ISSN-2146-7366

Dear Colleagues,

INTE & ISTEAC & IETC & ITEC & ITICAM & IWSC & IQC 2024 Conferences are now well-known international academic events and the number of paper submissions and attendees are increasing every year.

We have lots of participants from 34 different countries. There was great interest in each conference held.

Also, we would like to thank to our distinguished guests, keynote speakers, reviewers for their collaborations and contributions to the success of these conferences. And we would like to thank all of you for coming, presenting, and joining in these academic activities.

Should you have any enquiries regarding conferences, please do not hesitate to contact with us for any additional information you may require.

December 10, 2024

Thank you...

Conference Organizing Committee

## KEYNOTES

**Prof. Dr. Muzaffer Elmas**

Rector, Kocaeli Health and Technology University, Turkey

**Speech Title:** New Developments on Higher Education

**Prof. Dr. Douglas Franklin**

Ohio University, United States

**Speech Title:** New Trends in Quality Assurance & Accreditation

**Prof. Dr. Ümit Kocabiçak**

President - Turkish Higher Education Quality Council (THEQC), Ankara, Türkiye

**Speech Title:** Accreditation in Higher Education in the World and in Turkey

**Prof. Dr. John Hitchcock**

WESTAT-1600 Research Boulevard, Rockville, Md 20850

**Speech Title:** Using Mixed Methods Approaches in Large Scale Studies

**Speech Title:** Using AI In Research

**Prof. Dr. Teresa Franklin**

Ohio University, United States

**Speech Title:** Higher Education Meet GenAI: Helping Educators Improve Learning

**Speech Title:** AI: Changing the Paradigm of Higher Education and K12

**Prof. Dr. Anna CohenMiller**

Nord University, Bodø, Norway

**Speech Title:** "Embracing the 4Cs in gender research: How to remove the illusion of perfection through Compassion, Community, Care, and Collaboration"

**Assistant Professor Dr. Federica Incerti**

Director of Technology for SoA & Cybersecurity for CVPA

George Mason University, College of Visual & Performing Arts

**Speech Title:** Unbridled GenAI in Higher Education

**Prof. Dr. Nilgün Sazak**

Sakarya University, State Conservatory

**Speech Title:** Women and Music

**Prof. Dr. Badrul h. Khan**

Leaders in Open and Distance Education in North America, Washington D.C.USA

**Speech Title:** Smart Learning In The Digital World

# **INTE & ISTEÇ & IETC & ITEC & ITICAM & IWSC & IQC 2024 CONFERENCES**

## **Organizing Committee**

### **General Coordinators**

- ❖ Prof. Dr. Aytetin İřman, Sakarya University, Turkey
- ❖ Prof. Dr. Douglas Franklin, Ohio University, United States
- ❖ Prof. Dr. Teresa Franklin, Ohio University, United States
- ❖ Prof. Dr. John Hitchcock, Indiana University, United States

### **Coordinators**

- ❖ Prof. Dr. Ahmet Adalier
- ❖ Prof. Dr. Fatoř Silman
- ❖ Prof. Dr. Carlos Francisco De Sousa Reis
- ❖ Prof. Dr. Tolgay Karanfiller
- ❖ Assoc. Prof. Dr. Mustafa Öztunç
- ❖ Assoc. Prof. Dr. Dilan Çiftçi
- ❖ Assoc. Prof. Dr. Nesrin Akıncı Çötök
- ❖ Assoc. Prof. Dr. Azmiye Yınal
- ❖ Assist. Prof. Dr. Ayřegöl Nacak

### **Associate Coordinators**

- ❖ Dr. Sabriye Topal

**INTE & ISTEK & IETC & ITEC & ITICAM & IWSC& IQC 2024****Editorial Board**

# A STUDY ON THE CHALLENGES FACING PRESS FREEDOM IN AFRICA: THE CASE OF CAMEROON

**Carlson Nkongho OJONG**

MA thesis in communication and media studies

**Prof.Dr. Aytakin ISMAN**

isman@sakarya.edu.tr

## ABSTRACT

The liberty of the press is highly precarious in numerous African nations, including those that have substantial press freedom rankings. Journalists continue to encounter mistreatment, persecution, detentions, and aggressions for their professional activities. Hence, this present study was aimed to examine the challenges facing press freedom in Africa and Cameroon in particular.

To gain insight on the challenges facing press freedom in Cameroon, the qualitative research method was used through an online video interview technique with media experts within the private sector in Cameroon. And, in defining the sample population which consists of journalists working in the private sector a purposive sampling method is adopted and a total of 15 journalists were chosen from 12 different media organizations in Cameroon. In effect, an online video interview was conducted and was deemed appropriate because of distance and the size of the country, and going for an online interview will enable us reach a representative sample. Then the data were analyzed with the help of Nvivo software.

Moreover, the study helped in identifying the different challenges facing press freedom in Africa and Cameroon in particular as well as the role play by the government in the promotion of press freedom in the country. Again, the findings served as milestones proposing long-lasting solutions to the Government in the promotion of press freedom and democracy.

**Keywords:** Press, Freedom, Press freedom, Africa and Cameroon

## INTRODUCTION

### Overview

Roosevelt, Chang and Malik (1947) initiated the Universal Declaration of Human Rights, which was later adopted by the United Nations in 1948, affirming that every individual has the entitlement to specific their contemplations and convictions unreservedly without any obstacle. Additionally, this right encompasses the liberty to acquire, disseminate, and exchange information and ideas through any communication channel, regardless of geographical boundaries. Moreover, the principle of press freedom, also known as media liberalization, is the mother concept which upholds the right to communicate and express oneself through different forms of media, such as electronic and printed media, without any restrictions.

In effect, (Croteau & Hoynes, 2005) argued that media business is mostly characterized by that domain which provides information to the entire society. However, most of the prolific researchers have pointed out the fact that most businesses operating in the media sector have the ability to set the agenda and influenced the general ideology (Keane, 1991; Aspinall, 1973), in numerous African nations the media are mostly controlled by government agencies and always at the mercy of a dependence stems that originates from a history of dictatorships and one-party regimes that have stymied and continued to curb media freedom (Makungu, 2004; Kasoma, 1995; Ochilo, 1993). Moreover, Freedom of the press guarantees citizens the liberty to comprehensive data concerning resolutions established by state. In this guise, the public is informed thereby bringing transparency to government work (Banda, 2007). Still in the same light, (Phiri, 2008) also pointed out the fact that accessibility to data helps citizens to evaluate the state's decisions better and thus strengthens responsibilities of media practitioners during the analyzing as well as the disseminating of facts to the population.

### Press

According to Seymour (1991), press is defined by its origins as an old "newspaper" due to the fact that their invention dates back from the 14 century. Similarly Turrow (2009), also argued that press is normally published at least once a week, as with any regularly published, multi-issue newspaper. Moreover, other scholars define press as a newspaper that disseminates important facts (McQuail, 2005). Again, Hiebert et al (1988) also Used this term often emphasizing the impossibility of coverage in the absence of press that provide information that enables the public to make informed decisions. Camrose (1947) stressed on the fact that the definition of the printing press is problematic, it is clear from a historical point of view that its origins lie in the ancient printing techniques that introduced the mass media in the field of press. However, In other works, the term is often used substitutable with other mass media (Makungu, 2004). Still in the same light, (McNair, 2000) stated that media events is not only for news workers but also includes other media practitioners. According to Faringer (1991),

the invention of press within the developed countries was as a result of the rise of the working class and went with the bourgeois requests for gracious rights, such as flexibility of discourse and press. Again, Siegel (1996), based on his encounter within the North American media arranged, portrayed and outlined the impact of cash on media's viability. In addition, the author contended that involvement of cash includes a awesome affect in undermining adequacy of the press and its substance. Thus, in this pretense, media substance resounds goes in line with the individual objectives and yearnings of media shoppers, who are the most consumers of the media outlets. Moreover, the idea of data predisposition is witnessed, when the government claims and oversees the press, the ultimate item speaks to the government's needs and motivation since the same government reserves government media through appropriations (Siegel, 1996).

Concurring to Siebert (1956:p9), a deliberate understanding of press requires an understanding of the political and social structures inside which press works. In this pretense, four of presses were talked about: Authoritarian, freedom, social responsibility, and Soviet communism. To begin with, the authoritarian theory of press was a theory nearly consequently embraced by most nations once society and innovation had adequately created to form what we nowadays call "mass media" communication. Consequently it depicted press, as an organization, having its capacities and exercises controlled by organized society through another organization, the government. Still within the same light; the liberal press school of thought argued that the press could be a put for the trade of thoughts, where assorted sees can be communicated without fear of restraint or abuse (Siebert, 1956:p70).

In addition, this theory recognized that press must be a vehicle for displaying contentions, suppositions and prove to the open on the premise of which they can confirm for those in control and make educated choices but advocates of this theory also contended that the press ought to be independent and not subject to any shape of state administration, since a state-controlled press cannot hold the government responsible conjointly pinpointed out the reality that the state-run press organization will prevent endeavors to uncover degenerate lawmakers; as well as the efforts of writers to supply the open with the data they ought to contribute intellectuals to open wrangle about and make educated choices in other zones of life.

However, it was uncovered that competition for per users would advance press to speak to a assortment of viewpoints within the society (Siebert, 1956:p71; McQuail, 2010:p176). Again it was also pinpointed out that such press theory makes Media experts to entirely follow government rules for the discharge of data (Nerone,2018). Moreover, this theory too holds that a free press ought to communicate and bolster government arrangements (Merrill, 1974). The government forces licenses and can be repudiated on the off chance that the press criticizes the government (Hamasaka, 2008). In reality, numerous African nations share a bequest of colonialism and dictator run the show that tends to affect press freedom (Ochilo, 1993). Still within the same light, the liberal theory depicted the status and work of the press in society, as well as the improvement of philosophical standards that frame the premise of the political and social structure in which the media works. Moreover, liberalism, as a political and social organize, contains a characterized system for the educate that work inside its circle, and the press, like other educate, is controlled by the standards that support the society of which it could be a portion. Over the past century, much of the civilized world has claimed to follow to the standards of progressivism (Seibert, 1956).

Again, (Seibert, 1956), argued that the value of press is to secure the flexibilities and rights of the individuals and to supply data to the open so that they can take an interest as citizens in equitable self-government. Consequently, the freedom theory favored the fact that private news media appreciate most extreme flexibility to educate citizens and criticize open approach, whereas too giving oversight of the government. In this guise, the ability to express oneself openly isn't the privilege of the state or government; it may be a essential right of free people. In this pretense, a free press and freedom emerge from the individual's right to life, freedom, and the interest of bliss hence making , opportunity of the press basic for a free society and the respect of the person (Nerone, 2018). Despite the free nature of press supported by this theory (Nerone,2018) contended that the impediment of such press framework is that in some cases the Wiki spill stage distributes private reports to the public. In this manner, numerous governments around the world don't permit the hone of a free press framework and this will affect political parties in shaping governments.

Moreover, the social responsibility theory started in 1947 by the Hutchins Commission on opportunity of the press. This press theory demonstrated the opportunity to get and spread data must be went with by a few frame of open responsibility and this obligation does not as it were incorporate displaying total, real and precise reports but too advancing open debate (Commission on freedom of Press, 1947:pp21-27). As compare to the freedom theory of press, the concept of social responsibility suggests government mediation within the media responsibility framework conjointly recognizes when the media comes up short to meet its duties to society, a open specialist or government ought to be permitted to mediate to guarantee journalistic responsibility. Besides, the fact that press has a commitment within the society, it also see that all parties are represented which the open has adequate data to choose; which in the event that the media does not expect that duty itself, it may be vital for another organ of the open to work out that duty (Siebert, 1956:p5). Again, this theory rejects the way that dictatorship makes control genuinely genuine, taking off the media without flexibility of choice. On the other hand, it too rejects a circumstance where there are no limits and rules on what the media can distribute, such as

distributing anything they need, making the hypothesis broadly criticized for being too vague (Nerone, 2018). Last but not the least, the Soviet Communist theory started from Lenin's application, the belief system of the administering course wins in all times, and the press is the "otherworldly item" of the prevailing belief system, which required the control of the working lesson with their concerns been communicated and the media utilized as an instrument to socialize people (Siebert, 1956). However, (Nerone, 2018) contended that such theory gives the state outright control to control the media for the advantage of the individuals and closes private proprietorship of daily papers and other media. Additionally, the Government media transmits positive thoughts to make a strongly socialized society conjointly educates, teaches, engages, spurs and mobilizes. Moreover, (Siebert, 1956) again pinpointed out the truth that the press ought to support leaders instead of play a supervisory role and On the off chance that the authority is off-base, the complete country will endure overwhelming misfortunes.

### **Press Freedom**

Press freedom underlies different activities such as free press, dissemination of information as well as the opportunity to speak out (Abbas and AlFadhly, 2005). In a more comparative terms, (Gastil 1979, p.5) extended the respectful definition of press freedom by incorporating "freedom of the press, public discourse, and the presence of teach unmistakable from government, the legal is autonomous of control and the nonattendance of political prisoners". Still within the same light, Merrill (1989, p.19), illustrated freedom as that "the condition for being able to select and accomplish goals". The author further attested that it's an opportunity which is unlimited from the exterior and gives compelling control to do what one needs. Moreover, the ideology of freedom within the setting of news coverage is challenging since it proposes that freedom lies completely between "constraint and inertia" (Merrill, 1989, p.24).

Again, Lichtenberg (1990) contended that the thought of "originality" remains important nowadays, particularly since numerous individuals consider the press to be a capable voice, on standard with the people's voice; securing a free press basically implies ensuring liberty of discourse. In this pretense, Lichtenberg's investigation was substantial to a certain degree, but there are outstanding contrasts between freedom of the press and individual press freedom of expression, outlined when they struggle with each other (Cullen and Fu, 1998).

However, Anshah (1991) too contended that the meaning and work of press liberty in society is to spread data and concepts through mass media without government control. Similarly, Lieberman (1953, p.134) also illustrated that the concept of press freedom was not one or the other carefully clarified nor utilized precisely in open recognition. Concurring with Merrill and Lowenstein (1979), numerous national press frameworks are restricted in their level of press liberty, making the notion of press freedom unworkable but may indeed be incomprehensible. Still in the same light, Asante (1997), pinpointed out that social and political setting in which the media operates determines its level of free press. The author also contended that measures like: censorship, physical badgering, dangers of legitimate activity, press and writer authorizing prerequisites, arrangement and terminating of editors is the reason why some press organs limits their publications. Still in the same perspective, Rozumilowicz (2002) concurred on the reality that non-monopolization by any entity is key to a free and autonomous media which can as it were be accomplished on the off chance that the basic segments of society (legitimate, organization, financial and socio-cultural) bolster a non-monopoly structure of media sources. In addition, (Lieberman, 1953) considers press freedom to be outright, meaning press alludes to the news segment of the mass media, which concentrates on dispersing data to the open through printed media (such as daily papers and magazines), broadcast news (through radio and television), and the Web (through online news outlets). Agreeing to Onagoruwa (1985), free press entails "the autonomy for the press to distribute without being subjected to any shape of terrorizing, attack or intimidation". Still in the same light, the author emphasized on the idea that free press infers the freedom to distribute news or data without any limitations. Again, Asemah (2011) also argued the fact that it's the obligation of the media to criticize the country's policies and establishments. Moreover, Sambe and Ikoni (2004) also agreed that "press freedom concentrates on the unfettered liberty to write and print information for mass consumption".

Concurring to Agee, Ault, and Emery (1979) characterize freedom of press as "the ability to print without earlier confinement". This thus implies that for press freedom to exist the authority should be given to the writers without fear or favor. Still within the same light, Asante (1997) states that human liberty has levels and no nation within the world has outright press. In this guise, Asante contended that diverse nations have diverse degrees of press freedom. However, the author continued by emphasizing that the concept of freedom is pertinent to each nation, society, culture, and individuals. Additionally, (Sharma, 2006) concurred that press is social foundation that continuously takes the frame and color of the social and political structure inside which it capacities. Moreover, Martin, Chaudhury, & Anju (1983), suggested that the degree of press freedom in a country is measured or understood through two indicators. The first is to know whether the government, through various agencies and mechanisms, takes direct action against media outlets for certain undesirable conduct, and whether the media can be restricted or penalized for not speaking out. However, a study conducted by Freedom House in the United States found an overall decrease in freedom of press round the globe, including fully democratic

countries (Lefkow, 2009). Moreover, the research also pointed out that only 36% of the 195 countries surveyed have press free zones (Lefkow, 2009).

In a recent study carried by World Press (2020) it was pointed out that the global Press Freedom Index is an essential tool used to support the principle of competition between States. Moreover, the indicator ranked one hundred and eighty nations and districts based on the degree of press freedom enjoyed by media practitioners. And also portrait the condition of press freedom based on quality, legal framework, safety of journalists and their judgment; pluralism and independence of media in all countries and regions.

In effect, Chowdhury (2004) revealed that Press freedom improves people's access to information which tends to expose the unethical and illegal activities of politicians and civil servants, making it virtually impossible to hide or get away with corruption, from that affects the government's reputation). Similarly, Dan (2004) also said that in the past, newspapers had a direct connection with common freedom of expression and press but over the past decade, press freedom has become quieter around the world. Additionally, Lai (2007) found a coordinated interface between the government and free press and this relationship between the media and government has changed significantly since the advent of mass media. Furthermore, Lee (2004) emphasizes that the social roles and professional orientations that mass journalism pursues and strengthens include; maintain political neutrality, represent public opinion, and control the government. Moreover, Splichal (2002) pointed out that freedom of the press was initially seen as an extension of two important principles "freedom of thought and freedom of speech which were all aimed at combating the secrecy that reigned openly in feudal society. In other recent findings by Repucci's (2019), it was pointed out that press freedom worldwide has declined dramatically, and Western countries are no exception. Furthermore, following the various threats stipulated above, The Freedom House proposed four ways to monitor press freedom around the world Repucci (2019): Promote propaganda free and independent media through activities, Monitor violations of press freedom, Media system assessment through written report and the Protection and defense of journalists working in conflict zones and under government repression. Similarly, in a study conducted by Dunham (2016), claimed that 2015 was the worst year for press freedom in the world in the past 12 years and in accordance with the Freedom in the World report, it also highlighted various reasons for this decline, estimating a 13% world's populace lives in places with a free press. In this pretense, freedom of press is like a double-edged sword that has to ensure person rights whereas controlling government exercises (Hiebert et al, 1988:600). Moreover, (Curran, 1978) also suggested that controlling government exercises frequently causes the press to turn a dazzle eye to businesses that too require open investigation. Still in the same light, Ogbondah, (1994), pointed out that in numerous African nations; specialists tend to closely screen media organizations that criticize government exercises. However, Chirwa (1996) contended that the level of suppression of press freedom in numerous African nations is frequently ridiculous. Again, Banda (2007) claimed that it is due to destitute administration of open reserves that specialists need to keep it covered up and hence tend to debilitate imperative citizens with detainment. Concurring with Wasserman (2010), freedom of the press often dissents with the right of seclusion and the right to enjoy one's personal life free from prying eyes, especially in many developing nations in Africa and around the globe. However, (Phiri, 2008) suggested that press writers must regard the protection of others and dodge encroaching on their private delights and distresses and must be able to censure false reverence and set the record straight.

### **Press Freedom in Africa**

Amsterdam (2012) agreed that the media is an invaluable asset for democracy as well as a threat within a country. But (Tunney, 2007) suggested that Content differences and proprietorship plays an imperative part in popular government. Similarly, Karikari (2004) took on comparative study on radio liberalization in Africa and results showed that beside the development of the print media have had the most prominent affect on press freedom and popular government on the landmass. Moreover, few nations nowadays don't have autonomous radio and television, and among the financial community of 15 effective West African nations, and Guinea was revealed to be the one that does not permit private proprietorship whereas in East Africa, Kenya, Tanzania and Uganda have energetic autonomous broadcasters. In effect, media freedom around the globes has lead to a dangerous scenario where media practitioners are being arrested, charged, and even killed for simply doing their jobs. Moreover, authoritarian regimes are using legal provisions to silence the independent media, while politicians and their followers are spreading false information to discredit them. In this guise, social media is being used to harass and defame individual journalists, especially women who are subjected to sexual abuse. And these actions not only undermine the credibility of independent media, but they also endanger the safety of journalists and damage public trust in factual information. However, this trend is not limited to Africa, but is a global issue that needs urgent attention. (Kasoma, 1995) also contended that in most developing nations in the African continent, the press repeatedly criticize the governments to their own detriment.

In East Africa, governments constantly arrest and detained press workers who are neither tried nor prosecuted (Karikari, 2004). Cameroon attacks on journalists and it has deteriorated the condition and the country is known for been number oppressor of journalists on the African continent (African Journalist Federation, 2010). Moreover, in Ivory Coast, journalists are often accused of exposing government hypocrisy and imprisoned

(Fliess & Sandeen, 2000). Again, (Ongowo, 2011) revealed that in East Africa, press organs push the moral boundaries of news coverage by distributing confidential data and advocating infringement of moral codes with respect to the public's right to data. Similarly, (Phiri, 1999) also revealed that in Zambia, The Post was disputable due to its need of regard for protection and its provocative information.

Moreover, The organization, Reporters Without Borders (RSF), observes that the continent witnesses frequent breaches of press liberty, such as arbitrary control, particularly on the web, apprehension of reporters under the pretext of tackling cybercrime, fabricated news or terrorism, and instances of aggression against media workers, which frequently remain unpenalized. Hence, media freedom violations in Africa take various forms. For instance, in most part of Africa, freedom of press is frequently stifled and writers routinely confront badgering and savagery (Confederation of African Writers, 2010). Still in same light, Chama (2012) pinpointed the case with Zambian Writers who are frequently assaulted for criticizing the government and other writers are censored and startled of compliance.

Moreover, In Africa, the introduction of multiparty elections has partly spurred the establishment of free radio stations and the passage of laws allowing for competitive journalism. Myers (2014) finds that international donors play an important role in this transition by providing advice, providing start-up capital, and forcing countries to adopt these laws. Again, (Wanyama, 2000) pointed out that numerous nations around the world, and in Africa, have experienced quick socio-economic advancement in the last decades and this advancement has urged the creation of an equitable administration. In this guise, Harbeson and Rothchild, (2009) pointed out that numerous sub-Saharan nations have moved toward popular government since 1990 by holding free and fair elections. Moreover, Mukhongo (2010) stated that researchers are increasingly focusing their attention on the link connecting the press and socio-economic advancement indexes.

Alam and Ali Shah (2013) argued that economic wellbeing, foreign investment and good high level economic growth within the country is revealed that have a positive impact of press freedom within a country. However, (Brunetti and Weder, 2003) agreed on the existence of an adverse connection with bad governance within a country. Additionally, "the concept of press freedom remains disputable within the mass communication literature" (Becker et al. 2007:6).

However, As a result of the new wave of democratization launched in the 1990s, the majority of African countries received the all inclusive Statement of Human Rights in their constitutions, thereby enacting provisions to strengthen freedom of the press. Previously, the African Charter on Human and Peoples' Rights was ratified in 80's .And 15 Sub-Saharan African governments were also forced to provide more information to the public to promote better journalism (Gicheru,2014).The only obstacle to the implementation of these laws is the government's ability to control the judicial system, which can arbitrate failures and conflicts. Moreover, aids in Africa have also contributed in Press freedom and this could explain differences in press freedom among aid recipient countries in Africa are the current level of judicial independence. (Wright, 2015) found a positive relationship between the amount of foreign aid a country receives and the corresponding freedom of the judiciary. Again, China also finances infrastructure in these African countries. Chinese funding for infrastructure increased from negligible levels in 2000 to 20% of total external infrastructure investment commitments in sub-Saharan Africa in 2012 (Gutman et al,2015).This increasing level of aid from China undermines the Western power that humanitarian organizations have exercised in the African context. These countries can now fund development projects while maintaining central authority and violating basic rights, such as freedom of press and expression. In effects, this aid helps reduce the level of influence or control of major international donors over the internal politics of recipient countries. According to Wright (2011), unconditional aid often helps strengthen authoritarian governments, which can be seen as providing long-term benefits to China because it provides access and ensure stable trade relations. Similarly, (Makungu, 2004) contended that the move from imperialism in numerous developing popular governments contributed to the rise of free press inside numerous African countries. But Phiri (1999) pointed out that the government press cannot be free since its writers tend to take after the wrench of the lawmakers in control. It is additionally vital to know that freedom from government or private control does not ensure the press from the impact and control of its proprietors. Moreover, (Banda, 2007) argued that in reference to the difficult economic situation in Zambia, newspapers are worth purchased. However, Mano (2005) argued that newspapers that ceaselessly distributes data around the viewed particular political bunches not worth buying. Again, Phiri (1999) contended the fact that some of these press publication are made accessible to the general public as political action documents. Additionally, the directing guideline of numerous promoters is that these daily papers are not great stages for publicizing and they dodge them (Boyce & Curran, 1978:-34) However, publicity is considered a valuable asset for the existence of journalism but there are few documented examples of journalism surviving on non-advertising revenue, "journalism funding is atypical in the business world (Phiri, 2008).Again, talking about the press in Zimbabwe and the impact of its proprietors, Mano (2005) contended that both open and private media proprietors have made "regimes" that weaken proficient and moral measures of news coverage. And what is more stressing, he clarifies, is that writers have surrendered themselves to these advancements, considering them "normal" and seeing it as characteristic for them to adjust their proficient parts to the modern environment. Be that as it may, Mano advance famous that not

all writers are to fault, others have “resisted” and “rebelled” against the weights set on them by private and open media proprietors. Additionally, when talking about citizen news coverage and press opportunity in Africa, Banda (2010) notes that the journalistic scene is changing exceptionally quickly on the landmass due to the quick improvement of Web innovation, advancing people's cooperation in news coverage and bringing unused trusts and modern things but Challenges requiring “re-democratization” on the African landmass has been orchestrated by the spread of the Web in Africa and as portion of broader debates about almost press and the components that constrain the part of writers in their proficient hone in popular governments. Still in the same light, Adam (2012) contends that data innovation is introducing in citizen news coverage and press freedom in Africa whereas uncovering writers to lawful and political challenges. Moreover, in Africa, press directions have a solid impact and affect on the freedom of numerous media organizations and restrain journalistic exercises (Berger, 2007). However, the lawful and regulation system encompasses a negative effect on the media in contributing to expanded straightforwardness and responsibility of open accounts (Banda, 2007). In spite of the fact that the media works inside a set of legitimate imperatives, there's still room for strong investigative news coverage (Phiri, 2008; Banda, 2007).

### **Press freedom in Cameroon**

The colonial government and missionaries jointly owned newspapers throughout the early era of the press, and the press served a utilitarian purpose. These two themes defined the early press (Wete, 1986). The author claims that while missionary-owned publications served to support missionary endeavors, colonial government-owned journals aimed to enlighten civil personnel about administrative, regulatory, appointment, and transfer-related news. Following its independence in 1960, the media landscape in Cameroon was marked by unprecedented abuses of power through harsh legislation during the dictatorship of first President Ahmadou Ahidjo (Abé 2006). Additionally, radio was first introduced by the French colonial government in 1941 in Douala, serving the French and giving them information about the Second World War (Muluh and Ndoh, 2002). This led to the development of Cameroon's first radio system. International observers categorize Cameroon as a nation having free and fair elections, according to Hansen (2010). Once more, Eribo and Tanjong (2002) point out that Cameroon has always had a democratically elected civilian administration since independence, in contrast to many other African nations that have seen military control. Additionally, Ngange (2020) stressed that Cameroon's democratic process is progressing significantly. With more than 175 political parties registered, Forje (2008) underlined that Cameroon's democracy has unquestionably improved since the country returned to multiparty rule in 1990. In addition, Ngangum (2019) thinks that Cameroon still has free media, opposition parties, and regular elections even though it exhibits some traits of a dictatorship. This assertion, though, can be tempered because regular elections do not always correspond to a democratic society. Regular elections are necessary, but so are free and fair elections (Voltmer 2006). Ngomba (2011) contend that the normative function of mass media in promoting communication between political players and the public is crucial in developing or transitioning democracies like Cameroon. Ngomba and Thorsen (2012) contended that Cameroon is only beginning a significant and contentious shift toward a more democratic political structure. Unquestionably, there isn't an agreement among scientists about democracy in Cameroon. On the other hand, Cameroon's political system has come under heavy criticism from some academics. For instance, Fonchingong (2004:33) refers to it as a "broken democratic process," while Nyamnjoh (2002) calls it a "fake democracy." All emphasized the distinction between liberal democracy as claimed by the Constitution and actual life. In the same vein, Ngomba (2016) notes that Cameroon has a developing media system that is marked by an increasing blend of traditional indigenous media forms and newly emerging modern media. Again a 2012 assessment by the UNESCO Institute for Statistics on the state of the Cameroonian media and revealed that out of the 27 television channels that are available in Cameroon, six (public CRTV and five private Equinoxe TV, STV, Canal2, Vision 4, and DBS) reach more than 75% of households, and the penetration rates of 11 other TV channels are less than 25% of households. Moreover, Ngangum (2019) pointed out that press freedom in Cameroon is currently protected by the constitution and is frequently regarded by the government as a key sign of their dedication to democracy. In a similar vein, Kamdem (2018) proposed that Cameroon's media landscape from the 1990s to the present is distinguished by a robust private press that has offered public forums for free speech, debates, and alternative and more trustworthy information. The affordability of news media is another issue in Cameroon. Moreover, Nyenty (2013) identified the reality that the majority of people in Cameroon cannot afford the 400 FCFA (087 USD) cost of a newspaper. In addition, the issue of complete press freedom has long existed in Cameroon (Eribo & Tanjong 2005). And even after Paul Biya took over as president of Cameroon in 1982, the idea of press freedom remained largely theoretical, with signs prohibiting local publishers and many media professionals being arrested for defying government expectations (IRIN NEWS 2007). However, Nyamnjoh (2002) highlighted how widespread press repression existed in Cameroon until the 1990s, when a liberal wave swept through Africa and reached Cameroon, enabling the enactment of laws that resulted in public media freedom. Nonetheless, a number of writers have discussed the issue of content ownership and influence in Cameroon (Ngange & Elempia, 2019; Tanjong, 2012 & Ndangam, 2009). Again, Djankov et al. (2001) noted that government control

over media content is made possible by state subsidies to the media. Additionally, in Cameroon, the government uses libel laws to suppress investigative journalism and purposefully refuses to advertise in the private press, which is important to the government. Furthermore, Muluh (2014) holds contrasting opinions regarding Cameroonian radio station ownership and professionalism. He noted that while radio stations employ a large number of journalists, very few of them have formal training. The author claims that this has an impact on the caliber of news and foreign affairs programs, which are overseen by inexperienced journalists and receive poor management.

Cameroon, media faces significant constraints due to a strict legal framework. Journalists covering sensitive topics or areas are at risk of being interrogated by the police, sued, or detained without trial. Although the 1990 Social Communication law abolished for glance censorship, Article 17 of the amended 1996 laws empowers newspapers deemed a threat to public order will be banned by officials. Media regulators continue to suspend media outlets and journalists who criticize the government face the risk of arrest, prosecution, and violence in connection with their work. Again, it is unfeasible for a press organization to embrace a discerning and autonomous editorial stance without facing considerable risks and intimidation if its coverage jeopardizes the welfare of the administration and its delegates. This ambiance fosters self-restraint and leads to the majority of media outlets conforming to the outlooks of the government or its associates. In report published by Reporter without borders (2021) revealed that Cameroonian reporters are persistently vulnerable to the danger of a verbal or physical assault, detention, censorship, and even homicide. Still the same, Reporters without borders (2021) evoked the case of two journalists that were released after being detained for 24 and 16 months, respectively, on charges of defamation. However, journalists hailing from the Anglophone areas in the western part of the nation are frequently blamed for being in league with a separatist movement that has been present for several years. Press freedom is very precarious in Africa and in Cameroon in particularly and the activities of Journalists within this context suffer a lot of challenges. For instance, many journalists are forced to engaged in surviving journalism just because do not want to be persecuted. According to Reporters without Borders (2012) Cameroon was ranked 120th out of 179 countries assessed for press freedom, down places from the previous year. Moreover, the study also pinpointed out that Cameroon still fluctuates between repression and liberalization and that taboos remain unbreakable (Le coz 2008). Similarly, media scholars such as Nyamnjuh (2005: 168-9) have criticized this legal framework as outdated because it does not take into account freedom of expression and press . Still in the same light, Eribo and Tanjong (1998) indicated that Cameroon is “trapped in a vicious cycle of a muzzled press”. In effect, cases have been recorded with journalists been prohibited from criticizing powerful governments in Africa, and has raised issues questioning the degree of press freedom. And these cases include Nigeria, where political movements opposed to the government have been outlawed, Cameroon, where Kamto, the leader of the opposition party, was arrested for criticizing the current government following the presidential election (Ngangum, 2019), and Kenya, where a journalist is alleged to have been shot dead (Somerville, 2011; Wasserman and Madrid-Morales, 2019). In a similar vein, limits on the right to free speech have diminished the number of political discussions in which people exchange opinions about the social and political landscape of their nations.

### **Purpose Of Study**

Press freedom is impeded globally by the power dynamics of antagonistic forces. Social science research grounded in media political economy uncovers the underlying causes of press freedom and independence issues within the media system's political economy framework. Hardy (2014) claimed that the earliest scientific contributions to critical political economy date from the late 1960s and early 1970s. On the other hand, political economy of communication describes how political economy and communication are related. In a similar vein, Hardy (2014) highlights that power dynamics that comprise social hierarchies are central to the political economy of communication. Because of this, important political economy examines how politics and capital shape how people communicate by influencing their perceptions and social representations of reality. The structural forces that give rise to trade and the global division of labor are capital and political power.

Moreover, Herman and Chomsky (1988) underlined the significance of ownership groups in the creation of media content. Consequently, these structural forces dictate the editorial line. As a result, editorial policies in the media are seen as models of propaganda that are strongly related to information geopolitics. In light of this, the purpose of this qualitative study is to investigate the obstacles that press freedom faces throughout Africa, and specifically in Cameroon. In this context, we will look into media laws, censorship, the role that this nation's government plays in promoting press freedom, as well as the shortcomings with regard to this issue.

Moreover, to do an in depth evaluation of the challenges facing press freedom in Africa and particularly in Cameroon, we use an online interview technique and the data will be collected by an interview guide administered by the researcher. In this guise, we to achieve the purpose of study the research will address the question to know the challenges facing press freedom in Africa and Cameroon in particular? However, the main research question will be achieved through the following specific questions. Moreover, accomplishing the study's goal, which is focused on the challenges faced by press freedom in Cameroon, the research will choose

journalists as participants for the study. In so doing, the journalist will be chosen from private media organizations, because they are the most vulnerable and also because they always speak truth concerning the government and the country. Again, in recent years private media journalists in Cameroon had forced a lot of execution and torture by the government who does not encourage pure democracy. Hence, this study which will be conducted in Cameroon also has for aim to do an in-depth investigation into the Cameroonian media landscape to try and locate the issue of threats to press freedom and journalists in the country. Again, study will progress through all aspects of the threat; attempt to identify the source of the threat tracking journalists and sources of information, including press freedom within the country. However, the study will also investigate and examine the media theaters with aim of having a real picture on the different media abuse, the social behavior as well as the degree of intolerance of society's press criticism. To examine the problem of press freedom in Cameroon, the study was engaged in pinpointing the educational, skills and the aging components of media sphere in the country. By so doing, it will go through the law, the press laws, the legal system, legal system, the press order situation and their sphere of effects on the press in the state. Furthermore, this study will hope to show trends in journalist pressure and threats while exercising their duties. In this guise, this work will act as a pivot in presenting a case in which a journalist was killed while performing their job, and the court investigation progressed.

### **Importance Of Study**

According to UNESCO (2021), the ratification of Windhoek protocol in Namibia in 2021 on press freedom in Africa, did not have any impact since the problem of press freedom is still consistent in the continent ranging from torture, killing, unlawful detention and exile of journalists. Moreover, (Berger, 2007) pinpointed out that in Africa, media restrictions greatly affect and hinder freedom limits the performance of numerous media organizations and journalism. Again, (Banda, 2007) revealed that the media is adversely impacted by both institutional and legal frameworks that promote greater accountability and transparency in public finances. In this guise, this study helped the researchers to start a debate about the quality of Cameroonian journalism in the editorial office. As well as the difficulty broadcast journalists face is to keep their audiences fully informed about issues of a highly complex and political nature, while maintaining an obligation not to take sides. However, this study will help to identify factors affecting press freedom in Cameroon.

In recent years, Cameroon has lost so many of its brilliant journalists due to Government brutality to press freedom, so this study will serve as a contribution for freedom advocates and media regulators and reporting. Moreover, this topic was considered contemporary issue faced by the entire continent of Africa and Cameroon in particular; therefore this work will also provide insight to policy makers about the media freedom challenges facing media organizations. And in this light, policy makers will be able to use these results as a reliable source of guidance-related information press freedom policy, with the goal of assessing and advocating on current issues related press freedoms on the Cameroonian media landscape. Again, this work will enable stakeholders to receive information that will enable them make constructive suggestions to improve the media freedom of the companies analyzed. Moreover, this study will also help future researchers in the field of media studies with rich literature.

### **Problem Statement**

The importance of press freedom in today's society, and government attitudes towards freedom of expression and democratic practice, have taken on a new look from the conclusion of the Cold War. Hence, the advantages of press freedom and the continent's growing recognition of individuals' unalienable right to free speech have led to an unquenchable demand for press freedom throughout Africa. Moreover, the continent is at a crossroads, as evidenced by the abundance of independent newspapers, radio, and television outlets, as well as the regularity of state censorship and journalist arrests. Furthermore, even in nations with high levels of press freedom, many African nations have extremely low levels of press freedom, and journalists are still frequently harassed, mistreated, detained, and attacked for their work. Press freedom is the foundation of journalism, allowing journalists to report and investigate freely. However, globally, journalists have faced intimidation, incarceration, and even death over believable (Freedom House 2004).still in the same light, the human race's quest for democracy and the development of political institutions in the West (Lijphart, 1968) emphasized the critical role that press freedom plays in all societies.

Though freedom of the press and expression are guaranteed in the preamble of Cameroon's 1996 constitution, these rights are not upheld in actuality. Under this guise, defamation remains a criminal and civil violation, carrying a maximum sentence of six months in jail. In addition, the onus of proof in defamation cases rests on the defendant, truth is indefensible, and criminal law provides additional "special protection" for public figures. In effect, Bernault, (1999) argued that Cameroonian prisons, is made up of "detention zones" reserved for individuals guilty of embezzlement of public funds or similar crimes who often benefit from other considerations and preferential treatment intended to "soften" their confinement. While imprisoned journalists clearly do not benefit from this type of treatment. However, the detention of journalists is indeed an expression and practice of

the balance of power (Njawé, 1998, s.15) which makes situation of journalists in Cameroon says a lot about the State that holds them. It was this backdrop that this present study was initiated with goal to investigate the challenges of press freedom in Cameroon.

## LITERATURE REVIEW

### Empirical review on Press freedom

There are some related studies about the challenges facing press freedom in developing countries and this decision was made because of the fact that these countries face a lot of hindrance in term of democracy.

First, Apuke, (2016) initiated a study to explore the issues that make Nigerian press freedom difficult. Additionally, the research objective was achieved by using the qualitative research method with an in-depth review of literature that was done with the aids of books and magazines. As well as a theoretical frame work that made use of the theory of social responsibility. In this capacity, the writer illustrated factors such as: legal pressure, secrecy, and censor ship, economic and social pressure to clarify the conceptual framework of the study.

Moreover, the findings revealed that numerous underlying issues preventing people from reporting in Nigeria press freedom and these includes confidentiality, legal pressure, heavy censorship, and violence. In this guise, the press freedom in Nigeria is paradoxical and simply exists, thus implies that the act of press freedom only exist in writing but absent in practice. However, the study also emulate urges the guaranteed of free press with reference to the Nigerian legal framework, and journalists should be given access to government sources so as not to impede press freedom.

This study was carried in Nigeria in a West African like Cameroon whose press freedom exists only in text not in practice. Moreover, it was a suitable guide for the present study that was initiated in Cameroon. In this light, the study provided a rich overview on the concept of press freedom which the study that was conducted in Cameroon explored.

Second, Brian (2014) also conducted another study with the aimed of investigating the independence of the press in Zambia's political environment, National tabloid post. And his research included in-depth interviews with tabloids journalist who works or has worked for a tabloid primarily in the field of political reporting. In order to accomplish the research goal, the researcher reviewed the literature in a wider field and discovered that, although press freedom is essential to democratic societies and should be preserved, there are additional challenging factors that obstruct its realization.

The investigation ultimately concluded that the Post had not made a significant contribution to democracy's development. Its close ties to ruling politicians damage its credibility as a tabloid. Political affiliation has also hindered the traditional oversight role of holding the social and political elites accountable to the public. Furthermore, since online journalism supplied information at the post office's expense and eliminated its influence in these domains, the public was forced to consider it carefully. In keeping with this, the Zambian governments also needed to offer profitable ways to enhance online publishing because it helps to advance and safeguard democracy. Moreover, in order to safeguard journalists' professional values, the South African Media Institute and the Zambian Journalists Association needed to step up their oversight and balancing of press policies and be more critical of the government's treatment of the media.

The critical analysis of this topic that follows makes evident how this research contributes to the body of knowledge. Under this guise, the rich literature of the 2014 study conducted in Zambia will be of great assistance to the current study on Cameroon, as both studies share the same subject matter press freedom.

Third, Ewunetie (2019) carried a study with the purpose of studying how press freedom was used both before and after Ethiopian Prime Minister Abiy Ahmed was appointed. Additionally, it explored how state media in particular practice freedom of the press and writing without state intervention. To attain this quest, the author selected a state-owned newspaper (Addis Zemen) as an example and conducted a thorough interview with two of Addis Zemen's chief editors Again, a two years sampling period was chosen because the press in Ethiopia suffered many repressions and restrictions before Abiy's arrival and after the "reform", and as the political and economic landscape shifted, the government pledged to give greater priority to establishing a democratic system in order to protect press freedom.

The study's findings showed which states were chosen, and they were: The Addis Zemen newspaper's print media coverage following the "reform" was identical to that which followed it. The publication faced censorship, government interference, and lack of access to information, lack of varied viewpoints, lack of criticism, lack of government propaganda, lack of research themes, and lack of information before and after the reform. Additionally, the study demonstrated that there was no discernible difference in press freedom in state-owned media before or after the reforms.

Moreover, it was also revealed that the government is not actively involved in the promotion of press law enforcement and the defense freedom of press and expression. However, the author also emphasized on the need for the government to promote and foster press freedom by implementing a law that governs the press sector in Ethiopia.

In effect, this study is a true reflexion of the one initiated on Cameroon concerning the challenges facing press freedom. Ethiopia is a country in Africa which faces similar problems in terms of democracy and press freedom so it will be valuable information for the present study on Cameroon.

Fourth, Hussain (2019) conducted another study to examine the media environment in Pakistan and determines the status of the press liberty as a sacred trust within local morality in relation to the universal truths and classification of threats faced by journalists. To achieve the research goal, the researcher embarked on a review of media history regarding press between the period of 1947 to 2017 in Pakistan followed by a structured interview with one hundred senior journalists together with a close ended questionnaire. Again, the study also tracked press freedom as a right guaranteed by Article 19 of the UN Declaration of Human Rights (1948), along with the responsibilities stipulated in Articles 19 and 19A of the 1973 constitution of Pakistan, driven by the Access Bill.

The study revealed that censorship exists in a veiled form, which is surprising undermine the spirit by impeding the ethical standards of the press's content, within the press freedom context. It also calculates journalists' perceptions of law and order. Moreover, it was also pointed out that owners of news organizations and journalists of non-professional affiliations face numerous threats. However, the study revealed the role of journalists' organizations as defenders of press freedom and journalists' rights nationally and internationally whose voice could be active and strong through trade unions. Again, this study also provided policy lines for sound implementation planning and result-oriented strategies to create a safe media environment for journalists to work professionally, free from fear of established threats.

The problem of democracy is a contemporary issue faced in so many developing nations and this study done in Pakistan was a valuable literature for the study that was conducted on the challenges facing press freedom in Cameroon and both topics treats the same subject matter.

Fifth, Charity (2022) embarked on a study using a descriptive survey design and qualitative research methodology to examine the variables influencing media freedom in South African broadcasting organizations. In order to achieve the study's objective, a qualitative approach to data collection was employed, along with in-depth participant interviews to gather information. This was a non-probabilistic sampling technique that the research used, choosing four journalists, four press directors, and four press editors. Additionally, thematic analysis was used to examine the gathered data.

In essence, the study showed that media freedom is impacted by the political climate at the South African Broadcasting Corporation. And in this form, broadcasters' operations are frequently obstructed by political organizations, powerful people, and groups in an effort to sway the programming that is aired. Furthermore, it was discovered that media freedom is impacted by the financial circumstances faced by broadcasters. Because of these financial limitations, broadcasters are unable to air approved programming and must reduce employee pay and business scale. The study also emphasized that in order for the South African Broadcasting Corporation to become a profitable and successful business, it must devise strategies that specifically address the political, economic, and legal obstacles it faces both domestically and internationally. Additionally, the corporation must implement a digitalized national public broadcaster that provides interesting, educational, and informative content on all platforms South Africa is considered as reference in matters of freedom of press and expression. Hence, the study was important because it adds a body of knowledge about the factors impacting Press Freedom in South Africa.

In this guise, this study was significantly and enriched the body of knowledge, because it is situated within the same framework as the current study on the obstacles to press freedom in Cameroon.

Tutwane (2019) also initiated a study to investigate media regulation within Botswana in relation to the context of liberal democratic norms and the need to challenge them. In this guise, the postcolonial theory and the concept of ideology, was used together with the Eurocentric approach to knowledge. Drawing on this theoretical framework, the study argued that Botswana's respected approach to regulation represents an African approach to regulation that is at odds with Western epistemology. Moreover, the study also elaborated number of questions to understand how the media in Botswana is generally regulated, whether the colonial regime had any influence on media policy, as well as to know whether it is possible to theorize the regulation of African media outside the dominant Western system.

In effect, the study revealed that Botswana has its own unique regulatory approach, influenced by cultural factors such as respect for elders, community and public ethics. And the colonial regime was also highly influential with a number of repressive policies which included insult laws, criminal defamation and public order laws, among others. Moreover, it was also revealed that Botswana had preference for state broadcasting system instead of a public service broadcasting (PSB) system and concentrated authority in the President's Office, enabling the government to significantly impact the media, much to the chagrin of the opposition, trade unions and the private press. Nevertheless, the author argued that a thriving private press often enjoys great freedom to publish without government interference, although it often complains of harassment by government agencies.

This study fills a gap in existing studies on Botswana, which largely evaluate the country according to dominant Western epistemologies thus provided rich literature to that conducted in Cameroon.

Still in the same light, Dashti (2008) also conducted a study to evaluate the impacts of online journalism about Kuwait's state's local press freedom. The author embarked on this study perspective due to the fact that online news coverage has brought unused highlights of news coverage hones for neighborhood writers and constrained

the development of their flexibility and making the dissemination of data empowered more openings for opportunity of expression and discourse thriving, driving to a better level of opportunity in nearby press. To achieve the research objectives, three different tools were used (surveys, online content analysis, and interviews), and the researchers focus was mostly on popular personal websites, weblogs, and forums in Kuwait, and journalists' activities and reporting in the country

The findings showed that while online journalism affected journalistic practices, it did not completely replace them. Furthermore, it was noted that many local journalists now use the Internet as a platform for communication and as a source of information. Online journalism has also developed into a tool for enhancing local press freedom at the same time. In a similar vein, the language of online journalism has evolved from that of local news sources, enabling individuals to write, debate, and exchange ideas more freely without worrying about governmental reprisals. However, the author contended that because online journalism is so widely used in the nation, what was once regarded as a taboo "red line" in the local press has evolved into an acceptable "green line."

It is well known that Kuwait holds free elections, distributing power among the ruling family while imposing limitations on press freedom. Accordingly, the study and another on the difficulties facing press freedom in Cameroon used the same contextual framework.

In another study, Elvis (2020) also carried a study to examine the media's role and its relationship along with government organizations which the author believed it is a major concern in different societies. Again, the author also engaged in examining how the Cameroonian government combines legislative, judicial, executive, and authoritarian policies to effectively enforce information control, monitor, and monitor military harassment and torture as well as exposed the violation of press freedom in Cameroon and repression within domestic private media institutions. Moreover, to attain the research objectives, a survey was conducted and a sample population of two hundred (200) men and women in the media practicing in both public and private media in Cameroon. In this light, the main government media sampled their opinion through interviews and questionnaires.

The results of the investigation proved that the Cameroonian government effectively enforces, monitors, and controls information to the detriment of press freedom by utilizing a combination of administrative, executive, and legislative structures and institutions as well as law enforcement (military intimidation, torture, and harassment). It was also asserted, though, that in addition to government intervention through the aforementioned institutions, there is now a climate of fear and panic. The fear of publishing could result in extinction at the hands of the military, rendering news reporting and journalism untrustworthy. And as a result, there is an unequal distribution of news coverage and a lack of professionalism, which undermines the ethical foundation of the journalistic profession in the context of Cameroon.

Cameroon is known for oppressing journalists by killing and unlawful imprisonment. In this guise, both studies were been carried in the same countries revealing the concept of press freedom very urgent for scholarly discussion.

Another study from Svernlöv (2020) was aimed to describe the challenges in the workplace faced by media practitioners in the private media sector in Ethiopia at a time of historic political change. Moreover, the author engaged in this study with focus to evaluate the era of Prime Minister Abiy Ahmed and claimed that despite the fact that many journalists were released but some challenges were still visible. As a data collection method, this study used qualitative and thorough interviews with a number of important figures in the private media industry and discovered a number of findings that describe the new landscape of journalists within the country.

While respondents generally perceived increased media freedom and decreased state threats, other challenges remain and new challenges are emerging. Furthermore, data indicated that because new media laws have not yet been introduced, there are still major obstacles to accessing government information, and there is a great deal of uncertainty about whether the transition will occur. The most startling discovery, though, was a distinct and widespread change in the way threats against journalists were perceived. Public fear and intimidation escalated as government intervention waned, and some respondents no longer felt safe enough to report from specific regions of the nation. The study also demonstrated the impact of political developments in sub-Saharan Africa on journalistic practices, as well as the effects of abruptly expanding freedom of expression in nations with a history of authoritarianism and strict censorship. However, the research also exposed the persistent divide exists between private and public press within the Ethiopian media landscape, with independent media playing a predominantly radical role and government media playing a distinctly collaborative role.

In effect, this study in Ethiopia was an invaluable literature to the one carried in Cameroon on the challenges of press freedom on the basis that both study treated the same concept.

Another study was carried out by Chungu (2022) to assess the conditions surrounding the closure of Prime TV and the Post newspaper, as well as the consequences for press freedom and the economic impact of these actions in Zambia. With this in mind, the author looked into what caused Prime TV and the Post Newspaper to close in Zambia as well as the effects of various policies on press freedom, employee well-being, and the overall state of the economy. With a total sample size of twenty (20) respondents from the public and private sectors, the author employed a qualitative research design that was descriptive in nature in order to meet the study's objectives.

The study's conclusions showed that without media participation, a democratic society like Zambia cannot run smoothly. Additionally, the media has a special responsibility to protect society by educating the public and assisting them in making decisions regarding governance. In addition, it was recognized and valued that the media serves as social watchdogs, expected to uphold standards of decency, veracity, and accountability. Under the same guise, the author discovered that while the press is frequently perceived as depending on government propaganda and being swayed by commercial values when reporting on political and social issues, accurate and trustworthy information is the cornerstone of a successful democratic process. In addition, it was proposed that, in opposition to laws imposed by the state, the media should function under a self-regulatory framework that has the support of all relevant parties, including non-governmental organizations, print, radio, and television. Political and economic meddling has resulted in the permanent closure of the majority of private media outlets in Zambia. Similarly, in Cameroon, the state-run Communication Regulation Board frequently closes and suspends private news organizations.

Still In the same light of this, Darge (2023) conducted a qualitative investigation to examine how private press journalists understand, report, and clarify the obstacles they face in the Ethiopian legal system .in addition to their personal struggles, the study also looked at the experiences of journalists and their campaigns for the nation's just trials. Under this guise, the author employed the chronological framework connected to the tenure of the late Prime Minister of Ethiopia, Meles Zenawi. However, a "pure" description of the participants' lived experiences was provided by using Alfred Schutz's "life world" theory as a lens. Once more, information was gathered via semi-structured interviews, which are thought to be the most discerning technique for acquiring data for an interpretive analysis study.

The study's findings showed that during Meles Zenawi's nearly 25-year rule, Ethiopia's private press industry faced numerous issues, hardships, and suffering as a result of the absence of a free judicial system. Furthermore, the author made the case that in order for there to be true freedom in all of its manifestations such as press freedom political power must be totally released from the legal system, which means it must cease functioning as a puppet and take on its necessary functions. Additionally, by delving into the experiences of private press journalists during the Meles regime, the researcher aims to address a number of unresolved issues, including the crimes committed by private press journalists, and throws light on the sociopolitical phenomena of the day

In Ethiopia journalists faces a precarious situation ranging from unlawful arrest, detention and torturing. In this guise, the study was in the same line with that carried in Cameroon on the challenges of press freedom, thereby providing in-depth information for both the theoretical and conceptual framework.

In a different study, Öztunç (2021) looked at the difficulties facing media independence and press freedom globally, as well as in Turkey specifically. To accomplish the study's goal, the author employed the critical political economy of the media as the theoretical foundation, examining how politics and capital shape social perceptions and reality representations in Turkey's media landscape to affect communication practices. Additionally, a qualitative analysis of secondary data was conducted

The results showed that the biggest global barriers to media freedom are political barriers, media concentration, media proprietorship, and commercial interests. Furthermore, the article revealed that the main barriers to media freedom and flexibility in Turkey are political roadblocks, monetary interests, and the legal framework within which the media operates. It was also discovered that the media continues to fight to maintain a completely independent publication strategy even in countries where the Structure guarantees the right to free speech. Thus, a negative global trend in media independence and flexibility implied a negative bias in the global vote-based system. Nonetheless, the expansion of electronic news coverage has added to the media's freedom and opportunities. However, the media's content is controlled by political power and digital capital, which frequently results in censorship. Regarding the independence and freedom of the press, Turkey was ranked 157th out of 180 nations in the same study.

Regarding the literature for the research done in Cameroon on the difficulties facing press freedom, this study is helpful. Furthermore, Cameroon and Turkey rank similarly in terms of press freedom, which links the two studies in the discussion of press freedom.

Okong'o (2020) also carried out research to look at the connection between journalistic practices in Kenya's mainstream media and self-censorship. Additionally, look into the causes of self-censorship in the mainstream media and the effects it has on Kenyan journalism. In order to do this, the study used a mixed-methods research approach, which gave researchers a better understanding of whether unethical journalism practices and the use of media outlets by various vested interests are the causes of journalists' self-censorship.

The results emphasized the primary causes of journalists' self-censorship, breaking them down into three primary categories: institutional (ownership and editorial policies), national (political, economic, and legal), and personal/cultural. Additionally, those in positions of authority such as politicians, media owners, advertisers, and governments force journalists to practice self-censorship. Additionally, media companies depend on advertising revenue to stay afloat, so they comply with requests from states, businesses, and politicians in exchange for advertising funds. Additionally, it has led media managers and owners to impose rules on journalists that incentivize them to practice self-censorship. It was also disclosed that journalists decide not to write in

opposition to influential people's interests. Because of this, they withhold information, conceal facts, and refuse to work on delicate subjects about which they are unable to write with objectivity, and so on. Additionally, Okongo'o identified the following as priorities for media organizations: creating high-quality news content; managing media ownership; supporting and upholding the full implementation of Kenya's Constitution's Article 34 on press freedom; and matching editorial policies with journalistic principles.

In this guise, this study is a valuable resource for the initiated study in Cameroon on the challenges facing press freedom also both countries have the same African media landscape.

In the same vein, Ahmed (2019) conducted research using a case study of Africa to examine the combined effects of democracy and press freedom on corruption. The author's goal in the same study was to investigate the notions of democracy and press freedom in relation to the explanation of corruption in Africa. Once more, the research goes beyond understanding the origins and effects of corruption in Africa to offer policy recommendations that are consistent with the findings. The author used extensive empirical methods and 17 years of panel data to accomplish the research goal. Regression analysis was done to demonstrate that the study variables had an effect on graft reduction while maintaining the same perspective.

The study's conclusions demonstrated that, in order to effectively combat corruption, a nation must have a mix of democratic institutions that permit journalists to work without interference from the political or financial establishment. Additionally, the author stressed that coordinated efforts are needed to address the issue of persistent corruption on the continent, which an African one is given its global scope and intricate involvement of foreign actors. Therefore, it was determined that strong governance and international cooperation were required to eradicate widespread corruption in Africa.

Being one of the most populous continents in the world, Africa has long been ruled by corrupt and self-centered leaders. Given this, the system had never been favorable to press freedom since journalists who attempted to reveal some of these unethical activities were assassinated, imprisoned, or forced to flee their home countries. In order to prevent more tragedies in the journalism industry, press freedom in Africa is a pressing issue that requires immediate attention. Under this guise, the study supported the one conducted in Cameroon regarding the obstacles to press freedom. Additionally, it offered in-depth readings and analyses on press freedom and its connection to corruption, which may help to explain why oppression of freedom of expression persists.

Ahmed (2013) detailed the current status of Somaliland's media industry and regulatory framework in a different study. This included information on laws, policies, complaint and licensing procedures, content regulation, print, broadcast, electronic, and media ethics, as well as fundamental values centered on equality of opportunity and fairness. Furthermore, the author investigated the factors that led to Somaliland's media underdevelopment and current predicament, including the absence of enforcement of laws and other media regulatory frameworks and weak institutions. Under this guise, the study also sought to determine the reasons behind the nation's non-application and disrespect of legal frameworks. In order to achieve the research's objective, primary sources were gathered through in-person interviews and conversations with officials, academics, and journalists. For the secondary data, a thorough literature review was conducted, with a special emphasis on the regulatory and practical frameworks of the media.

The study's conclusions showed that the legal framework for the media in Somaliland needs to be given careful consideration by public and private actors, such as the government, lawmakers, media owners, the private sector, and the community, as it is the only safeguard against potential malicious interference with the media from these sources and also prevents public and private media actors from abusing their power and violating the rights of others. In addition, it was noted that a number of human rights violations had occurred, including forced disappearances of media professionals in Somaliland, extrajudicial executions, protests, and demonstrations.

Cameroon recent reports have recorded attacks on journalists making press freedom a bone of contention in the media sphere in the country. In this guise, the study carried in Somaliland will be of invaluable literature for the research carried in Cameroon.

Joel (2014) also conducted research to examine how Ugandan print media might use freedom of expression. Once more, the investigator studied pertinent literature to establish the groundwork for the investigation. In light of this, the author employed the problem state as a means of explicating the entire study by critically examining the obstacles to press freedom that the Ugandan printing media sector faces. Additionally, the sample size was determined using the Slovenian formula, and the contingent relationship between two variables was investigated by the researcher using the descriptive survey design. The content validity index was employed in the design of the questionnaire, and the Corn-bachs coefficient alpha variable was used to determine the instrument's reliability.

According to research findings, 73% of the journalists surveyed felt that the divisive topic of freedom of expression threatened their work in some way, while 22.4% denied ever facing threats or difficulties related to press freedom. Additionally, it was noted that the media had a very bad track record when it came to preserving freedom of expression, which occasionally resulted in the closure of media outlets and the seizure of equipment. Moreover, it was also noted that the quality of content produced was affected because journalists are overloaded with work and thus is forced to take shortcuts, which will affect the quality of their work. However, the author

still pointed out that non-media professional, such as Comics and notables who are employed in Uganda's media, because it believed by media owners that they could attract a large audience.

Cameroon and Uganda are both Africa countries facing problems in relation to press freedom. Moreover, these countries operate in the same media landscape in Africa where press freedoms threaten.

According to Mohale (2018), press freedom is a valuable justification for advancing the public interest through the publication of facts and viewpoints, as without it, a democratic electorate is unable to form responsible opinions, which is a crucial component of democracy's internal force and dynamism. In light of this, the author conducted this study using case studies from Western nations in order to investigate the function of press freedom in effective government. Additionally, a case study approach was employed to examine the function of press freedom in government effectiveness as well as secondary data from peer-reviewed journals, newspapers and books, and many other sources. In addition, the study also obtained pieces of information from the Pew Research Center.

According to findings from the Pew Research Center, the perceived state of press freedom varies widely across Western countries. And showed a popular dissatisfaction with democracy in selected Western countries. According to the analysis, Greece, Sweden, the US, and Argentina have the highest levels of support for free media. However, as in other countries, less than half of those surveyed believe that the media should not operate under government and state censorship in their country. It was also revealed that freedom of the press has negative implications for government effectiveness. This means that freedom of the press is necessary but insufficient for Western nations to have efficient .Therefore; the government should protect citizens from excessive media abuse through defamation laws.

In effect, the study served as a rich literature review for the one that was carried in Cameroon on the challenges facing press freedom. However, both studies are linked in the sense that they both discuss the same concept in two different contexts making it an invaluable data for future researchers on the field of media studies.

According to Balasuriya (2023), democracy is crucial to the establishment of a society that guarantees people's freedom, human rights, and social welfare. According to this viewpoint, the media is an important informational resource that can help a democracy run smoothly. The author therefore started the study with the intention of examining the coexisting challenges to media and democracy in Sri Lanka from the perspective of young citizens because there was a dearth of empirical research on these issues from the perspective of citizens. In line with research objectives, the author employed a sophisticated theoretical framework based on capability theory and Hasebrink's idea of "users as citizens" to comprehend the viewpoints of citizens regarding the difficulties facing press freedom in Sri Lanka. Additionally, 16 young people from the Gampaha district of Sri Lanka participated in semi-structured face-to-face online interviews in addition to a case study approach using a purposive sample selection. Thematic analysis was also used to analyze the collected data

The study's conclusions showed that spreading false information on social media platforms, news streams, and television channels in Sri Lanka can have negative effects. These include the spread of conspiracy theories, fake news, gossip, provocative material, and the promotion of political agendas. Again, the author identified how the majority of the media, politicians, and their allies used fictitious Face book profiles to make statements that could upset democracy. Furthermore, the majority of those surveyed contended that Sri Lanka's ongoing political turmoil had resulted in harassment and media censorship, to the point where public confidence in democracy and the media had all but collapsed.

Sri Lanka is a developing nation like Cameroon where democracy has suffered due to bad governance. In this guise, this study was an invaluable literature to the research that carried on the challenges of press freedom in Cameroon.

Nyenty (2013) pointed out that the accessibility of mobile devices such as smart mobile phones, ordinary people, technically known as "crowds", assist traditional media in gathering news which was done through photos, audio clips, video incidents and the reporting documents sent to traditional media through tweets, emails and text messages. It was against this back drop that the author initiated this study with the aim of evaluating the method used by mainstream media in Cameroon in crowd sourcing to report on issues affecting democratic governance and those they would otherwise not be able to cover without the cooperation of the "crowd". To achieve the research objectives, the author used in-depth interviews with editors, publishers and senior journalists from traditional media agencies.

Findings from the research revealed that the existence of corruption makes the collection of information very difficult and as such journalists are often denied access if they are perceived to be investigating corruption-related issues. Moreover, the research also pointed out that editors were under increasing pressure to reduce costs for investigative reporting while journalists on the other hand suffered constant surveillance and threat, with risk of physical violence. However, the interviewed journalists claimed were the cause of scarcity of most important investigative stories. In this guise, the author agreed that crowd sourcing was the best method to fill the gaps left by traditional media, because if properly resourced, journalists could avoid been harassed.

Cameroon is been ranked 172 over 180 according the world press index thus implies that the problem of press freedom is an urgent call of concern in the country. Hence, this study provided important literature to that was

carried on the challenges facing press freedom in Cameroon. However, conducted in the media landscape provides an in-depth knowledge on the media practice in the country.

A study on the difficulties facing investigative journalism in Nepal was started by Regmi (2019) aiming to investigate the difficulties and experiences faced by investigative journalists employed by Kantipur Daily, Nagarik Daily, and Nayapatrika Daily, three distinct print media outlets. In order to accomplish the research goals, the author spoke with ten informants in-depth about the difficulties and experiences they face as well as the methods they employ when conducting investigative reporting. Furthermore, the investigative journalism Smear model was used to analyze the data collected and its results.

The study's conclusions showed that three main obstacles to press freedom in Nepal are the lack of a dedicated investigative journalism office in the media, a lack of funding for investigative journalism, and deadline pressure for investigative reporting. Investigative journalism in Nepal has also been impacted by the influence of media commercialization and alliances with interest groups. Once more, it was discovered that investigative journalists reported for their own gain; the editorial and media management teams do not give them instructions or direction on what topics to cover in their investigative reporting. Moreover, resources are linked to how a media organization arranges its journalistic endeavors as well as the pay they receive. Furthermore, it was also discovered that one of the biggest obstacles facing investigative journalism was the lack of information. Under this guise, government agencies, departments, ministries, and administrative agencies were considered information centers in Nepal; investigative reports are prepared based on in-person meetings with stakeholders, data analysis, and documents (annual reports and newsletters, press releases) of organizations involved.

Nepal is known to have one of the worst governments with persistent corrupt practices thus hindering press freedom so this study served as a literature to the one that was carried in Cameroon.

### **Theoretical framework of study**

Due to the fact that the social responsibility is a relatively new concept that emerged in the middle of the 20th century and is primarily used in developing and least developed countries, it was used. This theory had its roots in Europe, and the Press Freedom Commission of 1949 brought it to the United States. The notion of social responsibility was reinterpreted by Siebert et al. (1956) as the theory that promotes complete freedom of the press and no censorship, but it should be governed by social obligations and outside controls. In this guise, Babarinsa (2003) argued that Social responsibility of the press requires a tight relationship between four main State holders that is executive, the legislature, the judiciary and indeed, the mass communication. Moreover, Alliance (2019) commented that social responsibility is ethical nature thus implies that individuals are obliged to fulfill this civic right and in return its actions should have a positive impact on the entire nation. Again, this theory is believed to have redirected the role of media which is that of been productive and innovative Baran and Davis (2009). Moreover, the authors commented that the media should also engaged in promoting cultural diversity as well as speak for the voiceless. It should also be noted this theory replaced the libertarian theory with the view that libertarianism was outdated even though it also included some aspects of authoritarian theory. However, the media industry is now much more professional thanks to this theory. Furthermore, this theory permits unrestricted press freedom; however, it also advocates for open discourse on report content and the exemption of the media from public scrutiny, professional self-regulation, and accountability for either. Furthermore, Siebert et al. (1956), the social responsibility theory lies halfway between authoritarian and libertarian theories because it permits total media freedom while also allowing for outside control. Press ownership is private under this guise. The concept of social responsibility goes beyond "objective" or "factual" reporting to include "interpretive" or "investigative" reporting. The Press Freedom Commission stated that "facts are no longer being truthfully reported, but are being reported with the necessary analysis or interpretation accompanied by clear explanations," even though the news is complete and truthful overall. In addition establishing a high standard of accuracy, truth, and information, this theory effectively contributed to the development of professionalism in the media industry. Additionally, the Press Council Committee was able to take on responsibilities pertaining to media social responsibility, including creating a press code of conduct, raising the bar for journalism, defending the rights of journalists, and denouncing and punishing journalists who break the code. Under similar circumstances, Moemeka (1991) contended that the social responsibility theory overemphasizes the moral and social obligations of the people and institutions that control the mass mediation, Siebert et al. (1956) contended that the obligation. Additionally, they concur that the foundation of a self-regulatory code is the idea of ethics, which is a moral philosophy that addresses standards of appropriate and inappropriate behavior as well as actions. Again, Okunna (2003) highlighted that ethics is self-legislation as opposed to the formal or state legislation that defines law and is imposed from the outside. The basis for this theory and further elucidating the ethical aspects of the principle of social responsibility, such as the acceptance and fulfillment of specific social obligations as well as setting high professional standards of truth, accuracy, objectivity, balance, and information content, is (McQuail, 1987, p. 117), quoted in Okunna & Omenugha (2012). Furthermore, Bittner (1989) pointed out that while the theory gives the press the authority to criticize institutions and the government, it also requires the press to uphold fundamental obligations to social stability.

Hence, the decision for choosing the social responsibility theory for this study is due to the fact that, it is one of the best of normative theories and makes journalists accountable for all published material and the press freedom must come with a certain amount of responsibility. Therefore, he or she must take social responsibility for the environment in which he or she works. In this guise, the study which has for objective to study the challenges of press freedom in Cameroon has good match with this theory since, it emphases on journalists and their responsibility as well as media censorship.

## **METHODOLOGY**

The methods and procedures utilized in this study are described in this chapter, including the research equipment, study population, sampling technique, sample size, and methods for gathering and analyzing data. Hence, setting the parameters for the study and doing data analysis depend heavily on the research methods used.

### **Research design**

A study design, according to Campbell (1998), referenced in Tejumaye (2003), is the plan or research framework that is utilized to gather and examine data sets. Furthermore, a survey's structure is determined by Asika (1991) survey design, which aims to identify variables and their relationships. The study employed a qualitative research methodology in this capacity. On the other hand, culturally specific data regarding values, beliefs, behaviors, and individual experiences can be best obtained through qualitative research (Mack 2005). In this study, an exploratory research design was chosen because the researchers sought to investigate challenges to press freedom by gathering information directly from study subjects. In-depth interviews were conducted using a qualitative method based on research questions. Its objective is to ascertain the obstacles that journalists encounter concerning press freedom in Cameroon and to pinpoint potential remedies for the problems that journalists have identified and implemented.

### **Sample size**

The total number of elements in a given environment is the study population. Accordingly, a study population is a collection of individuals, things, or occasions that a researcher has specifically chosen to study, usually in order to gather information required to address a specific issue (Chinaka, 2006). With a population of about 30 million, Cameroon is home to over a thousand journalists who cover the country for both government and private media outlets. 15 journalists, both public and private, were selected for the study population in light of this investigation.

### **Sampling technique**

A sample is an item from a population that is thought to be representative of the entire population; sampling is the act, process, or technique of choosing an appropriate sample (Tejumaye 2003). According to Tejumaye (2003), quoting Sobowale (1983), sampling is done so the researcher can select a subject, item, or respondent from the population to represent that population. And the sampling method used was the non probability method which entailed choosing the participants or samples in order to gather data for a particular study is known as the sampling technique (Chinaka 2006). In regards to the study a purposive sampling technique was chosen, and this was because the study had for respondents' private journalist working for private press organs in Cameroon. And the sample population was 15 journalists from the following private press organs in Cameroon: Cameroon Tribune, Eden Newspaper, Guardian Post, Cameroon express, and The Sun Newspaper, Le jour Newspaper, Le Messenger, Le Popoli, Cameroon weekly, The Herald, Mutation, and La nouvelle expression.

### **Research Instrument**

Measurement tools, such as scales or questionnaires, are called research instruments and are used to gather information from research subjects about a particular subject of interest. A structured interview was used in relation to the study's objectives.

### **Data collection technique**

Data pertaining to the research question were gathered through an in-depth interview. To find out what journalists thought about press freedom in Cameroon, to look into their problems, to find potential solutions, and to determine what steps the media should take to improve press freedom in Cameroon. A Coordinated interview appointments was initiated with respondents. The interview used an online procedure through a Skype and whatsapp video call. The interview guide served as a map throughout the interview session, the respondent's data was also recorded, the interviews were transcribed, and finally qualitative data analysis was used to determine the meaning of the interview transcripts.

#### **3.6. Data analysis**

The study employed qualitative data analysis techniques to examine the information gathered. The objective of analyzing qualitative data is to find new concepts, themes, patterns, and insights (Patton, 2002). Data

interpretation was performed using the qualitative data processing, analysis, and interpretation software developed by Nvivo. Hence, the software helped in providing tools to categorize, sort, and organize data, as well as organizing, analyzing, and visualizing mixed media and unstructured information. However, it also aided in identifying themes and patterns.

### **Media organizations**

In this sub section, information on the selected press organs was given. In the guise of the research, a total of twelve (12) press organs were chosen with seven (7) from the English and five (5) from the French part of Cameroon.

#### **Cameroon Tribune**

It is a well-known newspaper in Cameroon which can be found online as well. It is government press. The Société de Presse et d'Éditions du Cameroun (SOPECAM) founded it in 1974. The nation's lone daily newspaper was the French version. Currently based in Yaoundé and Douala, the press organ publishes daily information about the social, political, and economic affairs of the nation. Because it is the only government-owned news organization in Cameroon, it was selected for this study.

#### **Eden Newspaper**

Eden is a newspaper published in Mile II Limbe, Cameroon, in English language. Senior Journalist Zachee Nzohngandembou published it on behalf of the non-governmental organization CERUT (Centre for Rural Transformation). Eden was established in 2004 and has been published on Mondays and Wednesdays for the past two weeks. His writings included numerous reports from other nations as well as a thorough analysis of Cameroon's entire national triangle. It is the English press that publishes the most in Cameroon. Additionally, two journalists from this press outlet were selected to be interviewed for the study.

#### **Guardian Post**

The Guardian Post, with headquarters at Tam-Tam -Yaoundé, has been existing for seventeen uninterrupted years. Created since August 30, 2001, 90% of The Guardian Post staffs are former Editorialists, Desk Editors and Reporters of The Herald Newspaper which was the first daily private Newspaper in Cameroon. With a print-run of 7000 copies, The Guardian Post has an ever-increasing readership; spread in all of the country's ten regions. The newspapers distribution company does about 25% of our circulation especially in the Francophone towns while the bulk of the Newspaper's distribution is directly handled by our vibrant Commercial Service. The Commercial Service of the press organ is charged with widely- circulating The Guardian Post in the following towns in the North West Region: Bamenda, Bali, Mbengwi, Ndop, Jakiri, Kumbo, Ndu, Nkambe, Wum and Santa Sub divisions. In the South West Region, The Guardian Post is widely-distributed in Tiko, Mutengene, Limbe, Buea, Muyuka, Kumba, Tombel and Mamfe in Manyu Division. It makes meaning to know that Anglophones of all walks of life have easily identified themselves with The Guardian Post not only because it is the lone English Language daily in Cameroon but more so because of the manner in which the Newspaper covers and reports on issues that greatly affect the lives of Anglophones. Statistics are there to show that The Guardian Post is not only the best-selling English Language Newspaper in Cameroon but is read like a Bible especially in the North West and South West Regions. Moreover, the main subscribers to this press include: Diplomatic Missions in the country, the President of the Republic, the Senate, the National Assembly and the Prime Minister's Office, the Ministry of Finance, CONAC, FEICOM and a host of other Ministries. Again, The Guardian Post also has a large readership; is made up of the large Nigerian community in Cameroon, thanks to a page that regularly broadcasts on News from Nigeria. In respect of the study two journalists were as well chosen as participants for the interview.

#### **Cameroon Express**

Founded in July 2009, The Cameroun Express is an online newspaper for Cameroonians. The newspaper is based in Bafoussam and delivers publications twice a month. And the publications are solely done in French.

#### **The Sun Newspaper,**

Established in 2006 with Ministerial license number: 930/G37/L9/1/Vol 9/T/OAPP, Cameroon Sun Newspaper is one of the main English-speaking newspapers in Cameroon. With headquarters in the coastal town of Limbe-SWR Cameroon. The media organ is engaged in publishing reports on Business politics, crime, sports entertainment, education within the country and the outside world.

#### **The day Newspaper**

The day is a Cameroonian daily newspaper founded on September 17, 2007 by Haman Mana, its publishing director. Its editorial line is presented as a daily newspaper for dummies with a section that gives readers a voice.

Moreover, the day is a private daily newspaper which is engaged in processing and publishing general information with head office in Yaoundé. The media organ employs around twenty journalists within the organization.

### **Le Messenger**

Created in 1979 stands as the oldest private newspaper in both the English and French Cameroon. The press organ is based in Douala and Bafoussam. Le Messenger covers Cameroonian and international news, politics (including news on the Cameroonian government), business and sports. According to Report without borders (2009) revealed that founder of Messenger had been arrested 126 times in 30 years.

### **Le Popoli**

The Popoli Express is a Cameroonian satirical newspaper created in 2003, almost entirely written in comic strip form. The newspaper is based in the economical capital of the country and is fully engaged in delivering comic news. Moreover, the newspaper is made up of editors and graphic designers dedicated to covering current events.

### **Cameroon weekly**

Created in 2012, the Cameroon Weekly Newspaper is one of the only bilingual papers printed weekly in Cameroon with a connection with Cameroonians and the African diaspora. Moreover, the press organ prints up to 100,000 readers from Cameroon, Africa, and Cameroonian expatriates, and 100,000 copies sold with offices in London, Paris, New York, Yaoundé, and Douala. The newspaper is the best source of up-to-date and relevant information.

### **The Herald,**

The coming of multiparty in the 1992 marked the creation of the Herald newspaper. The press organ is based in the political headquarter of Cameroon and publishing three times a week. It was the first private press organ with 7000 copies daily.

### **Mutation**

The mutation newspaper was created in 1996 and later ban in 1997 only one year of operation due to political squabbles. It is based in the political headquarter of Cameroon. The newspaper delivers publications five times a week. In 2001 the publication director of Mutation was placed under pre trial because of an investigation that was related to the government. And in 2008, the newspaper produced 10,000 publications.

### **La nouvelle expression.**

La Nouvelle Expression is a French-speaking Cameroonian daily general information newspaper created in 1991 by Séverin Tchounkeu. La Nouvelle Expression informs and deals with current issues in Cameroon by providing reliable and useful information is a commitment specific to New Expression. Written in French, this newspaper appears from Monday to Friday. Moreover, la Nouvelle Expression is available in all newspaper outlets in Cameroon in cities like Douala, Yaoundé, Garoua, Maroua and many others.

## **FINDINGS AND DISCUSSION**

This section of the study depicted, the results of the in-depth interviews conducted with the 15 journalists from both the private and public press organs and the following survey questions guided the study.

1. In your esteemed opinion, what are the challenges facing press freedom in Cameroon?
2. In your opinion, is the communication law of 1996 effective both in theory and practice?
3. As a journalist, what are the coping mechanism or measure you put in place to carry your job efficiently?
4. What do you think about the role played by the Cameroonian government in promoting press freedom in Cameroon?
5. What do you think about the future of modern Journalism in Cameroon?
6. As a professional in the field, what are the possible solutions for a free press in Cameroon?

All the fifteen (15) journalists were available for the interview and this was conducted in the month of July, August and September 2023. And as stated in the methodology, they were chosen from 12 press organs operating both in the private and public media sector in Cameroon. As per the data collected the transcription was done by the researcher. According to "Ezzy (2002), cited in Morris (2015, p. 122)," the researcher's act of transcription allowed him to become thoroughly acquainted with the interview guide's content and evaluate any gaps as well as the inadequacies and potential improvements for the interview techniques.

### Demographic information of respondents

The identities of study participants were safeguarded by using codes for respondents and their various media platforms in accordance with ethical requirements regarding respondents' codes of confidentiality and anonymity (Morris, 2015). In the study, there were 12 males respondents and two (3) females respondents. In this guise, researcher proceeded with a codification method that identified each respondent as R while the different media organs were represented by an acronym of their operating name.

**Table 1.1: Overview of Interviewed Journalists**

| Media organs           | Platform code | Respondents codes | Number of respondents | Date of interview | Interview medium | Duration | Years of experience |
|------------------------|---------------|-------------------|-----------------------|-------------------|------------------|----------|---------------------|

### Answers to the research questions

The thematic analysis technique was used to present the results and it was done in relation to the research questions that were elaborated in line with purpose of the study.

**Research question 1:** In your esteemed opinion, what are the challenges facing press freedom in Cameroon?

Journalists in Cameroon faces a lot of problems related to press freedom, Hence, these problems or challenges are heavily felt especially on investigative journalists embarking on topics related to the Government. In this research, the following was identified as challenges facing press freedom in Cameroon: Government policy, Death threats, poor remuneration, physical attack, Access to information and intimidation. And the journalists that were interviewed had this to say. Hence, it was revealed that 8 of the 15 journalists that were interviewed vividly agreed to the fact that the government in Cameroon poses enormous barriers to press freedom.

On this note, a journalist stated:

...The government has suspended a number of journalists for disclosing material that appeared to be threatening to the government. I believe that in a democratic society such as Cameroon, journalists should be able to write about societal concerns that require attention... (Journalist REN 15/07/2023).

Still in same light another journalist indicated that ... The Government imposes threat on censorship on information before broadcasting... (RCE 26/07/2023).

Moreover, another journalist stated ..... Government authoritative rule over the national media and misinformation by the national media on the current happenings within the country, because it has been controlled by the ruling party... (RPL 25/08/2023)

Again, access to information was revealed as one of the challenges facing press freedom in Cameroon. In this guise, 6 of the 15 journalists interviewed supported the fact that access to information is one of the greatest challenges faced by media practitioners in Cameroon.

A journalist stated:

...Access to information is also one of the greatest challenges of journalism practices in Cameroon. Especially information from the public sector... (RCW 1/09/2023).

Moreover, another journalist quoted:

... Secondly access to information. Hostile environment often restrict journalists to Access to accurate and reliable information making it difficult for the journalists to gather facts and reports objectively... (RJN 4/08/2023).

Still in the same light, a journalist also stated:

...There is no freedom of speech as regards to journalism in Cameroon. For example since the Anglophone Crisis journalists are banned to report current or firsthand information to the public and in the cause of exposing any information to the public, it either leads to their death or imprisoned...(RSN 31/07/2023).

Poor remuneration was identified as one of the challenges faced by journalists in Cameroon. On this note, 2 of the 15 journalists interviewed agreed that the financial situation of journalists in Cameroon poses a lot of problems to their activities.

A journalist stated:

... The press in Cameroon encounters enormous difficulties, both structurally and politically. The policies which manage the media do not put the journalists in the optimal conditions and do not pay them from where the work of the journalists on the ground is difficult... (RCT 8/07/2023).

In this guise another journalist also quoted:

...when I graduated from university with a BA in Journalism , I worked for a press organ for six months without salary and after the six month , I was able to received my first pay package that amount to 50,000FCFA that is 100\$...(RGP 24/07/2023).

Intimidation and threats was also revealed to be one of the challenges faced by media practitioners especially those working in the private sector. And this intimidation comes from two sources the government and owners of press organs. Moreover, 10 of the 15 journalists interviewed affirmed that intimidation is one of the challenges faced by the journalistic profession in Cameroon.

On this note a journalist stated:

... Press freedom in Cameroon is authorized by the law of 1990 but however, the freedom itself is permitted by what comes after publication. There is still no immunity for media practioners, punishment for publishing information, Moreover, the job itself exposes media practitioners to risks and harm...(RCW 1/09/2023).

Another journalist stated:

... Journalists are bound to report some news and not all. This is because of the fear of detention in reporting on the ills of the government... (RLP 25/08/2023).

Moreover, a journalist also commented:

... Journalists often face intimidation and harassment from various actors including government officials, criminal organization or individuals with vested interests. These acts can range from verbal abuse and threats to surveillance... (RM 19/08/2023).

Again, it was also stated by another journalist:

...Journalists as a whole perform their duties under pressure and fear of the unknown. For example the journalists might have first hand information to give to the general public but fear of what might happen to him or her life after releasing such news cause them to sit and stay quiet, and some have been bribe not to give such news thereby leading to false or fake new... (RSN 31/07/2023).In another quote, it was stated by a journalist:

... No, journalist are not allow to report exact information from the field as collected .Reasons being that it exposes most hidden agenda and reveals a lots of secrets to the public that has been preserved by government officials...(RCE 26/07/2023).However, another journalist stated:

... Journalists work a lot on pressure and are sometimes forced to modify the content of their paper because of the constraints of politicians and media bosses... (08/07/2023).

Moreover, Journalists in Cameroon under the watchdogs of those who dictates their activities. In this guise, a journalist stated:

... I believe that journalists in Cameroon do their professional tasks under pressure to some extent. Journalists are not permitted to share certain information about the country and government that is meant to be made public due to personal avarice and desires on the part of people in control. As a result, most material provided out by journalists is redefined and altered by people in authority, causing journalists to fail to do their duties successfully. Furthermore, most journalists who attempt to divulge critical material that may not have been favorable to the administration were warned. All of these have contributed to journalists being under pressure while performing their duties... (REN 15/07/2023).

## **Research question 2: In your opinion, is the communication law of 1996 effective both in theory and practice?**

The 15 journalists interviewed for the study all agreed that the law of 1996 do exist but believe it is more in the theoretical format than practice. In this light, a journalist stated:

... The law does indeed exist, these are texts but on the ground, it is another reality which is completely different from the texts of law. Journalists in the privately owned press are suffering enormously of which I am an example... (RCT 08/07/2023).Still in the same line, another journalist that was interviewed quoted:

... The Communication Law of 1996 in Cameroon has been subject to criticism and concerns regarding its impact on press freedom. While it may have certain provisions aimed at regulating the media industry, its

implementation and enforcement have raised questions about its effectiveness in theory and practice... (RGP 24/07/2023). Another journalist also stated:

... The law of 1996 is simply theoretical and not practicable. A country where journalists are killed every year like the case of Cameroon implies that there is no legal code binding the journalistic profession... (REN 15/07/2023).

Moreover, most interviewed journalists argued that with a communication law in country like Cameroon journalist should not have been going through torments. As stated by a journalist:

... Press freedom in Cameroon is not fully practice it is rest on theory because pressmen are detained, harassed, and even Shawn away to cover some events as was seen on the last dialogue meeting held in Cameroon about the Anglophone crises...(RCE 26/07/2023).

Moreover, to back this opinion, another respondent stated:

... No, because there is continuous harassment and torture of journalists this law is in words not practical. Moreover, the content of the law is good even though needs amendment but I think if practiced at this stage it could have been better for the journalistic milieu...( RM 19/08/2023). However, another journalist quoted:

... The Communication Law of 1996 only grants authorities' broad powers to regulate media activities, including licensing requirements and content restrictions. Hence these provisions have been criticized for giving the government excessive control over media operations and limiting freedom of expression... (RGP 24/07/2023).

### **As a journalist, what are the coping mechanism or measure you put in place to carry your job efficiently?**

After the exploration of the collected data, it was revealed that the following were identified as the main coping mechanism used by Journalists in Cameroon: Self censorship, Respect of journalism code of ethics, encouraging professionalism in doing the job, Security, avoiding fake news, censorship of information before publication, hiring of independent informants in communities where the roads are bad and also side hustling as stated by a journalists complained of not been well paid. In this guise a journalist stated:

... I try to self censorship myself and also avoid fake news... (REN 15/07/2023).

Still in the same light, another journalist also quoted:

... Due to bad road and poor infrastructure, I cannot get all the information I want so am forced hire an informant despite my little salary in communities where I can't reach all these because the government does not want to construct roads in most communities...(RSN 31/07/2023). As revealed by the study, journalists in Cameroon are poorly paid and some even works as volunteer just because they want to big their career portfolio. In this guise, another journalist stated:

... As a journalist, in order to do my job efficiently, I have to do side jobs. Currently, I give French and English lessons to children from where I will receive my pay at the end of August. In addition, I have to do an interview with an expert who can pay me at the end of the work. I write articles for my magazine from where I receive money from my Mobile Money account. This is how we juggle because we do not receive salaries in the press where I work... (RCT 08/07/2023).

Still in the same light, a journalist also quoted:

... Journalists in Cameroon are to be assign optimum security provided for their safety to carry on their work effectively... (RCE 26/07/2023). Moreover, it was also quoted by another journalist:

... I stick to the ethics of the profession and stay professional despite the presence of restrictions... (RLP 25/08/2023).

Again, another journalist stated:

... Well, just as I mentioned earlier in other not to run into problem which will be unable to manage, it is simple we the journalists in Cameroon have learnt to first of all censor ourselves. You need to censor the information before publishing it. At the level of our media organs we also have restriction on what we are to publish. And based on this, we are able to vindicate ourselves from harm... (RCW 01/09/2023).

### **What do you think about the role played by the Cameroonian government in promoting press freedom in Cameroon?**

14 out of the 15 journalists interviewed affirmed that the government of Cameroon is doing nothing to promote press freedom but instead wiping out its existence in the Country. On this note a journalist stated:

... The government does not play an effective role for the press since the privately owned press survives in Cameroon. The budget allocated for the press is insignificant and meaningless. I think these policies are trying to put journalists in miserable conditions to better martyr them... (RCT 08/07/2023).

Still in same light, another journalist quoted:

... No way, there are a lot been faced by journalist and journalism as a whole. Press freedom is accepted in Cameroon as a purpose to track down pressmen from much in-depth info they undercover in fact they are been use as a facet to understand and know deep things that are not publicly reveal. Sometimes they are been watch by secret agents to track them down with vital handy information. Sincerely the government in Cameroon is making

very little efforts promoting press freedom even though it seems supportive but its propaganda full of corrupt practice...(RCE 26/07/2023).

Moreover, it was also quoted by another journalist:

... The government of Cameroon is not doing anything in promoting press freedom in Cameroon. There is no freedom of speech, movement making the country to be backward and stagnant... (RSN 31/07/2023). But another journalist believed that the government should not be the only actor in promoting press freedom and the fact that a law on communication exist within the country is not a bad. He quoted:

... Well, the law has stated it but there is lack of clarity but Cameroon has open part of the gate, however, the government is that institution that gives out the goat and holds the rope. No media organ is free as to say because the resources to practice as an independent media organ are very tiny. Also just the fact that you must rely on the government to function you have to just pull the line and go according the terms of government. The government is doing very minimal and it is very limited as compare to what is expecting to be press freedom in the country... (RCW 01/09/2023).

### **What do you think about the future of modern Journalism in Cameroon?**

In relation to the collected data, it was revealed that 12 out of the 15 journalists interviewed affirmed that there a future for modern journalism despite the challenges facing press freedom within the country. On this note, a journalist stated:

... Of course, I mean there is nowhere in the world that journalism should be considered a death job. There is future and also media practitioners are knowledgeable about the lapses and gaps and a researcher like you is also aware of the weaknesses around our media landscape and as such continue to address this issues, and continue to plead for policy change, media practices and treatment of journalists, it gives me hope that there future for the practicing of journalism in Cameroon in the future more and more peoples are gaining interest in practicing journalism. And as such universities continue to expand training courses in the field of journalism. Moreso; there are also master classes in journalism... (RCW 01/09/2023).

Still in same light, another journalist quoted:

... Definitely especially digital journalism. That is going with the changing trends to report news online... (RLP 25/08/2023). Again, another journalist commented:

... Yes of course with the collaborations with other foreign organizations and the usage of modern technologies and facets set in place to exercise their duties... (RCE 26/07/2023). Moreover, it was also quoted by a journalist:

... Yes, if things change and the government is willing to allow journalist feel free to report information necessary for the general public... (REN 15/07/2023). Still in the same guise, other interviewed journalists categorically rejected the idea of a modern journalism in Cameroon. And a journalist quoted:

... There is no future regarding journalism in Cameroon, first of all discouraging youth's to be journalists, no freedom of speech and expression... (RSN 31/07/2023). Another journalist also stated:

... No, I don't because the government is doing nothing to encourage the profession which many feel reluctant to venture into... (RJN 04/08/2023). Still on the same light, a journalist commented:

... No, who will want the brother or sister venture in such profession which will become their early grave I don't but if the government and international organization encourage or promote project towards this area it will be great and also the involvement of social media will also develop the modern journalistic sector in Cameroon... (RM 19/08/2023).

### **As a professional in the field, what are the possible solutions for a free press in Cameroon?**

From data collected, it was revealed that 15 journalists interviewed in relation to the study share an optimistic point of view for the possibility of a free press but outlined certain conditions which they deemed important for the smooth functioning of a free press in Cameroon: Access to information, a favorable political system, Good economic reforms for media sector, professionalism of journalists, implement a security policy for media practitioners, Reviewing and amendment of the 1996 law on Communication in Cameroon, Less government intervention in the management of press organs in the country. On this note a journalist quoted:

... If the press is to be free in Cameroon, there must be a favorable political system for the smooth running of the press, a beneficial economic system for the media sector and above all a balance between the professional and academic training of students in journalism, in communication and the realities on the ground... (RCT 08/07/2023).

Still in the same guise, another journalist stated:

... There should be a reviewing and amending of the 1996 legislation to ensure it upholds freedom of expression and press freedom principles... (RGP 24/07/2023). Again, a journalist also shared its view and commented:

... First, an enabling atmosphere for press freedom must be established. The government must ensure that policies and guidelines governing press freedom meet international and domestic norms. Next, it must be avoided that journalists be murdered by authoritarian regimes in order to curtail journalistic freedom. Furthermore, legislation governing the dissemination of material on social media and online places must be

consistent with international human rights norms... (REN 15/07/2023). Still on the same line, another journalist expressed its view and quoted:

... The laws that binds this movement of press freedom should be review and be enact in practice with serious observations on measures been put in place, Security measures that protect and portray a free press environment should be install and legalized with recognitions from the law as a measure to have an effective work that led to proper dissemination of information thoroughly... (RCE 26/07/2023). Another journalist agreed that the government is the sole actor and responsible for a free press in Cameroon. And he stated:

... The government has a major role to play in putting in place laws and providing an enabling environment to enhance press freedom... (RLP 25/08/2023). Still in the same light, another journalist expressed its point of view and quoted:

... A free press is that which guarantee quality of information at the right time. It's the one that is independent and need to practice without government influence and also have profession base. So if we have all these in our environment Cameroon will be considered a hub for journalism practice... (RCW 01/09/2023).

## DISCUSSION

Results from the study revealed that government policy, death threats, poor remuneration, physical attack, access to information and intimidation were the main challenges faced by journalists in Cameroon. This is in correlation with a study carried by Apuke (2016) on the challenges of press freedom in Nigeria that revealed numerous underlying issues preventing people from reporting in Nigeria press freedom and these includes confidentiality, legal pressure, heavy censorship, and violence. Again, it's also pinpointed the fact that press freedom in Nigeria is paradoxical and simply exists, thus implies that the act of press freedom only exists in writing but absent in practice. Still in the same light, the study carried by Hussain (2019) connected with the study that was carried in Cameroon on the challenges of press freedom on basis that censorship exists in a veiled form, which undermined the ethical standards of the press's content, within the press freedom context. And also the fact that owners of news organizations and journalists of non-professional affiliations faced numerous threats. Again, government policy was revealed to be one of the main reasons why press freedom in Cameroon is at lockdown. On this guise, Repucci, (2019) also pinpointed out barbaric act of Cameroon's government blocking internet access in unstable English-speaking nations as a violent response to growing demonstrations and riots brought on by years of discrimination against minorities in the English-speaking majority. Poor remuneration was identified as one of the challenges facing press freedom in Cameroon. In this light, a study carried by Amabo (2015) also illustrated in one of his reports, the fact that Cameroonian journalists face deplorable conditions, including low salaries of around 48,459 Central African francs (\$80) per month, even after a one-year probationary period, and many work without contracts. Again, Regmi (2019) in a study conducted in Nepal also affirmed that lack of funding for investigative journalism was one of the main threats faced by press freedom in the country. However, results from the study was in accordance with the study carried by Elvis(2020), which revealed that the Cameroonian government effectively enforces, monitors, and controls information to the detriment of press freedom by utilizing a combination of administrative, executive, and legislative structures and institutions as well as law enforcement (military intimidation, torture, and harassment). It was also asserted, though, that in addition to government intervention through the aforementioned institutions, there is now a climate of fear and panic. And also the fear of publishing which could result in extinction at the hands of the military, rendering news reporting and journalism untrustworthy. Moreover, access to information was revealed to be a great challenge to journalists operating in Cameroon. In the same light, Svernlöv (2020) pointed out that accessing government information by journalists operating in Ethiopia was one of the obstacles the media landscape was facing in relation to press freedom.

Moreover, results from findings revealed that the 1996 communication law was more theoretical than practical. Similarly, Apuke (2016) also pointed out the fact that the communication law in Nigeria is more in writing than in practical. In this light, laws in Africa are functional only in writings but passive in practical. Still in the same light, Ahmed (2013), in a study carried in Somaliland revealed that the legal framework for the media in Somaliland needed to be given careful consideration by public and private actors, such as the government, lawmakers, media owners, the private sector, and the community, as it is the only safeguard against potential malicious interference with the media from these sources and also prevents public and private media actors from abusing their power and violating the rights of others. Self censorship was revealed by the study to be one of the coping mechanisms used by journalists in Cameroon. On this note, Okong'o (2020) in a study confirmed that those in positions of authority such as politicians, media owners, advertisers, and governments forced journalists in Kenya to practice self-censorship. The results are also in line with the study conducted by Reporter without borders (2021) that revealed the fact that Cameroonian journalists are persistently vulnerable to the danger of a verbal or physical assault, detention, censorship, and even homicide. Concerning the legal framework which was criticized by many of the journalists interviewed of not been effective. Nyamnjoh (2005: 168-9) in a study also criticized the legal framework and called it outdated because it does not take into account freedom of expression and press. Moreover, the research participants all argued for the reviewing and amendment of the Communication law and this connects with Apuke (2016) that urged the guaranteed of free press with reference

to the Nigerian legal framework, and journalists giving access to government sources so as not to impede press freedom.

Still in the same light, it was revealed that the government in Cameroon is not doing anything to promote press freedom. This thus goes in line with Ewunetie (2019) which pinpointed the fact that the government in Ethiopia was not actively involved in the promotion of press law enforcement and the defense freedom of press and expression. As suggested by the journalists interviewed on the study of challenges facing press freedom in Cameroon, on the need for government participation in the promoting of press freedom in the country. Likewise Ewunetie (2019) in the study carried urged on the urgent need for the government to promote and foster press freedom by implementing a law that governs the press sector in Ethiopia. Still in the same line, the result from study also revealed that journalists in Cameroon used informants in communities where they could not access for information. However, Nyenty(2013) suggested in a study carried in Cameroon that crowd sourcing was the best method to fill the gaps left by traditional media, because if properly resourced, journalists could avoid been harassed. The lack of access to information from journalists is one of the hindrances to journalist activities as pinpointed by the participants. In this guise, (Berger, 2007) also pointed out that in Africa, media restrictions greatly affect and hinder freedom limits the performance of numerous media organizations and journalism. As suggested by the interviewed journalists on the redefinition of a political and economic policy for media sector in Cameroon. A study conducted by Alam and Ali Shah (2013) argued that economic wellbeing, foreign investment and good high level economic growth within the country is revealed that have a positive impact of press freedom within a country. Physical attack on journalists was revealed by the study to be one of the challenges faced by journalists in Cameroon. In this light, a study initiated by the African Journalist Federation (2010) revealed that attacks on journalists in Cameroon has deteriorated the condition of press workers within the country, and in this course, it is known for been number one oppressor of journalists on the African continent. Moreover, the results from the study revealed the persistent intervention of the government in the control of press within the country. As stated by Siebert et al. (1956) in the social responsibility theory complete freedom of the press and no censorship should be promoted, but it should be governed by social obligations and outside controls. This is in accordance with study because most of the participants interviewed believed that a free press can exist in the country if and only the government could stop censoring journalists. Again Okunna (2003) highlighted that ethics is self-legislation as opposed to the formal or state legislation that defines law and is imposed from the outside. The basis for this theory and further elucidating the ethical aspects of the principle of social responsibility, such as the acceptance and fulfillment of specific social obligations as well as setting high professional standards of truth, accuracy, objectivity, balance, and information content, is (McQuail, 1987, p. 117), quoted in Okunna & Omenugha (2012). In this guise, the research revealed that the journalists in doing their job in Cameroon try to respect the ethical code and stay professional.

## **CONCLUSION, LIMITATION AND RECOMMENDATIONS**

It is the concluding part of the study and englobes the conclusion, limitation of study and recommendations.

### **Conclusion**

This qualitative research had for aim to study the challenges of press freedom in Cameroon. The data was collected with the help of an interview guide that was administered to a number of journalists in Cameroon. In this guise, government policy, death threats, poor remuneration, physical attack, Access to information and intimidation were identified as the potential challenges faced journalists and press freedom within the country. In this light, more than half of the participants agreed that the above mentioned challenges gave a clear picture of the precarious situation they face in relation to press freedom in Cameroon.

Again, the study also had for objective to examine the 1996 communication law in Cameroon. On this note, the 15 participants all agreed on the fact that law was only on paper and not practical. They all believed with a law like that of 1996, press freedom should be guaranteed, journalists should have access to information and should not be harassed while doing their job. Still in the same light, it was also revealed that journalists in Cameroon to do their job effectively, they opt for strategies like self censorship, respect of the journalistic code of ethics, imposes professionalism in doing the job, avoids fake news, censor any information before publication, hiring of independent informants .

In effect, all the participants interviewed affirmed that the government is the biggest threat to press freedom within the country. They journalists claimed the government is not doing anything to foster the smooth functioning of press freedom but on the contrary, it's engaged in torturing, killing, attacking and imprisonment of journalists.

However, it was also noted from the study that press freedom could function smoothly within the country if certain conditions like: Access to information, a favorable political system, Good economic reforms for media sector, professionalism of journalists, implement a security policy for media practitioners, Reviewing and amendment of the 1996 law on Communication, Less government intervention in the management of press organs in the country are all taken into consideration. Nevertheless, modern journalism was believed to have a

chance in the country coupled with the fact that everything has gone digital but also requires the contribution of the government.

### **Limitations**

Study limitations, according to Price, James H., and Judy Murnan (2004), are methodological or design flaws that have an impact on or have influenced how study results are analyzed. In the course of the study, the following limitations were encountered:

1. The fact that the study used only the qualitative method was a bit of problem. Since dual research method could have ease the work. And also the collecting the data from Cameroon while in Cyprus was stressful for the researcher.
2. The mode of data collection was a problem since it was done online through whatsapp; this however limited a more depth responses from the participants.

### **Recommendations**

In relation to the findings, the following were recommended:

#### **Recommendations for the present study**

1. The Cameroon government needs to give accountability on its actions in relation to press freedom in Cameroon. In this guise, a national debate should be organized by the Cameroonian government inviting press men for a decisive talk on the issue of press freedom within the country.
2. The communication law of 1996 should be revisited and amended including innovations in the field of communication. This goes in line with the study carried by Apuke (2016) on the challenges of press freedom in Nigeria which suggested a review on the legal framework governing the media sector in the country. Still in the same light, Ewunetie (2019) also argued that the media law in Ethiopia needed review for press freedom to function well.
3. The role of international organizations in the fight for a free press in Africa should be intensified and follows a vigorous trend. In this light, these organizations should urge governments to release detained journalists and drop all charges. Moreover, they should assist journalist unions, organizations advocating press freedom, and civil society groups in their endeavors to ensure the safety of journalists.
4. Increase reporting and awareness about attacks on journalists. Thus implies that Media outlets ought to expand their coverage of assaults and intimidations by releasing not solely news bulletins, but also comprehensive analyses, commentaries, editorial write-ups, and documentaries.
5. Build regional multi stakeholder platforms for advocacy. To tackle the difficulties in advocacy that emerge due to the vastness and variety of the continent, various participants proposed creating regional, multi-party platforms that would include regional editorial forums, journalist organizations, civil society groups, and scholars.
6. The economic conditions of journalists within the country should be improved by so doing incentive should be provided to mitigate the expenses they endure in covering news.

#### **Recommendations for journalists**

7. Due to difficult situation faced by journalists within country, press workers within the country should continue to apply self censorship to avoid harassment and torture from the government.
8. Again, press workers should apply too much professionalism in doing their jobs so has to avoid fake news. Still in the same light, they should respect the ethical code of the journalism profession in the context of the country.

#### **Recommendations for future researchers**

9. The present study should be extended in other African Countries so has to have a deep insight of press freedom concept in the continent.
10. Again, a panel study could be carried on the same topic with the aim of doing a comparative analysis with other African countries.
11. Moreover, a mixed research method is suggested for future studies on this topic with the aim of a wide range of data.

### ABSTRACT

The article considers the main components of the critical information infrastructure (CII), examines the rules and the current law on ensuring the security of critical information infrastructure in the Republic of Azerbaijan. Based on them, a step-by-step scheme is built to identifying an information system, an automated control system or an information and communication network as an object of critical information infrastructure. The global experience in categorizing critical information infrastructure objects has been studied. An approach to categorizing critical information infrastructure (CII) objects has been developed for Republic of Azerbaijan and has been applied in a step-by-step scheme for identifying CII objects. The architecture of the register of critical information infrastructure objects is also proposed.

**Keywords:** Critical information infrastructure, object of critical information infrastructure, subject of critical information infrastructure, information security, threat, cyber risk, register of critical information infrastructure objects.

### INTRODUCTION

Critical Information Infrastructure (CII) is a set of information systems, automated control systems, and information and communication networks that support activities in essential areas, the disruption of which can cause significant harm to the interests of citizens, society, and the state. Effective management of CII requires careful analysis and categorization, which allows for assessing their vulnerability levels and developing adequate protection procedures. In the face of increasing threats, including cyberattacks and natural disasters, the need for categorizing CII objects becomes particularly relevant.

The aim of this article is to investigate the existing laws and other regulatory documents of the Republic of Azerbaijan to build a step-by-step scheme for identifying CII objects. And the development of an approach to categorizing critical infrastructure objects, with the intention of proposing it within the current step-by-step scheme. An in-depth analysis of this topic will help ultimately contributing to enhancing the resilience and security of critical information infrastructure in the current context.

### A Scheme For Identifying Objects Of Critical Information Infrastructure

The main components of critical information infrastructure (CII) are the objects and subjects of the critical information infrastructure. To simplify and clarify the interpretation of these concepts, the following illustration can be presented (Figure 1) [1].

In accordance with Chapter V-I of Article 20-2 of the Law of the Republic of Azerbaijan "On Information, informatization and information protection", the basis for considering an object as an object of critical information infrastructure is a violation of its functionality, which can lead to the following consequences:

1. the emergence of a threat of violation of the independence, sovereignty, constitutional order, territorial integrity and defense capability of the state, as well as significant threats to public security;
2. depriving the population of important guarantees as a result of disruption of the activities of governmental bodies (institutions), creating serious obstacles to the normal functioning of life support infrastructure, interruption of transport and communication links or significant restrictions on the provision of medical services;
3. violation of economic and financial stability, causing significant damage to the formation of the state budget;
4. violation of the ecological balance and a sharp deterioration of the environmental situation [1].

The above consequences cover the main 4 areas (Figure 2).

On the basis of the "Rules for ensuring the security of critical information infrastructure in the Republic of Azerbaijan", established by the Cabinet of Ministers of the Republic of Azerbaijan on July 17, 2023, the functions of the authorized body in the field of ensuring the security of critical information infrastructure in the

Republic of Azerbaijan are performed by the State Security Service of the Republic of Azerbaijan (State Security Service - SSS), in relation to state institutions, are carried out jointly with Special Communication and Information Security State Service of the Republic of Azerbaijan (Special Communication and Information Security State Service – SCISSS). The list of critical information infrastructure objects is approved by the Cabinet of Ministers of the Republic of Azerbaijan on the basis of proposals from the authorized body [2].

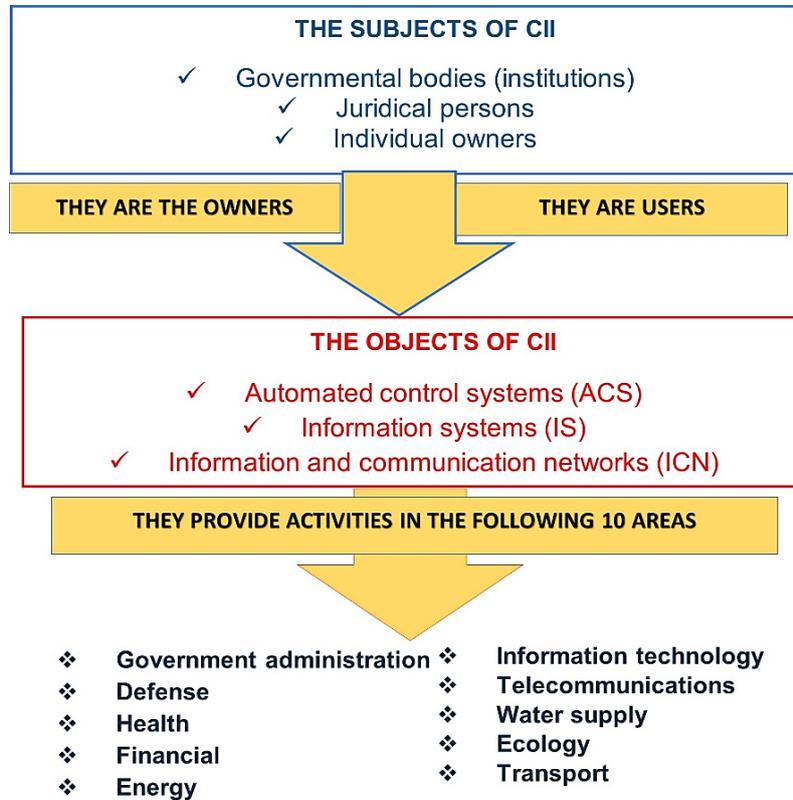

Figure 1. Components of CII.

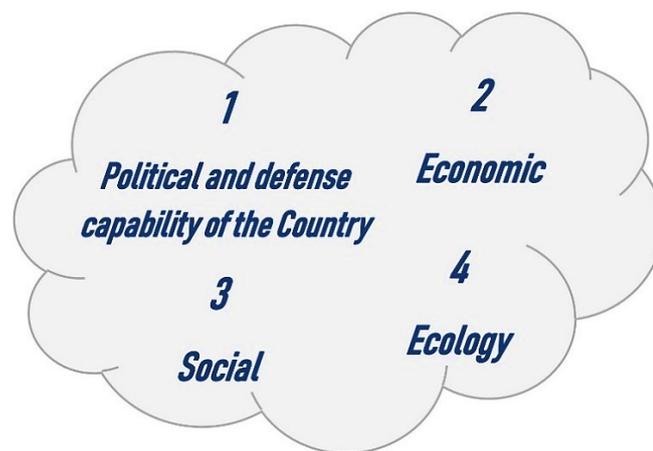

Figure 2. The basic areas of influence of the consequences.

In the Republic of Azerbaijan, the process of reviewing an information system, automated control system, or information and communication network as a critical information infrastructure object is also organized by the authorized body and includes the following stages:

1. The processes of activities conducted through information systems, automated control systems, and information and communication networks in 10 areas of activity are being identified.
2. The information systems, automated control systems, and information and communication networks that support the processes in 10 areas of activity are being identified;

3. The damage that may be caused by the disruption of functionality in each information system, automated control system, and information and communication network is being assessed, as well as the potential consequences in the previously designated 4 basic areas.
4. Reasoned proposals from the authorized body for the consideration of an information system, automated control system, or information and communication network as an object of critical information infrastructure are submitted to the Cabinet of Ministers of the Republic of Azerbaijan.

Entities of critical information infrastructure (CII) must submit the requested information to the authorized body within 30 (thirty) days for the purpose of identifying critical information infrastructure objects. The status of a critical information infrastructure object is reviewed no less than once every 3 (three) years, as well as in the event of changes in the configuration, functionality, or information security requirements that the object must meet [1-2].

The general step-by-step scheme for identifying critical information infrastructure objects in the Republic of Azerbaijan is considered in Figure 3. From this figure, it is clear that the identification of a specific critical information infrastructure (CII) object has two outcomes: positive or negative.

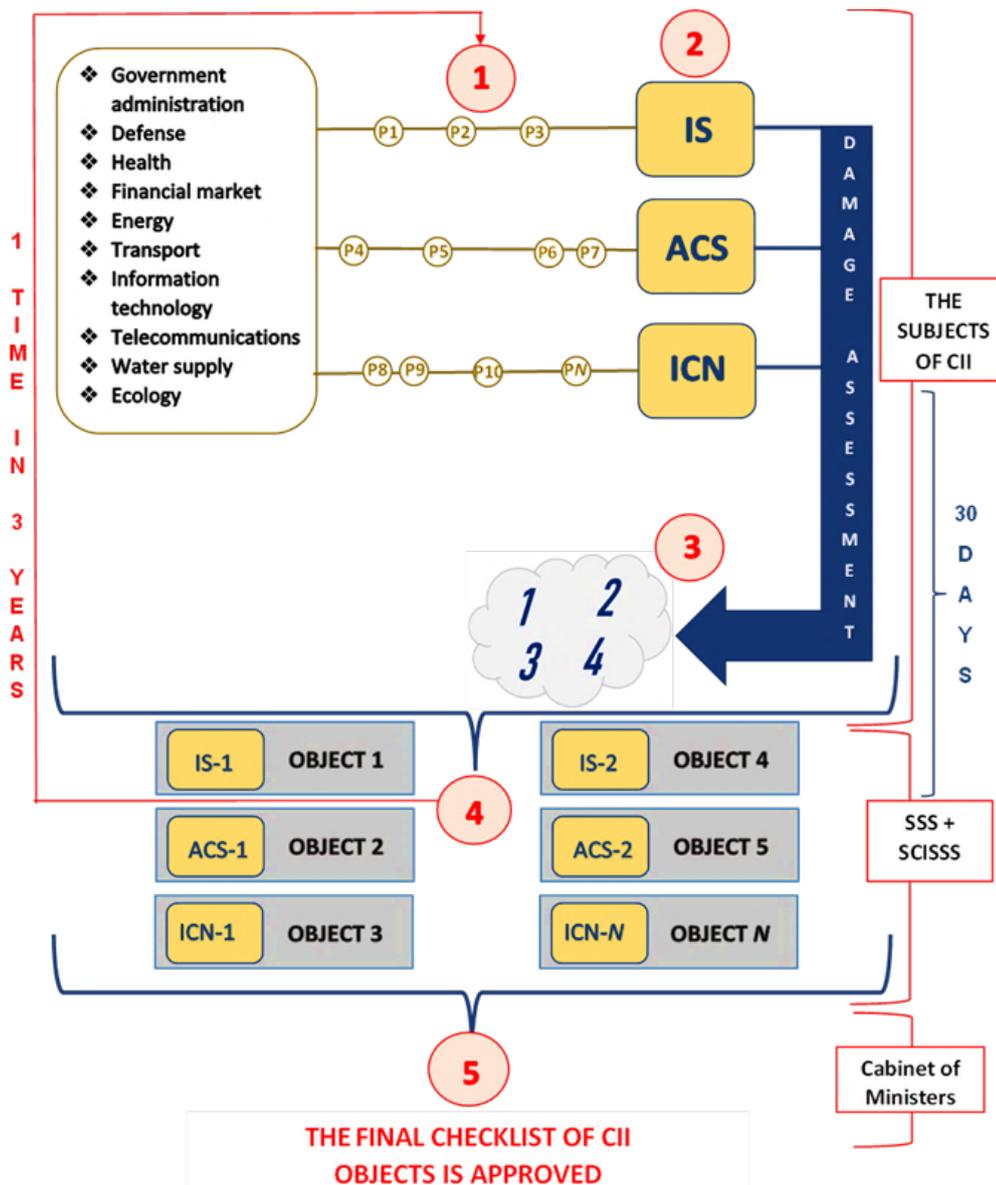

Figure 3. Step-by-step scheme for identifying CII objects in the Republic of Azerbaijan

### An Approach To Categorization Of Critical Information Infrastructure Objects

The study of international experience on this topic reveals that critical information infrastructure objects can be classified by levels based on their importance categories. The categorization of a critical information infrastructure object involves determining its significance and criticality based on a range of criteria and

indicators. For example, practices used in countries such as the Russian Federation and Ukraine are supported by legislative and other regulatory documents [3-5].

Why is categorization needed? First, to determine the priority of protection: identifying which objects require an increased level of protection and monitoring based on their importance to the functioning of society and the economy of the state. Second, to identify vulnerabilities and potential threats to different categories of objects, which contributes to more effective management of cyber risks. Additionally, it aids in developing protection measures: defining response plans for emergencies and incidents, allowing for a quick and effective reaction to threats [6-7].

Based on these beliefs, it is advisable to apply an approach to categorizing critical information infrastructure (CII) objects between steps 2 and 3 in the step-by-step scheme (Figure 3), where the damage caused by the disruption of the functionality of the CII object is assessed, which may lead to consequences in the areas of influence presented in Figure 2.

The following categories have been compiled and proposed to characterize the degree of criticality and importance of CII objects for the Republic of Azerbaijan:

- Category I* — Especially Critical Objects;
- Category II* — Prioritized Important Objects;
- Category III* — Important Objects;
- Category IV* — Key Objects;
- Category V* — Fundamental Objects;

There is also a possibility to define a *Category VI*, which is not considered critical.

The categorization of CII is carried out based on the assessment of the criteria  $C_o$  for the CII object, which is calculated using formula (1).

$$C_o = \sum_{i=1}^m w_i C_i \quad (1),$$

where  $C_i$  is the assessment for criterion  $i$ , and  $w_i$  is the weight coefficient for criterion  $i$ .  $m$  is the number of criteria, and each criterion is assessed using the appropriate scale. In this paper,  $w_i$  is defined by the formula (2):

$$w_i = \frac{1}{C_{max}^i} \quad (2),$$

where  $C_{max}^i$  is the maximum score according to the  $i$ -th criterion.

The decision on the category of a critical information infrastructure (CII) object is made based on a ranked assessment of the level of criticality and importance of the critical infrastructure object according to the following rule:

- Category I, if  $0.9 < C_o \leq 1$ ;
- Category II, if  $0.7 < C_o \leq 0.9$ ;
- Category III, if  $0.5 < C_o \leq 0.7$ ;
- Category IV, if  $0.3 < C_o \leq 0.5$ ;
- Category V, if  $0.1 < C_o \leq 0.3$ ;
- The object is not considered critical if  $0 < C_o \leq 0.1$ .

For the proposed approach to categorizing critical information infrastructure (CII) objects, the following model for representing CII can be applied. Suppose that 10 areas of activity, which implement critical processes through information systems, automated control systems, and information and communication networks, are defined as domains, while the interrelated and interdependent relationships among them are represented as subdomains.

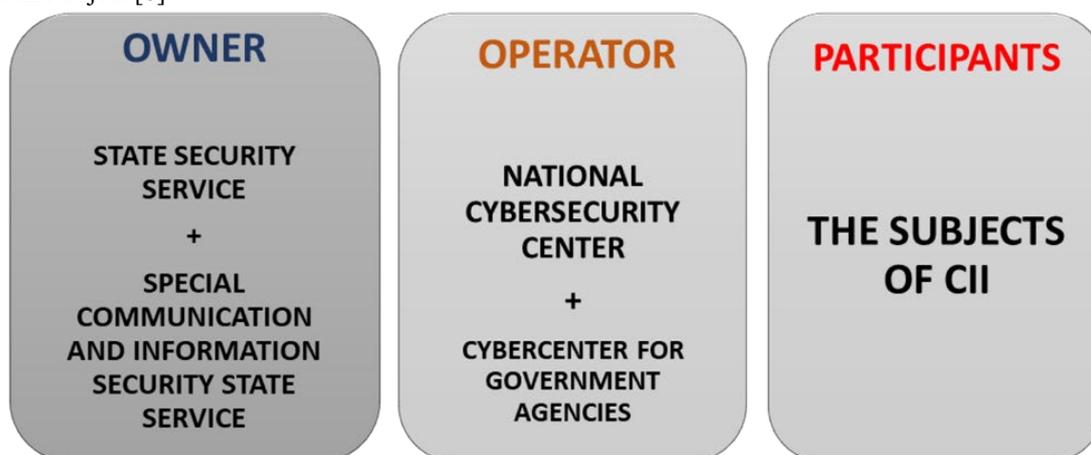

To ensure the security and continuity of functioning of critical information infrastructure objects, including issues related to security risk management and cyber incidents, a register of critical information infrastructure objects has been developed.

In accordance with the "Rule for the structure, creation and maintenance of the register of critical information infrastructure objects" established by the Cabinet of Ministers of the Republic of Azerbaijan dated July 17, 2023, the register is an information system designed to conduct analysis in order to implement information processes (creation, collection, processing, storage, search, protection and exchange of information), related to critical information infrastructure objects, as well as planning and execution of activities, related to ensuring the security of critical information infrastructure, including the implementation of the fight against cyber threats [8].

The operation and maintenance of the register of critical information infrastructure objects is carried out by the owner, operator and register participants, as well as through the successful interaction and interdependent communication of all three. The roles of the owner, operator, and register participants are defined in Figure 4.

The register of Critical information infrastructure objects includes:

- 1) data on subjects of critical information infrastructure;
- 2) data on objects of critical information infrastructure;
- 3) special requirements, security procedures and security plans for a critical information infrastructure object;
- 4) the results of activities carried out in order to monitor the state of security of the critical information infrastructure object [8].

**Figure 4.** Distribution of roles in the Register

## CONCLUSION

In this article, an approach to categorizing critical infrastructure objects for the Republic of Azerbaijan has been developed as an important element of ensuring security and managing cyber risks in CII. The main reasons for categorizing critical information infrastructure objects have been identified for their application in the established step-by-step scheme for identifying CII objects. Additionally, the significance and role of the register of critical information infrastructure objects in the Republic of Azerbaijan have been discussed.

Summarizing the legislation of the Republic of Azerbaijan concerning critical information infrastructure objects is the first step toward developing legislation in this area. Consequently, practices aimed at systematizing and ensuring the security of CII are new, and many rules and procedures established by legislation are, in fact, not functioning.

The proposals and developments put forward within this topic can serve as a foundation for further advancements in CII protection and contribute to creating a safer and more resilient environment. It is essential to continue research in this area to identify shortcomings in existing approaches and improve them using modern technologies such as artificial intelligence and machine learning.

## AFET DEVLET POLİTİKASI VE EĞİTİM: 6 ŞUBAT 2023 DEPREMLERİ SONRASINDA OKULA ERİŞİM VE OKUL SEÇİMLERİ

**Özkan ASLAN**

Okul Müdürü, Milli Eğitim Bakanlığı, Ağrı, Türkiye  
ozkanaslan0411@gmail.com.tr

**Nermin KARABACAK**

Recep Tayyip Erdoğan Üniversitesi, Eğitim Fakültesi, Türkiye  
nermin.karabacak@erdogan.edu.tr

### ÖZET

Öngörülemeyen zamanlamada, kamu eğitim hizmetlerinin kesintiye uğraması, psikososyal refahın bozulması, doğal afetlerin eğitim hizmeti perspektifinden değerlendirilmesini gerektirmektedir. Afet devlet politikasında, devlet organizasyonu ile 6 Şubat 2023 depremleri sonrasında dezavantajlı bir grup durumunda bulunan depremi yaşayanlar üzerindeki eğitimde okula erişim ve okul seçimlerini nasıl belirlediği önemlidir. Bu bağlamda 6 Şubat 2023 depremleri sonrasında zorunlu eğitim çağındaki çocukların okula erişimlerinin nasıl sağlandığı ve/veya okul seçimlerinin nasıl yapıldığına ilişkin veli, öğretmen ve okul yöneticilerinin görüşlerini ortaya koymayı amaçlayan bu araştırma, nitel araştırma deseninde ve durum çalışması modelinde yürütülmüştür. Araştırmanın çalışma grubu, amaçlı örnekleme yöntemlerinden ölçüt örnekleme tekniğiyle belirlenen, (1) deprem yaşayan öğrenci velisi, (2) deprem yaşayan öğrencisi bulunan öğretmen ve (3) deprem yaşayan öğrencisi bulunan okul yöneticisi olmak her gruptan sekiz olmak üzere toplam 24 katılımcıdan oluşmaktadır. Çalışma grubunda bulunan üç katılımcı grubuna yönelik görüşme formları hazırlanmıştır. Araştırmanın verileri yarı yapılandırılmış görüşme formlarıyla toplanmıştır. Veriler içerik analizi yöntemiyle analiz edilmiştir. Bu çalışmada, deprem sonrası göçe maruz kalan zorunlu eğitim çağındaki çocukların yeni göç bölgelerindeki okula erişimlerini ve/veya okul seçimlerini yakınların tavsiyesini alarak, yerleşim adresinin okula yakınlığı, yeni göç yerlerindeki kurumların yönlendirmesiyle resmi kolaylık sağlanarak yaptıkları tespit edilmiştir. Araştırma sonuçlarına göre, deprem sonrası aileler göç rotalarını belirlerken yakınlarının, arkadaşlarının veya akrabalık bağlarının olduğu yerleri tercih etmişlerdir. Bu tercihlerin neticesinde ise eğitim çağındaki çocukları olan aileler okul seçimi yaparken yakınlarından destek almışlar ve yakınlarının tavsiyesine göre çocuklarının okula erişimlerini sağlamışlardır. Deprem yaşayan ailelerin bir diğer okul seçim tercihi ise kurumların zorunlu oldukları yönlendirmelerdir. Bunun yanı sıra deprem sonrası Türkiye'nin farklı illerine göç eden ailelerin zorunlu eğitim çağındaki çocuklarının eğitim ihtiyacının karşılanması için illerde/ilçelerde kurulan komisyonlar tarafından, deprem nedeniyle göç eden zorunlu eğitim çağındaki çocukları takip ederek okullara yönlendirme yapılmıştır. Araştırma sonuçlarında, bir devlet politikası olarak Milli Eğitim Bakanlığının deprem yaşayan çocukların biran önce eğitime kazandırılması amacıyla "herhangi bir şart olmadan" istenilen kamu veya özel okula kayıt yapılabilmesinin önünü açması ile birlikte ailelerin okul tercihini kendilerinin yapmasına ve çocukların kısa süre içerisinde okula erişim sağlamasına olanak sağladığı ortaya konulmuştur. Ayrıca 6 Şubat depremleri sonrası uygulanan kayıt kolaylığının tüm doğal afetlerden sonra uygulanması gerektiği ve okula erişimleri sağlanan çocukların geri dönüşleri dikkate alınarak bu uygulamada sürekliliğin sağlanması gerektiği önerisinde bulunulmuştur.

**Anahtar Kelimeler:** Deprem, okula erişim, okul seçimi, zorunlu göç, zorunlu eğitim.

### GİRİŞ

Birçok alanda faaliyetlerin durmasına veya aksamasına neden olan doğal afetler, öngörülemeyen zamanlarda ve farklı alanlarda etkisini göstermektedir. Bu anlamda afete maruz kalan toplumlar, ekonomik, sosyal, siyasi, kültürel ve eğitim alanında doğrudan etkilenmektedir. Özellikle geniş coğrafyayı veya büyük yerleşim yerlerini etkileyen afetler meydana geldiğinde afetlerin yaşandığı bölgeler değil, çok daha geniş alanlar veya uluslar ekonomi, sosyal, siyasi, kültürel ve eğitim alanlarında etkilenmektedir (Şahiner, 2022). Bu şekilde kendini gösteren afetlerden birisi 6 Şubat 2023 tarihinde Türkiye saati ile 04.17'de ve 13.24'de merkez üssü Kahramanmaraş olan 7,7 ve 7,6 büyüklüğünde iki depremdir. Bu iki deprem, Kahramanmaraş, Hatay, Adıyaman, Gaziantep, Kilis, Diyarbakır, Malatya, Osmaniye, Adana, Şanlıurfa ve Elazığ illerini şiddetli bir şekilde etkilemiştir (SBB, 2023). Türkiye'nin güneyinde meydana gelen depremden en çok etkilenen on bir ilde sağlık, eğitim, ulaşım, barınma gibi hizmet alanlarında aksamalar nedeniyle toplumsal yaşam durma noktasına gelmiştir. Meydana gelen depremler toplumsal işleyişi kesintiye uğratarak fiziksel hasara, kayıplara, genel refah ve mutluluğun azalmasına yol açmıştır. Ayrıca depremlerin etkileri ulusal çapta kendini göstermiştir. Bu etkilerin sonuçlarından bir tanesi de deprem bölgesinden Türkiye'nin tüm illerine yönelik yapılan iç göç ve eğitim alanında öğrenci hareketliliğidir. Bu özelliklerde yaşanan büyük afetlerden sonra zorunlu iç göçler ve bu göçlere bağlı çeşitli zorluklar meydana gelmektedir (Atalay, 2023).

Geniş bir coğrafyayı ve büyük bir insan nüfusunu etkileyen deprem ortamında, eğitim faaliyetleri de olumsuz olarak etkilenmiştir. Deprem sonrası okullarda, üniversitelerde ve yurtlarda meydana gelen yıkım ve tahribatlar, deprem sonrası yüz yüze eğitime geçmeyi güçleştirmiştir. Tüm ülkeyi etkileyen deprem sonrası ülke genelinde okullara ara verilmiştir. 71 ilde iki hafta sonra, 20 Şubat 2023 tarihinde açılan okullar depremin en yoğun yaşandığı illerde ise kademeli olarak 27 Mart'a kadar aralıklı olarak açılmıştır.

Milli Eğitim Bakanlığı tarafından yayınlanan 2022-2023 eğitim öğretim yılı örgün eğitim istatistiklerine göre, Türkiye'de zorunlu eğitim çağındaki bulunan 15.532.369 öğrenci bulunmaktadır. Depremden etkilenen on bir ilde bu sayı 3.418.856'dır. On bir ilin öğrenci sayısı Türkiye'deki toplam öğrenci sayısının %22'sini oluşturmaktadır. Bu öğrencilerin büyük bir kısmı ya devlet imkânları ile ya da ailelerin kendi imkânları ile farklı illere göç etmiştir. Göç sonrası kendi imkânları ile yakınlarının yanına gelen aileler dışında devlet yardımı ile göç eden aileler illerdeki komisyonlar aracılığıyla yurtlara yerleştirilmiştir.

Deprem sonrası hayatta kalıp göç eden sınırlı imkânlarla sahip zorunlu eğitim çağındaki çocukların yeni yerleşim yerlerinde eğitim gereksinimlerinin karşılanması amacıyla okul ihtiyacının ortaya çıkmasına neden olmuştur. Bu anlamda 6 Şubat 2023 depremleri sonrası göç eden zorunlu eğitim çağındaki çocukların yeni yerleşim yerlerinde okula erişimlerinin sağlanması öncelik gerektirmektedir. Çünkü okullar, çocukların karşılaştıkları zorluklar karşısında güçlendiren ve eğitim almasını sağlayan hizmet birimleridir (Rah, Choi & Ngoyen, 2009).

Alanyazın incelendiğinde Türkiye'de deprem sonrası göçe maruz kalan zorunlu eğitim çağındaki çocukların okula erişimleri, okula devamları ve okul seçimleri ile ilgili saha araştırmaları bulunmamaktadır. Bundan dolayı bu araştırmada, 6 Şubat 2023 depremlerine bağlı göçler sonrası kısıtlı imkânlarla sahip grup durumunda bulunan zorunlu eğitim çağındaki çocukların okula erişimlerinin nasıl sağlandığı ve/veya okul seçimlerinin nasıl yapıldığının belirlenmesi amaçlanmıştır. Bu amaç doğrultusunda aşağıdaki sorulara yanıt aranmıştır:

Zorunlu eğitim çağındaki deprem yaşayan ve göçe maruz kalan çocukların;

- 1) Okula erişimleri nasıl sağlanmıştır?
- 2) Okula erişimleri sağlanan çocukların okul tercihleri ve/veya okul seçimleri hangi kriterlere göre yapılmıştır?
- 3) Okula erişimleri sağlanan çocukların devam/devamsızlık durumları nasıldır?

## YÖNTEM

6 Şubat 2023 Kahramanmaraş depremleri sonrasında göçe maruz kalan zorunlu eğitim çocukların okula erişimlerinin nasıl sağlandığı ve/veya okul seçimlerinin nasıl yapıldığının belirlenmesi amacıyla tasarlanan bu araştırma nitel araştırma deseninde ve durum çalışması modelinde yürütülmüştür.

## Çalışma Grubu

Bu araştırmanın çalışma grubu, amaçlı örnekleme yöntemlerinden ölçüt örnekleme tekniğiyle belirlenen, (1) deprem yaşayan öğrenci velisi, (2) deprem yaşayan öğrencisi bulunan öğretmen ve (3) deprem yaşayan öğrencisi bulunan okul yöneticisi olmak her gruptan sekiz olmak üzere toplam 24 katılımcıdan oluşmaktadır. Çalışma grubunda bulunan üç katılımcı grubuna yönelik görüşme formları hazırlanmıştır. Araştırmanın verileri yarı yapılandırılmış görüşme formlarıyla toplanmıştır. Veriler içerik analizi yöntemiyle analiz edilmiştir. Araştırmaya dâhil edilen katılımcıların seçiminde amaçlı örnekleme yöntemlerinden maksimum çeşitlilik yöntemi kullanılmıştır (Creswell, 2012). Maksimum çeşitlilik yöntemi çerçevesinde, okul türlerinin ve katılımcıların belirlenmesinde "6 Şubat Kahramanmaraş depremlerinden sonra göçe maruz kalmış olmak ve zorunlu eğitime kamu ya da özel okullarda devam etmek" ölçütü olarak alınmıştır (Hatch, 2002; Yıldırım ve Şimşek, 2021).

## Veri Toplama Aracı

Araştırmada veri toplamak amacıyla yarı yapılandırılmış görüşme tekniği kullanılmıştır. Çalışma grubunda okul yöneticilerine, öğretmenlere ve öğrenci velileri olmak üzere her gruba yönelik üç adet görüşme formu hazırlanmıştır. 6 Şubat 2023 depremlerine bağlı göç yapan zorunlu eğitim çağındaki çocukların okula erişimlerini nasıl sağladıklarının belirlenmesi ile ilgili görüşler doğrultusunda veri toplamak amacıyla okul yöneticisi, öğretmen ve velilere yönelik hazırlanan yarı yapılandırılmış görüşme formu, iki bölüme ayrılmıştır. İlk bölümde katılımcıya ait demografik bilgiler, ikinci bölüm ise yarı yapılandırılmış görüşme sorularından oluşmaktadır.

## Verilerin Analizi

Araştırma verilerinin analizinde tematik içerik analizi tekniği kullanılmıştır. Tematik içerik analizinde katılımcılardan elde edilen verilerden yola çıkılarak temalar, alt temalar ve kodlar oluşturulur (Patton, 2015). Araştırma kapsamında, katılımcı görüşleri detaylı şekilde araştırmanın amacı doğrultusunda sözcük ve sözcük grupları belirlenerek kodlar oluşturulmuştur. Uzman görüşler alınarak ana tema ve alt temalar oluşturulmuştur.

## BULGULAR

Bu bölümde araştırmanın alt problemlerine göre oluşturulan bulgulara yer verilmiştir. Ana tema, alt tema ve kodlar tematik içerik analizi sonucunda tablo halinde sunulmuştur. Araştırmada, “okula erişim ve okul seçimi (OES)” ana tema olarak belirlenmiştir.

### Okula Erişim ve Okul Seçimi

Okula erişim teması, okul seçiminde yakınların tavsiyesi, okul erişiminde adrese yakınlık, kurum yönlendirmesi ve resmi kolaylık olmak üzere dört alt tema belirlenmiştir. Tablo 1’de okula erişim temasına ait alt tema ve kodlara yer verilmiştir.

**Tablo 1.** Okula Erişim ve Okul Seçimi Temasına İlişkin Ana Tema, Alt Tema ve Kodlar

| Ana Tema         |                                     | Okula Erişim ve Okul Seçimi   |
|------------------|-------------------------------------|---|
| Kodlar           | Alt Temalar                         | Örnek İfadeler  |
| OES <sub>1</sub> | Okul seçiminde yakınların tavsiyesi | “Yakınlarımızın yönlendirmesi ile okula kayıt yaptık”<br>“Bir yakınlarımızın tavsiyesi üzerine kayıtlarını yaptık”<br>“Burada akrabalarımızın tavsiyesine göre okulu belirledik.”                                       |
| OES <sub>2</sub> | Okula erişimde adrese yakınlık      | “Okul seçiminde adrese yakın olmasını göz önüne aldık.”<br>“Adres bölgesine göre adrese yakın olan okulu tercih ettiler.”<br>“Böyle bir durumda ilk baktığım okulun adrese yakın olmaydı.”                              |
| OES <sub>3</sub> | Kurum yönlendirmesi                 | “Ailelerin kurumlara başvurusu ve yönlendirilmesi ile kayıtlar yapıldı.”<br>“Öğrenciler ildeki komisyon tarafından okulumuza yönlendirildi.”<br>“Komisyonlar tarafından kayıt yapabileceğimiz okullara yönlendirildik.” |
| OES <sub>4</sub> | Resmi kolaylık                      | “Herhangi bir prosedüre gerek olmadan eğitime devam edebildiler.”<br>“Velilerin sözlü beyanını esas alarak direkt nakil alabiliyoruz.”<br>“Depremzede olduğumuzdan istediğimiz okula kayıt yapabildik.”                 |

**Tablo 1** incelendiğinde, 6 Şubat depremleri sonrası göç eden çocukların okula erişimlerinin sağlanması için illerde Milli Eğitim Müdürlükleri bünyesinde komisyonlar oluşturulmuştur. Bu komisyonlar aracılığı ile çocukların okullara yönlendirildiği tespit edilmiştir. Depremzede aileler deprem bölgesinden göç ederken akrabalarının, arkadaşlarının veya yakınlarının olduğu yerleri tercih etmişlerdir. Bu tercihler neticesinde çocuklarını okula kayıt etmek isteyen aileler, yakınlarından aldıkları tavsiyeler, buldukları konuma yakınlık gibi kıstaslarla kayıt işlemlerini yaptıkları ortaya konulmuştur. Ayrıca çocukların kayıtları sırasında depremdede ailelerin sözlü beyanı esas alınarak herhangi bir evrak talep edilmeden resmi kolaylık sağlandığı saptanmıştır.

## TARTIŞMA VE SONUÇ

Bu bölümde, 6 Şubat 2023 Depremleri sonrası eğitim çağındaki çocukların okula erişim ve okul seçimlerinin nasıl yapıldığının tespiti üzerine elde edilen bulguların tartışması yapılmıştır. Türkiye’deki alan yazın incelendiğinde deprem sonrası çocukların okula erişimleri ve okul seçimlerine yönelik ayrıntılı bir araştırmaya rastlanılmaması nedeniyle araştırmadan elde edilen sonuçların alan yazına katkı sağlaması açısından önemli olduğu düşünülmektedir.

Araştırmanın sonuçlarına göre, deprem sonrası göçe maruz kalan ailelerin zorunlu eğitim çağındaki çocuklarının okula erişimleri konusunda dört farklı unsurun etkili olduğu sonucu ortaya çıkmıştır. Bu unsurlar; okul seçiminde yakınların tavsiyesi, okulun adrese yakın olması, kurumların yönlendirmesi ve okula erişimde kolaylık sağlanmasıdır.

Araştırma sonuçlarına göre, depremden sonra birçok öğrenci başka illere nakil gitmiştir. Öğrencilerin gittikleri şehirlerdeki okullara kolaylıkla nakillerini alabilecekleri sistemler kurulmuştur. Bu sistemler sayesinde depremdede çocuklar istemeleri halinde Türkiye’nin herhangi bir yerinde herhangi bir eş değer devlet veya özel okula kayıt yapabilmıştır. Bu kayıtları yaparken 6 Şubat 2023 Depremleri sonrası yeni yerleşim yerlerine göç eden çocukların okula erişimlerinde ve okul seçiminde ailelerin ve yakınlarının tavsiyeleri önemli bir yer tutmaktadır. Özellikle kendi imkânları ile yeni yerleşim yerlerine göç eden aileler ya tanıdıklarının yanına ya da akrabalarının yanına göç etmişlerdir. Bu anlamda depremdede aileler çocuklarının okula tercihleri konusunda yakınlarından tavsiyeler alarak okul seçimleri yaptıkları sonucuna ulaşmıştır.

Araştırma sonuçlarına göre, depremdede çocukların kayıt yapabilecekleri okul seçiminde kıstaslardan birisi ise göç edilen yeni yerleşim yerinde barınma imkânı sağladıkları adrese en yakın okulun tercih edilmesidir. Araştırma sonuçlarına göre, deprem yaşayan aileler, çocuklarını okula gönderirken ayrılma kaygısı, acil bir durumda kısa sürede ulaşma imkânı ve servis ücreti ödememek gibi durumları göz önüne alarak uzak yerde bulunan okulları tercih etmemiş adrese en yakın okul tercihinde bulunmuşlardır.

Araştırma sonuçlarına göre, deprem bölgesinden göç eden tüm depremzede çocukların kayıtları yapılırken “yerleşim yeri adresine bakılmaksızın” ve “hiçbir şart aranmadan” kayıt edilmesinin önü açılmıştır (MEB, 2023). Deprem sonrası göç eden aileler çocuklarının kayıtlarını yaparken veli beyanı esas alınarak, okula kayıtları sağlanmıştır. Bu anlamda nakil işlemlerinin yapıldığı E-Okul sisteminde Merkezi Nüfus İdaresi Sistemi (MERNİS) ile bağlantılı işlemler yapılabilmekte ve çocukların özel durumlarına göre nakil seçenekleri aktif hale getirilerek nakil işlemleri sistem üzerinden tamamlanabilmektedir. 6 Şubat depremleri sonrasında okula erişimleri sağlanan çocukların kayıt işlemlerinde E-Okul sistemi üzerinden “doğal afetler nedeniyle nakil” seçeneği aktif hale getirilmiş ve çocukların kayıtları tamamlanabilmektedir. Göç sonrası yeni yerleşim yerlerinde çocukların okula erişimlerinin sağlanması amacıyla il ve ilçelerde komisyonlar marifeti ile yönlendirilmeler yapılmış ve kayıt işlemleri tamamlanmıştır. MEB’in bu uygulaması çocukların okula kayıtlarını hızlandırdığı sonucunu ortaya koymaktadır. Van Yüzüncü Yıl Üniversitesinin (2017) hazırlamış olduğu rapora göre, 2011 yılında Van’da meydana gelen deprem sonrası 14.471 öğrenci Van ilinden göçe maruz kalmış gittikleri yeni yerleşim yerlerinde “misafir öğrenci” seçeneği ile kayıt işlemlerini tamamlayabilmiştir. Bu anlamda Van Yüzüncü Yıl Üniversitesi raporu da bu araştırmanın okula erişimde resmi kolaylık teması ile benzer niteliktedir (VYYU, 2017).

## ÖZET

Karartılmış, çarpıtılmış, gerçeğinden kopmuş dil kullanımlarının ALGÜL Dijital Reel Psiko-Semiyotik Dil Kullanımları Ayrıştırıcıları kullanılarak nasıl parçalanıp yok edilebileceklerine dayalı olan bu makalede henüz bir yazılım ve/veya aygıt olarak kullanıma sunulmamış projemin geleceğini yönlendirirken sadece bu bakış ve bilgelikle bile geniş kitlelerin güdümlene yollarını öğrenebilecekleri üzerinde durulmaktadır.

Bu bağlamda ALGÜL Dijital Reel Psiko-Semiyotik Dil Kullanımı Ayrıştırıcıları ve türleri nasıl çalışır aktarılırken gerçeğe ulaşmayı engelleyen, manipülatif dil kullanımlarını ayırtmaya yönelik bir görüş kazandırma tüm çalışmanın içeriğinde yer almaktadır.

Dil kullanımların imza olabileme özellikleri üzerinde durulmuş, bu özellik üzerinden ALGÜL Dijital Reel Manuel Dil Kullanımı Ayrıştırıcılarının kişiye özgü dil kullanımlarını yakalama ve dijital etkileşim alanının yakın bir gelecekte dijital etkileşim hukukuna bağlanmasına aracı olabileme özelliği Yapay Zekâ üzerinden de aktarılmıştır. Bu makalede bana ait tanımlamaların ve teorilerin başına ALGÜL getirerek, bilimsel katkı alanına açmayı tercih ettiğimi ifade etmeliyim. Bu tanımlamaların bilimsel sorumluluğunu aldığım anlamını da yüklediğim anlamına da gelir.

**Anahtar Sözcükler:** ALGÜL, Dijital- Reel, Psiko-Semiyotik, Ayrıştırıcı, İmza, Etkileşim.

## GİRİŞ

21. yüzyılda ve gelecek yüzyıllarda insanlar gerçeğe gerçek olmayı nasıl ayırt edebilecekler, ALGÜL, Dijital, Reel, Manuel Psiko-Semiyotik Dil Kullanımları Ayrıştırıcıları, yalanın, algı manipülasyonlarının inşasını söker, insanları gerçeğe buluşturur. Hatta biraz acı olacak ama gerçeğe el ele baş başa bırakır çünkü bazı toplumlarda gördüğü gerçeğe dahi inanmamayı seçmek eyyamcı, çıkarları üzerine kurulu bir tercih olabilir. Gerçeği eğip bükenlerin, çarpıtıp yeniden yaratanların panzehiri olarak tasarlandı, halk diliyle söylenirse ALGÜL Dijital, Reel, Manuel Psiko-Semiyotik Dil Kullanımı Ayrıştırıcıları kuvvetli bir rüzgârla şapkalı uçurur, düşürür, kelleri, çıplak gerçeği ortaya çıkarır. Bilimsel açıklamasıyla: Dijital Reel Psiko-Semiyotik Dil Kullanımlarının yapılanmasını, onları tek tek katmanlarından soyarak çözer ve ayırıştırır. Bir başka söylemle gerçeği çarpıtın, karartın, gerçeğe ulaşılmasını engelleyen psikolojik etkiyi hedefleyerek kasıtlı olarak bu kavrayıcı etkiyi yaratabileceği düşünülerek seçilen dilsel ya da görsel göstergeler alanında çalışır. Vurucu etkileri olma ihtimalinin çok yüksek olacağı itkiyle bu dilsel ve görsel göstergelerin saptanacakları, seçilecekleri kaynak hedef bir toplumsa eğer , toplumun genetik kültürel kodlarında var olabileceği saptanan dilsel veya görsel göstergeler, en fazla korkuları, en çok kullanılacak unsurlar, dinsel göstergeler, andaki eğilimlerini ölçümlemek üzere legal görünümü ve illegal dijital alanlarından ölçümlenen korku, istek, sevinç vb. gibi andaki toplumsal duygu durum biçimleri üzerinden görsel ve dilsel gösterge seçimi veya yaratımı, hedef toplumsa, korku unsurları yaratılabilir de, genel çoğunluğu etkileyecek yeni bir korku düzeneği yaratmak ve toplumsal hafızaya yakın zamanlı yaratılan korku alanları üzerinden yönetmeyi planlamak; geniş halk kitlelerini manipüle etmede çok etkin olacaktır.

Hedef bireyse eğer, bireyin psikolojisini istedik doğrultuda vurmak, bu vurucu etkiyle psikolojisini istedik doğrultuda değiştirip yeniden yapılandırmak, bir başka sözlerle bireyi avuçlarının içine almak üzere legal görünümü dijital alanlar kullanılabilir ama bu tür, bireyin hedef alındığı psiko-semiyotik iletişim tasarımlarında en önemli kaynak potansiyel dijital kölelik vakalarında (Algül, 2020-2023), olduğu gibi, olabileceği gibi, bireyin kişisel dijital alanlarının içeriğinden çözümlenen duygu durum biçimlerini: Korku, endişe, değer verdikleri, varlığını anlamlı kılan unsurlar, heyecan duyduğu şeyler, kişiliğine ait özellikler vb. gibi, çözümlenen alanlardan üretecekleri gerçeğine kesin olarak bakılmalıdır. Bakılırsa zaman kaybedilmemiş olur. Bir yandan ticari meta değeri gereği talan edilen bu dijital alanlardan, bireye yönelik elde edilen özel verilerden çıkarılan insan profilleriyle çepeçevre sarılacağı da unutulmamalıdır. Evin içine görmek 7/24 dinleme , gözetleme,, 7/24 dijital alanları takip dijital reel psiko-semiyotik iletişim, dil kullanımları için gerekli bir yapılanmadır.

## ALGÜL Dijital Reel Psiko-Semiyotik Dil Kullanımları Ayrıştırıcısı Nedir? Nasıl Çalışır?

“Psiko-Semiyotik Dil Kullanımı benim tanımladığım bir bilim alanı ve bilim dalı olma zorunluluğu açıkça ortada görünmektedir. Psiko-Semiyotik Dil Kullanımını şimdilik ikiye ayırılır çünkü elastiki ve tüm bilimsel gelişmelere endeksli olduğu için ilerleyen zaman diliminde değişkenlik gösterecektir.

1. Dijital Psiko-Semiyotik Dil Kullanımı

2. Reel Psiko-Semiyotik Dil Kullanımı

Tanımladığım bu alan Göstergebilimin tüm araçlarını kullanmakla beraber, hepsinin üzerine çıkan ve teknolojiyle endekslenen bir yapıya sahiptir ve tasarımın özelliğinden kaynaklı olarak reel yaşam ile dijital ortamlardaki kullanımlar girift, içiçe geçmiş, çoklu çözüme, yapıbozucu (Rıfat, 2009) yaklaşımla ki, bu bir yazın eleştirisi kuramadır, alanım da bunu kullanır ama onun da üzerine çıkmak zorunluluğunu hisseder; dolayısıyla dijital reel alanlar genelde psiko-semiyotik dil kullanımlarını çözmek veya tasarlamak gerektiğinde her iki alanın ve olası çoklu ötesinin dikkate alınma gerektiği sorumluluğunu yaratır.

Ötesi sözcüğünü neden kullandığımı açıklamadan önce psiko-semiyotik dil kullanımının tanımlamasını yapmak istiyorum. Hedefi manipüle edebilecek ve/veya tekrarlarında aynı tutum ve tavra yönlendirecek şekilde güdümlenebilecek dil kullanımları tasarlamak, var olan üzerinde daha da etkili olabilmek için çalışmak demektir. İstendik doğrultuda güdümlenmek üzere duygu durum biçimleri hedeflendiği için Psiko-Semiyotik Dil Kullanımları olarak tanımladım. Semiyotik çünkü bu dil kullanımları hem dilsel göstergeler üzerinden hem de görsel göstergeler üzerinden yapılabilmektedir ve bu iki anlamı da bünyesinde taşıyan sözcük semiyotik sözcüğüdür( Algül, 2020),( Algül, 2021), (Algül, 2022).

Diyaloji (Rıfat, 2009) de Göstergebilim alanında kullanılan bir kuramdır. ALGÜL Dijital Reel Psiko-Semiyotik Dil Kullanımları Ayırıştırıcıları bünyelerinde kendilerine ait eşsiz donanımlı yeni bir sözcükle ifade edilen; şimdilik anlaşılması için Göstergebilim alanından diyaloji benzerliği kurularak ifade etme gereği duyulmuştur.

Bana ait teorilerden biri de 21. yüzyıl insanının hiç olmadığı kadar görsel olarak tasarlandığıdır. Düşünen insan için dilsel komplike dilsel göstergeler: Uzun cümleler, retorik, bir başka deyişle güzel hitap etme sanatı dolayısıyla dil sanatları vb. gibi, tüm bunları gerçeğe en yakın anlayabilmek için düşünene bir beyin gerekir ve düşünen beyinler kolayca güdümlenemezler, genelde andaki bilime endeksli içselleştirilmiş bilgi dağarcıkları, çapraz sağlama yapabilmeye yetenekleri, köklerini geçmişten alan bilimsel bir alt yapının kazandırdıkları: Çoklu okuma eylemi önünde sonunda bilimle bulaşabilir ihtimaline dayanarak, gelişmiş olur ve manipülatif kullanımlara yem olmayabilirler. Bilim, andaki gerçeğin aksi ispat edilmediği sürece, en doğru yol olabileceğinden; diğer tüm yollar psiko-semiyotik dil kullanımları olabilirler ve gerçeklerden uzaklaştırıcı manipülatif etki taşıyabilirler ki, zaten bu amaçlanır. Bakınız: İnsanlık tarihi...

Belki bu aşamada göstergenin tanımını da yapmamız gerekir: “Kendi dışında bir şeyi temsil eden dolayısıyla temsil ettiği şeyin yerine geçen her türlü biçim, (Rıfat, 2009)nesne, renk. vs. “ Bu tanım Rıfat’ın Göstergebilimin Abc’si adlı kitabından ben buna şunları ilave ediyorum, her türlü ses, koku, beden dili, her türlü aksesuar kullanımı ki, beden dili kullanımlarına aittir, biliyorsunuz, jestler mimikler gibi, alternatif alanlar, yüz okuma sanatı, görü, içgörü, öngörü, 6. his ve olası ötesilikler. Neden ‘ötesi’ sözcüğünü kullandığımı cevabı da burada, görü, içgörü, öngörü, 6. his, küresel ya da ulusal bu çemberin giderek daraldığını da bu çalışmalarla hareketlendiğini, küresel belleğin ayak sesleri de duyulabilir. ALGÜL dil kullanımları ayırıştırıcıları tüm bu alandaki hareketliliği küresel ve toplumsal bazda çözerken ve tasarlarken kullanılması gereken bir buluştur. Tüm bunları yaparken elbette AI’den faydalanması ve/veya AI’nin ondan faydalanması kaçınılmaz olacaktır.

ALGÜL Dil Kullanımları Ayırıştırıcılarını başlangıçta tasarlarırken manuel başlangıçta manuel kullanımına uygun, halkın gündelik yaşamda karşılaştığı manipülatif dijital reel psiko-semiyotik dil kullanımlarını eğlenceli bir şekilde fark edebilmesini amaçlayan bir yan ürünü de vardı ama bu makaleyi kaleme alırken bundan tümüyle vazgeçtim. İlerleyen zaman diliminde belki özellikle çocuklar için tekrar gündeme de alabilirim.

ALGÜL dil kullanımı ayırıştırıcıları hedefteki bireyin ya da kitlenin psiko-semiyotik dil kullanımlarıyla nasıl manipüle edilebileceğine yönelik, tüm bu psiko etkiyi katmanlarına ayırıp sunabilen ve aynı zamanda psiko etkinin nasıl sifira indirgenebileceğinin olası çözümlerini de taraçalandırarak sunabilen bileşik kapları bünyesinde barındıracaktır.

Örneğin bu dilin kötücül kullanımlarına örnek olarak tasarım vaka olarak 2023 yılında yazdığım makalelerimin birinde onun üzerinden aktardığım maruz kalma durumlarında dijital reel psiko-semiyotik dil kullanımlarının yoğun olduğu semtten ve işten derhal uzaklaşması bir çözümdür çünkü normal şartlarda kötücül dış dinamiklerin yoğunluğu ve sürekliliği asla bu şekilde gelişmez, agresif, illegal diji kölelik(legalse tüm toplum öğrensini), yine dijital alanın illegal talanında elde edilen kötücül mahrem bilgilerden kaynağını alan reel psiko-semiyotik dil kullanımları dünyada cehennemi yaşamakla aynı anlama gelecektir. Yoğunluk fazlaysa derhal o ortamdan çıkılmalıdır. ALGÜL dijital reel psiko-semiyotik dil kullanımı ayırıştırıcıları bu kötücül psiko-semiyotik dil kullanımının toksik seviyesini de ölçebilen bir aygıt olacaktır. Elbette diji köle olarak senelerce beyni sömürülen karakterim haklarını almadan hiçbir yere gitmeyecektir. Dolayısıyla kurumların kötücül dijital reel psiko-semiyotik dil kullanma yoluyla dehası, yeti ve yetenekleri dijital ağda deşifre edilen; kurumlarında çalışan veya daha başlangıçta sırf bu yüzden oralarda çalışması kötücül oluşumlar tarafından planlanan bireylerin, kurumların, o kurumda çalışan kötücül oluşumlarla ilişkili kişilerin, yöneticilerin, hem bünyelerinde olan kişiler için, hem kurum için çalıp; hem dijital reel psiko-semiyotik dil kullanımlarıyla, korkutup, sindirip, piyasaya

peşkeşi çekme, bir başka deyişle sermayeye talan ettirme ve bu talanı sürdürülebilir kılma hükümlerine ALGÜL dijital reel psiko-semiyotik dil kullanımı ayrıştırıcılarıyla son verilebilecektir çünkü kötücül dijital reel psiko-semiyotik dil kullanımlarının da ayrıştırarak takiplerini yapabileceklerdir.

Gene ALGÜL dijital reel psiko-semiyotik dil kullanımı ayrıştırıcılarıyla kullanılan dijital reel psiko-semiyotik dille hangi duygu durum biçimlerinin hedeflendiğini bilgisine sahip olabileceklerdir: Bilinçaltı mı? Bilinçaltı duyular alanı en çok eğlence ile tam tezadı savaş arenasında kullanılmaktadır. Bilinçdışı duygu durum biçimlerini hedefliyorsa ona ait bu mahrem bilginin ele geçirilme yöntemleri, güvenlik açıklarıyla ilgili uyarılacaktır.

Tüm bu anlatının nedeni: Toplumsal belleği tasarlarken; bu tasarım iyicil de olabilir kötücül de; hiç olmadığı kadar görsel göstergeler üzerinden tasarlamak başarıyı da beraberinde getirecektir. (Algül, 2015) 21. yüzyıl insanının profili hiç olmadığı kadar görsel tasarlandığına dair. Hatta Görsel göstergeler alanının dilsel göstergeler üzerinden kurgularken, dilsel göstergelerin çağrışım anlamlarının da tasarımının gerekliliği doğacaktır. Bir diğer söylemle alt çağrışım, üst çağrışım anlamları, birincil, ikinci, üçüncül olanlar, daha da açarsam: Seçilen dilsel gösterge kullanıldığı anda hedefin ya da hedef kitlenin ilk aklına gelecek görsel göstergeler alanını düzenlemek gerekecektir çünkü kürenin genel olarak var olan kitlesine ulaşmak buradan geçmektedir ya da geçebilir.

Bilim dalı olarak benim yarattığının bu alan; bilimsel çalışmaların ışığı altında, onlardan edindiğimiz verilere dayanarak diyebiliriz ki, ilk bilinç dışı deneyimler psiko-semiyotik dil kullanımını başlatmış olsa, bilim dalı olarak tanınmamış olsa da varlığı insanla beraber mevcut olan alanlardan. Bilim de böyle bir şey değil midir? Yaşamı, doğayı, insana dair ne varsa çözmek ve anlamlandırmak. İşte ben bu buluşlarımla bu alanı anlamlandırmış oldum.

Bunun beni nasıl mutlu ettiğini tahmin bile edemezsiniz. Bilim tahminlerinizin üzerinde heyecan verir ve mutlu eder. Bilimsel mutluluğu değil, son konunun ne demek olduğunu açmadan ya da hatırlatmadan önce ilk yaşam koşullarını gözümüzde canlandırmaya çabaladığımızda yeme, içme, barınma olduğunu düşünebiliriz. Önce hayatta kalma refleksi ve bizler içinde yaşadığımız çağda bile bu itkilerin sağlanmasını yapabiliyoruz. Sonsuz bir içgüdü bu ve belki de her canlı varlıkta olduğu gibi, ...

Tüm bunların tekrar hatırlatılma sebebi ilk psiko-semiyotik dil kullanımı ne zaman doğmuştur, sorusunun üzerinde düşünmenizi sağlamaya yöneliktir. Bu makalenin de iddiası insanlıkla beraber var olabilir çünkü insanın doğası bunu bize düşündürmektedir. Psiko-semiyotik dil kullanımının düzeyleri birbirinden farklı olabilir aynı grupta, aynı hizipte bir başka deyişle ortak ülküsü olduğu topluluklar ve bu topluluklar dışındakilerle kurduğu iletişim dilinde uzlaşma anlarında, kavga anlarında, ortak çıkarları gereği hareket ettiklerinde, enteresan bir insan doğası: Bir annenin kendi çocuklarıyla kurduğu iletişimin dili bile, çocuklarının karakterine göre farklılık gösterebilir ve bu farklı dil kullanma ihtiyacı psiko-semiyotik dil kullanımı kapsama alanının içine girer çünkü devreye karakter farklılıkları girmiştir. Bu aynı zamanda farklı bir psikoloji demektir ve o halde hedefe yönelik farklı bir dil kullanarak istedik tutum tavır kazandırmak, amiyane tabirle bir dediğini yaptırmak ki, toplumdan topluma farklılık gösterse de bizler biliriz ki bizim toplumumuzda ebeveynler böyle şeyler hiç yapmazlar(!) duygu durum biçimlerini manipüle ederek istedikleri doğrultuda yönetmek isterler.” (Algül, 2023).

ALGÜL Dijital Reel Psiko-Semiyotik Dil Kullanımları Ayrıştırıcılarının paydaşları özetlenirse:

“İlk etapta ALGÜL dijital reel psiko-semiyotik dil kullanımları ayrıştırıcısının çözümlemesi gereken kullanılan semiyotik sözcük ya da sözcük öbeklerinin hedefini ( birey veya kitle, bu kitle küresel de olabilir) bilinçaltına mı bilinçdışına mı yönelik olduğudur. Bilinçaltı kullanımlar insan türüne ait oldukları için tür üzerinden, doğuşsal ortak kazanımlardır: Ölüm korkusu, buna bağlı olarak savaş, açlık, kıtlık, hayatta kalmak, cinsellik vb. gibi temel içgüdüler alanını kapsar. Bilinçdışı ise birey hatırlamasa dahi yaşam sürecinde yaşantıları doğrultusunda başka deyişle deneyimlerine bağlı olarak edindiği tutum ve tavırlardır. Bazen tutumlarına neden olan yaşantılarını anımsamasa da bu böyledir(Mlodinow, 2013).

Çok anlamlılığın, çok anlamlılık katmanlarının bireysel ya da kitlesel olarak çözümünü de elbette bireyin ve/veya kitlelerin özelliklerine bağlı olacaktır. İnsana ait iyi bir gözlem gücüyle bu özelliklerin tam olarak ortaya çıkmasını sağlayabilecek anahtar sözcükler üzerinden kurulacak algoritmalar katmaları birer birer çözmeye zorluk çekmeyeceklerdir.

Bazı katmanlar bildirişim göstergebilim dalının tanımladığı gibi (Rifat. 2009 tüm kitaba bakabilirsiniz) görür görmez anında aygıt tarafından tespit edilebilecektir. İşin püf noktası ve ilginç bu aygıtla beraber kodlanan uygun algoritmalar sayesinde göstergebilimin ‘anamlama göstergebilimi’ olarak tanımladığı benim ‘anamlandırma göstergebilimi’ olarak nitelendirdiğim çok katmanlı, grift, komplike, çözülmesi zor, ancak Göstergebilimin belli metodolojileriyle çözümlenebilecek alanlarını ALGÜL ayrıştırıcılarının kolayca yapacak olmaları çünkü göstergebilimin anlam katmanlarını çözmek için kullandığı bu yöntemleri ALGÜL Dijital Reel Psiko-Semiyotik Dil Kullanımı Ayrıştırıcılarının bünyesinde olacak ve tüm katmanları ayrıştırırken AI’den faydalanacak elbette AI de ondan.”(Algül,2023).

## **ALGÜL, Dijital Reel Psiko-Semiyotik Dil Kullanımları Ayrıştırıcıları, Dijital Etkileşim Derecelerinde Dil Kullanımlarının İmza Olabilme Özellikleri, Yapay Zekâ, Dijital Etkileşim Hukuku**

ALGÜL Dijital Reel Psiko-Semiyotik Dil Kullanımları Ayrıştırıcılarında, dil kullanımlarının imza olabilme özellikleri ve Yapay Zekâ ilişkileri,

“Henüz çok küçükken, o zamanlar bana devasa gelen kütüphâne gibi, piyanolu odalarda, aralıklarla bir yetişkin gibi ağırlandım. O kütüphânenin kitapları bana sunuldu Teşekkürler soy atalarım.. Babamı anımsadığım zamanlar, işten yorgun argın gelmiş, elinde bir kitap, balkonda oturup, akşam yemeğini beklerken, bu arada eli kolu hep dolu gelirdi; kitap okuyarak yorgunluğunu attığı, içeriğinden mutfaktaki annemi de bilgilendirdiği anlar. Çok sonraları o kitapların, amcalarımın lise ve üniversite ders kitapları olduğunu öğrenecektim. Toprak zengini dedem, çok çalışkan olduğu için en büyüğün bir küçüğü olan babama, köye yarım saat mesafedeki yerde Yalı denilen yerde bir kereste atölyesi açmış, sen burayı işlet demmişti. Babam, ondan gizlice gidip, araçla Yalı’ya bir saat mesafedeki, şehrin merkezinde yer alan ortaokula kaydolmuş ve bu ikiliği, köyden biri görünceye kadar dört ay sürdürebilmişti. Yıllar sonra tavana atılmış kitaplar arasında okul müdürünün dedeme gönderdiği telgrafi bulmuştuk. Şöyle yazıyordu “Kâzım Efendi, oğlunuz çok zeki ve çalışkan, maddi durumunuzdan dolayı geri aldıysanız tüm eğitim masrafını ben karşılamak ve velisi olmak istiyorum.” Tam böyle olmayabilir ama başlangıç böyleydi. İlk rol modelim babamdı. Elbette annemin babası, babasının dayısının önce gazete sahibi, sonra egemen siyasi erk tarafından bu engellenince matbaa sahibi olması, köken olarak eğitime önem verilen bir geçmişten, aslında hem ticarete hem eğitime önem verilen bir genetik kökten gelme; Romanya’dan gelen ve Türk siyasi tarihinde de yerleri olan atalarımın da çok etkilendim. Çocukken hayâlîm hep bu çok iyi eğitilmiş kökeni canlandırmaktı. Her zaman, zeki, iyi eğitilmiş, iyicil yollarla iyi para kazanan, aynı zamanda iyi yürekli insanlar arayışında olan, hep çok okuyan bir çocuk oldum. Bu okumalar, doğayı keşfetmem bittiyse, arkadaşlarla oyuna ara verdimsem, gene doğa içinde olurdu. Ağaç evi henüz hiç görmemiş olan ben, adını bile duymamış olan ben, siklamen renkli çiçek açan ağacıma çıkar, küçük kilimimi serer, okumaya başladım. Hatta çarpım tablosunu bağıra çağıra ezber yaptığım zamanlar... Eve geldiğimde anneme sorardım: -“Anne, çarpım tablosunu ezberledim. Duydun mu? Annem de:- “Tabii, tabii, camda seni bekledim”, derdi. Bahçemizdeki tüm ağaçları denemiş, en uygun olarak Manolya ağacı seçmiştim ki, bu ağacın tam olarak ne olduğuna erme hikâyem de çok ilginçtir, üç katlı evimize en yakın ve en kocamanı olan da oydu, hem eve hem göğe daha yakın olmak! Bir de denizi görebilmek, ah bir bulut olsam zamanları, Annemin ve benim içimi rahatlatan bir hâldi. Ağacım da benimle beraber büyümüş ya da küçülmüş olabilir, ilk tanışmam küçük kilimin incecik bileğime çok ağır geldiği zamanlar, küçük ama üç buçuk( herhalde en fazla üç buçuk yaşlarında olabilirim, birinci sınıfın bitimine bir ay kala beş buçuk yaşındaydım ve hiç unutmam) olan ben , o zamanlar keşfettiğim yerden vazgeçemedim. Küçük kilimime daha uzun saatler için arada çalışma masası görevini gören küçük bir yastık ilâve oldu. Uzun saatler için çok şey denediğimi çok iyi hatırlıyorum. Belki başka bir zaman paylaşabilirim. Evimizin alt katı boştu ve ardiye olarak kullanılıyordu. İlkokul birinci sınıfın bitmesine bir ay kala ve ikinci sınıftan başlayan bu daimi beraberlik, o zamana kadar kesintilerle; ikinci sınıfın yaz tatiline kadar sürdü. Sonrası, o zamanlar bilemeyeceğim nedenlerle olmayacaktı. Üçüncü sınıfı okumdan dörde devam edecektim. Belki kurşunkalem sevgisi de buradan gelmektedir. Okuma Sevgisi ve Çocuk LinkedIn’deki hikâye baz alınmış yazarı tarafından biraz genişletilerek verilmiştir(linkedin/VinciSafiye).

Doğuştan kazanımla gelen zekâ, yeti ve yeteneklerin içinde yeşerebileceği alanlar bulması sonucunda ki, çoklu okuma seçkisine sahip olmak, bu tür bir eğilimle doğanlar için bu alanda büyük bir gelişim şansıdır, bu yeteneklerini geliştirebilecek yan imkânlarla okumalarından ve onu besleyen çevresel şartlarından ki, anlamlı ötekileri de bu kaynaklara dahildir; kaynaklı etkileşimler sonucunda erebilirler ve bu imkânların onlara sunabileceği geniş bir yelpazeye yayılan, küresel boyutta bir karşılaştırma ve kıyaslama olanağı da verebileceği çıkarımını yapabilirler. Yaşam süreçlerini veri gibi kullanıp, bunu kendi erken çocukluk ve çocukluk süreçleri üzerinden değerlendirmeye tabi tutabilirler. Böyle süreç bilimsel bir bakışla değerlendirildiğinde felsefe takibinin bile yapılabileceği saptaması ortaya çıkabilir. Hangi felsefe kimler tarafından kullanılmış, en azından sunulan tarih üzerinden bu karşılaştırma ve kıyaslama yapılabilir. Etkileşim alanında belirleyici olacak olan bireyin doğuştan getirdiği donanımsal özellikleridir.

ALGÜL Dijital-Reel Psiko-Semiyotik Dil Kullanımları Ayrıştırıcıları, daha başlangıcında Psiko-Semiyotik İletişim alanını çözmek ve katmanlarına ayırmak, bu dil kullanımlarının bir başka söylemle dilsel ve görsel göstergeler alanının psikolojik olarak neyi hedeflediğini saptayarak psikolojik etkiyle neleri kamufle ettiklerini açığa çıkarmakla kalmaz aynı zamanda bireye özgü dil kullanımlarının da takibini yapabilecek ve bu amaçla yapay zekâyı küresel boyutta, istenileni IT’ye dönebilecek alanında yetkin uzmanlarla işbirliği içine girerek, kullanmak üzere tasarlanmış bir dijital küresel kitle iletişim teknolojisi ürünü olmak üzere kurgulanarak tasarlanmıştır.

Her dil kullanımı, düşünceleri yansıtır ve bu düşünceler birer imza niteliğini taşıyabilirler. Da Vinci’nin de, insan karakterinin yazdıklarından anlaşılabilirliğini ifade eden bir söylemi vardır. Aynı zamanda dil kullanımları çok maskeli değilse kişinin ruhunu da yansıtabilir. İçinde bulunulan çağ, deforme olmuş ruhlardan dolayı, ticari ederi olan ruhların, dil kullanımlarının tehlikede olduğu bir çağ olarak düşünülebilir çünkü geniş kitlelerin içinde

gerçeğe, bilseler de bilmeseler de eğilim vardır. Bu gerçeğin kimlerden sömürüldüğü önemli değildir. Sözün nüvesi dil kullanımlarının vuruculuğu onları kullananların karakterinden gelir, en azından gelebilir.

**“Yapay zekânın bir insana eşdeğer kılınabilmesi için bir insanda olduğu saptanan çoklu zekâ türlerini: Dilbilimsel zekâ, mekânsal zekâ, sayısal, artistik, duygusal, duyuşsal zekâ( çevresiyle etkileşime girebilme becerisi), fiziksel zekâ, refleksiif zekâ( kişinin davranışları üzerinde düşünme ve bunları değiştirilebilme becerisi; barındırması gereklidir (Alfa Yay., 2024). ALGÜL Dijital-Reel Psiko-Semiyotik Dil Kullanımı Ayırıştırıcılarında girilecek algoritmalar, kodlamalar, bireyin duygu durum biçimlerini, düşün dünyasını, karakterini ölçümleyebilecek şekilde tasarlanacaktır. Öyle ki, tutarlı tutum ve tavırlarını, bireyin farklı zaman, mekân, vb. gibi kısaca sekiz zekâ türü üzerinden tutum ve tavırlarını süreç içinde takip etme ki, dijital çağ bu imkânları sunabilmektedir, Bakınız Potansiyel Dijital Kölelik üzerine üretilen makaleler( Algül, 2020-2023), dil kullanımlarını saptama ve ayıklayabilme üzerine kuruludur. Yapay zekâyâ yapılandırılacak algoritmalarla aynı zamanda bu dil kullanımlarının kimler tarafından talan edildiği, kimler tarafından modellendiği veyâ kopyalandığı bilgisini de sunacaktır. Dil kullanımlarının vurucu etkisinin boyutu andaki zamanda bile çok açıktır, dijital mahrem alanların talan nedenlerinden biri de budur: Geniş kitleleri avlayabilmek ve paraya, çikara, güce dökebilmek için yapılmaktadır.**

### **Etkileşim Dereceleri ve Etkileşim Hukuku**

Herkesin bildiği gibi müzik sektöründe başka bir besteden belli bir orana kadar legal olarak ilham alınabilir ama o ölçü, sekiz mezur, geçildiği takdirde bu yasal işlem gerektiren bir boyuta taşınır ve telif hakları gündeme gelir. İlerleyen zaman dilimlerinde Kovid 2019’la beraber yaygın kullanımı kemikleşen bir sürece küresel boyutta giren dünya halkı, aynı oranda bir sömürü alanını zorunlu olarak kullanmaya da mahkum etmiş olduğundan ilerleyen zaman dilimlerinde bu alanının Etkileşim Hukuku üzerinden düzenlenmesi ve yeniden yapılanması kaçınılmaz olacaktır. Tabii tercih edilirse çünkü kürde yakın zamanlarda meydana gelen her kitlesel olay, dijital alanlarının, bir başka söylemle sömürü alanlarının yaygın kullanımıyla sonuçlanmıştır. 21. Yüzyıl insanlı, onunla adeta dalga geçen bir illüzyonla karşı karşıya bulunmaktadır. Makalenin içeriğinde bulunan fikirler böyle bir düzeneğin yeniden yapılanma aracı, kamufler aracı bilimsel deyimle Dijital-Reel Psiko-Semiyotik Dil Kullanımı aracı yapılmazsa eğer, ciddi bir şekilde gerçeklere, doğruluğa yönelik bir adım atılmaz sa eğer bu alan da Etkileşim Hukuku Dereceleri üzerinden; müzik alanında yer alan mezur gibi bir kısıtlamaya tam hakkı verilerek gidecektir, gitmelidir: Belli orana kadar dil kullanımlarını kopyalamak, modellemek legal sayılabilir ama bunun üzerine çıkmak, aynı kişiyi sürekli takip edip birebir almak veya içeriğinden çıkarmak söz konusu olduğunda legal işlem başlatılması kaçınılmaz olacaktır. Bu bağlamda ALGÜL Dijital-Reel Psiko-Semiyotik Dil Kullanımları ayırıştırıcısı tüm bu izlemelerin küresel takibinde, etkileşim derecelerini tam olarak saptamada, Yapay Zekâdan faydalanması hesaplanan, hayata geçirilmek üzere bekleyen bir proje olarak karşımıza çıkmaktadır.

### **SONUÇ**

Bu makale: Bütünüyle bana ait Dijital-Reel Psiko Semiyotik Dil Kullanımları ki, bu bilim dalı yaratımı tümüyle bana aittir ve bir bilim dalı olarak yeni bir makalemin konusu olacaktır. Öncelikle bu son dört makalede ben dili bilimsel yaratılarım gereği daha sık kullanılacaktır. Uzun yıllar boyunca dijital hırsızlığa maruz kalmış bir akademisyen olarak da bu dil kullanımını tercih ediyor ve gerekli görüyorum.

Bildiğiniz üzere bilim insanları kendi yaşam süreçlerine bir bilim insanı gözüyle bakabilir ve yaşam süreçlerini bilimsel veri olarak kullanabilirler. Bu bağlamda, Psiko-Semiyotik Dil Kullanımları, Dijital Reel Psiko-Semiyotik Dil Kullanımları bilim alanı yaratımından ürettiğim ALGÜL Dijital Manuel Psiko-Semiyotik Dil Kullanımları Ayırıştırıcısı “...fikri bir nüve olarak bende erken çocukluktan itibaren vardı. Okul öncesi dönemlerde ki, ilkokul birinci sınıfın bitiminde beş buçuk yaşında olan biriydim; İsviçre’den gelen amcamın konuşmaları, Romence, İngilizce bilen, iyi eğitilmiş, ülkemize de siyasi alanda hizmet etmiş, büyüklerimin, babamın konuşmaları, zevkle dinlediğim akşam oturumları var; dil kullanımlarına erken çocukluktan beri özellikle dikkat eden ve hatta bu sözcük öbeğinin kullanım şeklinin patenti bana ait diyen bir erken çocukluktan geliyorum. Sonra bu görüş, dil kullanımları birer imza niteliği taşıyabilir duygusuna yerini bıraktı çünkü etrafımdaki yetişkinlerin dili kullanma biçimleri birbirinden çok farklıydı ve hatta bazıları sadece belli sözcükleri aynı şekilde kullanıyordu. Bazen bir sözcük seçimi ve dil kullanımı sadece o kişiye ait olabiliyordu. Herhangi bir konuşma aktarılırken, aktarılan cümlelerin sahibi bilinmezken dahi, eğer bu farklılık sadece sözcük seçimi, sözcük dizgesi ya da sözcüğün standart yapısında yer alan harflerin yapısını bozmaya dayanıyorsa başka bir deyişle sesle, tonlama ile ilgili değilse aynen aktarıldığında kimin konuştuğunu, cümlelerin kime ait olduğu çıkarımını yapabilecek hatta bunu oyuna dökebilecek ( buradan da bir dil oyunları buluşu çıkar) bir geçmişin sahibi olarak geldiğim son nokta ki, buna dayalı içeriğim talan edilen bilgisayarımdaki günlüğümden çalınarak-Bknz. Potansiyel Emsal Dijital Kölelik Vakası( Algül, 2020-2023)Fetömetre: Adı bana ait değildir)- belli bir grubu ayırıştırmak üzere ortaya çıkarıldı. O buluşun fikri de bana aittir. Dijital alanımın 7/24 elektronik illegal takibiyle sürekli yağmalanması sonucunda çalınmıştır. Özetlenirse ALGÜL Dijital Reel Psiko-Semiyotik Dil

Kullanımları Ayrıştırıcısı erken çocukluk günlerimin eğlence, oyun alanı olarak gördüğüm dil kullanımlarına olan ilgimin zaman içerisinde onca alınan dil bilimi dersleri ki, dil bilimi derslerinin önemini hep söylerim çünkü dilin formüllere dayalı, matematiksel, sayısal yapısını açıkça ortaya koyar ve genel bir bakış oluşturur: Bu bakış düşünce oluşumu açısından önemli olabilir. Bknz. ALGÜL Türkçe (Ana dilin)'nin okur yazarlığının, öğretilme (metodolojisinin) matematik bilgisinin aktarılma yönteminin sağlıklı düşünce oluşumunu etkileyeceği üzerine kurulu teoriler. Ben öyle olduğunu düşünüyorum- özel ilgi alanlarıma yönelik okumalarımla girdiğim etkileşim sonuçlarının evrilmesiyle gerçekleşmiştir..."(LinkedIn). Bu içerik yazarın LinkedIn'de yayımlanan, yaşamına ait hikâyelerinden baz olarak alınarak, genişletilmiştir.)

Elbette bu buluşum çok daha farklı buluşlara gebe olma özelliğini de bünyesinde taşımaktadır. Bu evrimleşmeden doğan her bir fikrim öncelikle hukukla güvence altına alındıktan sonra makale çalışmamın konusu olabilecektir. Hukuki güvence eksikliğinden dolayı, bu makalemde her şeye değinmem söz konusu değildir. İlerleyen zamanlarda detaylı aktarım belki ürünü piyasaya sunduktan sonra mümkün olabilecektir. Bir dijital köle akademisyenin geldiği nokta ve kullandığı dil budur ve tarihe tüm bunları aynı gerçeklikle bırakıyorum.

İnsanlık tarihine baktığımızda başarılı olan devletlerin teknolojiye ileri gitmiş, sahip olunan elektronik teknolojiyi önce savaş alanında kullanmış ki, teknolojik üretimler hep önce savaştaki başarı için üretilmişlerdir: Savaş sırasında yanlısamları gören, tespit eden, ayırt eden, yanlısamlar yaratan liderler başarılı oldular. Casus ve ajan kültüründe öne geçenler, sömürü düzeninde ileriye gidenler aynı bilgi birikimini elbette şimdi dijital evirerek kullanıyor olabilirler ya da 18. yüzyıl Aydınlanma çağına demirlemiş olabilirler. Bu iş karanlık yapılanmalara kalmış olabilir.

Psiko Semiyotik İletişim üst başlığı altında topladığım Dijital Reel Psiko-Semiyotik Dil Kullanımları Ayrıştırıcıları ve bundan yaratmış olduğum ALGÜL Dijital-Reel- Manuel Psiko-Semiyotik Dil Kullanımı Ayrıştırıcıları dedüktif bir yöntemle andaki teknolojinin sağladığı olanakları kullanarak, dijital reel psiko-semiyotik dil kullanımlarının kafa karıştırıcı, karartıcı, hedefin psikoloji alanını tahrip etmeye, etkilemeye, istedik güdümlenme ve manipüle etmeye yönelik katmanlarını sökmek ve anda ulaşılabilecek en gerçeğe ortayı çıkarmak üzere, savaşı bir dünya, gerçeklere dayalı bir iletişim dili ve küresel tarih için yaratılmıştır. Sanırsal tasarımların sökülmesi, kötücül, metaverse dijital reel psiko-semiyotik dil kullanımlarının sonu, alaşağı edilmesi, sökülmesi, gerçek olanla olmayanı ayırt etmek üzere yaratılmışlardır.

Gerçeği eğip bükenlerin, onu yeniden yaratanların ve hayatın bu olduğunu sanacak kadar sığ olanların, oyuncağı edilemez insanlık. ALGÜL Dijital-Reel- Manuel Psiko-Semiyotik Dil Kullanımı Ayrıştırıcıları, gerçeklik algısıyla oynanan arenaya bilinçle bakabilmeyi sağlayan bilgiyi de insanlığa sunan bir buluştur. Genel çoğunluğa karşı küresel boyutta 7/24 gerçeklik algısıyla oynanan dilsel ve görsel göstergelerle güdümlenme oyununa son veren bir buluştur ki, bu 7/24 sürdürülebilir dijital kölelik için de uygulanan bir yöntemdir (Algül, 2020-2023). Gelecekte, psiko-semiyotik iletişim araçlarına geniş kitleleri onların aleyhine olacak şekilde sürekli maruz bırakma eylemleri hukukun, temel insan haklarının alanına girecektir. Bir şekilde tüm bu psiko-semiyotik; dilsel ve görsel göstergeler alanı genel çoğunluğun lehine hukuki bir düzenlemeye de tabii tutulmak zorunda kalacaktır. Hiç kimse kamuya açık alanları, kamu aleyhine kullanamamalı ve özgür düşüncenin önünü kesip, çıkarları doğrultusunda düşünce gelişimini manipüle edememelidir. Tüm bu açık, kamusal alanın yaratıcı düşünceyle de ilgisi vardır ve sürekli aslında gerçek olmayan, korkuya (savaşlar, hastalıklar vb. gibi.) dayalı manipülasyon amaçlı göstergeler kontrol altına alınmalıdır çünkü o her yerden legal görünümlü veya illegal küresel çapta elde etmeye çabalanan, uzun yıllar boyunca sürdürülebilir kılmak yolunun tercih edilebildiği dijital köleliğe vardırarak kadar kasıtlı bir şekilde insan haklarına aykırı olarak elde edilmeye çabalanan verinin özgür düşünceyle ilgisi vardır; özgür düşünce korku çemberinde yeşermez, *tarafsız düşünce gelişiminin* desteklenmesi ve beslenmesi gerekir ki, *tarafsız düşünce* direkt olarak yaratıcı zekâyla ilişkilidir. Tarafsız düşünce ortamı oluşturmanın ilk adımı istedik doğrultuda manipüle araçlarına tabii tutulmayan ortamlar sunmaktan geçer. Tarafsız düşünce daha başlangıçta eliptik kürenin herhangi bir yerindeki herhangi bir olguyu, durumu, bireyi ötekileştirmemenin tek yolu olabilir ki, bunu ispatlamaya çalışan araştırmalar yapıyorum. **Yapanın farkında bile olmaması durumundan** dolayı, daha başlangıçta ötekileştirme **önemli kavramdır**. Tüm klişeleşen, kalıplaşan, şablon haline gelen düşünceler bu gruba dahil edilebilirler.

Geçmişin sömürüye, gerçekleri kararmaya dayalı, egemen güçlerin çıkarları doğrultusunda yaratılan dünyasını tersine çevirmek, yerle bir etmek ve çıplak gerçeğin ortaya çıkmasını sağlamak üzere tasarlanmıştır. İyilik, güzellik, gerçek arayışı erken çocukluk döneminden beri bende var olan bir duyguydu. Gezegenin tarihini çarpıtmaya, insanları sömürüp semirmeye hiç kimsenin hakkı olmamalı. Dilerim bu buluşlarım insanlığın gelişimi ve dönüşümü için çok faydalı olur, savaşlarla, hastalıklarla, bir başka söylemle *korkularla* sindirilip sömürülmeye hayır demeli **insanlık**, doğa içinde, doğayla bütünleşik özgür bir yaşam her bireyin hakkı olmalıdır.

### ABSTRACT

Social media is one of the most influential media organs for content production and consumption today. It can be said that social media platforms are largely platforms that amplify sexism by producing gender-based harmful stereotypes and reinforcing unequal treatment. This media, which is used intensively, especially by generation Z, can have all kinds of content and subject matter. While consuming content in these applications, people are often confronted with sexist content. How much the individual is aware of such content and how much information they have about this awareness is a controversial issue. Based on this discussion, a literature review was conducted on sexist content awareness and social media use of university students. A qualitative research method will evaluate university students' understanding of sexist content during social media use. It was applied to 20 university students at Sakarya University. According to the results of the research, it shows that university students encounter many different sexist content during the use of social media, and they are aware of these contents. For individuals to better understand this awareness, it can be supported by school and online seminars and can be suggested as a solution to this problem.

**Keywords:** Social media, Sexist content, University Students

### INTRODUCTION

Technology is developing worldwide, and these technologies have become an integral part of our lives. Social media has made the use of social media a daily issue, like fulfilling the physical needs of millions of people by destroying the space and time boundaries of daily life. Social media allows them to share various events, ideas, and situations (Batur, 2014). For this reason, human beings use these developing technologies in many different fields, such as media, news, content production, and consumption. Mass media are practical tools for individuals to access almost all the information they want from every field. These tools are essential in forming the perception of masculinity and femininity. Gendered approaches in mass media offer a critical research area to examine how male and female roles are perceived in society and how these perceptions are reinforced. Therefore, mass media is essential for individuals to learn gender roles. It may function to reproduce and normalize gender stereotypes. The language, visuals, and content choices used in this process may contain messages that support or challenge gender inequality.

Sexism refers to discrimination against gender in society. In a broad sense, this concept includes gender stereotypes of men and women and also reveals discrimination against men and women (Kan, 2011). In recent years, with the increased use of new media and its prominence as a widespread media type, interactions such as social media have assumed an essential role in rebuilding social reality and reflecting daily life. In this context, sexist content is also more common on different platforms in social media.

Historically, the roles assigned to male and female identities have been passed down through generations through many social institutions. Society, which used to see such content through traditional media in the past, sees sexist content and posts in the new media and social media (Doğan, 2024). Mobile phones have become very popular, especially with social media. Social media has become a platform where we have difficulty distinguishing between right and wrong as much as it is powerful. An individual can prepare the ground for many manipulations and unethical events with all kinds of content that he/she shares and speaks regardless of his/her identity. Based on gender, social media platforms have sexist content and receive a large number of interactions. In these interaction environments, sexist discourses and posts are prepared and shared.

The problem of the awareness of sexist content during social media use was a question in the minds of more than one person. It can be said that the importance of this question stems from the fact that the internet environment is a free / highly interactive platform. Many people inevitably say that they express themselves freely on the Internet. They can also express hate speech against social sensitivities and groups within this freedom. Social media also hosts a structure that can quickly separate and polarise society and individuals. For this reason, awareness of sexist content in social media is a crucial situation worth examining. Based on this importance, the primary purpose of this study is to reveal young people's awareness of sexist content on social media.

## THEORETICAL BACKGROUND

The concept of sexism and gender, which is not based on a biological basis, is that the roles and responsibilities of individuals in society are shaped according to the roles imposed by society on individuals, not according to their biological competencies. For this reason, the perception of gender has developed differently in each society. The concept of gender differs depending on forms of belief, economy, and culture. The concept of gender, which goes back to the transition to settled life, is still one of society's problems today (Karakaya, 2018). Gender is transmitted to the individual through genes before the individual is born. It is the imposition of social roles imposed on them from birth according to their physical characteristics after birth, with the gender being male or female, and they are asked to adapt to society according to these roles. In retrospect, although some social roles are imposed on both genders, women are the gender that is more affected by this situation (Artar & Fildiş, 2021).

From the past to the present, the characteristics, status, and roles attributed to men and women at the level of society have been determined according to the gender of individuals, and it has been believed that these are gender-based and unchangeable things. The concepts of gender and sex are different. Women are seen in a subordinate position under male domination. This position of women is tried to be explained depending on their biological structure, and this situation is expressed as a situation that needs to be fought. Gender refers to the values, roles, and expectations defined by society by male and female roles. Women and men are individuals who have quite different roles from each other in terms of characteristics such as appearance, ability, and thought. It is argued that each society assigns different gender roles to men and women and that individuals who do not display the behavior models of these gender roles are excluded by society (Bora, 2012).

In the distribution of roles in society and gender roles, they are forced to live with gender stereotypes determined for them with the influence of factors such as culture and religion. The fact that women are more compassionate and emotional individuals who can show their feelings with their maternal instinct, while men are more harsh and do not show their feelings, has led them to use their characters and characteristics that they may not want to be. Because society tries to exclude people who are not normal according to themselves and who do not look like them, in sexist content, objectification of women is at the forefront, and these contents are reinforced by the use of language and the discourses chosen. These contents also carry the danger of marginalization.

Among the studies on social media use based on gender, Yılmaz and Polat's (2023) research is fascinating. Accordingly, as a result of the research, it was found that women were more selective about their posts than men because they thought they would be criticized and judged by society. It was noticed that men were less concerned about the opinion of the society than women. This may suggest that social expectations put more pressure on women and restrict their behavior.

In addition, the Association of Journalists of Turkey provides ethical principles and recommendations on the representation of women in the media in its 'Women and Media Guide.' It focussed on issues such as women not being discriminated against in the news, not using sexist language and protecting the victim in the news of violence and abuse. In addition, the guideline emphasizes the need to ensure gender equality in the media, to make women's achievements visible, and to use a language free of prejudices. It also recommends that journalists use careful language and observe gender sensitivity in reporting on women.

'With web 2.0, one-way communication has been replaced by two-way and simultaneous communication, which has become a system used in all areas of the media. Social media is the name given to all kinds of dialogues people share and make with each other. It stands out as a platform where people can mutually share posts and content on social media and share the information you are looking for and the news, information, or posts your friends want to see.' (Öztürk, 2015).

'Social media are web-based platforms that allow users to express themselves, explain and communicate with others, share their life experiences, share their experiences, and share different types of media content with everyone in the world. Blogs, forums, and communities in social media that produce content are the names given to websites that can bring together thousands of people from different countries and where they can significantly interact with these people, get news, and share pictures and videos (Uluç & Yarı, 2017).

'It is a fact that the concept of gender is very different and broad. The concept of gender tells us that there are molds established in society, such as femininity and masculinity. Studies that make gender the main subject of their research should not only include women but also be aware of different ideas in their studies and advance their work accordingly. Differentiating women and men in the division of labor by including gender also restricts access to the resources belonging to society. Many different inequalities and discrimination reinforce this inequality and constitute a serious obstacle not only for women but also for the development of multiple areas affecting society. In Turkey, gender inequality exists in serious dimensions in every part of life (Özaydınlık, 2014). The gender of the individual has both biological and social functions at many different and essential points. Being born as a woman or a man can change population-based balances, but it is also one of the factors that play a role in issues such as gender-based social differences and inequality. One's biological sex and social gender are treated

independently, as being male or female is assigned at birth. Being masculine and feminine targets geographical and cultural structures through socialization (Bingöl, 2014).

The desire of society to share everything that emerged with the instinct to exist in social media, especially with the Z generation born after 2000, has turned social media into a data stack. Without thinking about what is right and wrong, they can ignore all kinds of moral values just for the sake of followers. It is possible to see sexist content about women in our country and the world as a majority. Especially with social media taking such an active place in our lives, sexist content, regardless of gender, becomes legitimized with social media. Social media publishes sexist content without any censorship or warning. This may cause society to see these situations more than once and to accept them as a normal part of life.

## METHOD

A literature review was conducted during the research process on the relationship between university students and sexist content. No scholarly articles or academic studies were identified on this subject.

A qualitative research method was used in this study. 'Based on qualitative research, qualitative data collection techniques such as document analysis, observation, and interview techniques are often used. In addition, qualitative research, which helps to examine the events related to people and society by going deeper into the events in their natural environments, is an analysis technique that combines many different disciplines.' (Baltacı, 2019). The study population consists of Sakarya University students. The data were analyzed by considering the answers received in the semi-structured question form applied to 20 university students determined according to the random sampling model. According to the results obtained in the study, it is concluded that university students encounter sexist content during social media use and are aware of this content.

## FINDINGS

The research questions were analyzed in two categories: sexist content and gender awareness. There were three questions in the sexist content category and four in the gender awareness category. The findings of the sexist content category are as follows;

As we can see in Table 1, Instagram is the social media application most frequently used by the students participating in the study. Based on this situation, the platform where they see the most sexist content is Instagram, with 55% (11 people). The remaining 45% (9 people) constitute the X platform.

**Table 1.** Most Used Social Media Applications

| Social Media Application | <i>f</i> | %   |
|--------------------------|----------|-----|
| Instagram                | 11       | %55 |
| X                        | 9        | %45 |

**Table 2.** Table of the Most Sexist Content Subject Gender

| Sexist Content | <i>f</i> | %   |
|----------------|----------|-----|
| Female         | 18       | %90 |
| Man            | 2        | %10 |

According to the data in Table 2, 90% of the participants (18 people) said that they saw sexist content mainly through the female gender. 10% (2 people) said that they saw content through the male gender.

**Table 3.** Frequency of Sexist Content Table

| Frequency of Sexist Content | <i>f</i> | %   |
|-----------------------------|----------|-----|
| Rarely                      | 5        | %25 |
| Occasionally                | 2        | %10 |
| Sometimes                   | 7        | %35 |
| Very Frequently             | 1        | %5  |
| All the time                | 5        | %25 |

Participants' frequency of seeing sexist content is given in Table 3 above. According to this table, the participants mostly answered 'sometimes.'

**Table 4.** Action Table for Sexist Content

| Action Taken                 | <i>f</i> | %   |
|------------------------------|----------|-----|
| Comment, Like, and Complaint | 7        | %35 |
| Does Not                     | 10       | %50 |
| Sometimes                    | 3        | %10 |

As seen in Table 4, the rate of those who comment, like, or complain about sexist content they encounter is 35% (7 people), the rate of those who do not is 50% (10 people), and the rate of those who sometimes do so is 15% (3 people).

**Table 5.** Sexist Content Materiality Table

| Importance of sexist content    | <i>f</i> | %   |
|---------------------------------|----------|-----|
| Those who attach importance     | 11       | %55 |
| Those who disregard the content | 9        | %45 |

According to Table 5, 55% (11 people) of the participants prefer to follow pages emphasizing gender equality, while 45% (9 people) do not.

**Table 6.** Finding Sexist Content Correct

| Opinion                       | <i>f</i> | %   |
|-------------------------------|----------|-----|
| Those Who Find It True        | 6        | %30 |
| Those Who Do Not Find It True | 14       | %70 |

According to Table 6, the data we obtained tells us the following. The number of people who think that what the pages that increase interaction through sexist posts on social media do is right is 30% (6 people), while those who argue that this is wrong are 70% (14 people).

**Table 7.** Rate of Exposure to Gender Discrimination Table

| Rate of Exposure to Gender Discrimination | <i>f</i> | %   |
|---|----------|-----|
| Yes                                       | 7        | %35 |
| Sometimes                                 | 9        | %45 |
| No  | 4        | %20 |

As can be seen in Table 7, the number of people who have been subjected to gender discrimination is 35% (7 people). 20% (4 people) answered sometimes. 45% (9 people) stated that they have not been subjected to any discrimination.

## DISCUSSION AND CONCLUSION

Social media platforms were initially seen as the ultimate tool of connection, enabling people to expand their social networks across cultures and international boundaries. Today, people report spending twice as much time socializing online versus in person (Buie ve Croft,2023).

The study examined how university students perceive and interact with sexist content on social media. Based on the information obtained from university students, the participants mostly use the Instagram application. They stated that the sexist content they encountered mainly was based on the female gender. Participants also stated that they observed sexist discourses not only from the opposite sex but also from their sex.

When the average age of university students is considered in the research findings, it is noteworthy that Instagram is the most used application. It is seen that sexist content on social media is mainly based on the female gender. Since the research covers university students, it is seen that their awareness of sexist content is high. Sexist content is considered disturbing by the participants. Individuals who are frequently exposed to gender discrimination in society in their daily lives are also exposed to sexist content while using social media to spend time at home, which both normalizes and creates a change in perception in the long term.

In the findings of the study, those who are disturbed by seeing sexist content on social media are in the majority. On the other hand, half of the respondents do not react to sexist content. This situation brings along the normalization of sexist content. Activist movements in social media react to sexist situations. This is because reacting to the participants who use social media to linger in daily life is not considered necessary.

When fighting for gender equality, avoiding sexist language and behavior is essential. This is necessary to build a more just, inclusive, and tolerant society. Tackling sexism will help create a healthier and more balanced society in the long run.

It is essential to provide training such as media literacy at an early age for awareness of sexist content. Public spots and seminars can be organized to raise awareness of society, and efforts should be made to prevent such situations by creating a more conscious society. In order to prevent this from happening, it can be suggested that courses on media literacy and gender discrimination should be opened in educational institutions and course centers of municipalities, and existing programs should be increased.

### ABSTRACT

This research endeavor seeks to scrutinize films portraying women in Turkish cinema during the period spanning 2010-2024. Within this study, the characteristics of films featuring women's themes in Turkish cinema productions from 2010 to 2024 are investigated. The representation of women in these films, alongside their societal significance, serves as a sociological reflection, delineating the cultural landscape. Moreover, Turkish cinema has undergone a notable evolution both in narrative content and cinematic style since the turn of the millennium. A review of scholarly discourse on Turkish cinema reveals a consistent thematic focus on women's issues since the 1980s, a trend that persisted into the post-2000 era. Consequently, an examination of films produced over the past fourteen years offers valuable insights into evolving societal perspectives and thematic frameworks. This study endeavors to elucidate the perspective of directors and audience reception concerning women's representation in contemporary Turkish cinema through quantitative analysis, operating within the confines of the patriarchal paradigm. By quantifying the prevalence and treatment of women in Turkish cinema, this study aims to contribute to a nuanced understanding of gender dynamics within the realm of contemporary Turkish filmmaking. To achieve this aim, a purposive sampling method will be employed to select films addressing women's themes in Turkish cinema between 2010 and 2024. Subsequently, a content analysis approach will be utilized to dissect these films, offering a systematic examination of their thematic and narrative elements. This research initiative is poised to enrich the existing scholarly discourse on the portrayal of women in Turkish cinema, thereby contributing to the broader academic landscape.

### INTRODUCTION

The subject of the study is the characteristics of women in the films on women in Turkish cinema productions released in 2010 and after, based on viewing rates. It is considered important in terms of contributing to the literature and positioning the social perspective, and it is thought that it should be examined in this context. When we look at the history of Turkish cinema, films with women as the main subject after 1980 are called 'women's films'. Films about women and the presentation of women in these films are attributed importance as they are a sociological projection/reflection to define society. Turkish cinema has experienced a transformation in both content and cinematographic context after 2000. After this transformation, when the literature on Turkish cinema is examined, it is seen that the rise of women-themed films in the 1980s, although interrupted in the 90s, continued after the 2010s. For this reason, considering that different perspectives develop periodically as a result of social dynamics in Turkish cinema, the data to be obtained as a result of examining the subject of women in the productions realized in the last fourteen years is important. In this context, the rate of audience interest in films about women in Turkish cinema is another striking point of this issue. It is noteworthy that women-themed films have recently been released in Turkish cinema in different genres. Whether these productions are preferred by the audience when they are released is a noteworthy data. Determining the gender of the directors of women's films, the genre in which the production team deals with the subject of women more intensively, and the characteristics of female characters will provide important information about how women have been presented in Turkish cinema recently. In this study, it is attempted to reveal the directors' perspective on women in the patriarchal order in recent Turkish cinema and the audience's interest in this issue through quantitative data. In this context, in order to create healthy data for the last fourteen years of cinema, the films on women released in this period were analyzed using the content analysis method. Thus, it is thought that by obtaining the quantitative data of the films on women in Turkish cinema, it will shed light on the presentation of women in Turkish cinema in the recent period and contribute to the field.

### An Overview Of Turkish Cinema And New Turkish Cinema

Turkish cinema is generally classified starting with the year 1914. Shot in 1914 by Fuat Uzkınay, The Destruction of the Russian Monument at Ayastefanos is considered the first film in the history of Turkish cinema, and Uzkınay is considered the first Turkish filmmaker. (Özön, N. 1995; Onaran, A. Ş., 1994; Teksoy, R., 2007; Scognamillo, G., 2010). For this reason, various events and celebrations were held in Turkey in 2014, the 100th anniversary of Turkish cinema. Beginning in 1914, the adventure of Turkish cinema was interrupted by the World War I that

started in these years, but it experienced its golden age especially with Yeşilçam films. Gülçur states that Yeşilçam took its name from a street in Beyoğlu where film producers were mostly located, where Turkish cinema established an intense relationship with its production and audience in the 1960s and the first half of the 1970s (2020). Turkish cinema underwent a change after the second half of the 1970s. One of the most important reasons for this change was the widespread use of television in Turkey. In addition, in these years, the effects of migration from the village to the city began to be seen intensely in the films of that period. This situation caused arabesque songs and movies to be popular in the market. Moviegoers, who had retreated to their homes with the widespread use of television, showed interest in the cinema again with arabesque films (Güçhan, 1992).

In the 1980s, films about women were frequently featured in Turkish cinema. There are two different categories of women in films made in Turkey in the 1980s. The first one is arabesque content and commercially oriented films. In films in this category, women are in the traditional Yeşilçam style, where female characters are presented as good “angels” and bad “devils”. In the films in the second category, women are presented as “human beings” with both good and bad qualities, as individuals who can think, have sexual desire, take part in business life and be a good mother (Esen, 2000). After 1980, the first director that comes to mind when it comes to films about women is Atif Yılmaz. Atif Yılmaz directed more than 70 films between 1960 and 1979, and after 1980, he produced works in different genres and pushed the envelope (Scognamillo, 2010). The presentation of women as the main characters in Turkish cinema started with the 1982 film *Mine* directed by Atif Yılmaz and continued with films made by directors such as Başar Sabuncu, Şerif Gören and İrfan Tözüm in the 1980-1990s (Kanlı, Agocuk, & Çiftçi, 2019). In films about women in this period, women were generally seen as educated, working and individual characters trying to gain a place in society, in addition to their roles as good wives and devoted mothers, unlike traditional Yeşilçam characters.

By the 1990s, there was a change in the general structure of Turkish cinema. The collapse of the Yeşilçam structure brought the end of the production system. Therefore, directors started to search for different sources to shoot their films (Teksoy, 2007). In these years, Turkish cinema started to look for solutions to the financial problem. This situation was also being experienced in European countries. In 1991, the state helped the film industry for the first time in the history of Turkish cinema. In 1992, the Ministry of Culture provided a grant of 500 million TL for each film, 50% of which was grant and 50% of which was interest-bearing, and one year later this support was increased to 600 million TL. Some of the films that benefited from this support in this period are; *Ah Gardeşim* (Kadir İnanır, 1991), *Berlin in Berlin* (Sinan Çetin, 1992), *Amerikan* (Şerif Gören, 1993). In addition, Eurimages and various foundations and private television organizations also provided support for films during this period (Scognamillo, 2010).

After 1990, a new generation of directors emerged. Changing social dynamics and the phenomenon of producers led to a change in the subjects of films. The change in Turkish cinema in general led to a differentiation in the audience profile. Rekin Teksoy (2007, p. 83) describes the impact of the change in the producer structure on cinema as “the fact that directors instead of producers directed production led to the unexpected result that many new directors produced films that took cinema seriously”. A young generation of directors such as Zeki Demirkubuz, Semih Kaplanoğlu, Derviş Zaim, Nuri Bilge Ceylan, Reha Erdem, who started directing films in the 1990s and continued to direct films after the 2000s, winning awards both at home and abroad, emerged. Although it was the new generation of directors who made their first films in these years, the older generation of directors also continued to make films during this period. Suner states that although the new Turkish cinema represents the generation of directors who made their first feature films after 1990, it is a problem that the older generation of directors who made films after 1990 are excluded from this framework (Suner, 2006). As Suner points out, directors of the older generation continued to make films in this period. For example, old generation directors such as Atif Yılmaz's *Nihavend Mucize* (1997), *Eylül Fırtınası* (1999), *Eğreti Gelin* (2005); Halit Refiğ's *İki Yabancı* (1992), *Gelinlik Kız* (2000); Ömer Kavur's *Gizli Yüz* (1991), *Akrebin Yolculuğu* (1997), *Karşılaşma* (2003); Zeki Ökten's *Güle Güle* (1999), *Gülüm* (2002) directed films after 1990. In this period, Yavuz Turgul, who had written screenplays for many successful films in Yeşilçam, especially within the Arzu Film school, such as *Tosun Paşa* (1976), *Sultan* (1978), *Çiçek Abbas* (1981), *Şekerpare* (1983), etc., made the transition to directing with *Fahriye Abla* in 1984. Turgul continues to work on films from the mid-1980s to the present day (2024). The unique narrative and cinematographic codes of Turgul's cinema allow him to be associated with the concept of 'auteur', which has become prominent especially in post-2000 Turkish cinema. He is both the screenwriter and director of Turgul films. After 1990, he attracted attention especially with the movie *Eşkıya*. *Eşkıya* (1996) marked the beginning of the popular part of the New Turkish cinema and had a record-breaking box office at the time (approximately two and a half million viewers) (Suner, 2006).

Although the rise of popular cinema was realized with the film *Eşkıya*, Derviş Zaim's *Tabutta Rövaşata* (1996) also stands out in this period. In 1996, Zaim made his directorial debut with the film *Coffin in a Box*, which won many awards and became a big hit. Moreover, he used a small crew and a low budget for this movie (Scognamillo, 2010). In fact, with this movie, Zaim encouraged the new generation of young directors by showing that it is possible to make talked-about and award-winning movies with a low budget. In post-2000 Turkish cinema, the films of the new generation of directors have also created their own audience. New generation directors such as Zeki

Demirkubuz, Nuri Bilge Ceylan, Semih Kaplanoğlu, Reha Erdem, Çağan Irmak, etc. continue to create their own cinematic language. Scognamillo (2010) states that in the 2000s, Turkish cinema tried to become a “new generation cinema” that progressed with its own means. This new generation of directors usually directed their first films in the late 90s and continue to make films after 2000. Many of this generation of directors have studied cinema and have produced films with their cinematic background. Many of these directors write the scripts of their films themselves. These directors have created their own style with state support, foreign co-productions and low-budget films, even though Yeşilçam production conditions continue and television has negative effects. The cinema created by these directors, who are considered auteurs, has been called “New Era Turkish Cinema”, “New Turkish Cinema”, “Director Cinema” or “Modern Turkish Cinema” (Uğur, 2017).

### **Cinema And Women**

In order to understand the relationship between cinema and women, one should look at the position of women in the script as well as in the context of the viewer or actress. Because it is important how women or elements related to women are presented in movies in which real life/world/society/individual is inspired, reflected, reconstructed, foresighted and transformed into artistic structure. As looking at it from a patriarchal perspective creates significant disadvantages for women, the presentation of women in cinema can create destructive and constructive effects in the presentation of women in cinema, in the social presentation, in the reconstruction period from social reality to cinema. In this context, it is first necessary to define the patriarchal structure. Cevizci (2005) defines the concept of patriarchy as the rule of the father or a system in which men exercise economic, social and dominance over women and young men. Masdar (2011) states that the motifs of women in Turkish cinema are in harmony with the social reality; the woman is second, passive, honorable, chaste and in need of protection. Masdar (2011) also states that social oppression is legitimized with elements such as virginity, which degrade women's sexuality, normalized with phenomena such as blood feuds, and women are rendered invisible in rural areas with unapproved relationships. Koncavar (2021) states that since the production team and the consumer audience have been men since the first day of Turkish cinema, women have little or no place in the public sphere, and that good women are women who take care of the home, family and children, who are self-sacrificing, sacrificing, honorable, innocent, passive and subordinate to men. Bad women, on the other hand, are women who corrupt men, destroy homes, express their sexual desire and take part in the public sphere. Furthermore, Koncavar (2021) draws attention to the protection and rescue of women (passive/powerless) by men (male strong) and states that women are shaped in cinema in accordance with the tastes and expectations of men shaped by the patriarchal structure. The depictions of women in the first examples of Turkish cinema confirm this picture. When the literature on patriarchal Turkish cinema is examined, it is seen that the patriarchal/masculine world structure is also prominent in cinematic productions and women are constructed within this framework. In this context, when we look at the first thematic films, it is observed that their subjects are about marriage, but the masculine is at the forefront. Weinberg and Fuat Uzkınay's names are mentioned as directors in the 1916 film *Himmat Ağa'nın İzdivacı* (The Marriage of Himmet Ağa) and the Sedat Simavi-directed *Peñçe* (The Paw). In the movie *Peñçe*, the subject progresses through men within the context of the characters Leman, who is fictionalized in the context of pleasure, and Feride, who cheats on her husband (Özgüç, 1985). In the 1919 film *Mürebbiye*, directed by Ahmet Fehim Efendi, the story of a French woman who negatively affects all the men in the family is told, and the first vamp woman of Turkish cinema appears in this film (Özgüç, 1985). In the movie *Binnaz*, the story of Binnaz, who was famous for her beauty in the Tulip Age, is told. In addition to *Nur Baba*, directed by Muhsin Ertuğrul, which tells the story of a woman who kills her friend, a womanizer and a womanizing man in the film *İstanbul'da bir Facia-i Aşk* or *Şişli Güzeli Mediha Hanımın Facia-i Katli* (1922), the films *Aysel Bataklı Damın Kızı* (1934), which tells the story of a woman seeking her rights, and the 1948 film *Çıldıran Kadın* (Crazy Woman) are seen in the literature. In the films made during the Muhsin Ertuğrul period of Turkish cinema, it can be said that the representation of women is generally negative or victimized. In the transition period, Ö. Lütfi Akad's *Vurun Kahpeye* and Yalçın Ünsal's *Evvel Zaman İçinde* (Once Upon a Time) are the productions in which male protagonists come to the forefront. Şakir Sırmal's *Kamelyalı Kadın* (1957), Aydın Arakon's *Sahildeki Kadın* (1954), Fosforlu Çevriye (1959), Atıf Yılmaz's *Kadın Severse* (1955), Suavi Tedü's *Kahpenin Kızı* (1953), and Ö. Lütfi Akad's *Meyhanecinin Kızı* (1958) are examples of films in which women were in the foreground (Scognamillo, 2003).

In the 1960s and 1970s, films about women include Süreyya Duru's *Şoför Nebahat* (1960), Nejat Saydam's *Küçük Hanımefendi* (1961), Ertem Eğilmez's *Ben Bir Sokak Kadınıyım* (1966), Ö.Lütfü Akad's *Vesikalı Yarım* (1968) and Gökçe Çiçek (1972), Orhan Aksoy's *Kezban Roma'da* (1970), Ömer Kavur's *Yatık Emine* (1974) and Türkan Şoray's *Bodrum Hakimi* (1976). Although in the 1960s and 1970s women-themed films were made in Yeşilçam, it was not until after 1980 that women's films were made in the true sense of the word. This is because, within the context of the patriarchal order in Turkish cinema until the 1980s, the need for “women to always be under the protection of a man” was brought up (Çelen et al., 1984). With the influence of the feminist movement in cinema in the 1980s, films in which women actually existed and their feelings were expressed began to be made. Akdemir Dilek (2021) points out that feminist film criticism argues that women's daily lives and behaviors should be

represented as they are in cinema films. Thus, the idea that cinema is not a place for women and that women are objects of desire in their presentation and exploitation in their consumption was re-evaluated. The actress Müjde Ar was the pioneer of the change of women on the silver screen (AltınSaray, 1985). Despite the influence of feminism on cinema films, in the cinema of the 1980s, sex cinema was important in the world in the 70s in order to make a lot of money in a short time (Auty, 1985), and women took their place as the main object of this sector. Due to the widespread use of television broadcasts and the failure to establish an industrial structure in the cinema, which was adversely affected by the 1980 Coup d'état, sex films took place in Turkish cinema during this period. Nevertheless, women's films managed to gain a place in Turkish cinema during and after this period. Atıf Yılmaz's *Mine* (1982), *Adı Vasfiye* (1985), *Dul Bir Kadın* (1985), *Ahh Belinda* (1986), *Asiye Nasıl Kurtulur* (1986), *Kadınının Adı Yok* (No Name for a Woman) (1987) are witnessed to question the patriarchal structure. In Şerif Gören's films *Hidden Emotions* (1984), *Fırar* (1984), and *Kurbağalar* (1985), the woman is freed from certain stereotypes. Because, in Yeşilçam and before, women were categorized as good and bad with clear lines (Altınsay, 1985). Koncavar (2021) argues that the women in Atıf Yılmaz's films are 'real women' who question their goals in life, who are brave, active in their efforts to become subjects, who are struggling, who are aware of their desires, and who resist society and traditions, departing from the patriarchal ideology of women. In Yılmaz and Gören's films, the concept of women's film has evolved and the view of good and bad women has transformed, going beyond the understanding of women presented as objects of desire, and representations of real women have taken place. Koncavar (2021) argues that in this period, women began to be presented as subjects rather than objects, and that Turkish cinema now focuses on the problems, lives and expectations of women.

After 1990, Turkish cinema started to regain its strength, but the number of women's films remained limited. Halit Refiğ's *Karılar Koşuşu* (1990), Atıf Yılmaz's *Berdel* (1990) and Gece, Melek ve Bizim Çocuklar (*Night, Angel and Our Children*) (1994), İrfan Tözüm's *Mum Kokulu Kadınlar* (*Candle Scented Women*) (1996) stand out among the films on women in Turkish cinema in the 1990s and beyond. In the 2000s and beyond, the perspective of women is changing with the strengthening of independent film directors as well as veteran directors who continue to make films. Although the stereotype of good and bad women in Turkish cinema productions had been broken before, in this period, the "human woman" type developed with the combination of good and bad representations, and in this context, women's problems were brought to the cinema. Post-2000 films on women include Zeki Demirkubuz's *Kader* (2006), Atıf Yılmaz's *Eğreti Gelin*, and Aclan Büyüktürkkoğlu's *Meleğin Sırları* (2008). In post-2010 productions, while the subject of women is frequently featured in different genres, the presentation of 'human woman' is also strengthened in the presentation of women. The number of women's films, which was limited in the 2000s, increased significantly after 2010. Looking at the academic literature on cinema and women, Öztürk (2011), *Looking at Women in Turkish Cinema Literature*, Gevher Öz and Seçen (2018), *Looking at the Representation Problem of Women in Turkish Cinema with an Alternative Method: Bechdel Test*, Demir (2020), *Women in Yeşilçam Cinema*, Yaşartürk (2015), *Cinema and Gender*, Akgül (2019), *Women in Film from the Perspective of Feminist Theory: The Case of Women's Film Festivals in Turkey*, Yerlikaya (2020), Tekin (2021) *Post-2000 Turkish Cinema Patriarchy and Women Representations*, Yatçı (2024) *Turkish Cinema's Productive Women from Other to Subject*, Sabiha's Sisters. This study differs from the studies on this subject in the sense that it covers the last fourteen years after 2010.

## METHOD

Content analysis is a research method with a systematic structure (Wimmer & Domibick, 2000) developed to analyze the content of recorded information. Geray (2006) defines it as a method that enables the systematic realization of communication content within the framework of predetermined categories. Therefore, in terms of comparing the real world with the world reproduced by mass media, content analysis is favorable for quantitative data. In this study, the films on women in theaters between 2010 and 2024 were analyzed with this method in the context of the categories determined, and it was tried to reach information about the relations underlying the presentation of women. The population of the study consists of feature-length fiction films about women released in theaters between 2010 and 2024. The Turkish films included in the list of the first hundred films released in the Box Office Turkey website on women between 2010-2024 were determined as the sample of the study. In the study, animation and cartoon categories were excluded within the scope of limitations. In this study, a total of eight categories were identified in order to determine the position of women in films about women in Turkish cinema between 2010-2024.

The first category was determined based on Box Office information in Turkey, and the second category was determined as 'number of viewers' in order to reveal the audience rates of the women's films selected as the sample. The category titles are 300 thousand and above, 299,999 and 50 thousand, the third sub-code title is 49,999-20 thousand, and the third sub-code title is 19,999 and below. The second category was determined as 'film genres' in order to determine the genres of films on women. As a result of the examinations made in this field, three category headings were created as drama/biography, horror and comedy. The third category was determined as 'gender of the director' based on the patriarchal world and gender. The titles of the director's gender category were selected as male and female. The fourth category was formed with the question 'Is there an expression related to

women' in the title of the film in order to reveal whether the concepts and words related to women and women are included in the films on women, and yes or no was used in the title. The fifth category was created as 'roles of women' in order to evaluate the female lead actor/actresses in women's films in the context of the roles assigned to women. In this category, 'women's roles' were analyzed under the headings of mother, wife, sister, sister and other. The sixth category was determined as the socio-economic structure of women in order to obtain information about the presentation of women in terms of their status, whether they are involved in working life and whether they have economic freedom. The seventh category was determined as 'socio-economic structure' in order to find out which economic class women belong to in films about women. The socio-economic structure category was formed with the titles of lower income group, middle income group and upper income group. The eighth category is 'location information' in order to reveal the information about the location/location in films about women. The category of spatial information includes urban and rural titles.

## FINDINGS

**Table 1. Number of spectators**

| Year   | .....-300.00 |       | 299.999-50.00 |       | 49,999- 20.000 |       | 4.19.999-..... |       | Total |      |

| 2024   | 1            | %100  | -             | -     | -              | -     | -              | -     | 1     | %100 |
| Toplam | 20           | %15.3 | 24            | %18.3 | 28             | %21.4 | 59             | %45   | 131   | %100 |

In Table 1, the top 100 women-themed Turkish films on the Box Office Turkey website were identified according to the number of viewers. A total of 131 films identified as a result of this determination were analyzed in the study. These films were coded into 4 categories according to their audience numbers. These categories were determined as the first sub-code ...-300,000, the second sub-code as the films preferred by the audience between 299,999- 50000, the third sub-code as the films watched between 49,999-20000, and the fourth sub-code as 19999-... and later. In the context of these codes, the first sub-code rate is 15.3%, the second sub-code rate is 18.3%, the third sub-code rate is 21.4% and the fourth sub-code rate is 45%. Based on these data, it was determined that 45% of the films analyzed in the study were ranked first in the fourth sub-code, i.e. films with an audience of less than 20,000, while the first sub-code with the highest number of audience was ranked last with a rate of 15.3%. Looking at Table 1 in the context of years, it is determined that in 2010, the number of 299,999-50,000 and 19,999 and below audiences was 37.5%, while the number of 49,999-20,000 audiences was 25%. In 2011, it was seen that the number of audience of 300,000 and above and 299,999- 50,000 was 14.3%, while the number of audience of 19,999 and below was 71.4% and the highest rate. In 2013, the attendance figures in this category were 300,000 and above (18.2%), 49,999- 20,000 (36.3%) and 19,999 and below (45.5%). In 2014, the figures in this category were 300,000 and above 25%, 299,999- 50,000 12.5%, and 19,999 and below 62.5%. In 2015, the number of audience of 300,000 and above was 18.2%, between 49,999 and 20,000 was 36.3%, while the number of audience of 19,999 and below was 45.5%. In 2014, the data in this category was 23.5% for 300,000 and above, 11% for 299,999-50,000, 29.4% for 49,999-20,000, and 35.3% for 19,999 and below. In 2016, the number of audiences for 300,000 and above, 299,999-50,000 and 49,999-20,000 was 20% each, while the number of audiences for 19,999 and below was 40%. In 2017, it was determined that the attendance rate of 300,000 and above, 299,999-50,000 and 49,999-20,000 were 14.3%, 42.8% and 28.6% respectively. In 2018, while 300,000 and above was 20%, 299,999-50,000 and 49,999-20,000 were 40%, and in 2019, while 299,999-50,000 was 85.7%, 49,999-20,000 was 14.3%. Looking at the audience rates in 2020, it was determined that 300,000 and above was 16.7%, 49,999- 20,000 was 33.3% and 19,999 and below was 50%. In 2021, it was determined that only 49,999- 20,000 was 33.4% and 19,999 and below was 66.6%, and it is thought that the

pandemic experienced in this period caused the low number of spectators. In 2022, the attendance rates were 14.3% for 300,000 and above, 9.5% for 299,999-50,000, and 40% for 49,999-20,000, while in 2019, it was 85.7% for 299,999-50,000, 19% for 49,999-20,000, and 57.2% for 19,999 and below. In this category, where audience numbers are discussed, in 2023, 299,999-50,000 is 37.5%, 49,999-20,000 is 40%, in 2019, between 299,999-50,000 is 85.7%, 49,999-20,000 is 12.5% and 19,999 and below is 50%, while the study covers the data until February 2024, 1 movie was discussed and the audience number of this movie was determined as 300,000 and above as 100%.

Table 2 shows the genres of 131 films that were released in Turkey between 2010 and 2024 and that deal with the subject of women. These genres were identified as drama/ biography, horror and comedy. According to the analyzed data, 45% of these films are drama and biography, 33.6% are horror and 21.4% are comedy. Based on these data, it was found out that the highest number of the analyzed films were in the drama/biography genre and the lowest number of comedy films. The types of women's films analyzed in this study will be analyzed by year. In 2010, 62.5% of the films on women were in the drama/biography genre, 25% in the horror genre and 12.5% in the comedy genre. In 2011, 2012 and 2013, no comedy genre was found. In 2011, 71.4% of the films about women were in the drama/ biography genre and 28.6% in the horror genre, while in 2012, 75% were in the drama/ biography genre and 25% in the horror genre. In 2013, 81.8% was drama/ biography and 18.2% was horror. In 2014, 62.5% was drama/ biography, 25% was horror and 12.5% was comedy. In 2015, 41.32% of the films about women were in the drama/ biography genre, while 29.4% were in the horror and comedy genres. In 2016, the ratio of drama/biography and comedy genres was 40%, while the ratio of horror genre was 20%. In 2017, 28.5% of the films analyzed were drama/biography, 57.2% were horror and 14.3% were comedy. In 2018, the ratio of drama/biography genre was 20%, while the ratio of horror and comedy genres was 40%. In 2019, 14.3% of the female-themed films were in the drama/ biography genre, 57.2% in the horror genre and 28.5% in the comedy genre, while in 2020, 50% of the horror and comedy genres were in the horror and comedy genres, while the drama/ biography genre was not included. In 2021, it was determined that all 3 genres were at the same rate, i.e. 33.3%, while in 2022, 19.1% of the films with the same theme were in the drama / biography genre, 52.3% in the horror genre and 28.6% in the comedy genre. In 2023, 87.5% were in the drama/ biography genre, while the horror genre was 12.5%, and in 2024, 100% comedy genre was identified.

| 2024  | 1    | %100  | -      | -     | 1     | %100 |
| Total | 118  | %82   | 26     | %18   | 144   | %100 |

Table 3 shows the gender information of the directors of the women-themed films analyzed in the study. According to this data, 82% of the directors of women-themed films are male and 18% are female. In 2012, it was observed that the rate of female directors in women-themed films was the highest with 33.4%. Although there are 131 films in the study, there are 144 directors in total in the table. The reason for this is that some films have more than one director. When the genders of the directors of the films on women between 2010 and 2024 were analyzed, it was determined that 80% of these directors were male and 20% were female in 2010, 77.7% were male and 22.3% were female in 2011. In 2012, 66.6% of the directors were male and 33.4% were female, and in 2013, 90.9% were male and 9.1% were female. In 2014 and 2015, 72.2% of the directors of women-themed films were male and 27.8% were female, while in 2016, 70% of the directors were male and 30% were female. In 2017, 75% of the directors were male and 25% were female, while in 2018, 80% were male and 20% were female. In 2019, 2021 and 2022, it was determined that there were no female directors in the films considered within the scope of the study, so the ratio of male directors was 100% in these three years. In 2020, while male directors were 83.3%, female directors were 16.4%, in 2023, male directors were 75% and female directors were 25%, while the director of 1 movie examined in 2024 was 100% female.

Does the title of the movie in Table 4 include an expression about women? The answer to the question is asked. The answer to this question emerges as follows in 131 films with the theme of women; 32% of the films contain an expression about women, while 68% do not. Accordingly, 50% of the films in 2010 included a statement about women, while the same percentage did not. 14.2% of the films in 2011 and 2017 had a statement about women, while 85.8% did not. In 2012, 25% of the titles of the films included a statement about women, while 75% did not, and in 2013, 45.4% of these films included a statement about women, while 54.6% did not. The answer to the question of whether there is an expression about women in the title of the movie was 37.5% yes and 62.5% no in 2014, while in 2015 it was 23.5% yes and 6.5% no. In 2016, 10% of the films analyzed included a statement about women, while 90% did not. In 2018, while the expression “woman” was present in 20% of the films, it was absent in 80%. In 2019, 42.8% of the films included the expression “woman” in their titles while 57.2% did not, and in 2020, 50% of these films included the expression “woman” while 50% did not. In 2021, the answer to the question of whether there is a statement about women in the title of the movie was 100% no, while in 2024, on the contrary, it was determined that the answer was 100% yes. In 2022, 28.5% of the movies included a statement about women, while 71.52% did not. In 2023, 62.5% of the films had a female expression, while 37.5% of the films did not.

In the light of the data in Table 5, when the roles of women in films about women are analyzed, it was found that in 2010, 25% of the women were presented as mothers, 12.5% as wives and 62.5% as other roles. In 2011, according

to Table 5, 25% of the main character women were mothers, 12.5% were wives and 62.5% were in the other category. According to Table 5 data of 2012, 50% of the main character women were in the mother and other categories. In the light of Table 5 data, 36.4% of the main character women in the movies released in 2013 were mothers, 18.1% were wives, approximately 9.1% were sisters and 36.4% were in other roles. In 2014, according to Table 5, 17.6% of the female characters were mothers and wives, 11.8% were sisters, and 52.9% were in other roles. According to the data in Table 5, in 2015, 11.1% of the main female characters in films on women were presented as mothers, 27.7% as wives, 11.1% as sisters and 50% in other roles. According to the 2016 table data, 18.1% of the female characters were presented as mothers, 36.4% as wives, 9.1% as sisters, and 36.4% in other roles. According to the data in Table 5, in the films analyzed in 2017, 14.3% of the main female characters were mothers and wives, and 71.4% were in other roles. According to 2018 Table 5 data, 20% of the main character women played the roles of mother and sister, while 60% played other roles. According to 2019 Table 5 data, 28.5% of the female characters in the films in the sample played the roles of mother and other and 42.8% played the roles of wife. According to the 2020 table 5 data, 28.5% of the main character women took part in the roles of wife and 71.5% in other roles. In the light of Table 5 data, it was observed that 33.3% of the main character women played the roles of mother, wife and sister in the films on women in the sample in 2021. In 2022, according to Table 5 data, 18.1% of the main character women were mothers, 13.6% were wives and sisters, and 54.4% were in other roles. In 2023, in the light of Table 5 data, it was observed that 6.6% of the main character women were presented as mothers, 53.4% as wives, 13.6% as sisters and 26.6% in other roles. According to Table 5 data for 2024, it was found that 100% of the main character women were in the role of mother. According to the data in Table 5, a total of 145 main character women were seen in the films analyzed in the sample in 2010-2014. In the analyzed films on women, 19.3% of the female main characters were presented as mothers, 24.1% as wives, 8.9% as sisters and 47.5% in other roles.

In line with the data in Table 6, when the socio-economic structure of the main female characters in the films about women released in 2010 is analyzed, it is found that 37.5% of them belong to the lower and middle income groups and 25% to the upper income group. In the light of the data in Table 6, it was found that 37.5% of the female main characters in the films on women released in 2011 were in the lower income group and 62.5% in the middle income group. Table 6 data for 2012 shows that 75% of the main character women were in the lower income group and 25% in the middle income group. According to the data in Table 6, 63.6% of the main female characters in the films included in the sample in 2013 were in the lower income group and 36.4% in the middle income group. Table 6, 2014 data shows that 29.4% of the women were in the lower, 52.9% in the middle and 17.6% in the upper income group. Looking at the 2015 data in Table 6, it was found that 16.6% of the main character women were in the lower income group and 83.4% in the middle income group. According to the data in Table 6, it is seen that 27.3% of the main character women in the films about women released in 2016 belong to the lower and upper income group and 45.4% to the middle income group. According to the 2017 data in Table 6, 100% of the main character women were from the middle income group. Looking at 2018 in the light of Table 6 data, it was found that 20% of the main character women were in the lower and upper income class and 60% in the middle income

class. According to Table 6, when the data of 2019 is analyzed, it is found that 28.6% of the main character women are in the lower class, 57.1% in the middle class and 14.3% in the upper class. When Table 6 data for 2020 is analyzed, it is seen that 100% of the main character women belong to the middle income group. According to the 2021 data in Table 6, it was observed that 33.3% of the main character women were in the lower and upper income group and 66.6% in the middle income group. In 2022, it was revealed in the light of the data in Table 6 that 20% of the main characters in the female films released in theaters in 2022 were in the lower income group and 80% in the middle income group. When the data in Table 6 2024 is analyzed, it is seen that 100% of the women belong to the middle income group. According to the data in Table 6, when the 145 female main characters were analyzed by income group, 24.8% of them belonged to the lower, 64.8% to the middle and 10.3% to the upper income group.

According to the data in Table 7, it was found that 50% of the main characters in the women's films released in 2010 were working and non-working women. According to Table 7 data for 2011, 37.5% of the female main characters were working, 50% were not working and 12.5% were retired. According to Table 7 data for 2012, 25% of the main character women were working and 75% were not working. According to the data in Table 7, 36.4% of the main female characters in the films included in the sample in 2013 were working and 63.6% were not working. According to the data in Table 7, 37.4% of the main female characters in the films released in 2014 were working and 62.5% were not working. In 2015, according to Table 7, 38.8% of the main character women were not working and 61.2% were not working. According to Table 7, in 2016, 63.6% of the main character women were presented as working and 36.4% as not working. Table 7 data for 2017 shows that 37.5% of the main female characters were working and 62.2% were not working. In 2018, according to Table 7 data, 80% of the main female characters were working and 20% were not working. According to Table 7, while 14.3% of the main female characters were working in 2019, 85.7% were not working. In 2020, 42.8% of the main female characters in the films released in 2020 were working, while 57.2% were not working, according to the data in Table 7. According to Table 7, it was seen that 33.3% of the main female characters in the films included in the sample in 2021 were working and 66.6% were not working. Table 7 shows that 52.1% of the main character women in the analyzed films were working and 47.9% were not working in 2022. In 2023, 86.6% of the main female characters in the analyzed films worked, while 13.4% did not work. According to table 7 data for 2024, it was seen that 100% of the main characters worked. According to the data in Table 7, it was seen that approximately 48.3% of the women in the analyzed women-themed films were working, 51% were not working, and approximately 1% were retired.

**Table 8 The setting of women-themed films**

| Year  | Rural |      | Urban |      | Total |      |
|-------|-------|------|-------|------|-------|------|
|       | S     | F %  | S     | F %  | S     | F %  |

| 2024  | -     | -    | 1     | 100  | 1     | %100 |
| Total | 73    | 50.3 | 72    | 49.6 | 145   | %100 |

According to the data in Table 8, it was found that 50% of the films analyzed in 2010 were rural and urban. Table 8 data shows that 25% of the women's films released in 2011 were set in rural areas and 75% in urban areas. Table 8 data for 2012 shows that 50% of the films were both rural and urban. According to Table 8, in the analysis of women's films released in 2013, 63.6% of the films were rural and 36.4% were urban. According to Table 8, in 2014, 52.9% of the women's films were set in rural areas and 47.1% in urban areas. In 2015, according to Table 8, 52.9% of women's films were set in rural areas and 47.1% in urban areas. According to Table 8, in 2016, 36.3% of women's films were set in the countryside and 63.6% in the city. Table 8 data for 2017 shows that 42.8% of women's films were shot in rural areas and 57.1% in urban areas. According to Table 8 data, 60% of the women's films released in 2018 were set in the countryside and 40% in the city. Table 8 data for 2019 shows that 71.4% of women's films were shot in rural areas and 28.8% in urban areas. Table 8 data for 2020 shows that 50% of the films were set in urban and rural areas. According to Table 8 data, 33.3% of the films analyzed in 2021 were rural and 66.6% were urban. In 2022, according to the data analyzed in Table 8, 36.8% of the women's films are set in rural areas and 63.7% in urban areas. According to the data in Table 8, it was determined that 50.3% of the films in the sample were set in rural areas and 49.6% in urban areas.

## CONCLUSIONS

Turkish cinema has been in constant change and development. This change and development has also led to a transformation in Turkish cinema under the influence of social dynamics. During the Yeşilçam period, the golden years of Turkish cinema, the subject of women was usually associated with certain roles (good wife, devoted mother), while after 1980, the process in which women were presented more individually began. This process, which continued after 1990, also manifested itself in Turkish cinema in the 2000s. In this study, Turkish fiction films released in Turkey between 2010 and February 2024 were analyzed. The films were determined based on the top 100 films on the Box Office Turkey website. With this study, the films that address the issue of women in Turkish cinema were analyzed in 8 categories determined by the content analysis method. In this context, the aim of the study is to examine the subject of women in 131 Turkish films released in Turkey between 2010 and 2024 and ranked in the top 100 on the Box Office Turkey website through the 8 categories determined and to determine how and in what way the subject of women was presented in these years.

The study consists of feature-length fiction films on women released between 2010 and 2024. The first one hundred Turkish films about women that were released in Box Office Turkey between 2010 and 2024 were determined as the sample of the study. In this context, 131 films were analyzed in the study. The analysis part of the study consists of 8 categories. In Table 1, 4 sub-codes were determined by focusing on the number of audience. With these codes, it was aimed to reach information on how much films on women were watched through the number of audience watching the films. Accordingly, in terms of the viewership rates of the films selected as a sample, it was found that films with an audience of 19,999 or less had the highest rate of viewership with a rate of 45%. 300.000 or more people watched Çınar Ağacı (2011), Benim Dünyam (2013), Hükümet Kadın 2 (2013), Deliha (2014) Bi Küçük Eylül Meselesi (2014), Dabbe 5 (2014), Siccin Büyü Haramdır (2014), Dabbe 6 (2015), Kocan kadar Konuş (2015), Kocan kadar Konuş Diriliş (2016), Görümce (2016), Maide'nin Altın Gün (2017), Deliha 2 (2018), Eltilerin Savaşı (2020), Bergen (2022), Diberay (2022), Benden Ne Olur? (2022) and Lohusa (2024). In Table 2, the genres of the 131 films on women are discussed. In terms of film

genres, it is noteworthy that 45% of the films are in the drama and biography genres and 33.6% in the horror genres. Among the comedy films, which constitute 21.4% of the film genres, the most watched films are Deliha Series (2014, 2018), Lohusa (2024), Görümce (2016) and Kocan Kadar Konuş series (2015, 2016). In the biography genre films, Diberay (2022) and Bergen (2022) were watched more by the audience, while drama films about women's problems such as Watchtower (2012), Auntie Came (2013) and Bear and Snow (2022) were preferred less by the audience. In addition, the fact that 32.1% of the films dealing with women's issues in the study were in the horror genre, it was seen that women and horror elements were used together and this ratio covered approximately 1/3 of the films in the study. Dabbe 5 (2014), Siccin Büyü Haramdır (2014), Dabbe 6 (2015), Alamet-i Kıyamet (2016), Bezm-i Ezel (2017), Alem-i Cin (2018), Efsunlu- Kabirden Gelen (2019), Araf 4: Meryem (2020), Ecinni 3 (2021), Şerr-i Cin (2022) and Zina (2023) are examples. Looking at these films, it is seen that at least one film is in the horror genre every year except 2024 (since the data is only available until February).

The genders of the directors of the films in the sample are discussed in Table 3. Accordingly, there are 144 data on the directors of 131 films with women themes. The reason for this is that some of the analyzed films had two or more directors. Accordingly, it was determined that 82% of the directors in the analyzed films were male and 18% were female directors. Between these two ratios, male directors are also prominent in the female-themed horror and comedy film genres. In the drama and biography genres, it was observed that both male and female directors talked about women's issues. Does the title of the movie in Table 4 include a statement about women? The answer to the question is asked. As an answer to this question, in 131 films with the theme of women examined, it is revealed as follows; 32% of the films contain a statement about women, while 68% do not.

In the analyzed films on women, 19.3% of the main female characters were presented as mothers, 24.1% as wives, 8.9% as sisters and 47.5% in other roles. In 131 films, it can be said in the light of these data that women are presented in different roles, thus the 'human woman' is confirmed in these films. According to the data in Table 6, when 145 female main characters were analyzed according to income group, it was seen that 24.8% were in the lower, 64.8% in the middle and 10.3% in the upper income group. Thus, when 131 films were analyzed, it was seen that the stories of women in the middle income group were more reflected in the film scripts. On the other hand, it was found that the stories of women belonging to the lower income group were more frequently included in the stories of women belonging to the upper income group in 131 films. According to the data in Table 7, it was observed that approximately 48.3% of the women in the analyzed women-themed films were working, 51% were not working, and approximately 1% were retired. The data in Table 8, which shows that 50.3% of the women's films released between 2010 and 2024 were set in rural areas and 49.6% in urban areas, reveals that narratives about women were told both in urban and rural areas. In the light of the data in Table 8, it is seen that women's stories were told more in the city in 2011, 2016, 2017, 2021, 2022, 2024, and in the countryside in 2013, 2019 and 2023. In terms of the viewership rates of the films selected as a sample, it was found that films with an audience of nineteen thousand ninety-nine and below had the highest rate of viewership with a rate of 45%. The analysis carried out within the scope of this study shows that working and non-working women are treated almost equally. As a result of the analysis, it was seen that women's stories were told both in rural and urban areas.

## ABSTRACT

Social gender is a concept associated with distinct roles, duties, and responsibilities between women and men. It introduces a binary distinction defining household and caregiving responsibilities for women and livelihood provision and public space responsibilities for men. The organization of public spaces directly influences and directs the use of space by women, men, and other disadvantaged groups, offering opportunities to some while constraining others. In the spatial organization of park areas, diversity and inclusivity, flexibility and adaptability, comfort and convenience, safety and security, accessibility, and maintenance principles are expected to be ensured. Similar principles in the same urban park are perceived and utilized differently by women and men.

Given the roles imposed by gender, investigating the spatial features required for a park to achieve equal usage levels for both genders forms the basis of this study. The main hypothesis of the research is that Faroz-Ganita Seaside Park does not exhibit equal usage levels between women and men. Qualities and design principles of urban parks with equal usage levels by women and men were determined by reviewing relevant literature and examining the most visited park areas in countries with the lowest Gender Inequality Index (GII). Within this framework, the spatial qualities of Faroz-Ganita Seaside Park in Trabzon province, Ortahisar district (Central district), and its relationship with its immediate surroundings depending on its location in the city (accessibility, security, etc.) were examined. In the field study, a two-stage process was conducted: 1. Spatial Analyses: The spatial organization and qualities of the park were mapped based on findings obtained from relevant institutions, Google Earth, and observations made in the field. 2. Survey Study with Male and Female Users: A total of 740 individuals, consisting of 359 women and 381 men using the park, were randomly selected for the survey. Participants were asked questions about their demographic characteristics, purposes of park usage, reasons for preference, frequency of usage, aspects they liked and complained about regarding the area. Faroz-Ganita Seaside Park is predominantly perceived as a walking area with a green area/hard surface ratio of approximately 1/3. People come to this area mainly for walking and using the cafes. There are 7 cafes, 2 restaurants, 6 children's parks, and a 1.11 ha parking area in the vicinity. People mostly use hard surfaces and rocky areas for sitting. The bike path passes through the park but does not continue to the east; it extends westward but is not integrated with the city as a whole.

**Keywords:** Social Gender, Park, Spatial Qualities, Urban Design

## INTRODUCTION

The concept of gender distinguishes between biological differences between women and men, while gender refers to the differences between femininity and masculinity resulting from socio-cultural factors (Butler, 2019). While gender is inherent, gender is shaped over time based on the values and lifestyles of societies. There is no superiority between the female and male sexes; however, inequality exists/has been created between femininity and masculinity based on social values and roles (Beauvoir, 2011). The responsibilities imposed by gender identity negatively affect a woman's life (Friedan, 2015). Since the earliest ages of human history, there has been an issue of women being confined to private spaces and men being directed towards public spaces (Yılmaz Bayram, 2011). As societies develop and urban environments grow, the dimensions and diversities of the problems experienced have also changed. Urban planning and urban design processes can sometimes be a means of reproducing inequality. Decisions made, policies produced, and spaces created can, albeit unconsciously, have exclusionary effects that prevent different groups from coming together (Yılmaz Bayram, 2020). One of the most important inequalities and exclusionary effects in urban spaces occur between women and men. One of the main reasons for this is the responsibilities imposed on women by gender. From this perspective, women are considered as individuals who perform household services and take care of children and other family members. From the perspective of gender, cities are defined as areas where spatial segregations based on gender occur without considering issues specific to women, and where inequality and injustice are reproduced (Bayraktar,

2005). In this context, urban planning and urban design remain limited in terms of producing areas where economic and spatial structure is sufficient, safe, and suitable for women. Consequently, these shortcomings necessitate new spatial arrangements.

One of the areas where women and men experience the most differences in the use of urban services and spaces is recreational areas. In the production processes of recreational services and spaces in today's cities, certain generalizations and standards are taken into account, while demands arising from perceived gender differences in detail are disregarded. Criticism is often directed towards the standards and generalizations used in the formation processes of urban green spaces and parks, as they fail to contribute to the needs and priorities of all segments of society. Especially, women face more difficulties in spaces produced based on standards and generalizations compared to men. However, the issue is not the deliberate exclusion and victimization of women from urban environments; rather, it stems from practices that fail to consider the special and different needs of women arising from social gender (Yılmaz Bayram, 2011).

For an activity to be truly recreational, it must be actions individuals undertake according to their own preferences, apart from actions they are compelled to take to sustain their lives within the social structure they are in. Recreation need is an indispensable need for every individual. However, the way this need is met varies among individuals and societies because recreational demands vary depending on individual and societal characteristics and the qualities of recreational areas. One of the most important variables determining recreational demand is gender (Yılmaz Bayram, 2011).

When determining the recreational demands of women and men, it is necessary to examine in detail the individual and societal characteristics and factors related to the quality of recreational areas. For example, one of the individual and societal factors is the time constraints women face due to household and childcare responsibilities, leading them to primarily utilize residential areas and their immediate surroundings. However, there are generally children's play areas in neighborhood units. Women's needs are suppressed and pushed into the background due to the needs of children (Yılmaz Bayram, 2011).

### **Urban Parks**

Tanrıverdi (1987) defines parks as social green spaces that provide residents of various neighborhoods and surroundings with active and passive entertainment and relaxation environments, creating measured, balanced, and beautiful compositions (Emür & Onsekiz, 2007). Additionally, parks are fundamental elements of urban open space planning because they support ecological diversity within the city with natural and/or artificial vegetation, occupying more space compared to other facilities. They serve as a prominent tool in social planning by not only enhancing the mental and physical health of urban residents but also creating an environment for entertainment and socialization. Individuals with different social, cultural, economic, and demographic characteristics who gather in parks learn to perceive each other's differences and look upon each other with tolerance (Thompson, 2002)

In the broadest sense, parks are green areas that enable residents of various age groups to engage in recreational activities such as relaxation, walking, playing games, and sports, as well as various cultural and social events (Baykan, 2005). Parks should be established in various parts of the city and in specific sizes. As seen in Table 1, parks are listed at the regional, city, district, neighborhood, and neighborhood unit levels, and the capacity of each park at each level varies according to the population it serves and its spatial size (Table 1).

There is no universally accepted standard for the norms used in park area arrangement worldwide. Moreover, differences can be found between cities in the same country. This is because the age, culture, occupation, and economic status of residents in each city vary, leading to diverse requirements for park areas (Steiner & Butler, 2007).

**Table 1.** Park Grading and Coverage (Aydemir, 1999; Aydemir, 2004; Ersoy, 2009, cited in Yılmaz Bayram, 2011).

| SCALE (POPULATION)  | PROVISION   | SERVICE AREA RADIUS  | UNIT AREA   | COVERAGE  |
|---|---|----------------------|---|---|
| <b>Region</b>   | Forest and Woodland areas<br>Regional park<br>National park | Approximately 20 km  | 3-6 m <sup>2</sup> /person<br>25-60 m <sup>2</sup> /person              | Should allow for active and passive sports activities (such as hiking, living in nature, climbing, hunting, etc.), enabling interaction with nature, equipped camping areas (kitchen, toilet, shower) should be available (approximately 80-120 units). |
| <b>Urban</b><br>(starts from a minimum of 50,000 people. Expands as the city grows. Maximum 100,000 people) | City park   | City-wide            | 4 m <sup>2</sup> / person   | Should accommodate cultural activities (concerts, shows, exhibitions, etc.), sports (various sports and games, fishing, walking, etc.), picnic and entertainment (amusement park, etc.) functions.  |
|   | Zoo (priority may be given to animals or humans)            | City-wide            | 4 m <sup>2</sup> / person (min. 40ha)                                   | Within the zoo, there may also be a city farm where children and young people provide services to animals (This is an effective tool in the education of disabled children), providing opportunities for relaxation, education, and shopping.           |
|   | Botanic Garden  | City-wide            | 4 m <sup>2</sup> / person (min. 40ha)                                   | The presence of facilities for relaxation, education, and shopping also enhances the potential usage of the area.   |
|   | Urban District Park (Serves several neighborhoods .)        | Approximately 3-5 km | 4-8 m <sup>2</sup> /kişi  | Picnicking, amateur nature observation/research, walking, and sports activities are facilitated, the presence of natural/artificial water surfaces is preferred.  |
| <b>Quarter</b><br>45,000-50,000 population  | Quarter Park  | 1.5-2,5 km           | 1,5 m <sup>2</sup> / person (min. 20ha)                                 | Should be close to nature, catering to picnicking, sports, and recreational needs. (Traffic education area, recreation center, countryside café, etc., facilities may also be available.)   |
|   | Playground (sports adventure playground)                    | 1-1,5 km             | 7-10 m <sup>2</sup> / person  | Sports facilities and adventure playground may not coexist.   |
| <b>Neighborhood</b><br>10,000-15,000 population   | Neighborhood Park (Serves several neighborhoods )           | 0.8-1 km             | Approximately 1.4 m <sup>2</sup> /person (half of it sports area)       | Should be arranged suitable for sports, viewing, entertainment, games, socializing, and relaxation activities.  |
| <b>Neighborhood Unit</b>  | Neighborhood Unit Park                                      | 250-500m             | Approximately 1.5 m <sup>2</sup> /person (minimum 5000 m <sup>2</sup> ) | Short-term relaxation, viewing, socializing, sports, equipped and unequipped (with and without vehicles) gaming activities are included.  |
| <b>Residential Group</b>  | Resting Area  | Max. 100m            | 50-100m <sup>2</sup> /person  | Near the residence, a space for relaxation, socializing, child observation, etc., as an extension of the residence.   |
|   | Children's Play Area  | Max. 300m            | 0,75 m <sup>2</sup> / person  |   |
|   | Children's Play Spot  | Max. 100m            | 0,2-0,5 m <sup>2</sup> / person   |   |

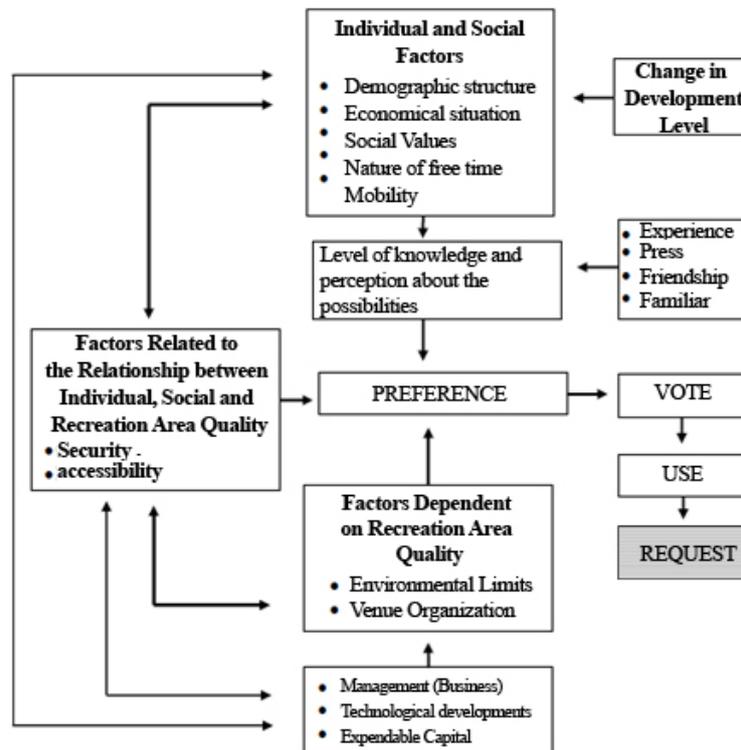

Recreation pertains to activities individuals engage in during their leisure time outside of working hours. According to Edginton and Ford (1985), recreation, as a modern social institution, is considered as a repository

of knowledge and a professional field: it is independent of work, inherently valuable, and serves as a means for fulfilling many important needs, contributing to a fulfilling and happy life (Karaküçük, 1997). Gökmen (1985) defines recreation as a series of activities that individuals can choose independently after fulfilling their occupational, familial, and societal obligations, aiming at relaxation, entertainment, skill enhancement, and self-renewal (Karaküçük, 1997). From a different perspective, recreation is seen as the preparation for a new and evolved work cycle, rejuvenating the worn-out body, and gaining freshness and energy for a new working period (Uzun and Altunkasa, 1997). Additionally, Gülez (1979) defines recreational activities as non-profit activities such as games, sports, entertainment, and relaxation, undertaken amateurishly, with the purpose of earning money (Gedikli, 1998). While all recreational activities are carried out during leisure time, not all activities done during leisure time can be considered as part of the phenomenon of recreation.

### Recreational Demand And Factors Affecting It

Recreational demand refers to individuals' desire to use or not to use any recreational opportunity. The demand for recreation among all individuals (both men and women) in a society is not the same because demand is determined by a series of internal and external factors. According to Gold (1980), the fundamental factors influencing people's recreational demand vary depending on user potential, recreational area, and the relationship between user potential and recreational area (Uzun and Altunkasa, 1997; Yılmaz Bayram, 2011).

Factors related to the quality of recreational areas include the area's attractiveness to users, alternatives available, carrying capacity, and natural features (Yılmaz Bayram, 2011). Additionally, factors such as area management, keeping up with technological developments, and available capital indirectly affect the mentioned factors (Figure 1). Factors related to the relationship between individual and societal qualities and the quality of recreational areas include travel time and distance, the cost of recreational resources and equipment, knowledge and user perception of the area, safety, and accessibility. Particularly, safety and accessibility depend on the demographic structure of individuals (Yılmaz Bayram, 2011). For instance, to assert that the same location is equally safe and accessible for women and men, it is necessary to carefully examine and address the specific sensitivities of women and arrange accordingly (Figure 1).

Şekil 1. Factors Influencing Individuals' Demand for Urban Green Space - Park Usage (Yılmaz Bayram, 2011).

Şekil 1 illustrates the relationship between the factors influencing individuals' demand for urban green space - park usage. Individual and societal factors vary depending on people's level of self-improvement. These factors shape preferences based on individuals' knowledge and perception. Here, communication tools and the experiences of individuals around us can influence people, leading hidden demands to turn into directed demands (Yılmaz Bayram, 2011). Preferences are formed with the varying effects of all the factors described above. Choices determine individuals' selections. By choosing the type of recreation and area, new demands begin to emerge accordingly. In the context of gender, individual and societal factors influencing women's and

men's demand for urban green space usage can be examined under the headings of demographic structure, economic status, societal values, the nature of leisure time, and mobility. The most fundamental distinction arises from gender. Due to gender roles, individuals' educational levels vary. It is observed that women, in some cases, have limited educational opportunities, leading to insufficient employment opportunities for them. Consequently, they lead their lives as economically low-paid or unpaid individuals. Even economically affluent women, at the middle and upper levels, are known to be not as comfortable as men in terms of societal values. The tasks and responsibilities imposed on them restrict their use of public spaces. Particularly, their use of recreational facilities is suppressed by the priorities and demands of their children.

### The Gender Inequality Index (Gender Inequality Index-GII)

The Gender Inequality Index (GII) is an indicator developed by the United Nations Development Programme (UNDP) as a measure of gender inequality. This indicator was introduced as an alternative to the Gender Empowerment Measure (GEM) in the Human Development Report (GDI) of the UNDP in 2010. GII considers three fundamental dimensions of gender inequality: 1.Reproductive Health: Reflects maternal mortality rates, adolescent birth rates, and inequalities in access to services. 2.Empowerment: Assesses women's participation in decision-making processes and access to education. 3.Economic Activity: Takes into account the gender gap in labor force participation and the ratio of earned income between women and men.

According to the Gender Inequality Index, in the 2020 report containing 2019 data, countries marked in red on the world map represent countries experiencing higher levels of gender inequality, while countries marked in green reflect greater equality (UNDP). GII combines these dimensions into a single index ranging from 0 to 1; higher values indicate greater gender inequality. Countries with higher GII scores typically face inequalities in health outcomes, limited access to education and economic opportunities for women, and lower levels of women's participation in political decision-making processes.

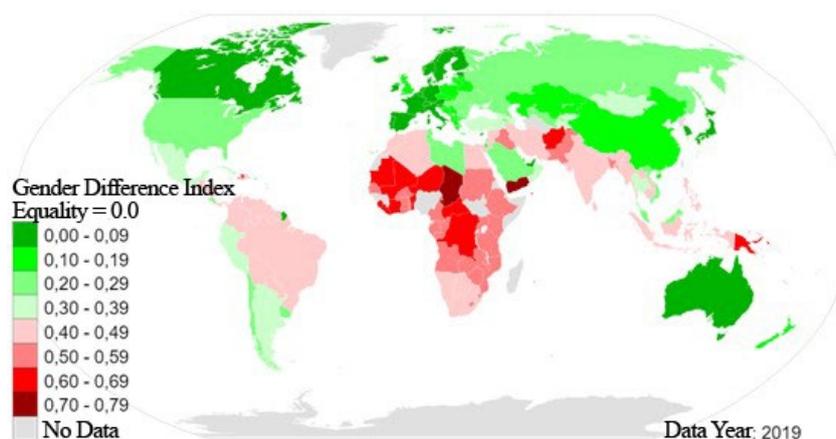

Figure 2. Gender Inequality Index of Countries (URL1)

Gender Inequality Index provides policymakers and researchers with a comprehensive measure of societal gender inequality, allowing for comparisons between countries and over time. It serves as a tool for monitoring progress towards gender equality and identifying areas where interventions are needed to address gender inequalities (URL1). In this study, the most frequently used parks in the capitals of the top 10 countries leading the GII ranking in the Gender Inequality Index were examined: namely, Zürichhorn in Zurich, Switzerland (GII value = 0.025); Slottsparken in Oslo, Norway (GII value = 0.038); Kaivopuisto in Helsinki, Finland (GII value = 0.039); Vondelpark in Amsterdam, Netherlands (GII value = 0.043); Ørstedsparken in Copenhagen, Denmark (GII value = 0.043); Kungsträdgården in Stockholm, Sweden (GII value = 0.045); Parc de Bruxelles in Brussels, Belgium (GII value = 0.045); Seoul Forest Park in Seoul, South Korea (GII value = 0.047); Jardin des Tuileries in Paris, France (GII value = 0.049); and Hljómskálagarðurinn in Reykjavik, Iceland (GII value = 0.058).

### Examples Of Parks In Countries With High Scores On The Gender Inequality Index

#### Zürichhorn (Switzerland - Zurich)

At Zürichhorn, located on the shores of Lake Zürich, there are numerous dock structures. This park, with a total area of 11.4 hectares, consists of 5.8 hectares of green areas, 1.7 hectares of recreational areas, and a 0.33-hectare Chinese garden. Within the park, there are facilities such as a sailing club building, an art workshop, the Le Corbusier museum, and a casino (covering 0.6 hectares).

The Zürichhorn Park, located in the Seefeld district of Zurich, stands out as the most frequently visited park, situated 3-4 minutes away from the city center and hosting various tourist attractions. This area, protected by

trees and reeds, became the focal point of national exhibitions such as the 1939 'Landi' and the 1959 'G59'. Zürichhorn Park serves as a place of relaxation for both locals and foreign visitors (URL2). The park offers modern amenities such as sculptures like Jean Tinguely's 'Heureka', playgrounds, and recreational areas (URL3). It provides various facilities appealing to people, including playgrounds, picnic areas, and sports facilities. Located by the lake, the park offers opportunities for swimming, boat trips, and walks along the shoreline. Throughout the year, concerts, festivals, and cultural events are held in Zürichhorn Park. Accessible by public transportation and designed to integrate with the city's bicycle paths and pedestrian walkways, the park features limited vehicular roads, with surrounding roads restricted to a maximum speed of 50 km/h. A bicycle lane is positioned east of the area to seamlessly connect with the city. Pedestrian crossings are provided to ensure safety at intersections between pedestrians and vehicles.

### **Slottsparken (Norway - Oslo)**

Slottsparken, also known as the Royal Palace Park, encompasses greenery, winding paths, and serene ponds within an area of 5.3 hectares. With a total area of 21.4 hectares, the park comprises 12.5 hectares of green spaces, 0.49 hectares of water areas, and a total of 4.8 hectares of parking areas. The parking area designated for the art museum covers 0.28 hectares, while the parking area designated for the hotel occupies 0.1 hectares. The art museum occupies an area of 0.32 hectares, with a storage area of 0.075 hectares, and a single hotel occupies an area of 0.40 hectares. Additionally, there are parking areas allocated for an office (0.040 hectares), a children's playground (0.012 hectares), a greenhouse (0.055 hectares), and a small park area (0.033 hectares). Designed by architect Hans Linstow in the 19th century, the park reflects the principles of English landscape design (URL5). Slottsparken offers a wide range of facilities including cafes, recreational areas, and ample space for outdoor activities (URL6). Throughout the year, Slottsparken hosts cultural events that contribute to Oslo's cultural scene (URL7). Apart from service roads providing access to the hotel and museum within the area, there are no vehicular roads, but stairs are available for pedestrian pathways. Public transportation routes pass through the south and east of the area. The maximum speed on vehicular roads is limited to 50 km/h, and pedestrian-vehicle encounters are facilitated by pedestrian crossings. Due to its central location, the majority of surrounding uses consist of office spaces .

### **Kaivopuisto (Finland - Helsinki)**

Kaivopuisto, located in the southern part of Helsinki, offers recreational activities such as sightseeing, skiing, and playgrounds. With a total area of 16.6 hectares, this park covers 11.8 hectares of green spaces and is situated along the coastline. The parking area in the park totals 0.11 hectares, and there is a field measuring 0.80 hectares. Additionally, the park features a dog park spanning 0.087 hectares, a children's playground covering 0.090 hectares, and commercial buildings occupying 0.2 hectares.

The Cygnaeus Gallery, Finland's oldest art museum, is located in this area. It features pathways for walks (URL8). Known for its sculptures, playgrounds, and natural beauty, Kaivopuisto demonstrates Helsinki's heritage and commitment to green spaces through conservation efforts and societal engagement (URL9). People are drawn to the lawns, pathways, and panoramic views of the sea (URL10). Additionally, the park serves as a hub for cultural events and picnics, enhancing its appeal with its proximity to the sea and nearby islands (URL11).

### **Vondelpark (Netherlands - Amsterdam)**

Vondelpark boasts sports facilities such as running and walking tracks, football fields, and playgrounds. The park offers recreational activities. With a total area of 47.5 hectares, wooded areas cover 11.7 hectares, grass areas cover 13.7 hectares, and water areas cover 8.5 hectares. Additionally, there are sports fields covering 0.31 hectares and children's playgrounds covering 0.99 hectares. Furthermore, the park features outdoor theater areas, musical areas, and cafe-restaurant-kiosk areas totaling 0.21 hectares.

During the summer months, free concerts/shows are held at the open-air theater, and the cafes/restaurants located throughout the park also provide relaxation opportunities (URL12). Dogs and their owners are allowed to roam freely in designated areas (URL12). Vondelpark is adorned with a national monument bridge and viaduct. Historical structures such as the Pavilion, where the Vondel statue is located, and the music-dome Groot Melkhuis are found in the park. The topography over the waste storage area in Vondelpark is utilized to prevent flooding (URL13). Being pedestrian and cyclist-friendly, the park serves as a bustling activity center where people from all walks of life come together to relax, socialize, and enjoy outdoor activities (URL14). While vehicular roads exist in the area, they are currently not open to vehicle traffic but are accessible for vehicles servicing the facilities and for emergency response in case of fire or emergencies. Bicycle paths are present to the north, west, and east of the area, with public transportation serving the vicinity. Although the surrounding roads have a width of 35 meters, the speed limit is restricted to 30 km/h.

**Ørstedsparken (Denmark - Copenhagen)**

Located centrally in Copenhagen, Ørstedsparken is situated amidst the bustling streets and cultural venues of the city. Offering panoramic views, Ørstedsparken sprawls over approximately 12 hectares of land. The total area of the park is 6.5 hectares, within which 2.4 hectares are wooded areas and 1.8 hectares are water areas. Additionally, there are six parking lots covering a total area of 0.2 hectares. The park features eight structures, including a café; the remaining structures are utilized as sheltered seating areas. In total, these structures cover an area of 0.046 hectares.

The park features concerts, outdoor events, and a public playground. Additionally, Ørstedsparken offers outdoor recreational activities such as yoga, tai chi, and cycling, and hosts cultural events throughout the year (URL15). Surrounding the park are vehicular roads with a width of 20 meters. However, within the restricted area with a speed limit of 50 km/h, there are no vehicular roads, but stairs are available for elevation differences. A bicycle path serving the city is present to the west of the area. Pedestrian pathways have an average width of 2-3 meters, with lighting every 15-20 meters.

**Kungsträdgården (Sweden - Stockholm)**

This park in Sweden is surrounded by a 20-meter-wide vehicular road, with a speed limit of 30 km/h, and it has been designed as an integral part of the city. With a total area of 10.9 hectares, the park consists of 6 hectares of green spaces, 0.6 hectares of monument areas, and 0.33 hectares of water areas. Additionally, there are planned areas for events (0.1 hectares), retail space (0.35 hectares), and walking paths (4.08 hectares).

Bicycle lanes dominate the cityscape and also traverse through the area. Roadside parking has been preferred along the vehicular road passing through the eastern part of the area, where bicycle lanes are also present. The main pedestrian axis to the east of the park connects to other park areas and the marina, enhancing the accessibility of the area. Pedestrian crossings are available for pedestrian-vehicle encounters. In the center of the park, there is typically a large fountain serving as a meeting point for visitors (Johnson, E., 2018).

**Parc de Bruxelles (Belgium - Brussels)**

Located north of the Brussels Royal Palace, this park area houses artistic activities, open-air buffets, and cafes. To the south of the area, there is a 2x2 lane vehicular road with a speed limit of 30 km/h on all surrounding roads. A tram line runs from west to north of the area, and a metro line passes under the area at a depth of 4 meters, with a station within the area. With a total area of 13 hectares, the park comprises 11 hectares of green space. Additionally, there are designated areas for a children's playground (0.14 hectares), a theater and live music area (0.35 hectares), and an open-air buffet area (0.03 hectares).

The park serves as a hub for public transportation lines. While there are bicycle lanes around the perimeter of the area, there are no bicycle lanes within the park itself. Parking areas are located within the facilities within the area and to the south of the park. There are two water features within the area. Throughout the park, there are monuments, statues, and memorials. The park features ample open spaces suitable for picnics, recreational activities, and gatherings. Strategically placed benches and seating areas provide resting spots and relaxation areas along the park's length (Dupont, M., 2015).

**Seoul Forest Park (South Korea - Seoul)**

Seoul Forest Park is the largest park in Seoul, the capital of South Korea, with a population of 10 million. Major city roads pass through the area, necessitating the presence of overhead crossings due to their hazardous nature. Additionally, the area houses facilities such as a high school, water treatment plant, and equestrian club. With a total area of 78 hectares, the park encompasses 40 hectares of green space. Furthermore, there are designated areas for playgrounds (0.4 hectares), sports fields (1 hectare), and the high school (1.8 hectares). The water treatment plant occupies an area of 28.5 hectares, while the water area covers 1.96 hectares.

The bicycle lanes located at the center of the area are uniformly distributed throughout the entire park. The area is integrated with the city, and the speed limit on the road passing through the area is restricted to 50 km/h. Pedestrian-vehicle encounters are facilitated by pedestrian crossings in the center of the area, while pedestrian paths connecting the area to the river outside are provided by overhead crossings. Public transportation stops serve the area. The park features wetlands, ponds, and streams that provide habitat for various plant and animal species. As the name suggests, Seoul Forest encompasses forested areas with walking trails for visitors to explore nature and enjoy outdoor walks. Cultural facilities such as art galleries, exhibition spaces, and performance venues are located within the park. Seoul Forest also includes a special children's park with playgrounds, sandpits, and other amenities for young visitors. Sports enthusiasts are catered to with facilities such as football fields, basketball courts, and tennis courts within the park. Bicycle and rollerblade paths are available for recreational activities (Kim, J., 2019).

**Jardin des Tuileries (France - Paris)**

The parking area is underground, with a bicycle path passing through the northern part of the area, where the speed limit is 30 km/h. Metro transportation is available in the area. Illumination within the area provides people with the opportunity to sit safely on benches. With a total area of 21 hectares, the area encompasses 11 hectares of green space. Additionally, the museum area covers 0.23 hectares, the built area (cafe and restaurant) covers 0.08 hectares, and water elements span 0.65 hectares. The amusement park occupies 2.8 hectares, while the children's play area covers 0.7 hectares.

Pedestrian crossings are available for pedestrian-vehicle encounters. Along the southern part of the area, there is a promenade pathway along the banks of the River Seine. (Pierre, L., 2020). The park is aligned along the central axis from the Louvre Museum to the Place de la Concorde, providing spatial connectivity. Within the garden, there are ponds, fountains, and basins such as the Grand Bassin Rond and Bassin Octogonal. (Leclerc, M., 2018).

**Hljómskálagarðurinn (Iceland-Reykjavik)**

On the shore of Lake Tjörninn, this park boasts a children's play area, a concert hall, and commercial structures. A city road traverses through the park, with a speed limit of 50 km/h enforced. Urban pedestrian pathways and bicycle lanes pass through the area, contributing to the coherence of the city. With a total area of 10.35 hectares, the park encompasses 8 hectares of green space. Additionally, there is a 1-hectare children's play area and a 0.05-hectare building zone within the park. Bicycle lanes are also present within the area.

The lake is completely covered with ice during the winter months, allowing people to engage in activities such as ice skating and skiing on the lake. The only complaint about the area is the lack of a café with toilet facilities. Pedestrian-vehicle encounters are facilitated by pedestrian crossings. Hljómskálagarðurinn offers various recreational activities, including playgrounds for children, sports fields, and exercise equipment for adults. The park is accessible to people of all ages, including wheelchair users, with asphalt paths and ramps (Jónsson, Ó., 2018).

**RESEARCH QUESTIONS AND METHODOLOGY**

Considering the gender roles attributed to women, investigating the spatial characteristics that a park should have to achieve equal usage levels for both genders forms the basis of this study. Starting from the hypothesis that Faroz-Ganita Coastal Park does not have equal usage levels by women and men, the study aims to answer the following questions: How do the spatial qualities and location of Faroz-Ganita Coastal Park affect its usage levels by genders?, For what purposes do women and men prefer the park?, What are the complaints and spatial qualities in the park identified by women and men?. In this study, the qualities and design principles of urban parks with equal usage levels by women and men were determined by reviewing relevant literature and examining the most visited park areas in countries with the lowest scores on the Gender Inequality Index (GII). Within this framework, the spatial qualities (size, functional diversity, amenities, area size, security, etc.) of Faroz-Ganita Coastal Park in Trabzon province, Ortahisar district (Central district), and its relationship with its immediate surroundings based on its location in the city (accessibility, security, etc.) were investigated. The fieldwork consisted of a two-stage process: 1. Spatial Analysis: The spatial organization and qualities of the park were mapped based on findings obtained from relevant institutions, Google Earth, and observations made in the field. 2. Survey Study with Female and Male Users: A total of 740 participants, consisting of 359 women and 381 men using the park, were randomly selected for the survey. Participants were asked demographic questions, as well as questions regarding their reasons for park usage, preferences, frequency of use, aspects they liked and complained about the park. The survey aimed to assess individual factors influencing urban open and green space usage in the context of gender (gender, age, education level, economic status), the park's capacity to meet needs (walking opportunities, recreational services, resting facilities, etc.), and people's satisfaction levels with the park. The survey was conducted between February 6, 2024, and February 25, 2024.

**Study Area**

The Faroz-Ganita Coastal Park is located in the Ortahisar District, which is the central district of Trabzon, Turkey. Situated west of the Trabzon Port, it is the park closest to the city's central business district. The park originated in the early 1900s when a Greek family built the Ganita Tea Garden on the rocks. The name "Ganita" derives from the Greek word "Καίητα," meaning "beautiful place." Over time, this area has evolved into one of the most significant parks along the coastal strip of Trabzon, with various recreational enhancements (Figure 3).

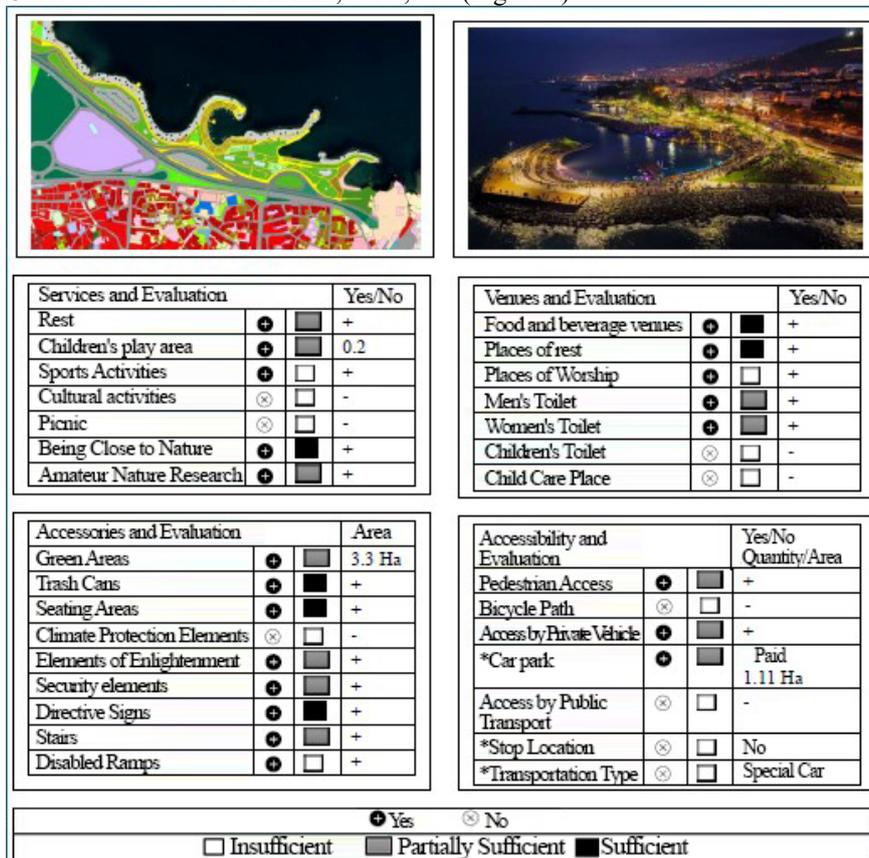

**Figure 3.** Faroz-Ganita Coastal Park (Trabzon Metropolitan Municipality)

The area is located along the seaside and comprises three pier structures. While one of the piers is designed with seating areas, serving as an internal structure, the two pier structures located to the east are primarily utilized as docking areas for tourist boats.

**FINDINGS AND EVALUATIONS**

**Spatial Findings**

The total area of this site is 12 hectares, with 3.3 hectares designated as green space. Additionally, there is a 0.2-hectare children's play area, a 2.6-hectare walking path, and a 0.2-hectare bicycle path. Within the area, there is also a total of 0.3 hectares allocated for kiosks, cafes, etc. (Figure 4).

**Figure 4.** Evaluation of the Spatial Characteristics of Faroz-Ganita Coastal Park (Turkey-Trabzon)

In contrast to the other parks examined (See; Park Examples in Countries with Good Gender Inequality Index), there is a 35-meter-wide Black Sea coastal road passing from the south, which is the D010 Black Sea coastal road connecting the city to other cities. Although the normal speed limit of this road is 82 km/h, due to its three lanes, vehicles usually travel at speeds exceeding 90 km/h (Trabzon Directorate of Security, Regional Traffic Control Department). As a result, while people can access other parks through pedestrian crossings, pedestrian overpasses are mandatory in Faroz-Ganita Coastal Park. This restricts the access of disabled individuals and young children to the area. Access to the area is typically provided by using 3-meter sidewalks alongside the 15-meter-wide roads used from the Square-Gazipaşa slope-Ganita direction, followed by stairs or elevators. This is considered a disadvantage for those who walk to the area. For those arriving by car, the parking area in the park

is used with a fee (up to 1 hour for 20 TL (0.61 \$), up to 4 hours for 30 TL (0.92 \$) as of April 2024, exchange rate 1\$=32.53 TL). After getting off the vehicle, it is necessary to walk about 500 m to reach the busiest part of the area (Figure 4). When compared to the parks in the aforementioned countries (See; Park Examples in Countries with Good Gender Inequality Index), Ganita Park, other parks are more accessible and safe, there are spaces prioritizing nighttime use, there are more green areas for picnicking, and the area is designed as an integral part of the city. Also, having a city-wide bicycle route, having a pedestrian transportation system where city pedestrian roads are connected, and the surrounding roads of the park having low speeds such as 30-50, which are city limits, making them suitable for pedestrian crossings, also increase disabled access. The noticeable decrease in the number of people towards the ends of the area is also due to its separate design from the city (Figure 4)

Table 2: A Comparison of Parks in Countries with Good Gender Inequality in the Context of Social Gender Inequality and Faroz-Ganita Park

| Good examples of gender equality in public parks within the context of societal gender inequality |  | OrstedPark, Denmark Copenhagen | Kaivopuisto Finland Helsinki | Slottsparken Norway Oslo | Vondelpark Netherlands Amsterdam | Zürichorn Switzerland Zürich | Hljómskalagardurinn Iceland Reykjavik | Kungsträdgården Sweden Stockholm | Parc de Bruxelles Belgium Brüksel | Jardin des Tuileries France, Paris | Seoul Forest South Korea Seoul | Faroz-Ganita Turkey Trabzon |

In Table 2, the cells shaded in light gray represent existing variables, while those shaded in dark gray represent non-existent variables. When examining the most commonly used parks in the capitals of countries with the lowest scores on the Gender Inequality Index (GII) in the context of social gender inequality, many common features stand out. These features include the homogeneous organization of urban parks throughout the city. For instance, the travel routes of individuals commuting to work in the mornings are planned along urban pedestrian and bicycle paths leading to the parks. In contrast, Faroz-Ganita Coastal Park, due to its internal arrangement of pedestrian and bicycle paths, is designed as an area to be visited solely for the purpose of enjoying the park, independent of the city. Therefore, the number of visitors to Faroz-Ganita Coastal Park is lower during weekdays and working hours. This is because the park is situated outside the city as a destination to be visited according to a specific plan. Since there are no bicycle lanes in Ortahisar district of Trabzon, people use their bicycles in this area solely for sports purposes. In contrast, in countries with good gender equality in terms of social gender inequality, bicycle lanes are dominant throughout the city, including those passing through park areas. During off-peak hours, Faroz-Ganita Coastal Park is deserted; however, it is used on holidays, weekends, and sunny days. Climate protection facilities are also available in other cities. For instance, enclosed areas are provided to people during windy times. These facilities include shaded areas under trees, umbrellas, and covered seating areas (excluding cafes and restaurants). In Faroz-Ganita Coastal Park, only cafe and restaurant areas have enclosed spaces. In parks in countries with good gender inequality, there are ramps for disabled access. Although Faroz-Ganita Coastal Park also has ramps, there are no facilities for disabled vehicles along the access routes to the area. Due to the high sidewalks, a disabled individual attempting to reach the park in a wheelchair encounters many obstacles. Unlike in parks in countries with good gender inequality, where bus and taxi stops and metro stations directly serve the parks, the nearest stop to Faroz-Ganita Coastal Park is 600 m away, and access is provided via stairs, overpasses, and 1.5-2 m sidewalks. Insufficient pedestrian access is the most important deficiency. The majority of married women using Faroz-Ganita Coastal Park visit the area to take their children for a walk. Women who cannot deviate from their childcare responsibilities spend their park visits dependent on their children, feeling obligated to act outside their own personal desires. When examining parks in countries with good gender inequality, women visit these areas comfortably at all times of the day, either with their children or alone or with friends. Each park has a green area ratio of over 50% compared to paved areas, while Faroz-Ganita Coastal Park has a green area ratio of only 20%. All parks have a water feature, with parks located by the sea or lake having pools and pond structures. Faroz-Ganita Coastal Park is also located by the sea, which is a prominent feature. Unlike in other cities, where bicycle lanes dominate and are planned in accordance with this structure, Faroz-Ganita Coastal Park has a bicycle lane that starts within the park and ends at Faroz Port. In parks in countries with gender inequality, ground-level pedestrian crossings are provided for pedestrian-vehicle encounters. However, due to the presence of the D010 Black Sea Coastal Road, which is a long-distance road passing from the south of the park, with a speed limit of 82 km/h, individuals only access the area via overpasses. In parks in countries with good gender inequality, the surrounding roads have speed limits of 30-50 km/h, allowing people to visit the park without the necessity of crossing a parkour using pedestrian crossings (Table 2).

## **FINDINGS AND EVALUATION OF THE SURVEY**

More than half of the respondents in the survey are male (359 females, 381 males), with the average age of female park users being 33, while males have an average age of 37. The majority of park users, regardless of gender, are married (N: 379, 51.21%). Single users account for 342 individuals (46.21%), while there are 19 users who are widowed or divorced (2.56%). Most of the park users have attained a university-level education, with a significant portion of them being females. While the number of female high school graduates exceeds that of males, users with lower levels of education are predominantly male (Table 3).

**Table 3. Demographic Characteristics of the Respondents**

| VARIABLES                                       |                          | FEMALE | MALE | TOTAL | FEMALE % | MALE % |
|---|--------------------------|--------|------|-------|----------|--------|

| Educational Background                          | Primary school           | 29     | 55   | 84    | 34.52    | 65.48  |
|   | Middle school            | 27     | 50   | 77    | 35.06    | 64.94  |
|   | High school              | 126    | 120  | 246   | 51.22    | 48.78  |
|   | University               | 177    | 156  | 333   | 53.15    | 46.85  |
| Economic Status                                 | Poor                     | 11     | 11   | 22    | 50.00    | 50.00  |
|   | Middle-class             | 89     | 125  | 214   | 41.59    | 58.41  |
|   | Well-off                 | 259    | 245  | 504   | 51.39    | 48.61  |
| Homeownership Status                            | Renter                   | 74     | 81   | 155   | 47.74    | 52.26  |
|   | Homeowner                | 285    | 300  | 585   | 48.72    | 51.28  |
| Accompanying Person(s) to the Park              | Individual               | 52     | 95   | 147   | 35.37    | 64.63  |
|   | Group                    | 307    | 286  | 593   | 51.77    | 48.23  |
| Health Status                                   | Has illness              | 59     | 104  | 163   | 36.20    | 63.80  |
|   | Does not have illness    | 300    | 277  | 577   | 51.99    | 48.01  |

The majority of park users express that their economic status is good. While women mostly indicate that their economic situation is good, men tend to provide responses indicating a moderate status. The vast majority of park users either reside in their own homes (N: 585, 79.05%) or with their families. A large proportion of park users visit the park in groups. While the number of men coming alone (64.63%) exceeds that of women, the number of women coming in groups (51.77%) exceeds that of men (48.23%). Women tend to visit the park with their spouses or relatives, whereas men mostly come with friends or alone. The overall health status of park users is generally good. All disabled individuals visiting the park arrive using their family's private vehicle. Due to the lack of facilities for disabled access, the park is not suitable for disabled individuals; the majority of park users are healthy adults (Table 3).

As described in Table 4, when park users were asked how often they use the park, the majority stated that they rarely visit (1-2 times a month) (N: 379, 51.21%). However, those spending a few days a week in the park outnumber those who visit every day. The majority of those who rarely use the park are women. Additionally, the majority of users who visit 1-2 days a week are men. Consequently, women tend to use the park less frequently than men (Table 4).

**Table 4.** Factors Related to Park Usage

| VARIABLES   |                                 | FEMALE  | MALE | TOTAL | FEMALE % | MALE % |

|   | Reasons for Preferring the Park | Resting | 114  | 145   | 259      | 44.02  |
| Engaging in sports  |                                 | 56      | 47   | 103   | 54.37    | 45.63  |
| Dining  |                                 | 33      | 27   | 60    | 55.00    | 45.00  |
| Socializing (Meeting friends, spending time together, etc.) |                                 | 109     | 109  | 218   | 50.00    | 50.00  |
| Natural Beauties: Sea                                       |                                 | 0       | 2    | 2     | 0.00     | 100.00 |
| Touristic Excursion   |                                 | 30      | 19   | 49    | 61.22    | 38.78  |
| Other   |                                 | 17      | 32   | 49    | 34.69    | 65.31  |

As the park does not have a minibus or bus stop, approximately half of the arriving users (N: 343, 46.35%) come by their own vehicles. The number of pedestrians approaching the park is close to the number of minibus passengers, as minibuses from the city center pass near the park. The low number of cyclists coming to the park is due to the absence of bicycle lanes in the city. Nearly half of the users come to the park for walking purposes (N: 334, 45.13%). Additionally, those who come for dining and walking purposes outnumber those with other purposes. Women generally show more interest in outdoor activities such as walking and taking children for a stroll. Furthermore, their interest in dining activities is remarkable (N: 297, 82%). However, their interest in

indoor activities such as listening to music and reading books is slightly lower (N: 4, 0.01%). Men, on the other hand, tend to show more interest in outdoor activities, especially fishing and hiking (N: 223, 58.5%). Additionally, their interest in indoor activities such as listening to music and reading books is slightly higher compared to women (N: 20, 0.04%). When users were asked about their reasons for choosing the park, the majority, regardless of gender, stated that they came for socialization and relaxation. The proportion of those engaged in sports, using dining areas, and visiting the park for tourism purposes is very close. Observations and interviews clearly indicate that during weekend holidays and lunch hours, people visit the park more frequently. The number of visitors during weekdays decreases by half compared to weekends, and this ratio remains the same during both day and night hours (Table 4).

As described in Table 5, when users were asked about their favorite aspects of the park, the majority, regardless of gender, expressed appreciation for the park's location, panoramic views, and the presence and variety of seating areas (N: 378, 51.1%). (Table 5).

**Table 5.** Satisfaction and Complaints Regarding the Park

| VARIABLES   |  | FEMALE | MALE | TOTAL | FEMALE % | MALE % |
|---|--|--------|------|-------|----------|--------|
| <b>3. Satisfaction and Complaints in the Park</b> |  |        |      |       |          |        |
| Most Liked Criteria in the Park                   | Variety and Quality of Food and Beverage Venues                          | 19     | 27   | 46    | 41.30    | 58.70  |

| Most Complained Criteria in the Park              | Inaccessibility of Venues  | 26     | 39   | 65    | 40.00    | 60.00  |
|   | Lack of Separate Areas for Different Age Groups                          | 11     | 12   | 23    | 47.83    | 52.17  |
|   | Obstacles in Pedestrian Access   | 14     | 4    | 18    | 77.78    | 22.22  |
|   | Sidewalks and Walkways not Suitable for Wheelchair Use due to Height     | 13     | 15   | 28    | 46.43    | 53.57  |
|   | Distance of Minibus-Bus Stops from the Park or Residence                 | 12     | 17   | 29    | 41.38    | 58.62  |
|   | Transportation Costs   | 15     | 8    | 23    | 65.22    | 34.78  |
|   | Paid Parking   | 8      | 12   | 20    | 40.00    | 60.00  |
|   | Paid Toilets   | 15     | 32   | 47    | 31.91    | 68.09  |
|   | Odors of Algae and Wastewater  | 55     | 56   | 111   | 49.55    | 50.45  |
|   | Noise Pollution from Surrounding People, Children, and Animals           | 62     | 101  | 163   | 38.04    | 61.96  |
|   | Presence of Stray Street Animals   | 3      | 10   | 13    | 23.08    | 76.92  |
|   | Inadequacy of Emergency Assistance Facilities                            | 12     | 0    | 12    | 100.00   | 0.00   |
|   | Neglected and Dirty Playground Equipment                                 | 12     | 19   | 31    | 38.71    | 61.29  |
|   | Inadequacy of Park Facilities  | 66     | 51   | 117   | 56.41    | 43.59  |
|   | Lack of Place of Worship   | 6      | 12   | 18    | 33.33    | 66.67  |
| Other   | 16   | 6      | 22   | 72.73 | 27.27    |        |

When park users were asked about the issues they were complaining about, people expressed the most discomfort with noise (N:163, 22%). Among the complaints raised by individuals are the odors generated by structures that dispose of wastewater into the sea, as well as the inadequate equipment in the park (Table 5).

**CONCLUSION AND RECOMMENDATIONS:**

The Faroz-Ganita Coastal Park, located in the center of Trabzon, is an important park area; however, it faces challenges in terms of access and usage. Accessibility issues, especially for disabled individuals and children, pose a significant barrier. Insufficient pedestrian crossings, underpasses, and overpasses present difficulties for visitors using wheelchairs or strollers. Additionally, safety concerns in the park particularly deter women from using it.

Comparing Faroz-Ganita Coastal Park with parks in countries with good gender equality, it is evident that it lacks in terms of accessibility and security. To enhance safety in the park, it is necessary to improve nighttime lighting and strengthen security measures. Facilitating access to the park requires the installation of disabled ramps and prioritizing pedestrian access on existing roads (creating pedestrian crossings, reducing speed limits). Measures such as increasing lighting in the park and installing additional security cameras in areas with security deficiencies should be implemented to increase nighttime usage and ensure visitor safety. Establishing public transportation stops around the park perimeter would facilitate easier and more economical access for visitors. Park areas can be organized to accommodate different age groups and disabilities through the principles of diversity and inclusivity. Flexibility and adaptability can be achieved by equipping parks with modular designs for easy adaptation to different activities and allocating spaces for temporary events. Sufficient seating areas should be provided for comfort, and areas designed to protect visitors from the sun and rain. Accessibility measures should include the provision of ramps, elevators, and barrier-free pathways for disabled individuals to comfortably use the park.

Regarding safety and security, parks should be equipped with lighting systems, camera systems, and adequate security personnel presence to ensure overall safety. Communication and intervention systems for emergencies should also be established. Finally, expert teams should be assigned for the regular maintenance of park areas, and regular maintenance plans should be developed. Implementing these recommendations can transform the Faroz-Ganita Coastal Park into a more accessible, secure, and attractive urban park. These improvements will contribute to the overall silhouette of the city and enhance the quality of life for its residents.

### ABSTRACT

The purpose of this study is to analyse the math skills of elementary school students based on various variables. This study aims to evaluate the success of students in elementary school math classes during the 2022-2023 academic year according to teacher opinions based on various variables. The data obtained may contribute to researchers working on the evaluation and development process of the elementary school math curriculum. The research will become more concrete and objective with the evaluations of our teachers.

The results of 48 classroom teachers working in the city centre of Ağrı were taken into account. The research results revealed that the math success of students is influenced by various factors according to classroom teachers. It was found that the most significant factor affecting students' math success is their success in other subjects, and that students' gender is not a significant variable in math success. Regarding the professions of parents, the responses of the interviewees were proportional. When looking at success according to families' income levels, a significant difference was observed in students' success. The research concluded that as income levels increase, access to resources becomes easier, leading to increased success. In the residential variable, it was found that students living in the city centre had higher success. According to the educational status of parents, it was found that having educated parents positively affects students' success.

**Keywords:** Success, Education, Gender, Math, Teacher Opinions

### INTRODUCTION

The primary goal of contemporary educational reform efforts is to establish a system that can help students understand and learn mathematics effectively. Creating this system according to the requirements of the era is of utmost importance (Dursun, 2004; Dede, 2004).

"Mathematics is a crucial tool for solving problems in our daily lives. Therefore, among the courses included in the educational programs implemented in schools, mathematics is undoubtedly one of the most important. In today's educational reforms, mathematics education holds a significant place. Establishing a system that can help students understand and learn mathematics is extremely important. Despite its importance, many students do not enjoy mathematics, viewing it as a boring and abstract subject (Aksu, 1985). In this context, several factors can be considered that negatively affect students' perceptions of mathematics. Environmental, cultural, linguistic, gender, socio-economic factors, the city in which they study, the school and class environments, and the educational status of their families can contribute to this negativity."

To make mathematics a comprehensible subject and to ensure students develop a positive attitude towards it, certain points must be considered in mathematics teaching. Several factors can contribute to the perception of mathematics as a difficult subject with which students have negative attitudes. Baykul attributes the low success in mathematics to the lack of relational understanding aids provided to students and the inherently abstract nature of mathematics. Teachers have the responsibility to concretize mathematics, an abstract subject, especially for students in the first and second stages of elementary education (Yazıcı, 2017).

The problem addressed by our research is the evaluation of elementary school students' success in mathematics based on teachers' opinions. Evaluations were made regarding factors affecting success, such as gender, parents' educational status, family's economic and social status, parents' occupations, and place of residence, revealing significant differences among these variables.

According to Baykul (2009), the answer to the question "What is mathematics?" varies depending on why people resort to mathematics, the mathematical topics they use for a specific purpose, their experiences with mathematics, and their interest in it. People's thoughts on mathematics can be grouped in this way. Gözen (2001) defines mathematics as a science that examines the properties of abstract shapes and measurable quantities put forth with definitions and the invariants in their relationships with each other.

### Historical Development of Mathematics

Mathematics is one of the oldest sciences in history. In ancient times, mathematics was defined as the science of numbers and shapes. It has a 4500-year history that can be proven with written documents. During this period,

the development of mathematics can be divided into five phases. The first phase, from the beginning to the 6th century BC, includes mathematics done in Egypt and Mesopotamia. Mathematics in Egypt involved basic operations with whole and fractional numbers and geometric calculations of some volumes and shapes. At the same time, mathematics in Mesopotamia was slightly more advanced. It was known as a craft-level endeavor aimed at meeting daily needs without reasoning-based proofs.

"The second phase, from the 6th century BC to the 6th century AD, is marked by the influence of Greek mathematics. This period is when mathematics transitioned from a craft to an art form. The most significant contributions to mathematics during this time came from Plato. Greek mathematics is considered modern mathematics."

"The third phase, from the 6th century AD to the late 17th century, is characterized by the mathematics of the Islamic world and India. While some believe that Muslims made original contributions to mathematics, others think otherwise. The contributions of Muslims to mathematics have not been sufficiently researched. Recent studies have shown that the derivative, one of the most important discoveries in mathematics, was found by Sharaf al-Din al-Tusi from Azerbaijan 500 years before Europeans. By the 16th century, Europeans had become the prominent figures in mathematics."

"The fourth phase, from 1700 to 1900, is known as the 'Classical Mathematics Period.' This era is considered the 'Golden Age of Mathematics.' During this time, mathematics became the foundation of all positive sciences. Much of the mathematics taught in universities today is based on the work done during this period."

"The fifth and final phase, from the early 1900s to the present day, is the 'Modern Mathematics Period.' Mathematics has developed rapidly, reached a very high technical level, and the accumulated knowledge is layered. One piece of information does not replace another, making mathematics increasingly complex but equally fascinating. It is a science that can only be pursued with passion."

### **Mathematics Teaching**

Mathematics is one of the oldest sciences in human history. It is defined as the science of numbers and shapes. Key principles in mathematics teaching include conceptual foundations, the principle of prerequisite knowledge, emphasis on key concepts, incorporation of research, and fostering a positive attitude towards mathematics.

It is crucial for teachers to create student-centered learning environments that align with the spirit of the constructivist approach to help students overcome difficulties in mathematics and develop positive attitudes and beliefs towards the subject. To establish learning environments that align with the constructivist approach, which is the foundation of the elementary mathematics curriculum, appropriate teaching methods must be used. These methods should actively engage students in the lesson, motivate them, encourage group work, and develop their creativity. Such approaches can change students' attitudes and thoughts about mathematics, which is often perceived as an abstract and daunting subject (Yenilmez & Uygan, 2010).

### **Success in Mathematics Teaching**

In Turkey, many students think that mathematics is difficult and exhibit negative attitudes towards it. This situation begins in elementary school and increases over time. It is crucial to establish conceptual foundations in all topics of mathematics in elementary school. When teaching mathematical concepts to elementary and middle school students, mathematical symbols and language should not be used. Instead, a language suitable for the students' level that they can understand should be used. Without providing a conceptual foundation, one should not immediately proceed to exercises. The quality of teaching is closely related to the teacher.

### **Factors Affecting Success**

A student's success or failure in mathematics cannot be explained by a single factor, such as gender. In addition to gender, many factors such as students' socioeconomic status, culture, language, and the environments of the class and school they attend can influence success. The multitude and variety of factors that can affect students' success in mathematics necessitate a reevaluation and a healthy redefinition of what it means to be successful or unsuccessful in mathematics. Teachers must help their students experience success in mathematics. It is essential to identify and present teachers' opinions on these factors. By doing so, the root causes of failure in mathematics classes can be identified. Therefore, this study aims to determine mathematics teachers' opinions on the factors that affect students' success in mathematics and the importance of these factors. Numerous internal and external factors affect a student's success. A student's own characteristics (intelligence, personality, gender, interest, etc.), family (parents' educational level, income level, value placed on education, involvement in education, etc.), and school-related factors (school environment, school climate, teacher behaviours, etc.) can all influence success (Güven, 2019).

### **METHOD**

This section provides explanations regarding the research model, the study group, data collection tools, data collection, and the analyses performed on the data.

### **Research Model**

This research is a qualitative study utilizing content analysis. The interview technique was applied by conducting interviews with classroom teachers to ensure the reliability of the research results. Evaluations based on a teacher interview form regarding students' achievement contributed to the reliability of the research.

### **Purpose of the Research**

The purpose of this study is to analyse elementary school students' math skills based on various variables. Specifically, the study aims to evaluate the success of students in elementary school math classes during the 2022-2023 academic year according to teacher opinions based on various variables.

### **Sub-Purposes of the Research**

1. Is there a relationship between the mathematics achievement of classroom students and their gender?
2. Is there a relationship between the mathematics achievement of classroom students and their parents' occupations?
3. Is there a relationship between the mathematics achievement of classroom students and their parents' educational status?
4. Is there a relationship between the mathematics achievement of classroom students and their families' monthly income?
5. Is there a relationship between the mathematics achievement of classroom students and their place of residence?
6. Is there a relationship between the mathematics achievement of classroom students and their achievement in other subjects?

### **Study Group**

The study group consists of 48 classroom teachers selected using a random sampling method, working in the city centre of Ağrı during the 2022-2023 academic year. Demographically, the group includes 40 female teachers and 8 male teachers.

### **Data Collection Tool**

In this study, a semi-structured interview technique was used. The purpose of this technique is to obtain extensive responses from participants and to allow the researcher to examine the relevant area in depth. The interview forms were prepared by reviewing the relevant literature. The questions in the interview forms were arranged to provide the necessary data to achieve the research objectives. The interview form consists of two sections. The first section includes personal information (teachers' gender, marital status, professional seniority, branch, and educational institution), while the second section consists of six questions related to the sub-purposes of the research.

### **Data Collection and Analysis**

Data for the research were obtained using a semi-structured interview form, one of the qualitative data collection techniques. In this study, classroom teachers' opinions were sought to determine whether elementary students' success in mathematics is influenced by various variables, and a "semi-structured interview form" was applied. Data were collected via Google Forms.

The data obtained at the end of the research process were analysed using content analysis. The primary goal of content analysis is to identify concepts and relationships that can explain the collected data. Content analysis is an analysis technique that allows for the objective and systematic examination of verbal and written data (Tavşancıl & Aslan, 2001). The responses given by the participants were grouped into meaningful categories based on the content of the responses. Similar and different responses were categorized, and positive and negative responses were separately indicated. The table shows similar responses and the number of individuals who provided these responses. The grade levels taught by the classroom teachers are presented in a separate table. The responses to the interview questions given by the teachers were interpreted. The 48 teachers participating in the study were coded as T1, T2, T3, ..., T48 in the table.

### **FINDINGS**

This section includes the personal information of the teachers who participated in the interviews, the information derived from their opinions, and the interpretations of the findings based on the questions prepared according to the sub-purposes. Table 1 explains the grade levels taught by the classroom teachers. Findings related to the research purposes are presented after Table 2.

**TABLE 1. Grade Levels Taught by Primary School Teachers**

| GRADE LEVEL | NUMBER OF TEACHERS | %   |
|-------------|--------------------|-----|
| 1ST CLASS   | 15                 | 31  |
| 2. CLASS    | 16                 | 33  |
| 3RD CLASS   | 8                  | 17  |
| 4TH GRADE   | 9                  | 19  |
| TOTAL       | 48                 | 100 |

As seen in Table 1, 31% of 1st grade teachers, 33% of 2nd grade teachers, 17% of 3rd grade teachers and 19% of 4th grade teachers participated in the interview. It can be seen that first and second grade teachers are in the majority here. 15 first grade, 16 second grade, 8 third grade and 9 fourth grade teachers answered the questions in the interview form.

#### Findings Regarding the First Sub-Purpose

**TABLE 2. The first question of the research is "What do you think about whether the mathematics course success of primary school students is related to their gender?" The teachers' answers to this question were examined and the results are shown in Table 2.**

| OPINIONS   | PARTICIPANT CODE   | NUMBER |
|--|--|--------|
| It has a relationship  | Ö11,Ö12,Ö13,Ö40  | 4      |
| No relation  | Ö1,Ö2,Ö3,Ö5,Ö6,Ö7,Ö8,Ö9,Ö15,Ö32,Ö33,Ö34,Ö35,Ö36,Ö37,Ö38,Ö42,Ö43,Ö44,Ö45,Ö46,Ö47,Ö48, | 22     |
| It is successful in both genders                                 | Ö10,Ö39  | 2      |
| Men are more successful  | Ö18,Ö19,Ö20,Ö21, Ö22, Ö23, Ö24, Ö25, Ö26, Ö27, Ö28, Ö29, Ö30,Ö31,                    | 14     |
| Girls are more successful  | Ö1,Ö17,  | 2      |
| It is related to the importance the student attaches to lessons. | Ö14,Ö41  | 2      |
| Perception is effective and individual                           | Ö4,Ö16,  | 2      |

According to Table 2; Teacher opinions on whether there is a relationship between grade 1 students' mathematics achievements and their gender are as follows. 4 of the teachers said they were in a relationship, 22 of them did not have any relationship, 2 said that both genders were successful, 14 said that boys were more successful, 2 said that girls were more successful, 2 said that it was related to the importance students attach to lessons and 2 of them stated that perception is effective and individual.

Considering these opinions, the dominant opinion is that the success of primary school students in Mathematics has no relationship with their gender. In addition, the second majority of teachers stated that 'Men are more successful'. It has been observed that the other opinions are close to each other and directly proportional. In the answers given, it was observed that the teachers who expressed the opinion that success was or was not related to gender gave short and unclear answers.

#### Findings Regarding the Second Sub-Purpose

**TABLE 3. What do you think about whether grade students' success in mathematics is related to their parents' professions? Teacher opinions regarding the question (Civil Servant, Tradesman, Farmer)**

| OPINIONS   | PARTICIPANT CODE   | NUMBER |
|--|--|--------|
| It has no relation.                                      | Ö4,Ö6,Ö8,Ö24,Ö25,Ö26,Ö32,Ö33,Ö36,Ö37,Ö38,Ö39,Ö40,Ö41,Ö42,Ö46,Ö47,Ö48 | 18     |
| There is a relationship.                                 | Ö3,Ö7, Ö28,Ö29,Ö30,Ö31,Ö34,Ö35,Ö43,Ö44,Ö45,                          | 11     |
| If both parents are civil servants, they are successful. | Ö1,Ö9,Ö13,Ö19,Ö20,Ö21,Ö22,Ö27  | 8      |
| If parents are educated, success is higher               | Ö12,Ö14,Ö15,Ö16,Ö17,Ö18,Ö23  | 7      |
| It has an indirect effect                                | Ö2,Ö5,   | 2      |
| Environmental stimuli affect intelligence development    | Ö10,Ö11,   | 2      |

According to Table 3; Teacher opinions on whether grade 1 students' success in Mathematics is related to their parents' professions (Civil Servant, Tradesman, Farmer) are as follows. 18 of the teachers stated that there is no

relationship, 11 stated that there is a relationship, 8 stated that if the mother and father are civil servants, they are successful, 7 stated that 'If the mother and father are educated, success is high', 2 stated that it has an indirect effect and 2 stated that it has an indirect effect. They stated that environmental stimuli affect intelligence development.

Considering these opinions, the dominant opinion is that primary school students have no relationship with their parents' professions. After this, the other majority opinion is that it is related. Following this, there are opinions that having parents who are civil servants and having educated parents, respectively, is effective in high success. In this section, the short answers given by the majority of teachers to the questions stand out. It has been observed that other opinions are directly proportional to each other.

#### Findings Regarding the Third Sub-Purpose

**TABLE 4. What do you think about whether the success of Grade 4 students in Mathematics is related to the educational status of their parents? Teacher opinions regarding the question**

| OPINIONS   | PARTICIPANT CODE  | NUMBER |
|--|---|--------|
| Successful if parents are educated                   | Ö1,Ö2,Ö6,Ö7,Ö8, Ö11,Ö13,Ö14,Ö15,Ö16,Ö17,Ö18,Ö19,Ö20,Ö21,Ö22,Ö23,Ö24,Ö25,Ö26,Ö27,Ö28,Ö29,Ö30,Ö31,Ö32,Ö35,Ö36,Ö37,Ö39,Ö41,Ö43,Ö44,Ö45,Ö46,Ö47 | 36     |
| Parents' education level is not effective            | Ö3,Ö4,Ö34,Ö48,  | 4      |
| The child whose parents are illiterate is successful | Ö40   | 1      |
| Children of conscious families are successful        | Ö9,   | 1      |
| It is indirectly or partially effective              | Ö5,Ö10,Ö12,Ö33Ö38,Ö42   | 6      |

According to Table 4; Teacher opinions regarding the question of whether grade students' success in Mathematics is related to their parents' educational status are as follows. 36 of the teachers said that success is achieved if the mother and father are educated, 4 said that the educational status of the mother and father is not effective, 1 said that a child whose mother and father are illiterate is successful, 1 said that children from conscious families are successful, 6 said indirectly. or they expressed their opinion that it was partially effective. When these views are examined, the dominant view is that success is achieved if the parents are educated. On the other hand, 4 teachers expressed the opinion that "Parents' education level is not effective." It has been observed that indirectly or partially effective teachers do not give short and explanatory answers. Other opinions are common and are directly proportional to each other.

#### Findings Regarding the Fourth Sub-Purpose

**TABLE 5. What do you think about whether the success of Grade 5 students in Mathematics is related to the monthly income of their families? Teacher opinions regarding the question**

| OPINIONS  | PARTICIPANT CODE  | NUMBER |
|---|---|--------|
| Successful if monthly income is high  | Ö1,Ö6,Ö7,Ö8,Ö13,Ö20,Ö24,Ö25,Ö26,Ö27,Ö28, Ö32,Ö33,Ö35,Ö48                | 15     |
| Monthly income is not effective in success  | Ö9, Ö10, Ö14, Ö17, Ö18, Ö19, Ö22,Ö31, Ö38, Ö41, Ö42, Ö44, Ö45, Ö46, Ö47 | 15     |
| Monthly income is effective in success in terms of sending to a private school or course. | Ö3,Ö4,Ö5,Ö12,Ö29,Ö36,Ö37  | 7      |
| Those with good nutrition patterns are more successful                                    | Ö2,Ö11,Ö15,Ö16,Ö30,Ö34, Ö39,Ö40,Ö43                                     | 9      |
| indirect effect   | Ö21, Ö23,   | 2      |

According to Table 5; Teachers' opinions on whether mathematics course success is related to their families' monthly income are as follows. 15 of the teachers said that success is achieved if the monthly income is high, 15 said that monthly income has no effect, 7 said that monthly income affects success in terms of sending them to a private school or course, 9 said that students with good nutritional habits are more successful, and lastly, 2 of them expressed their opinion in the form of a closed answer that monthly income has an indirect effect.

Considering these opinions, the majority of those who say monthly income is successful are those who say monthly income is not effective in success and those who say monthly income is not effective in success. These are followed by the opinion expressed as 'Monthly income is effective in success in terms of sending to a private

school or course'. Here, students' nutritional habits are also referred to and it is underlined that students whose nutrition is regular and good are more successful. Another view is that it is indirect. Therefore, it is seen that opinions are expressed in different but similar rates.

#### Findings Regarding the Fifth Sub-Purpose

**TABLE 6. What do you think about whether grade students' success in Mathematics is related to their success in other courses? Teacher opinions regarding the question**

| OPINIONS  | PARTICIPANT CODE   | NUMBER |
|---|--|--------|
| Other lessons are effective   | Ö1,Ö2,Ö3,Ö4,Ö5,Ö6,Ö8,Ö10,Ö11,Ö13,Ö16,Ö17,Ö19,Ö20,Ö22,Ö23,Ö24,Ö25,Ö26,Ö30,Ö31,Ö32,Ö33,Ö34,Ö35,Ö38,Ö39,Ö40,Ö41,Ö42,Ö43,Ö46,Ö47,Ö48 | 33     |
| Not effective   | Ö7,Ö10,Ö14,Ö15, Ö45,   | 5      |
| Science lesson is effective   | Ö9,Ö12, Ö21,   | 3      |
| Turkish lesson is effective   | Ö36,Ö37,   | 2      |
| Those with low literacy and comprehension skills have high math success | Ö27,Ö28,Ö29  | 3      |
| Varies depending on student and innate talent                           | Ö18,Ö44,   | 2      |

According to Table 6; Teacher opinions regarding the question of whether grade students' success in Mathematics is related to their success in other courses are as follows. 33 of the teachers said that the success in other subjects affects the success in the mathematics course, 6 said that the success in other subjects does not affect the success in mathematics course, 3 said that the success in science course is effective on the success in mathematics course, 3 said that success in mathematics course has an effect on the success of those with low literacy and comprehension skills. It is seen that it is high, 2 of them stated that Turkish course success is effective in mathematics course success, and lastly, 2 of them stated that mathematics success varies according to the student and innate ability.

Considering these opinions, the dominant opinion is that the success of other courses is effective in the success of mathematics course. It is possible to say that other opinions are proportionate. The expressions of 5 as 'not effective' are noteworthy in terms of understanding that success is independent of each other.

#### Findings Regarding the Sixth Sub-Purpose

**TABLE 7: What do you think about whether there is a relationship between the mathematics achievement of 7th-grade students and their place of residence? (City center, Town, Village) - Teachers' opinions.**

| OPINIONS  | PARTICIPANT CODE   | NUMBER |
|---|--|--------|
| No relation   | Ö24,Ö26,Ö30,Ö32,Ö33,Ö34,Ö35,Ö39,Ö40,Ö41,Ö42,Ö43,Ö44,Ö45,Ö46      | 15     |
| has a relationship  | Ö1,Ö13,Ö14,Ö3,Ö38  | 5      |
| Those who live in the center are more successful                  | Ö4,Ö5,Ö10,Ö17,Ö18,Ö19,Ö20,Ö21,Ö22,Ö23,Ö25,Ö27 ,Ö29,Ö31,Ö47, Ö48, | 16     |
| Environmentally effective   | Ö7,Ö15,Ö36,Ö37,  | 4      |
| Genetic factors are effective                                     | Ö16,Ö28,Ö37  | 3      |
| The success of students engaged in agriculture in villages is low | Ö9,Ö11,  | 2      |
| Related to equal opportunity                                      | Ö2,Ö6,   | 2      |
| The success of students living in villages is high                | Ö12,   | 1      |

According to Table 7; Teacher opinions on the question of whether grade students' success in Mathematics is related to their settlements (Center, Town, Village) are as follows. 15 of the teachers said that they did not have any relationship, 5 said that they did, 16 said that those residing in the center were more successful, 4 said that the environment was effective, 3 said that genetic factors had an effect, and 2 said that the success of students

engaged in agriculture in villages was low. , 2 of them stated that they were related in terms of equality of opportunity, and finally, 1 teacher stated that the success of students residing in villages was high. Considering these views, it is possible to say that there are independent, different and even contradictory views. The predominant opinion is that students living in the center are more successful. They stated that because there are more opportunities in the center and children have better access to resources, students residing in villages cannot spare time for agricultural activities. The teachers who stated that it is not related represent another majority. On the other hand, there are teachers who only give short answers such as 'it is effective'. Apart from this, equality of opportunity, environment, genetic factors and students' involvement in agriculture in villages were expressed as other views that affect success. A different answer here is that the success of students living in villages is high. He stated that the reason for this is that children deal with time and numbers in periodic tasks such as irrigation and animal care in villages, and that these and similar numerical activities play a role in the success of children growing up in villages.

## CONCLUSION - DISCUSSION AND RECOMMENDATIONS

### Results

In this research, we tried to get answers to the problem of our research by using an interview form with classroom teachers working in primary schools in the centre of Samsun, and in this context, the opinions of classroom teachers were consulted. The data obtained from the interviews with the classroom teachers were transcribed and made suitable for statistical analysis in the form of tables. Questions under 6 headings were asked to the classroom teachers who participated in the interview to examine the mathematics skills of primary school students according to various variables. Teachers' opinions were analysed and evaluated in the context of the six questions of our research. As a result of analysing the opinions of the teachers regarding the questions asked, the following results were obtained.

The first question of our research that we posed to the classroom teachers who participated in the interview is whether there is a relationship between the mathematics course success of primary school students and their gender. When the results of the research are examined; 22 of the teachers said that there was no relationship between mathematics course success and gender, 4 said that it was related, 14 said that boys were more successful, 2 said that girls were more successful, 2 said that both genders were successful, and 2 said that students gave their lessons well. and 2 of them stated that perception is effective and individual.

The second question asked to the teachers who participated in the research in the study was whether there was a relationship between the mathematics course success of the primary school students and the professions of their parents. In other words, teachers' opinions were consulted on whether success in the professions of Civil Servant, Tradesman, and Farmer was variable. When the results of the research are examined; 18 of the teachers said that there is no relationship between the success of mathematics lessons and the professions of their parents, 11 said that it is related, 8 said that if the mother and father are civil servants, they are successful, 7 said that the education of the mother and father increases the success, 2 said that it has an indirect effect. and 2 of them stated that environmental stimuli affect intelligence development.

The third question asked to the teachers participating in the study was whether there was a relationship between the mathematics course success of the first grade students and the educational status of their parents. When the results of the research are examined; 36 of the teachers said that success is achieved if the mother and father are educated, 6 said that it is indirectly or partially effective, 4 said that the education level of the mother and father is not effective, 1 said that the child whose mother and father are illiterate is successful, 1 said that it is consciously effective. They stated that the families' children were more successful. In the fourth question asked to the teachers participating in the research, what do you think about whether the success of the students in the Mathematics course is related to the monthly income of their families? is the question. When the answers are examined; 15 of the teachers said that success is achieved if the monthly income is high, 15 said that monthly income has no effect, 9 said that students with good nutrition patterns are more successful, 7 said that monthly income affects success in terms of sending them to a private school or course, and lastly 2 said that monthly income has no effect. They expressed the opinion that monthly income is indirectly effective.

In the fifth question asked to the teachers who participated in the interview in the research, what do you think about whether the mathematics success of the students in the first grade is related to their success in other subjects? is the question. When the results of the research are examined; 33 of the teachers said that success in other subjects affects success in mathematics, 6 said that success in other subjects does not affect success in mathematics, 3 said that success in science does affect success in mathematics, and 3 said that those with low literacy and meaning skills have high success in mathematics. 2 of them stated that Turkish course success is effective in mathematics course success, and finally 2 of them stated that mathematics success varies depending on the student and their innate ability.

The sixth question asked to the teachers participating in the research was whether there is a relationship between the mathematics course success of the primary school students and their settlement areas. In other words, it is about whether residing in the Center, Town or Village affects mathematics achievement. When the results of the

research are examined; 16 of the teachers said that those residing in the center are more successful, 15 of them said that they do not have any relationship, 5 of them said that they are related, 4 of them said that the environment is effective, 3 of them said that genetic factors have an effect, and 2 of them said that the success of students who are engaged in agriculture in the villages is low. 2 of them stated that they were related in terms of equality of opportunity and 1 teacher stated that the success of students residing in villages was high.

Considering these views, it is possible to say that there are independent, different and even contradictory views. The predominant opinion is that students living in the center are more successful. They stated that because there are more opportunities in the center and children have better access to resources, students residing in villages cannot spare time for agricultural activities. The teachers who stated that it is not related represent another majority. On the other hand, there are teachers who only give short answers such as 'it is effective'. Apart from this, equality of opportunity, environment, genetic factors and students' involvement in agriculture in villages were expressed as other views that affect success. A different answer here is that the success of students living in villages is high. He stated that the reason for this is that children deal with time and numbers in periodic tasks such as irrigation and animal care in villages, and that these and similar numerical activities play a role in the success of children growing up in villages. Considering all these interview data, we can say that the factors affecting the mathematics course success of primary school students are various. It can be said that material and spiritual reasons come first on the basis of these variables being independent and different from each other. Apart from these, we can say that students' own personality traits and the environment they live in are extremely effective in their success. However, when all these data are taken into consideration, it is not possible to say that these data are the only factors that affect students' mathematics success. Because the short and clear answers given to the questions and the scope of our research do not seem sufficient for this.

### **Argument**

The first question asked to the classroom teachers in the interview form of our research is about whether gender has an effect on mathematics achievement. 14 of the teachers said that boys are more successful than girls in mathematics. 22 of the teachers stated that gender has no relationship with success. Dede, Dursun (2004)'s study titled "Factors Affecting Students' Achievement in Mathematics: In Terms of Mathematics Teachers' Opinions" stated that the effect of gender on mathematics success varies according to age and education level. At primary and secondary school levels, male students are more successful than female students in terms of mathematics success. He stated that there was no significant difference between the studies showing that in this study, it was seen that similar studies were examined in the context of gender and a result directly proportional to our study was found. We can say that the prevailing opinion is that male students are more successful than female students. However, this does not mean that similar studies in the future will yield the same results. As a result of his study, Bozkurt (2012) found a significant difference between students' test anxiety, mathematics anxiety, general achievement and mathematics achievement and all variables. However, no significant difference was found between mathematics achievement and gender variable.

The second question asked to teachers is whether there is a relationship between the mathematics success of primary school students and their parents' professions (Civil Servant, Tradesman, Farmer). As a result of the research, 18 people stated that the profession of their parents has no effect on their success in mathematics lessons. While 11 people say they are related, the number of people who say 'it can be achieved if the parents are civil servants' is 8. 7 people stated that success is higher if their parents are educated. We see that there are different and similar views here. Savaş et al. (2010) conducted a study investigating how much students are affected by reasons such as study time, family income level, attitude towards mathematics, type of school and attending private teaching institutions, and concluded that students' success in mathematics courses is affected by various positive and negative aspects. Çavuşoğlu (2010) stated that there is a moderately significant relationship between reading comprehension success and problem solving success, and that there is a significant relationship between reading comprehension success and problem solving success in terms of the variables of preschool education level, socio-economic level, gender, and parents' education level. conclusion has been reached. There are significant differences between our research and other studies. In his study, Bayturan (2014) investigated the relationship between secondary school students' academic success in mathematics, their socio-demographic and psycho-social characteristics, and their attitudes towards mathematics. Considering the research findings, it can be seen that the socio-economic level of the family, family attitude, teacher behaviour, mathematics self-perception, aggressive behaviour and attitude towards mathematics have an effect on academic success in mathematics course, but gender, parents' education level, family type; It was determined that activity, sociality, school, and total competence had no effect.

In his study, Duman (2006) determined that the factors affecting the mathematics success of students studying in the 5th grade of primary school (attitude towards the course, learning-teaching methods, teacher, family and learning environments, gender) are the personal factors of students and teachers (gender, seniority, graduated school). investigated whether they differed according to their characteristics. As a result of the research, it was determined that there was no significant difference in terms of the gender variable, which is one of the factors

affecting students' academic success in mathematics, but a significant difference was found in terms of the variables "general success of the student, academic success in mathematics course, education level of the parents, monthly income of the family and gender of the teacher".

Dursun and Dede (2004) In this study, the factors affecting the mathematics achievement of primary school students were examined and listed in 10 items. These factors can be listed as gender, parents' education level, socioeconomic level, teacher qualifications, applied teaching strategies and techniques, physical facilities of the school, curriculum, multi-disciplinary study, listening well to the lesson, and mathematical intelligence. The study was created by examining the opinions of 38 teachers working in 8 primary schools in the province of Sivas in the 2001-2002 academic year. As a result, it was concluded that mathematics is a very feared subject among students and the necessity of making arrangements in this direction was emphasized. BOZ, (2018) In this article, it was examined how much the games played in the classroom affected the success of 4th grade primary school students in mathematics. Türkoğlu district of Kahramanmaraş

### **Suggestions**

Mathematics course is seen as a difficult course by the majority of students, and therefore success in mathematics course is lower than other courses. These and similar factors cause students to distance themselves from mathematics lessons and even become afraid of them. It would be an inadequate and incorrect statement to state that there is only one factor behind why mathematics is seen as a course that is feared by the majority of students compared to other courses. The reason is that there are many factors that affect the mathematics success of primary school students. The issue that needs to be examined here is to reveal these factors and offer solutions to them.

Addressing the sub-goals of our research is also important in terms of seeing what causes mathematics success or failure. In this context, paying careful attention to the success of families at lower economic levels or with low income in mathematics lessons and working on providing them with more opportunities to access resources may lead to an increase in the level of success. For these students, both digital and book etc. Necessary support should be provided to develop different methods by providing study opportunities.

Provincial and district directorates of national education organize courses, different in-school activities, educational games, etc. to increase success in mathematics lessons. studies can be done. Therefore, it would be extremely useful to obtain the opinions of mathematics teachers working throughout the province. It is extremely inevitable that the first thing to do is to reveal what these factors are by mathematics teachers and to inform students about the importance of mathematics success by classroom teachers. In addition, the opinions and recommendations of subject teachers should be taken into account regarding the effects of other course achievements, and students should be better guided to increase their mathematics achievements and success levels. Therefore, we can say that such a healthy study can affect mathematics success.

Another issue is that classroom teachers can raise students' awareness about the participation of students with low success in mathematics lessons and ensuring that the student receives more attention can be considered as a different option. In addition, activities to increase students' mathematics achievement can be organized at different times in schools. In other words, it may be possible to increase success by carrying out additional studies.

Families should be warned about prejudiced student behaviours such as difficulty and undesirability of mathematics lessons, and families should be made aware of increasing the success levels of the lessons. Parents should help and support students about the importance and necessity of mathematics. As a result, the awareness of families and students about success increases and a family profile that is more interested in the student may emerge.

As a result, it would be extremely useful for mathematics teachers to carry out a comprehensive study to increase the success of mathematics lessons and to determine whether success in other courses is related to mathematics lessons.

## ANALYSIS OF SECURE COMMUNICATION PROTOCOLS IN UAVS

**Ilaha Hasan GAHRAMANOVA**

Azerbaijan Technical University, Department of Cybersecurity  
Azerbaijan-Baku  
ilaha.qahramanova@aztu.edu.az

### ABSTRACT

Due to their open operational nature, UAVs are highly vulnerable to cyber attacks. Serious security breaches through cyber-attacks, interception of navigation and communication links, etc. Given its wide application, the demand for secure UAV communication has increased even more. Security failures are more critical as they can have harmful consequences. Although promising authentication mechanisms for UAVs have been proposed in the past few years, a comprehensive security analysis should be considered to measure the effectiveness of existing authentication schemes. Throughout this article, UAV identification strategies that require both security and performance are reviewed. Most of the problems and threats occur due to lack of security in communication protocols. Techniques for enhancing privacy and security in UAV-supported networks and solving various security problems are proposed in this paper. The core of the research work is the design and development of UAV security communication protocols.

**Keywords:** UAVs , cyber-attacks, authentication schemes, security in communication protocols

### INTRODUCTION

The widespread use of UAVs and security vulnerabilities have made them an attractive target for cybercriminals. Most of the problems and threats occur due to security breaches in communication protocols. This study addresses the issue of UAV security by developing a secure communication protocol for UAVs.

The UAV is controlled using a control system and a ground control station (GCS). The UAV is controlled in real time by transmitting controller signals. Both the controller and the UAV are connected through a communication module that communicates between them with the help of communication protocols. Typically, telemetry, Wi-Fi, ZigBee and many other network devices are used for communication. GCS-based control, on the other hand, uses a computer to interface software with the UAV, which then executes user-loaded mission commands. By collecting data from various sensors installed on the UAV, the GCS monitors the status of the UAV, such as current altitude, range, map location, and actual mission status. Unmanned aircraft systems include various parts, consisting of sensor payloads controlled by on-board or electronic equipment from the ground, one or more ground control stations. A UAV is a ground-controlled device that requires optimal wireless communication for this purpose. On the other hand, GCSs are required for large UAVs to overcome distance and communication obstacles and provide close control of them.

In many current and anticipated applications involving UAVs, safety is an important requirement. UAVs, like many computing devices, are vulnerable to malicious attacks such as impersonation, manipulation, and interception. Also, UAVs are vulnerable to physical interception, as they can navigate uncontrolled enemy territory with collected sensor data. It is critical to meet security requirements such as enabling communication between UAVs and other devices such as ground sensors (to be referred to as smart objects). An important security building block is represented by cryptography, which in turn requires an underlying control scheme. The implementation of a basic control scheme suitable for WSNs (Wireless sensor networks) involving smart objects and UAVs is quite difficult due to the limited resources of smart objects due to the mobility of drones and limited flight time.

### Requirements for Safe Unmanned Communications

1. Secure communication between drones and smart objects requires a better communication protocol that is generalized.
2. The mechanism of user authentication and validated key generation must be kept confidential as well as securely protected.
3. The communication protocol should ensure and verify the integrity of the transmitted data and support non-repudiation.
4. During the capture of the UAV, the information extracted from the captured UAV should be broken securely between the user and other smart objects and other drones.
5. Only authorized/authenticated UAS should be allowed various access rights to obtain internal information of smart objects.

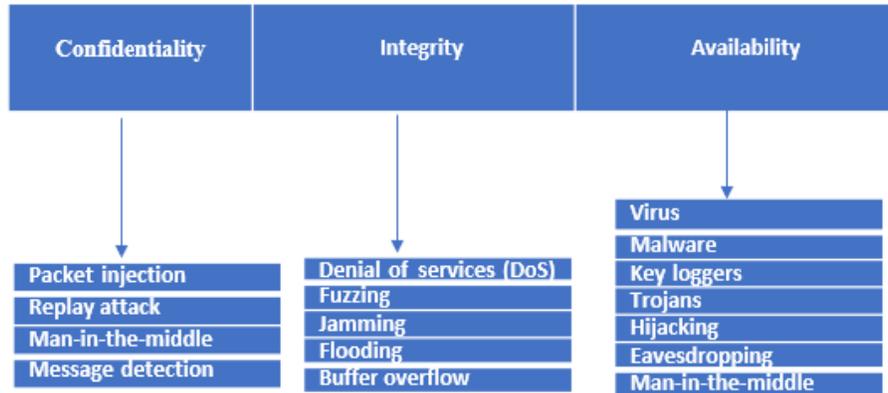

## Secure communication protocols

### Security Requirements

In general, much research has been done on the security of unmanned aerial systems, but security at the communication level, especially the Mavlink protocol, has been less studied. The medical term is most appropriate for safety requirements because "prevention is better than cure". To prevent security threats and attacks, it is very important to understand the security requirements and avoid these unwanted situations. The security requirements of Mavlink are summarized as confidentiality, integrity, availability, authentication, non-repudiation, authorization to ensure communication between PUA and GCS and avoid threats[4].

### Security threats

Communication between the UAV and GCS takes place through a wireless channel with the help of a communication protocol. For the Mavlink protocol, this connection is vulnerable because the Mavlink protocol does not have standard security procedures. The only security check is to determine if the packet is genuine and comes from an authentic source. The rest of the security requirements, such as privacy, are not locally available. Mavlink does not have a sophisticated security mechanism and does not encrypt messages. This means that the communication between the UAV and the Ground Control Station is not secure and can be compromised very easily. Any hacker or attacker with the appropriate transmission device can intercept the communication and communicate with the UAV. An attacker can use this vulnerability for their own purposes, for example, insert false commands into an existing mission or completely hijack the UAV (table 1).

**Table 1: Communication link attacks on UAVs**

### Mavlink protocol

Hackers and attackers find the opportunity to explore new loopholes and breach the security of these systems with various intentions. Before we can provide a solution to exploit the Mavlink protocol vulnerabilities, we need to understand the security issues. Mavlink protocol security issues can be divided into 1) Security Requirements, 2) Security Threats/Attacks.

Various communication protocols such as Mavlink, UAVCan, UranusLink are used to establish communication between UAV&GCS. Among these protocols, the Micro Aerial Vehicle Link (Mavlink) protocol is a widely used communication protocol supported by a large number of UAVs and Ground Control Stations.

Mavlink protocol is supported by several autopilot systems such as PUA, Ardupilot and PX4. The two open-source systems include drones, unmanned submarines, and more. are the leading autopilots that can control. Mavlink is an open source and cross-platform network protocol. Mavlink 1.0, Mavlink 2.0 and sMavlink prototype version are available. The Mavlink protocol can be transmitted over sub-GHz frequencies such as 433, 868 and 915 MHz using Wi-Fi, TCP/IP or low-band telemetry networks.

#### MAVLink 1.0 protocol

*There are two types of messages in MAVLink: (1) messages sent from the GCS to the UAV and (2) UAV messages sent to the GCS regarding the current vehicle status (such as location, altitude, heart rate and system status or other information ). Since the MAVLink protocol is used for real-time communication, it is intended to be a lightweight protocol[5].*

#### MAVLink 2.0 protocol

MAVLink 2.0 covers all the same areas as MAVLink 1.0, but also adds new areas and increases the size of some existing areas [5].

**UranusLink protocol**

UranusLink is designed to provide reliable services as a packet-oriented protocol. The protocol defines the packet structure and the presentation of the transmitted data[3]. The UranusLink protocol is specially designed for use in radio methods. In radio communication, data loss and incorrect data reception can usually occur.

**UAVCAN protocol**

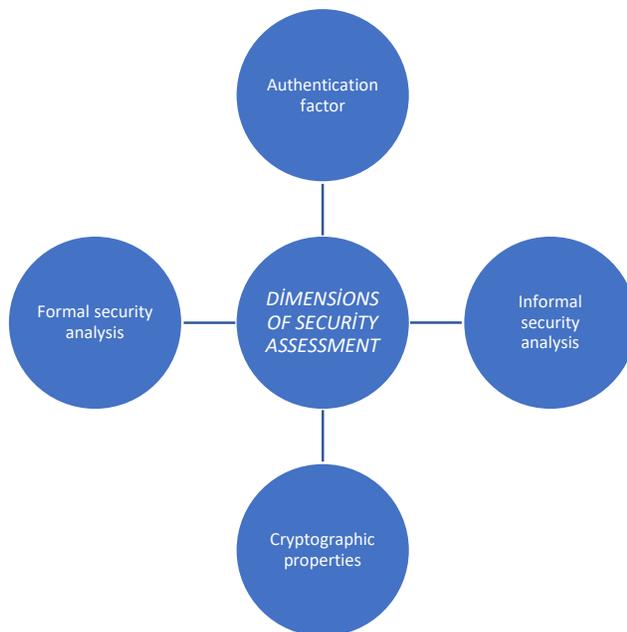

UAVCAN is an open source protocol designed to provide secure communication over robust vehicle networks such as CAN buses in aerospace and robotics applications. Nodes exchange long payloads corresponding to one CAN frame (eg GNSS solutions, 3D vectors, etc.). This protocol also supports multiple nodes and multiple interfaces; this feature is typically required in security-related applications. UAVCAN describes standard high-level services and communications, such as network discovery, node setup, firmware node upgrade, node status monitoring, network-wide time synchronization and adaptive node ID allocation (a.k.a. plug-and-play), etc. the protocol can be easily implemented and verified. The protocol is designed for resource-constrained and real-time systems suitable for UAVs. The MIT license ensures the implementation of high-quality open source references [4].

The UAVCAN protocol is based on the CAN bus (controller area network), which works as a standard design that allows communication between devices and microcontrollers without a host computer in other applications.

Any unit that can communicate via MAVLink or UAVCAN must use the same MAVLink Component ID (COMPID) number as well as the UAVCAN Node ID; otherwise serious inconsistencies may occur. Normally, if a single redundant autopilot is available, the UAVCAN Node ID and MAVLink component ID will be set to 1 (one). Each outgoing/incoming MAVLink message/command about a UAVCAN node will be set to the same value as its COMPID field [5].

**Authentication methods of UAVs**

It is essential that UAVs are authenticated before communicating with the ground control station (GCS) and that only authenticated UAVs are allowed to exchange control and telemetry data with the GCS. UAVs are prone to cyber attacks at different levels: sensor level, hardware level, software level and communication level. In this context, authentication provides a means to secure communications and prevent adversary cyberattacks. Although critical, authentication of each UAV during a flight mission is important due to the diversity in terms of communication protocols and application scenarios, as well as on-board security for UAVs. providing solutions is difficult due to their limited resources in terms of CPU, memory and battery.

**Certificate-based authentication:** Consists of using a digital certificate to authenticate PUAs over public communication channels. It is based on an authorized center that provides valid digital certificates for legitimate UAVs participating in a flight mission. Applicable environments include the Internet of Drones environment and UAV-enabled Intelligent Vehicle Systems environments. Certificate-based authentication models use elliptic curve cryptography, Diffie-Hellman key exchange, signature mechanisms, and hash functions to provide assurance. Also, an example of a certificate-based authentication method considers the use of hyperelliptic curve cryptography techniques, digital signature, and hash function to provide a privacy-preserving authentication scheme. In this case, session keys and pseudonym authentication are used to ensure identity anonymity and privacy.

**Request-response authentication:** In this type of authentication, the PUA must provide a valid response to the request by the GCS. Recent work has considered the use of physical non-cloneable functions (PUF) to authenticate PUAs using a request-response authentication mechanism.

**User authentication:** This method involves authenticating users to PUAs to benefit from real-time services (eg, environmental information, traffic status). PUAs use one-way cryptographic hash functions and bitwise XOR operations to achieve a lightweight user authentication pattern with a key agreement scheme.

**Signature-based authentication:** An authentication mechanism primarily used with digital certificates. The UAV verifies the digital signature of the GCS before establishing secure communication. This type of authentication uses modular exponentiation and discrete logarithm during the authentication process.

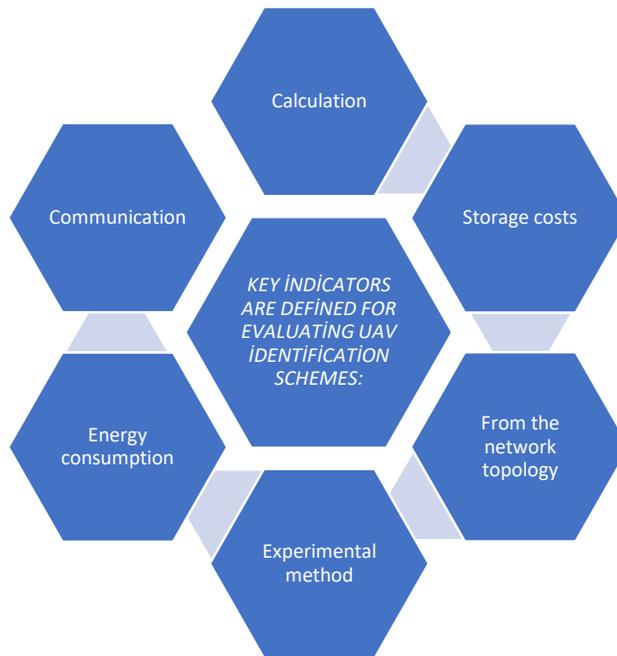

**Identity-based authentication:** consists of verifying the legitimate identity of the UAV participating in the flight mission and preventing impersonation and impersonation attacks.

**Anonymous authentication:** This authentication method provides anonymity feature for PUAs. Legitimate PUAs consist of anonymous authentication.

**Credential-based authentication:** Requires PUAs to provide credentials, defined as information associated with the PUA, for authentication. In general, credential-based authentication involves a trusted third party during the authentication process.

**Hash-based authentication:** Consists of authenticating PUAs by involving the use of cryptographic hash functions. In addition, hash-based authentication provides integrity and authentication simultaneously.

**Asymmetric cryptosystem authentication:** Other authentication schemes based only on cryptographic primitives. (authentication frameworks implementing various elliptic curve mechanisms, the Diffie-Hellman key exchange protocol, and hash functions) fit into this category.

### Related work

The proposed protocol is formally and thoroughly verified by using the BAN-logic (Burrow-Abadi-Needham logic) and Scyther tool, followed by performance evaluation and implementation of the protocol on a real UAV. From the security and performance evaluation, it is indicated that the proposed protocol is superior compared to other related protocols while meeting confidentiality, integrity, mutual authentication, non-repudiation, perfect forward secrecy, perfect backward secrecy, response to DoS (Denial of Service) attacks, man-in-the-middle protection, and D2D (Drone-to-Drone) security [1].

This article classifies UAVs in terms of various parameters, some of which can impact UAVs' communication performance. It then provides an overview of aerial networking and investigates UAVs routing protocols specifically, which are considered as one of the challenges in UAV communication. This article later investigates the use of UAV networks in a variety of civil applications and considers many challenges and communication demands of these applications. Subsequently, different types of simulation platforms are investigated from a communication and networking viewpoint [2].

This paper describes protocol designed for communication between UAV and base station. It is intended to send control commands towards to the drone and telemetry data towards to the base station. The requirements were usability in radio link with low data throughput, ability to detect and overcome data loss and providing low latency. Regarding to the safety aspect also secure variant of the protocol was designed [3].

The security attacks are normally carried out against communication protocols. In this chapter, we presented different communication protocols which are intended specifically for this environment. Their structure, working mechanism, and their critical analysis has been discussed. It is identified that MAVLink is the most widely used protocols for UAVs communication. However, MAVLink, though providing better communication, lacks security mechanism to encrypt messages and can result in serious consequences [4].

In this research, a solution of hijacking network channel or physical hardware by anonymous attackers on commercial UAVs. This paper proposed maintaining control of UAV in hijacking problem with an additional encrypted communication channel, authentication algorithm and DoS attack through Raspberry Pi and shown high applicability on the commercial UAVs [5].

A light-weight hardware solution is proposed to assure the confidentiality and integrity of both command data sent by the ground station and payload data transmitted by the drone. Using the developed prototype, finally, we investigate the impact of hardware accelerators on the power consumption of these power-constrained devices. It was shown that the advantage of hardware as a power-efficient computation platform is not necessarily valid for drones due to the extra hardware weight [6].

### Mobile data collectors in WSN

Most of the proposed encryption key management schemes for WSNs adopt a symmetric key-based approach instead of an asymmetric key-based approach to address the limited energy and processing capabilities of sensors. However, the symmetric key-based approach suffers from high communication overhead and requires a lot of memory space to store shared key pairs. Also, such an approach is not scalable, compromise-resistant, and cannot support adequate node mobility. Public key cryptography (PKC) is relatively more expensive than symmetric key encryption in terms of computational cost, but recent improvements in the implementation of elliptic curve cryptography (ECC) have demonstrated the practical application of PKC to WSNs. However, when ECC-based schemes with certificates and ID-PKC schemes based on pairing operation are applied directly to WSNs, they suffer from certificate management and additional computational overhead related to pairing operations, respectively. Moreover, since drones can record a wide range of data unlike sensors, they can become a target for physical interception. Thus, an approach is needed to minimize data leakage if a drone is intercepted by attackers.

To address the security and efficiency requirements for communication between UAVs and smart objects, we present an efficient Certificateless Labeling Label Key Encapsulation Mechanism (eCLSC-TKEM) that supports authenticated key agreement and non-repudiation. The main feature of eCLSC-TKEM is to combine one-way key agreement and digital signatures into one efficient algorithm. Since eCLSC-TKEM is based on certificate-less PKC (CL-PKC), it retains the advantage of CL-PKC in eliminating the overhead caused by certificate management. New private keys are generated after expiration during flight. Therefore, if a UAV is intercepted, data leakage is limited to the time the private keys are valid. To increase efficiency, eCLSC-TKEM minimizes the computational cost in the smart object. The efficiency of the whole system depends very much on the computing time required by the smart object, not the drone, because the smart object is equipped with a low-speed processor, while the UAV has a PC-like processor. The protocol solves the scaling problem by using an asymmetric key approach while minimizing the computational load on the sensors.

### CLSC-TKEM and CL-AKA

The authenticated key agreement (AKA) scheme is one of the most fundamental cryptographic mechanisms. It supports user authentication and generates private keys that are shared between two parties over an untrusted network. Traditional PKC-based AKA has overhead associated with certificate management, while ID-PKC-based AKA has a key deposit issue. To solve these problems, certificateless public key cryptography (CL-PKC) is used.

The certificateless signature encryption label KEM (CLSC-TKEM) protocol supports not only a practical authenticated key agreement but also an assigned verifier signature. Since the CLSC-TKEM protocol is based on binary pairing operations, they are not suitable for resource-constrained devices. However, none of the existing CL-AKA and CLSC-TKEM protocols are addressable. User override means that if UAVs are intercepted, an attacker will have full access not only to the data collected and recorded on the UAV, but also to future data collected by the drone.

The eCLSC-TKEM cancellation technique is used to minimize information leakage in case of physical interception of drones. The key generation center (KGC) in eCLSC-TKEM adds a time limit to its partial private keys. In other words, the partial secret keys provided in eCLSC-TKEM are only valid for specified periods of time. After the period expires, new private keys will be generated. By adding this time limit, we prevent data leakage. KGC stops issuing partial private/public keys and time component to PUA. Our approach prevents unauthorized users from generating complete private/public keys for future cycles. Although eCLSC-TKEM does not completely eliminate the risk of data leakage in the event of a physical capture, it limits the amount of compromised data to that obtained during the last period immediately before the takedown.

### eCLSC-TKEM protocol

Unlike existing protocols, eCLSC-TKEM meets all security requirements, such as authenticated key agreement, non-repudiation, and user revocation, with minimal computational burden on smart objects (table 1). Note that CL-AKA protocols satisfy only the first requirement. CL-AKA protocols should be extended with a signature scheme to support non-repudiation. Although CLSC-TKEM meets the first and second requirements, it does not support user cancellation or multiple access rights. eCLSC-TKEM consists of 8 sets: (SetUp, SetSecretValue, PartialPrivateKeyExtract, SetPrivateKey, SetPublicKey, SymmetricKeyGen, Encapsulation Decapsulation).

### CONCLUSION

Developing secure and robust authentication schemes with the integration of UAV-oriented applications into smart cities remains an ongoing research challenge. Although promising authentication mechanisms for UAVs have been proposed in the past few years, a comprehensive security analysis should be considered to measure the effectiveness

of existing authentication schemes. Throughout this article, UAV identification strategies that require both security and performance have been reviewed. Research shows that most UAV identification schemes are quite light in terms of communication overhead. UAVs operate from a remote controller or GCS with the help of various communication protocols such as MAVLink, UranusLink, UAVCan. Among these protocols, MAVLink is a lightweight protocol used for communication between GCS and UAVs. The messages contain important information about the state of the PUA and certain control commands sent from the GCS to the PUA. To address security and efficiency requirements for communication between UAVs and smart objects, we present an efficient Certificateless Labeling Label Key Encapsulation Mechanism (eCLSC-TKEM) that supports authenticated key agreement and non-repudiation. The main feature of eCLSC-TKEM is to combine one-way key agreement and digital signatures into one efficient algorithm. CL-AKA protocols should be extended with a signature scheme to support non-repudiation. Although CLSC-TKEM meets the first and second requirements, it does not support user cancellation or multiple access rights.

# BEDEN EĞİTİMİ İÇİN BAŞARI DUYGULARI ANKETİNİN TÜRKÇEYE UYARLANMASI: LİSE ÖĞRENCİLERİ İÇİN PSİKOMETRİK ÖZELLİKLERİ

Mustafa Enes İŞIKGÖZ

Sakarya Üniversitesi Rektörlük Birimi, Sakarya, Türkiye  
mustafaenesisikgoz@sakarya.edu.tr

## ÖZET

Bu çalışmanın amacı, altı faktör altında toplam 24 madde olarak İngilizce geliştirilen "Beden Eğitimi için Başarı Duyguları Anketi" nin Türk lise öğrencileri örnekleminde geçerlik ve güvenilirlik analizlerini yaparak Türkçe versiyonunu elde etmektir. İlk aşamada gelişmiş ters çeviri teknikleri kullanılarak anket Türkçeye çevrilmiş ve dilsel eşdeğerliği korelasyon analizi ile sağlanmıştır. Araştırmanın verileri farklı lise türlerinde öğrenim gören 739 öğrenciden toplanmıştır. Verilerin analizi SPSS (versiyon 27) ve Jamovi (Versiyon 2.5.6) programları ile gerçekleştirilmiştir. Anketin yapı geçerliği doğrulayıcı faktör analizi, güvenilirlik analizleri ise Cronbach alfa ve McDonald omega katsayıları ile incelenmiştir. Doğrulayıcı faktör analizi bulgularına göre ankette yer alan maddelerin standardize edilmiş faktör yük değerlerinin .52 ile .94 aralığında değiştiği, maddeler ile örtük değişkenler arasındaki korelasyonların anlamlı olduğu ( $t > 1.96$ ) tespit edilmiştir. Doğrulayıcı faktör analizi ile elde edilen ölçüm modelinin ise iyi ve kabul edilebilir uyum indeks değerleri ( $\chi^2/df = 3.81$   $p < .001$ , RMSEA= 0.069, SRMR= 0.037, GFI=0.90, AGFI= 0.87, CFI= 0.97, NNFI= 0.97, IFI= 0.97) göstermiştir. Anketin her bir faktörü ve geneli için hesaplanan Cronbach alfa iç tutarlık katsayıları .85'in McDonald Omega iç tutarlık katsayıları .86'nın üzerinde bulunmuştur. Sonuç olarak, altı faktörlü ve 24 maddelik "Beden Eğitimi İçin Başarı Duyguları Anketi" nin Türkçe versiyonu, lise öğrencilerinin beden eğitimi dersindeki başarı duygularını ölçmede geçerlik ve güvenilirlik koşullarını sağlamıştır.

**Anahtar Kelimeler:** Beden eğitimi, başarı duyguları, lise öğrencileri, psikometrik özellikler

## TURKISH ADAPTATION OF ACHIEVEMENT EMOTIONS QUESTIONNAIRE FOR PHYSICAL EDUCATION: PSYCHOMETRIC PROPERTIES FOR HIGH SCHOOL STUDENTS

### ABSTRACT

The objective of this study was to translate the "Achievement Emotions Questionnaire for Physical Education" (AEQ-PE) into Turkish. The original version, which was developed in English as a 24-item instrument comprising six factors, was analyzed for content validity and reliability using a sample of Turkish high school students. In the initial phase, the questionnaire was translated into Turkish using specialized reverse translation techniques, and linguistic equivalence was confirmed through correlation analysis. The data were collected from a total of 739 students, representing a diverse range of high school types. The data were analyzed using the SPSS (version 27) and Jamovi (version 2.5.6) software programs. The construct validity of the questionnaire was analyzed using confirmatory factor analysis, and the reliability was analyzed using Cronbach's alpha and McDonald's omega coefficients. The results of the confirmatory factor analysis indicated that the standardized factor loadings of the items in the questionnaire ranged between 0.52 and 0.94, and that the correlations between the items and latent variables were significant ( $t > 1.96$ ). The measurement model obtained by confirmatory factor analysis demonstrated satisfactory fit index values ( $\chi^2/df = 3.81$ ,  $p < .001$ , RMSEA= 0.069, SRMR= 0.037, GFI=0.90, AGFI= 0.87, CFI= 0.97, NNFI= 0.97, IFI= 0.97). Cronbach's alpha internal consistency coefficients were calculated for each factor and the overall questionnaire, yielding values above .85, while McDonald Omega internal consistency coefficients were above .86. These findings indicate that the Turkish version of the six-factor and 24-item "Achievement Emotions for Physical Education Questionnaire" meets the requisite validity and reliability standards for measuring high school students' feelings of achievement in physical education classes.

**Keywords:** Physical education, achievement emotions, high school students, psychometric properties

### GİRİŞ

Günümüzde psikolojik ölçme araçlarının farklı kültürlerde kullanılabilirliği giderek daha fazla önem kazanmaktadır. Kültürlerarası araştırmalar, farklı toplumların psikolojik yapılarını anlamada ve karşılaştırmalı çalışmalar yapmada kritik bir rol oynamaktadır. Ancak, bir kültürde geliştirilen ölçme araçlarının diğer kültürlerde doğrudan kullanılması, kültürel farklılıklar nedeniyle yanıltıcı sonuçlar doğurabilmektedir (Hambleton & Patsula, 1998). Bu nedenle, ölçeklerin kültürlerarası uyarlanması, psikometrik özelliklerin yeniden değerlendirilmesi ve hedef kültüre uygunluğunun sağlanması büyük önem taşımaktadır. Kültürlerarası ölçek uyarlama çalışmaları, sadece dilsel bir çeviri işlemi değil, aynı zamanda kavramsal, işlevsel ve metrik eşdeğerliğin sağlanması gereken kapsamlı bir süreçtir. Bu süreç, orijinal ölçeğin psikometrik özelliklerinin korunmasını ve hedef kültürde de aynı yapıyı ölçebilmesini amaçlamaktadır. Ölçek uyarlama çalışmalarında, dilsel eşdeğerlik, kültürel uygunluk, yapı geçerliği ve güvenilirlik gibi temel psikometrik özelliklerin titizlikle incelenmesi gerekmektedir (Van de Vijver &

Tanzer, 2004). Bu çalışmada da öğrencilerin beden eğitimi dersinde hissettikleri başarı duygularını ölçmek için güncel popülerliği nedeniyle Fierro-Suero vd. (2020) tarafından İngilizce olarak geliştirilen “Beden Eğitimi için Başarı Duyguları Anketinin [Achievement Emotions Questionnaire for Physical Education (AEQ-PE)] Türkçe formunun lise öğrencileri örnekleminde psikometrik özellikleri incelenerek Türk kültürüne uyarlaması gerçekleştirilmiştir. Orijinal ölçek, uluslararası literatürde yaygın olarak kullanılmakta ve farklı bağlamlarda nasıl kullanıldığını ve geçerliliğini inceleyen önemli veriler sağlamaktadır (Fierro-Suero vd., 2023; Fierro-Suero vd., 2022; Ibrahim vd., 2021; Macías León vd., 2022; Tian vd., 2023).

Literatür incelendiğinde, Türkiye’de ortaöğretim öğrencilerinin genel olarak başarı duygularını ölçmek için Can vd. (2020)’lerinin, Pekrun vd. (2002)’den uyarladıkları “Başarı Duyguları Anketi (BDA)”, Can ve Güven (2024)’inin Bieleke vd. (2021)’lerinden uyarladıkları “Başarı Duyguları Ölçeği-Kısa Formu (BDÖ-K)” gibi güncel Türkçe ölçekler olmakla birlikte, spesifik olarak beden eğitimi için öğrencilerin başarı duygularını ölçmeye yönelik Türkçe ölçme araçlarının sınırlı olduğu görülmektedir. Literatürde sadece Ceylan ve Karlı (2024) tarafından Fierro-Suero vd. (2020)’lerinden uyarladıkları “Beden Eğitimi için Başarı Duyguları Ölçeği (BE-BDÖ)” ne rastlanılmıştır. Ancak bu ölçek de ortaokul öğrencileri örnekleminde psikometrik özellikler sunmaktadır. Bu sınırlılıklar göz önüne alındığında, Türkiye’de ortaöğretim düzeyinde (lise) öğrencilerinin beden eğitimindeki başarı duygularını ölçmede geçerli ve güvenilir bir ölçme aracına ihtiyaç duyulacağı düşünülmektedir. Bu ihtiyaçtan hareketle bu çalışmanın, alandaki önemli bir boşluğu doldurması ve araştırmacılara güvenilir bir ölçme aracı sunması bakımından önemli görülmektedir. Bu çalışmanın amacı, Fierro-Suero vd. (2020) tarafından İngilizce olarak geliştirilen “Beden Eğitimi için Başarı Duyguları Anketinin (AEQ-PE)” lise öğrencileri örnekleminde Türkçe formunun psikometrik özelliklerini incelemek ve Türk kültürüne uyarlamasını gerçekleştirmektir. Uyarlanan anketin, Türkiye’de lise öğrencileri örnekleminde beden eğitimi için başarı duyguları alanında yapılacak araştırmalara katkı sağlaması, kültürlerarası karşılaştırmalı çalışmalara olanak tanınması ve bu alanda yapılacak müdahale çalışmalarının planlanmasına ışık tutması beklenmektedir. Çalışmada önce, konuyla ilgili kavramsal çerçeve ve teorik arka plana değinilmiştir. Bu bağlamda, araştırmanın temel kavramları tanımlanmış ve literatürdeki yeri açıklanmıştır. Ardından, uygulanan yöntemler ve uyarlama sürecinin detayları açıklanmaktadır.

### **Kavramsal çerçeve**

Akademik ortamlar çok çeşitli farklı duyguları tetikler; öğrenciler yeni bir şeyler öğrenmekten hoşlanır, sınav sonuçlarıyla gurur duyar, ödevlerinin miktarından rahatsız olur veya sıkıcı bir derste sıkılır (Bieleke vd., 2021). Duygular organizmanın psikofizik sisteminde organizma için önemli olan olaylara veya durumlara duygusal, bilişsel, fizyolojik, motivasyonel ve davranışsal yanıt olarak oluşan çok bileşenli değişiklikler olarak tanımlanmaktadır (Scherer & Moors, 2019). Başarı duyguları ise akademik, iş veya spor başarısı aktiviteleri ve bunların başarı ve başarısızlık sonuçlarıyla bağlantılı duygular olup, eğitimde bu duygular öğrenciler tarafından; ders çalışma, derslere katılma, ödevleri tamamlama veya sınavlara girme gibi farklı başarı durumlarında deneyimlenir (Pekrun, 2006, 2014). Başarı duyguları yalnızca başarı etkinliklerinin ve çıktılarının sonucu olmakla kalmayıp, bir etkinliğin performansında ve sonraki öğrenmede de önemli bir rol oynar (Pekrun vd., 2017; Pan vd., 2022). Öğrenciler duygusal bir ortam olarak sınıfta; kaygı, öfke, utanç veya can sıkıntısı gibi duyguları deneyimledikleri gibi keyif, umut, gurur ve memnuniyet gibi olumlu duyguları da deneyimlerler (Pekrun, 2024). Başarı duyguları, bilişsel, psikolojik ve motivasyonel bileşenlerden oluşan çok yönlü süreçlerdir (Fraschini & Tao, 2021). Örneğin, bir sınavdan önceki kaygı genellikle sinirsel, huzursuz hisler (duygusal), olası başarısızlık endişeleri (bilişsel), fizyolojik uyarılma (fizyolojik), sınavdan kaçınma dürtüleri (motivasyon) ve endişeli yüz ifadelerini (ifade edici davranış) içerir (Pekrun vd., 2023).

Sosyal-bilişsel bir çerçevede başarı duygularını anlamak için Pekrun (2006) tarafından kapsamlı ve bütünleştirici bir yaklaşım olan Kontrol-Değer Teorisi (KDT) geliştirilmiştir. Duyguların beklenti değer teorisi, işlemsel yaklaşımlar, atıf teorileri ve duyguların etkilerine dair modeller dahil olmak üzere çeşitli teorilerin varsayımlarını bütünleştiren KDT; öğrencilerin bir başarı sonucu veya etkinliğine ilişkin bilişsel değerlendirmelerinin, başarıyla ilgili durumlarda deneyimlenen duyguların yakın öncülleri olduğunu öne sürmektedir. Teoride başarı duyguları: (i) değerlik (pozitif veya negatif), (ii) fizyolojik uyarılma (yüksek veya düşük) ve (iii) nesne odaklılık (aktiviteyle veya sonuçla ilgili) olmak üzere üç boyutta sınıflandırılmaktadır. Bu sınıflandırma, örneğin, keyif gibi pozitif yüksek uyarılma aktivite duyguları ile umutsuzluk gibi negatif düşük uyarılma sonuç duyguları arasında ayırım yapılmasına olanak tanır. Son olarak, sonuçla ilgili duygular, zaman dilimlerine bağlı olarak geriye dönük veya ileriye dönük duygular olarak daha fazla gruplandırılabilir (örn. bir sınavda başarısız bir sonuçtan sonra geriye dönük utanç). Öğrenciler, görev zorluğuna ilişkin değerlendirmelerine ve kontrol derecesine bağlı olarak, başarı etkinliklerini tamamladıktan sonra olumlu ve olumsuz duygular yaşayabilirler. Olumlu duygular harekete geçiricidir ve yaratıcı düşünme ve yansıtmayı sağlayabilirken, olumsuz duygular etkisizleştiricidir ve genellikle öğrencilerin akademik performansını düşürür (Pekrun, 2002, 2006, 2011, 2017). KDT’ ne dayalı olarak farklı ortamlarda çeşitli başarı duygularının değerlendirilmesine olanak tanıyan Başarı Duyguları Anketi’nin (AEQ)

geliştirilmesiyle (Pekrun vd., 2011, Pekrun vd., 2002), başarı duygularının öğrencilerin öğrenmeleri üzerindeki etkileri, literatürde oldukça ilgi çekmiş ve bu yönde araştırmalar halen devam etmektedir (Camacho-Morles vd., 2021; Loderer vd., 2020). Araştırmalarda başarı duygularının, öğrencilerin iletişim, iş birliği, eleştirel düşünme ve yaratıcılık gibi 21. yüzyıl becerilerindeki yeterlilikleri (Camacho-Morles vd., 2019); problem çözme yetenekleri (Lee & Chei, 2020); akademik başarıları (Putwain vd., 2022); motivasyonları (Feraco vd., 2023); derslere katılım ve öğrenme devamlılıkları (Luo & Luo, 2022; Tang vd., 2021) ve memnuniyetleri (Wu vd., 2021) ile ilişkili kritik faktörler olduğu bulunmuştur.

Beden Eğitimi, öğrencilerin başarılarının gelecekteki sağlıklarıyla da ilgili olduğundan benzersiz bir akademik ders olup, aktif ve sağlıklı bir yaşam tarzına yol açan becerileri ve olumlu deneyimleri teşvik etmek için kritik öneme sahiptir. Bu noktada kaliteli bir beden eğitiminden istenen öğrenci sonuçlarından biri, öğrencilerin okul içinde ve dışında fiziksel aktivitelere düzenli katılmalarıdır (Society of Health and Physical Educators [SHAPE], 2018; Simonton, 2019). Beden eğitimi notları genellikle öğrenme dışı bileşenlerden oluştuğu için, öğrencilerin başarıları veya gelecekteki sağlık davranışları hakkında da asgari düzeyde bilgi sağlar. Öğrencilerin beden eğitimine katılımları sırasında hissettikleri başarı duyguları olumlu veya olumsuz olabilmekte, bu duygular; motivasyonlarını, derse katılımlarını ve genel akademik başarılarını etkileyerek fiziksel aktivitelere karşı tutumlarını, öz yeterliliklerini ve gelecekteki fiziksel aktivite katılımlarını şekillendirebilmektedir (Simonton & Garn, 2018; Simonton vd., 2017). Bu nedenle beden eğitimi sırasında öğrenmeyi, başarıyı ve davranışı artırma potansiyeline olumlu duyguların artırılması ve olumsuz duyguların sınırlandırılması gerekir (Yli-Piipari vd., 2013). Araştırmalar başarı duygularının, öğrencilerin motivasyon düzeylerini etkileyerek, derslere olan katılımlarını artırdığını göstermektedir. Örneğin, olumlu başarı duyguları (zevk, gurur) öğrencilerin derslere daha fazla katılmalarını sağlarken, olumsuz duygular (hayal kırıklığı, kaygı) katılımı azaltmaktadır (Fierro-Suero vd., 2023; Pekrun, 2006; Simonton & Garn, 2020). Beden eğitimi derslerinde başarı duyguları, aynı zamanda öğrencilerin sosyal ilişkilerini ve duygusal gelişimlerini etkileyerek sosyal becerilerini geliştirmelerine yardımcı olduğu görülmüştür (Leisterer & Jekauc, 2019). Bu bağlamda, beden eğitimi derslerinde başarı duygularının önemi, öğrencilerin fiziksel aktivitelere olan tutumlarını, motivasyonlarını ve genel akademik başarılarını doğrudan etkileyen kritik bir unsur olarak öne çıkmaktadır. Bu nedenle, başarı duygularını ölçmek ve değerlendirmek amacıyla uyarlanacak bir anketin geliştirilmesi, bu duyguların daha iyi anlaşılmasına ve beden eğitimi programlarının etkinliğinin artırılmasına katkı sağlayacaktır.

## YÖNTEM

Bu çalışmada, "Beden Eğitimi için Başarı Duyguları Anketi" (Achievement Emotions Questionnaire for Physical Education-AEQ-PE) ölçeğinin Türkçeye uyarlanması ve geçerlik-güvenirlilik analizlerinin yapılması amaçlanmıştır. Uyarlama süreci, uluslararası geçerliliği olan ölçek uyarlama yöntemleri izlenerek gerçekleştirilmiştir (Beaton vd., 2000; Hambleton & Patsula, 1999; Uluslararası Test Komisyonu (ITC, 2017). Öncelikle, AEQ-PE ölçeğinin orijinal formu ve bu ölçeğin farklı kültürlerdeki uygulamaları üzerine kapsamlı bir literatür taraması yapılmıştır. Bu tarama, ölçeğin teorik temelleri ve uygulama alanları hakkında derinlemesine bilgi sağlamıştır (Pekrun vd., 2011).

## Çalışma grubu

Bu çalışmaya; 2023-2024 eğitim öğretim yılı güz döneminde Türkiye'nin bir ilinde liselerde öğrenim gören toplam 739 öğrenci katılmıştır. Yaşları 14-18 arasında (M=16.38 SD=1.05) değişen öğrencilerin 283'ü (%38.3) kız, 456'sı (%61.7) erkektir. Ölçek uyarlama çalışmalarında örneklem yeterliliği, elde edilen verilerin güvenilirliği ve geçerliliği açısından kritik bir öneme sahiptir. Örneklem yeterliliği, araştırmanın hedef kitlesini temsil eden yeterli büyüklükte ve çeşitlilikte bir katılımcı grubunun seçilmesi ile sağlanır. Bu durum, ölçeğin farklı demografik özelliklere sahip bireyler arasında geçerliliğini test etmek için gereklidir. Örneğin Tabachnick ve Fidell (2013), faktör analizi için önerilen minimum örneklem büyüklüğünün her bir değişken için en az 5-10 katılımcı, P. Kline (2013) ölçekte yer alan maddelerin 20 katı kadar olması gerektiğini belirtmektedirler. ITC (2017)' göre ise bir testin faktör yapısını ortaya çıkarmak için ideal olarak 500'ün üzerinde örnek alınması gerekmektedir. Bu çalışmada kullanılan ölçeğin 24 madde ile sınırlı olduğu göz önünde bulundurulduğunda, örneklem büyüklüğünün 480 ve üzerinde olması yeterli görülmektedir.

## Ölçümler

### *Beden Eğitimi için Başarı Duyguları Anketi (AEQ-PE)*

Ortaöğretim öğrencilerinin beden eğitimi dersinde hissettikleri başarı duygularını ölçmek için keşfedici ve doğrulayıcı faktör analizi, zamansal istikrar, içsel kararlılık, tutarlılık ve regresyon analizi sonucunda, Fierro-Suero vd. (2020) tarafından geliştirilen anketin katılımcı örneklemine, İspanya'daki çeşitli ortaöğretim okullarının 1 ile 4. sınıf arasında öğrenim gören ve yaşları 11 ile 17 arasında değişen 902 öğrenci oluşmaktadır. Araştırmacılar açılımlayıcı faktör analizinde (AFA) örneklem grubundan topladıkları verilerin analize uygun olduğunu, [Kaiser-Meyer-Olkin testi (KMO)= (0.93); Bartlett test ( $\chi^2(276)= 4987, p < 0.001$ ) belirlendikten sonra Promax rotasyonu

ile birlikte kullandıkları Sağlam Ağırlıksız En Küçük Kareler [Robust Unweighted Least Squares (RULS)] tahmin metodu ile her bir boyutu dört madde olmak üzere altı boyut (gurur duyma, keyif alma, öfke, kaygı, umutsuzluk ve sıkılma) ve toplam 24 maddeden oluşan bir anket yapısı elde etmişlerdir. Ardından doğrulayıcı faktör analizi (DFA) ile anketin altı faktörlü yapısını maksimum olabirlik tahmin yöntemi ile incelemişlerdir. Analiz sonucunda anketin altı faktörlü yapısına ilişkin modelden elde edilen uyum indeksleri ( $\chi^2/df= 2.07$ , CFI= 0.94, TLI= 0.93, IFI= 0.94, GFI= 0.92, RMSEA= 0.05, SRMR= 0.04) iyi düzeyde ve alt boyutlarda maddelerin standardize faktör yük değerleri 0.47 ile 0.83 arasında istatistiksel olarak anlamlı bulunmuştur ( $p < 0.001$ ). Orijinal anketin güvenilirliği için hesaplanan Cronbach'ın alfa katsayıları, alt boyutlarda .68 ile .76 arasında değişmektedir.

Anketin gurur duyma boyutu için: Beden eğitimi dersine katıldığım için gurur duyuyorum; Keyif alma boyutu için: Beden eğitimi dersindeyken, öğretmenim önerdiklerini uygularken kendimi iyi hissediyorum; Öfke boyutu için: Beden eğitimi dersi sırasında içimde öfke kabarması hissediyorum; Endişe boyutu için: Beden eğitimi dersinde yanlış bir şey söylemekten/yapmaktan korkuyorum ve hiçbir şey söylememeyi/yapmamayı tercih ediyorum; Umutsuzluk boyutu için: Beden eğitimi etkinliklerini etkili bir şekilde yapma umudumu kaybettim ve Can sıkıntısı boyutu için: Beden eğitimi dersi beni sıkıyor, maddeleri örnek verilebilir. Anket maddeleri beşli Likert tipli (1: Tamamen katılmıyorum ile 5: Tamamen katılıyorum arasında) olarak derecelendirilmiştir.

### Adaptasyon süreci

Anketin (AEQ-PE) Türkçeye adaptasyonunda şu aşamalar izlenmiştir. İlk aşamada: anketi geliştiren araştırmacılardan e-posta yoluyla gerekli izin alınmıştır. Anketin amaçlanan psikometrik özellikleri taşıması için gerek orijinal anketin geliştirildiği ve gerekse bu çalışmadaki örneklem grubunun (yaş ve sınıf aralığı) benzer olmasına dikkat edilmiştir. İkinci aşamada: anketin kültürel ve dilsel farklılıkların etkisini en aza indirmek için kültürlerarası ölçek uyarlama çalışmalarında önerilen; çeviri-geri çeviri (Back-Translation) ve merkezden çıkma (Decentering) yöntemleri izlenmiştir (Beaton vd., 2000; Brislin, 1986, 1970). İlk olarak, anket İngilizce 'den Türkçe 'ye, İngilizce ve Türkçe dillerine hâkim üç uzman tarafından bağımsız olarak çevrilmiştir. Daha sonra, bu çeviriler bir araya getirilerek tek bir Türkçe form oluşturulmuştur. Bu form, başka bir grup uzman tarafından tekrar İngilizce 'ye çevrilmiş ve orijinal form ile anlam bakımından uyum gösterip göstermediği kontrol edilmiştir. Çeviriler arasındaki tutarlılık ve dilsel eşdeğerlik, uzmanlar tarafından değerlendirilmiş ve gerekli düzeltmeler yapılmıştır. Üçüncü aşamada: anketin İngilizce orijinal formu ile ve Türkçeleştirilen formu iki hafta arayla 10 İngilizce öğretmene uygulanmış ve her iki formun maddeleri arasında  $r = .89$  ile  $r = .98$  arasında anlamlı düzeyde ( $p < .001$ ) korelasyon katsayıları elde edilmiştir. Dördüncü aşamada: anketin Türkçe versiyonunun görünüş geçerliğini sağlamak için iki alan uzmanından görüş alınmış ve olası cevaplama hatalarına karşın her sınıftan bir öğrenci olmak üzere dört öğrenciyle bilişsel görüşmeler gerçekleştirilmiştir. Bu aşamalardan sonra Türkçe 'ye çevrilmiş anketin, dilsel anlam ve kültürel duyarlılık açısından bir sorun taşımadığı kanaatine varılmış ve veri toplama sürecine geçilmiştir.

### Prosedür

Araştırma, Mardin Artuklu Üniversitesi Bilimsel Araştırma ve Yayın Etiği Kurulunun 02.03.2023 tarih ve E-79906804-050.06.04-87290 sayılı yazı ekindeki kararı ile uygun görülmüştür. Araştırma verileri, katılımcılara ulaşmayı kolaylaştırması, zaman tasarrufu sağlaması ve etkinliği nedeniyle Google Forms platformu üzerinden toplanmıştır (Cohen vd., 2017; Roberts & Allen, 2015). Çevrimiçi anket formu iki bölümden oluşturulmuştur. İlk bölümde katılımcıların demografik bilgileri, ikinci bölümde ise anket maddeleri yer almıştır. Araştırmanın etik standartlarını sağlamak amacıyla, Helsinki Deklarasyonu'nun [World Medical Association, (WMA, 2013)] araştırma etiği ilkeleri doğrultusunda, form başlangıcında katılımcılara araştırma hakkında bilgi sunulmuştur. 18 yaş altı katılımcı kriteri göz önünde bulundurularak önce veli sonra öğrenci için çevrimiçi formun giriş bölümüne bilgilendirilmiş onam formu eklenmiştir. Bu formda, araştırmaya katılımın gönüllülük esasına dayandığı, verilerin yalnızca bilimsel amaçlarla kullanılacağı, kişisel bilgilerin gizli tutulacağı ve herhangi bir zamanda çalışmadan ayrılacakları belirtilmiştir (Buchanan & Hvizdak, 2009). Katılımcılar onam formunu onaylamadan anketin diğer bölümlerine erişememiştir. Anketin linki, ilgili ortaöğretim okullarında görev yapan beden eğitimi öğretmenleri ile sınıf rehber öğretmenlerine sosyal medya platformları (WhatsApp vb.) ve e-posta aracılığıyla iletilmiştir. İlgili öğretmenlere, anket linkini öğrencilerle paylaşmadan önce araştırma hakkında öğrencilere bilgi verilmesi istenmiştir.

### Verilerin analizi

Verilerin analizi SPSS (versiyon 27.0) ve Jamovi (versiyon 2.5.6) programları kullanılarak gerçekleştirilmiştir. Öncelikle tek değişkenli ve çok değişkenli normallik varsayımları test edilmiştir. Tanımlayıcı istatistikler kapsamında ortalama, standart sapma değerleri ile birlikte, tek değişkenli normallik için çarpıklık ve basıklık katsayıları incelenmiştir. R. B. Kline (2023)' a göre çarpıklık değerlerinin [3.0]' ten ve basıklık değerlerinin [10.0]' dan küçük olması tek değişkenli normallik varsayımının karşılandığını göstermektedir. Çok değişkenli normallik varsayımı için Mardia testi uygulanmış (Mardia, 1970) ve bu varsayımın karşılanmadığı tespit edilmiştir ( $p < 0.05$ ).

Değişkenler arasındaki ilişkilerin incelenmesinde, verilerin ordinal yapısı ve çok değişkenli normallik varsayımının karşılanmaması nedeniyle Kendall's Tau korelasyon katsayısı kullanılmıştır. Kendall's Tau, özellikle Likert tipi ölçeklerle toplanan verilerin analizinde ve normallik varsayımının karşılanmadığı durumlarda tercih edilen parametrik olmayan bir korelasyon analizi yöntemidir (Field, 2013).

Verilerin Likert tipi ölçümle elde edilmesi ve çoklu normallik varsayımını karşılamaması nedeniyle DFA' da Diagonal Weighted Least Squares (DWLS) tahmin yöntemi tercih edilmiştir (Forero vd., 2009; Li, 2016). Model uyumunun değerlendirilmesinde, literatürde sıklıkla kullanılan uyum iyiliği indeks ( $\chi^2/df \leq 5$ , RMSEA  $\leq .08$ , CFI  $\geq .90$ , GFI  $\geq .90$  ve AGFI  $\geq .85$ ) değerleri göz önünde bulundurulmuştur (Hu & Bentler, 1999; R. B. Kline, 2023). Maddelerin faktör yük değerleri, t değerleri ve R<sup>2</sup> değerleri incelenmiştir. Yakınsak geçerlik için Ortalama Açıklanan Varyans (Average Variance Extracted-AVE) değerleri hesaplanmış ve 0.50' nin üzerinde olması kriteri dikkate alınmıştır (Hair vd., 2014). Ayırt edici geçerlik için Heterotrait-Monotrait Ratio (HTMT) değerleri incelenmiş ve 0.90' ın altında olması kriteri göz önünde bulundurulmuştur (Henseler vd., 2015). Güvenirlik analizleri kapsamında, iç tutarlılık katsayıları olan Cronbach alfa ve birleşik güvenirlik (CR) Omega ( $\omega$ ) değerleri hesaplanmıştır. Hair vd. (2014)' ne göre bu değerlerin 0.70' in üzerinde olması güvenirlik için yeterli kabul edilmektedir.

## BULGULAR

Örneklem grubundan (N= 739) elde edilen bulguların tanımlayıcı istatistik ve Kendall's Tau korelasyon sonuçları Tablo 1'de gösterilmektedir. Anketin alt boyutlarında ortalamalar: Gurur için (M= 3.99, SS= 0.63); Keyif için (M= 4.03, SS= 0.58); Öfke için (M= 1.95, SS= 0.59); Kaygı için (M= 1.90, SS= 0.58); Umutsuzluk için (M= 1.78, SS= 0.55); Sıkılma için (M= 1.83, SS= 0.54) olarak gerçekleşmiştir. Verilerin dağılımına ilişkin çarpıklık değerlerinin 0.51 ile -1.77 arasında, basıklık değerlerinin 0.59 ile 4.92 arasında değiştiği görülmektedir. Bu değerler, verilerin tek değişkenli normallik varsayımını karşıladığına işaret etmektedir (R. B. Kline, 2023). Tüm boyutlar arasındaki korelasyonlar anlamlıdır ( $p < .001$ ).

**Tablo 1.** Tanımlayıcı istatistik ve korelasyon analizi sonuçları

|               | Ort. | SS   | Çarpıklık | Basıklık | 1        | 2        | 3       | 4       | 5       |

\*\*\*  $p < .001$

Betimsel istatistiklerin ardından, ölçeğin yapısal geçerlik ve güvenirliliğini test etmek amacıyla DFA' ya geçilmiştir. DFA sonucunda elde edilen model uyum indeksleri Tablo 2'de, ölçüm modelinin sonuçlarına ilişkin değerler Tablo 3'te gösterilmektedir.

**Tablo 2.** Beden eğitimi için başarı duyguları anketi uyum indeksleri

| $\chi^2$ | df  | $\chi^2/df$ | GFI  | AGFI | CFI  | NNFI | IFI  | RMSEA | SRMR  |
|----------|-----|-------------|------|------|------|------|------|-------|-------|
| 902.97   | 237 | 3.81        | 0.90 | 0.87 | 0.97 | 0.97 | 0.97 | 0.069 | 0.037 |

Tablo 2'deki uyum indekslerine ( $\chi^2/df = 3.81$   $p < .001$ , RMSEA= 0.069, SRMR= 0.037, GFI=0.90, AGFI= 0.87, CFI= 0.97, NNFI= 0.97, IFI= 0.97) göre anketin altı boyutlu yapısı, modifikasyon işlemine gerek kalmaksızın modelle iyi düzeyde uyum sağlamıştır (R. B. Kline, 2023; Hu & Bentler, 1999). Tablo 3 bulguları ise anketin alt boyutlarına ilişkin maddelerin standardize faktör yük değerlerinin; gurur boyutunda 0.81 ile 0.84, keyif boyutunda 0.74 ile 0.87, öfke boyutunda 0.52 ile 0.81, kaygı boyutunda 0.73 ile 0.89, umutsuzluk boyutunda 0.74 ile 0.94, sıkılma boyutunda 0.72 ile 0.82 arasında değişerek istatistiksel olarak anlamlı olduklarını göstermektedir ( $p < .001$ ). Anket boyutlarının her bir madde için açıkladığı varyans oranları (R<sup>2</sup>) 0.44 ile 0.79 arasında hesaplanmıştır. Maddeler ile örtük değişkenler arasındaki korelasyonlar anlamlı olarak tespit edilmiştir ( $t > 1.96$ ,  $p < .005$ ). Her bir boyutun açıkladığı ortalama varyans (AVE) değerleri 0.52 ile 0.70 arasında, birleşik güvenirlik ( $\omega$ ) değerleri, 0.86 ile 0.91 arasında, Cronbach alfa iç tutarlılık katsayıları ise .85 ile .91 arasında değişmektedir.

**Tablo 3.** Maddelere ait faktör yükleri ve güvenirlik değerleri

| Alt boyut | Madde | $\beta$ | z        | R <sup>2</sup> | AVE  | $\omega$ | $\alpha$ |
|-----------|-------|---------|----------|----------------|------|----------|----------|
| Gurur     | gr1   | 0,81    | 15.40*** | 0,65           | 0.70 | 0.91     | 0.91     |

|            | kg3 | 0,73 | 22.87*** | 0,54 |      |      |      |
|            | kg4 | 0,89 | 22.13*** | 0,79 |      |      |      |
| Umutsuzluk | um1 | 0,84 | 19.87*** | 0,70 | 0.68 | 0.89 | 0.88 |
|            | um2 | 0,94 | 20.88*** | 0,88 |      |      |      |
|            | um3 | 0,74 | 15.05*** | 0,54 |      |      |      |
|            | um4 | 0,77 | 17.12*** | 0,59 |      |      |      |
| Sıkılma    | sk1 | 0,84 | 23.41*** | 0,71 | 0.69 | 0.90 | 0.90 |
|            | sk2 | 0,87 | 24.39*** | 0,76 |      |      |      |
|            | sk3 | 0,72 | 16.99*** | 0,52 |      |      |      |
|            | sk4 | 0,87 | 24.26*** | 0,76 |      |      |      |

\*\*\* $p < .001$

Ayrıca ankette ölçülen yapıların birbirinden yeterince ayrılıp ayrılmadıklarını değerlendirmek amacıyla Heterotrait-Monotrait Oranı (HTMT) analizi gerçekleştirilmiştir (Tablo 4). Analiz sonuçlarına göre HTMT değerleri 0.90' in altındadır.

**Tablo 4.** HTMT Analiz Sonuçları

| Boyutlar      | HTMT korelasyon oranı |      |      |      |      |
|---------------|-----------------------|------|------|------|------|
|               | 1                     | 2    | 3    | 4    | 5    |
| 1. Gurur      |                       |      |      |      |      |
| 2. Keyif      | 0.41                  |      |      |      |      |
| 3. Öfke       | 0.18                  | 0.09 |      |      |      |
| 4. Kaygı      | 0.12                  | 0.03 | 0.37 |      |      |
| 5. Umutsuzluk | 0.33                  | 0.14 | 0.54 | 0.48 |      |
| 6. Sıkılma    | 0.26                  | 0.12 | 0.56 | 0.58 | 0.87 |

Bulgular birlikte değerlendirildiğine AVE değerlerinin 0.50' nin üzerinde olması anketin yakınsak (Hair vd., 2014), HTMT değerlerinin 0.90' in altında kalması anketin ayırt edici geçerliklerini sağladığını göstermektedir (Henseler vd., 2015). Anket yapısını oluşturan boyutların  $\omega$  (CR) ve Cronbach alfa değerlerinin ise 0.70' in üzerinde olması, anketin yüksek bir iç tutarlılıkla güvenilir olduğuna işaret etmektedir (Hair vd., 2014).

## SONUÇ

Bu çalışmada, Fierro-Suero vd. (2020)' nin geliştirdiği "Achievement Emotions Questionnaire for Physical Education (AEQ-PE)" anketinin lise örnekleminde Türk kültürüne uyarlanması süreci ele alınmıştır. Geçerlik ve güvenilirlik analizleri sonucunda elde edilen "Beden Eğitimi için Başarı Duyguları Anketi-Lise (BEBDA-L)" Türkçe versiyonunun, psikometrik özelliklerinin yeterli düzeyde olduğu ve anketin orijinal yapısının Türk lise öğrencileri arasında geçerli olduğunu ortaya koymuştur. Anketin iç tutarlılığı, hesaplanan güvenilirlik katsayıları ile desteklenmiş ve bu değerlerin anketin güvenilir bir ölçme aracı olduğunu kanıtlamıştır. Ayrıca, yakınsak ve ıraksak geçerlik analizleri, anketin ölçmek istediği kavramları doğru bir şekilde yansıttığını ve yapısal boyutlarının birbirinden yeterince ayrıştığını göstermiştir. Bu bulgular, anketin Türkçe versiyonunun orijinal anketle tutarlı bir yapı gösterdiğini ve güvenilir bir ölçme aracı olduğunu göstermiştir. Bu durum, ölçeğin temel yapı taşlarının farklı dillerde ve kültürlerde korunabildiğini ve bu bağlamda geçerliliğinin yüksek olduğunu desteklemektedir. Türkçe literatürde orijinal anketin ortaokul öğrencileri örnekleminde Türkçe versiyonuna ilişkin elde edilen bulgular (Ceylan & Karlı, 2024), örneklem grupları farklı olmakla birlikte bu çalışmanın sonuçları ile paralellik göstermektedir. Orijinal anketin (AEQ-PE), Malayca (İbrahim vd., 2021) ve Çince (Tian vd., 2023) uyarlamalarında da benzer yapısal özellikler ve güvenilirlik değerleri elde edilmiştir. Bu bulgular, AEQ-PE' nin ölçtüğü yapının evrensel bir nitelik taşıdığını ve farklı kültürel bağlamlarda da geçerli bir şekilde değerlendirilebileceğini göstermektedir. Literatürde, ölçeklerin farklı kültürlerle uyarlanması sürecinde yapısal özelliklerin korunmasının önemine dikkat çekilmektedir (Beaton vd., 2000; Hambleton & Patsula, 1999). Bu

açından, çalışmamızda elde edilen bulgular, ölçeğin Türkçe versiyonunun yanı sıra diğer kültürlerdeki versiyonlarının da orijinal ölçekle benzer psikometrik özellikler göstermesi, ölçeğin kültürler arası kullanımının uygunluğunu desteklemektedir.

Sonuç olarak BEBDA-L Türkçe versiyonunun, Türkiye’de lise düzeyinde beden eğitimi derslerinin önemini vurgulamak ve öğrencilerin başarı duygularını anlamak için kullanılabilecek geçerli ve güvenilir bir ölçme aracı olduğu değerlendirilmektedir. Beden eğitimi derslerinin öğrencilerin duygusal ve psikolojik gelişimindeki rolünü anlamak, beden eğitimi öğretim yöntemlerinin etkinliğini değerlendirmek ve öğrencilerin motivasyon düzeylerini incelemek amacıyla gelecekte yapılacak Türkçe araştırmalarda, ölçüm aracı olarak bu anketin kaynaklık sağlayacağı düşünülmektedir. Anketin uygulanması ve sonuçlarının değerlendirilmesi, eğitimcilerin ve araştırmacıların, öğrencilerin başarı duygularını daha iyi anlamalarına ve bu doğrultuda etkili stratejiler geliştirmelerine yardımcı olacaktır. Diğer taraftan bu çalışmanın sonuçları, belirli sınırlamalar çerçevesinde değerlendirilmelidir. Birincisi Türkiye popülasyonunda sonuçlar üreten bu çalışmanın bulguları her ne kadar kültürel arası çalışma bulguları ile örtüşse de örneklem grubu ve büyüklüğünün Türkiye ile sınırlı kalması, bulguların genellenebilirliğini kısıtladığı düşünülmektedir. İkincisi çalışmada kullanılan anket, belirli bir zaman diliminde uygulanmış olup, zamanla değişebilecek başarı duyguları hakkında sınırlı bilgi sunmaktadır. Üçüncüsü anketin kendisi öz bildirim temellidir; bu da katılımcıların duygusal durumlarını ve başarı duygularını doğru bir şekilde yansıtmada konusunda yanlışlık gösterebileceği anlamına gelir. Gelecek araştırmalarda, daha geniş ve çeşitli örneklerle çalışmak, farklı kültürel bağlamlarda geçerliliği test etmek ve uzunlamasına tasarımlar kullanmak, bu sınırlılıkların aşılmasına yardımcı olabilir.

# BEDEN EĞİTİMİ ÖĞRETMEN ADAYLARININ UYGULAMA ÖĞRETMENLERİNİN YETERLİKLERİNE İLİŞKİN GÖRÜŞLERİ İLE MESLEKİ YETERLİK ALGILARI ARASINDAKİ İLİŞKİ

Mustafa Enes İŞIKGÖZ

Sakarya Üniversitesi Rektörlük Birimi, Sakarya, Türkiye  
mustafaenesisikgoz@sakarya.edu.tr

## ÖZET

Bu çalışmada, beden eğitimi öğretmen adaylarının uygulama öğretmenlerinin yeterliklerine ilişkin görüşleri ile mesleki yeterlik algıları arasındaki ilişkinin incelenmesi amaçlanmıştır. Çalışmaya 2023-2024 eğitim öğretim yılı bahar döneminde öğretmenlik uygulaması-II dersi kapsamında ortaokul ve liselerde öğretmenlik uygulamasına katılan 673 beden eğitimi öğretmeni adayı katılmıştır. Araştırmanın verileri; “Kişisel Bilgi Formu”, dört boyut 20 maddeden oluşan “Uygulama Öğretmeni Yeterlilik Ölçeği” ve altı boyut 28 maddeden oluşan “Öğretmen Adayları için Mesleki Yeterlilik Ölçeği” ile toplanmıştır. Çalışma, nicel araştırma paradigması temelinde ilişkisel tarama modelinde desenlenmiştir. Çalışmada betimsel istatistik tekniklerinin yanı sıra, korelasyon ve çoklu doğrusal regresyon analizinden yararlanılmıştır. Korelasyon analizi bulguları, beden eğitimi öğretmen adaylarının uygulama öğretmenlerinin yeterliklerine ilişkin görüşleri ile mesleki yeterlik algıları arasında pozitif yönlü güçlü düzeyde anlamlı ilişkilerin olduğunu göstermiştir. Çoklu doğrusal regresyon analizi ile elde edilen modelin anlamlı olduğu ( $F(4, 668) = 109.89, p < .001$ ), beden eğitimi öğretmen adaylarının uygulama öğretmenlerinin yeterliklerine ilişkin görüşlerinin, mesleki yeterlik algılarındaki değişimin %39.3’ünü (Adj.  $R^2 = .393$ ) açıkladığı görülmüştür. Yordama gücüne göre ise uygulama öğretmenlerinin sınıf yönetimi ( $\beta = .37, p < .001, t = 6.22$ ) ve mesleki rehberlik ( $\beta = .38, p < .001, t = 6.92$ ) boyutlarındaki yeterlikleri beden eğitimi öğretmen adaylarının mesleki yeterlik algılarını pozitif yönde anlamlı olarak yordamaktadır. Uygulama öğretmenlerinin gözlem ( $\beta = -.08, p = 0.27, t = -1.10$ ) ve uygulamaya hazırlık ( $\beta = .00, p = 0.96, t = .05$ ) boyutlarındaki yeterlikleri ise beden eğitimi öğretmen adaylarının mesleki yeterlik algılarını anlamlı olarak yordamamaktadır. Sonuç olarak öğretmenlik uygulaması eğitimine katılan beden eğitimi öğretmen adaylarının, uygulama öğretmenlerinde sınıf yönetimi ve mesleki rehberlik alanında gözlemledikleri yeterlikler, mesleki yeterlik algılarını şekillendirmede önemli rol oynamaktadır.

**Anahtar Kelimeler:** Beden eğitimi, öğretmen adayı, uygulama öğretmeni, mesleki yeterlik.

## THE RELATIONSHIP BETWEEN PHYSICAL EDUCATION TEACHER CANDIDATES' VIEWS ON THE COMPETENCIES OF THEIR MENTOR TEACHERS AND THEIR PERCEPTIONS OF PROFESSIONAL COMPETENCE

## ABSTRACT

The objective of this study was to examine the relationship between the views of pre-service physical education teachers regarding the competencies of mentor teachers and their perceptions of professional competence. In the spring semester of the 2023-2024 academic year, 673 prospective physical education teachers participated in teaching practice in secondary and high schools as part of the Teaching Practice II course. The data were collected via the following instruments: the Personal Information Form, the Mentor Effort Scale (20 items, four dimensions), and the Professional Qualification Scale for Pre-service Teachers (28 items, six dimensions). The study was designed in accordance with the relational survey model, which is based on the quantitative research paradigm. In addition to descriptive statistical techniques, the study employed correlation and multiple linear regression analysis. The results of the correlation analysis indicated the presence of robust, positive, and statistically significant relationships between the views of prospective physical education teachers regarding the competencies of their mentor teachers and their perceptions of professional competence. The model obtained by multiple linear regression analysis was found to be significant ( $F(4, 668) = 109.89, p < .001$ ), indicating that pre-service physical education teachers' views on the competencies of their mentor teachers explained 39.3% (Adj.  $R^2 = .393$ ) of the change in their perceptions of professional competence. In terms of predictive power, the competencies of mentor teachers in the dimensions of classroom management ( $\beta = .37, p < .001, t = 6.22$ ) and professional guidance ( $\beta = .38, p < .001, t = 6.92$ ) were found to positively predict pre-service physical education teachers' perceptions of professional competence. The competencies of mentor teachers in the dimensions of observation ( $\beta = -.08, p = 0.27, t = -1.10$ ) and preparation for practice ( $\beta = .00, p = 0.96, t = .05$ ) were not found to significantly predict the perceptions of professional efficacy held by pre-service physical education teachers. Therefore, the competencies observed by pre-service physical education teachers participating in teaching practice in the field of classroom management and professional guidance are of pivotal importance in shaping their perceptions of professional competence.

**Keywords:** Physical education, pre-service teacher, practicum teacher, professional competence.

## GİRİŞ

Eğitim ve öğretim ile bununla ilgili yönetim görevlerini üzerine alan özel bir ihtisas mesleği olan öğretmenliğe hazırlık; genel kültür, özel alan eğitimi ve pedagojik formasyon/öğretmenlik meslek bilgisi dersleri ile öğretmen yetiştiren yükseköğretim kurumları tarafından sağlanır (*Öğretmenlik Meslek Kanunu, 2022*). Türkiye’de 1982 yılına kadar Millî Eğitim Bakanlığı (MEB)’e bağlı okulların bünyesinde olan öğretmen yetiştirme programları, daha sonra üniversitelere devredilmiş, başta 1997, 2006 ve 2009 yılları olmak üzere günümüze kadar geçen süreçte öğretmen yetiştirme lisans programlarında çeşitli düzenlemeler yapılmıştır. Son düzenlemede öğretmenlik lisans programlarındaki dersler, öğretmenlik meslek bilgisi (MB), alan eğitimi (AE) ve genel kültür (GK) dersleri olmak üzere üç grup altında oluşturulmuştur. Programlarda MB dersleri %30-35; GK dersleri %15-20 ve AE dersleri de %45-50 oranında yer almaktadır. Alan bilgisi; öğretmenin öğreteceği konularla ilgili bilgisini ifade ederken, pedagoji bilgisi; öğretmenin eğitim ve öğretime ilişkin genel ilke ve yöntemleri bilmesini içermekte, pedagojik alan bilgisi ise, alan bilgisi ve pedagojik bilgi arasında bir köprü görevi görmektedir (YÖK, 2018). Pedagojik alan bilgisi aynı zamanda bir konunun anlaşılmasını sağlayacak sunum yolları, örnekleri, betimlemeleri ve açıklamaları kapsayan bir bilgi çeşididir (Shulman, 1986).

Hizmet öncesi öğretmen yetiştirme sürecinin önemli sac ayaklarından biri, MB dersleri kapsamında yürütülen öğretmenlik uygulamalarıdır. Çünkü öğretmen adaylarının lisans eğitimleri süresince aldığı kuramsal eğitimlerin yanı sıra bu bilgileri gerçek ortamlarda kullanabileceği uygulama eğitimlerine de ihtiyaç vardır (Köse & Caner, 2022). Bu kapsamda öğretmen yetiştirme programlarında öğretmenlik uygulaması dersi bütün programlarda “Öğretmenlik Uygulaması 1” ve “Öğretmenlik Uygulaması 2” olmak üzere iki dönemde yer almıştır (YÖK, 2018). Öğretmenlik uygulaması: Uygulama öğrencilerine; eğitim gördüğü öğretmenlik alanında, yönetim ve ders dışı etkinliklerle birlikte bizzat sınıf içinde öğretmenlik becerisi kazandırmayı amaçlayan ve belirli bir dersi ya da dersleri planlı bir şekilde öğretmesini sağlayan, uygulama etkinliklerinin tartışılıp değerlendirildiği ders olarak tanımlanmaktadır (MEB, 2021).

Dünyanın her yerinde öğretmen eğitimi programı teorilerin öğrenilmesi ve ardından gerçek öğretmenlik dünyasına adım atmadan önce bunların uygulanması olarak iki bölüme ayrılırken, öğretmenlik uygulaması genellikle hizmet öncesi öğretmen yetiştirme programlarının kritik bileşeni olarak görülmekte ve öğrencilerin uygulamada daha fazla zaman geçirmesi istenmektedir (Grudnoff, 2011; OECD, 2019; Cochran vd., 2020). Öğretmenlik uygulaması sürecinde öğretmen adayları, edindikleri bilgi ve becerilerini uygulama imkânı bularak öğretmen eğitimi programının son yılındaki öğretmen olma yeterliklerini tamamlarlar (Kadir & Aziz, 2021). Uygulama süreci, öğretmen adaylarının öğretmenlik mesleğine ilişkin farkındalıklarını artırmalarına ve mesleki yeterliklerini geliştirmelerine katkıda bulunmakta ve mesleğe doğru ilerlerken bilgiyi uygulama, karar verme, performansları üzerine düşünme olanağı sağlayarak öğretmenliğe geçişlerini kolaylaştırmaktadır (Zeybek & Karataş, 2022). Bu nedenle öğretmenlerin günlük öğretim faaliyetlerine rehberlik ettiği kabul edilen öğretmenlik uygulaması, öğretmenlerin pratik bilgilerinin inşası için önemli bir araçtır (Allas vd., 2020; Shulman, 1986).

Türkiye’de öğretmen yetiştiren yükseköğretim kurumlarında öğrenim gören öğrenciler, MEB’e bağlı resmî eğitim kurumları ile özel öğretim kurumlarında öğretmenlik uygulaması çalışmalarına katılmaktadırlar. Öğretmenlik uygulaması, bir yılda iki dönemden az olmamak üzere güz ve bahar dönemlerinde, her bir dönem haftada altı ders saati olmak üzere toplam 12 hafta ve dönemlik 72 saat olmak üzere düzenlenir. Uygulamaya katılan öğrenciler her bir dönemde, uygulama öğretmenin gözetiminde en az sekiz farklı haftada olmak üzere ilgili dersin haftalık ders çizelgesinde ders saati bir-iki saat arasında olanlarda 10, üç saat ve üzeri olanlarda ise 20 ders saatinden az olmayacak şekilde fiilen ders anlatır (MEB, 2021). Bu süreçte kuramsal ve uygulamalı çalışmalar aracılığıyla uygulama öğrencilerine kazandırılması amaçlanan öğretmen yeterlikleri; dört ana başlık (1: Konu Alanı ve Alan Eğitimine İlişkin Yeterlikler; 2: Öğretme Öğrenme Sürecine İlişkin Yeterlikler; 3: Öğrencilerin Öğrenmelerini İzleme, Değerlendirme ve Kayıt Tutma; 4: Diğer Mesleki Yeterlikler) altında yer alan birtakım yeterlik göstergeleri ile belirlenmektedir. Yeterlikler: eksiği var (E); kabul edilebilir (K) ve iyi yetişmiş (İ) şeklinde değerlendirilmekte ve sırasıyla E için bir, K için iki ve İ için üç olmak üzere not verilerek toplam puan hesaplanmaktadır (MEB, 2019).

Öğretmen adaylarının pedagojik bilgilerini uygulamaya koyduğu, eğitim ortamlarında deneyim kazandığı uygulama sürecinin etkili bir şekilde yürütülmesi için dikkate alınması gereken birçok faktör bulunmaktadır. Çeşitli teoriler altında yürütülen araştırmalarda bu faktörler genel olarak; mentor (uygulama öğretmeni) desteği (Ellis vd., 2020; McGraw & Davis, 2017), uygulama okulunun özellikleri (Darling-Hammond, 2017), kişisel ve mesleki gelişim (Ryan & Deci, 2000), geri bildirim ve değerlendirme (Hattie & Timperley, 2007), çeşitli öğretim yöntemleri ve stratejileri (Hattie, 2008), eğitim programının içeriği (Zeichner, 2010) ve sosyal ve kültürel bileşenler (Gay, 2018) başlıkları altında sıralanmaktadır. Bu faktörler genelinde yürütülen araştırmaların ise daha çok mentörlük (danışmanlık) süreci ve uygulama öğretmeni kavramları üzerinde yoğunlaşmıştır (Çakmak & Çelik, 2022). Uygulama öğretmenleri, öğretmen adaylarına rehberlik ederek onların pedagojik becerilerini

geliştirmelerine, sınıf yönetimi yeteneklerini artırmalarına ve genel olarak mesleki kimliklerini oluşturmalarında yardımcı oldukları için öğretmenlik uygulaması sürecinde önemli bir bileşen olarak görülmektedir (Mena & Clarke, 2021). Birçok öğretmen adayı uygulamaya, ders öğretmenin kendisi için iyi bir model olacağı beklentisi ile başlamakta, ancak öğretmen adayının üniversitede öğrendikleri ile uygulamada gördükleri değişiklik gösterebilmektedir (Memduhoğlu & Tan, 2023). Bu noktada uygulama öğretmenlerinin pedagojik yeterlikleri, iletişim becerileri, liderlik özellikleri ve geri bildirim verme gibi birtakım yeterlikleri ön plana çıkmaktadır. Öğretmenlik mesleği yeterliği, bir öğretmenin öğretim görevlerini başarıyla yerine getirme yeteneğine olan inancını belirtirken, uygulama öğretmeni yeterliği, kendisinden beklenen görev, rol ve sorumluluklarının yerine getirilmesidir (Uçar & Aksu, 2021).

Uygulama öğretmenlerinin, öğretmen adaylarıyla olan etkileşimlerinde belirleyici rol oynayan yeterlikleri aynı zamanda öğretmen adaylarının, öğretim sürecine hazırlıklarını ve meslek hayatlarındaki başarılarını etkileyerek mesleki yeterlik algılarını da şekillendirmektedir (Danielewicz, 2001). Bireylerin belirli bir meslek için gerekli bilgi, beceri ve tutumları ne ölçüde edindiklerine dair duygu ve düşüncelerini ifade eden mesleki yeterlik algısı, öğretmen adaylarının kendine güvenini ve mesleki kimliklerini şekillendirebilmektedir (Bandura, 1997; Darling-Hammond, 2020). Literatür incelendiğinde, öğretmenlerin genel ve kişisel öz yeterlik inançlarının geliştiği en önemli dönemin, hizmet öncesi eğitimde aldıkları dersler ve yaptıkları uygulamalar olduğu belirtilmektedir (Gürbüz vd., 2013; Kızılkapan & Kırmızıgül, 2021; Sevimele & Subasi, 2018; Yenen, 2022). Diğer taraftan öğretmenlik uygulaması dersi kapsamında ilgili tarafların birbirlerine karşı birçok noktada görev ve sorumluluklarını tam olarak yerine getiremedikleri (Sathasivam vd., 2024; Yakar vd., 2021), öğretmen adaylarının öğretmenlik uygulaması sırasında; zamanı yönetme (Takaoğlu, 2017), sınıf yönetimi (Komolafe vd., 2020) ve genel öğretim iş yüküyle başa çıkma (Mutlu, 2015) gibi konularda zorluklar yaşadığına ilişkin araştırma bulguları mevcuttur.

Kültürel arası bu araştırmalar, branş ayrımı gözetmeksizin genel olarak öğretmen adayları popülasyonuna ilişkin sonuçlar üretmiştir. Köse ve Caner (2022) ise 2015-2020 yılları arasında öğretmenlik uygulaması dersi üzerine Türkiye’de yapılan çalışmalarını içerik analizi ile inceledikleri araştırmalarında, öğretmenlik uygulaması dersinde; değişen eğitim programının uygulanması, uygulama öğretim elemanı, kılavuz ve dersin uygulandığı zamanın yanı sıra uygulama okulu, öğretmen adayı ve uygulama öğretmenlerine ilişkin sorunlar ve çözüm önerilerinin sunulduğu görülmüştür. Son beş yılın alan yazınında, bu araştırmanın da örneklem grubunu oluşturan beden eğitimi öğretmen adaylarının, web günlüğü (blog) kullanarak aktardıkları öğretmenlik uygulaması ve okul deneyimi yansımalarının (Karakoç & Semiz, 2023), uzaktan eğitim (çevrim içi) ile yürütülen öğretmenlik uygulaması dersine ilişkin görüşlerinin (Aygüneş vd., 2022; Eti & Karaduman, 2020; Kaya & Kösterelioğlu, 2023; Yancı & Can, 2024) incelendiği çalışmalar bulunmaktadır. Bu çalışmaların Covid-19 dönemine yoğunlaştığı görülmektedir. Ancak Türkiye’de beden eğitimi öğretmen adaylarının öğretmenlik uygulaması sürecinde, uygulama öğretmenlerinin yeterliklerine ilişkin görüşleri ile mesleki yeterlik algıları arasındaki ilişkiyi doğrudan ele alan güncel bir araştırmaya rastlanılmamıştır. Gerek Zaman içerisinde bireysel tutum ve davranışlarda meydana gelebilecek değişimler ve gerekse öğretmenlik eğitiminin dinamik süreci ve önemi göz önünde bulundurulduğunda, alan yazında yeni araştırmaların yapılması bir ihtiyaç olarak karşımıza çıkmaktadır. Bu çalışmanın da güncel araştırma bulguları ile alan yazındaki ihtiyacı karşılaması ve birer aktör olarak öğretmen yetiştirme paydaşlarına fikir sunması açısından önemli görülmektedir. Bu çalışmanın amacı; beden eğitimi öğretmen adaylarının uygulama öğretmenlerinin yeterliklerine ilişkin görüşleri ile mesleki yeterlik algıları arasında nasıl bir ilişki olduğunu ortaya koymaktır.

## YÖNTEM

### *Araştırma deseni*

Öğretmenlik uygulaması sürecinde beden eğitimi öğretmen adaylarının, uygulama öğretmenlerinin yeterliklerine ilişkin görüşleri ile mesleki yeterlik algıları arasındaki ilişkinin kesitsel olarak incelendiği bu çalışma, nicel araştırma yaklaşımı temelinde ilişkisel tarama modelinde desenlenmiştir. İlişkisel tarama modeli; iki ve daha çok değişken arasında ilişki olup olmadığını ve/veya ilişkinin derecesini belirlemeyi amaçlarken, kesitsel tarama araştırmaları hedef kitleden tek ölçümle bir anda veri toplamayı amaçlamaktadır (Fraenkel vd., 2011).

### *Çalışma grubu*

Araştırmanın çalışma grubunu, basit rastgele örnekleme yöntemi ile 2023-2024 eğitim öğretim yılı bahar döneminde Beden Eğitimi ve Spor Yüksekokulları ile Spor Bilimleri Fakültelerinin; Beden Eğitimi ve Spor Öğretmenliği programı ile pedagojik formasyon dersleri alan Antrenörlük Eğitimi ve Spor Yöneticiliği programlarında öğretmenlik uygulamasına katılan 673 beden eğitimi öğretmeni adayı katılmıştır. Örneklem büyüklüğünün mevcut çalışma için yeterli güce sahip olup olmadığı G\*Power (3.1.9.7) programı ile hesaplanmıştır (Faul vd., 2009).  $f^2=0.15$  etki büyüklüğü, %95 güven düzeyi ve %5 güven aralığında hesaplanan örneklem büyüklüğü 129 olup, mevcut çalışmanın örneklem büyüklüğü (N= 673) araştırma sonuçlarının güvenilirliğini teyit

etmek için yeterli güce sahiptir. Çalışma grubunun demografik özellikleri Tablo 1’de sunulmuştur. Buna göre öğretmenlik uygulamasına katılan beden öğretmeni adaylarının 368’i (%54.7) erkek, 305’i (%45.3) kadındır. Katılımcıların 290’ı (%43.1) beden ve spor öğretmenliği, 195’i (%29.0) antrenörlük eğitimi, 188’i (27.9) spor yöneticiliği programında öğrenim görmektedir. Beden eğitimi öğretmeni adaylarının 296’sı (%44.0) ortaokullarda, 377’si (%56.0) liselerde öğretmenlik uygulamasını gerçekleştirmiştir. Uygulamaya rehberlik eden öğretmenlerin 384’i (%57.1) erkek, 289’u (%42.9) kadındır.

**Tablo 1.** Çalışma grubunun demografik özellikleri

| Özellik                      | Grup                               | f   | %     |
|------------------------------|------------------------------------|-----|-------|

#### *Uygulama Öğretmeni Yeterlilik Ölçeği*

Uygulama öğretmeni yeterlilik ölçeği, uygulama öğretmenlerinin öğretmenlik uygulamaları sürecine ilişkin yeterliklerini ölçmek için Uçar ve Aksu (2021) tarafından geliştirilmiştir. Ölçeğin yapısal geçerliliğini açılımlı ve doğrulayıcı faktör analizi (DFA) ile inceleyen araştırmacılar, açılımlı faktör analizi (AFA) sonucunda; toplam varyansın %69.01’ ini açıklayan ve faktör yük değerleri .580 ile .839 arasında değişen her biri beş maddelik dört faktörden oluşan 20 maddelik bir ölçek elde etmişlerdir. Adından ölçeğin yapı geçerliliğine kanıt sağlamak amacıyla gerçekleştirdikleri doğrulayıcı faktör analizi (DFA) sonucunda; ölçeğin model uyum indekslerinin ( $\chi^2/sd= 1.94$ , NFI= .98, GFI= .92, NNFI= .99, CFI= .99, RMSEA= .051), ölçek yapısı ile mükemmel düzeyde uyum sağladığını belirlerken, faktörlerin Cronbach Alpha iç tutarlık katsayılarını .81 ile .93 arasında, ölçeğin tamamı için .94 olarak hesaplamışlardır. Ölçek maddeleri; yetersiz (1) ile çok yeterli (5) arasında beş’li Likert tipinde derecelendirilmiştir. Ölçekte sınıf yönetimi boyutu için: Sınıf yönetimi yaklaşımlarından etkili olarak yararlanabilme; gözlem boyutu için: Gözlem yapabilme konusunda uzman olma; Mesleki rehberlik boyutu için: Öğretmen adayının fakültede öğrendiklerini, sınıfta uygulamasına olanak sağlama ve uygulamaya hazırlık boyutu için: Uygulama öğretmenin, görev ve rolleri hakkında bilgili olma gibi maddeler örnek verilebilir.

#### *Öğretmen Adayları için Mesleki Yeterlilik Ölçeği*

Öğretmen adayları için mesleki yeterlilik ölçeği, öğretmen adaylarının mesleki yeterliklerine ilişkin algılarını değerlendirmek için Sarpkaya ve Altun (2021) tarafından geliştirilmiştir. Araştırmacılar AFA sonucunda; toplam varyansın %67.9’ unu açıklayan; kişisel ve mesleki değerler (5 madde); mesleki gelişim (4 madde); öğretimi ve gelişimi izleme ve değerlendirme (7 madde); okul ortamı (3 madde); okul-aile ilişkileri (4 madde); program ve içerik bilgisi (5 madde) olmak üzere altı faktörden ve toplam 28 maddeden oluşan bir ölçek yapısı elde etmişlerdir. Ardından ölçeğin altı faktörlü yapısına ilişkin gerçekleştirdikleri DFA sonucunda ölçeğin model uyum indekslerinin ( $\chi^2/sd= 1.72$ , NFI= .86, GFI= .87, CFI= .94, RMSEA= .054, SRMR= .06) ölçek yapısı ile kabul edilebilir bir uyuma sahip olduğunu belirlemişlerdir. Ölçeğin güvenilirliği belirlemek için hesapladıkları Cronbach alfa iç tutarlık katsayıları, her faktör için sırasıyla .81, .74, .87, .80, .86, .86, ölçeğin toplamı için ise .94 olarak gerçekleşmiştir. Ölçekteki her bir madde yeterlilik düzeyi olarak düşük dereceden (1)- yükseğe doğru (5) olmak üzere beşli Likert ölçeği ile betimlenmiştir. Ölçekte kişisel ve mesleki değerler boyutu için: öğrencilerimin her birinin önemli olduğunu onlara fark ettirme; mesleki gelişim boyutu için: kişisel gelişimimdeki eksiklikleri (eleştirel düşünme, problem çözme, iletişim, estetik anlayış gibi) saptama; öğretimi ve gelişimi izleme ve değerlendirme boyutu için: öğrencilerimin kazanımlarını değerlendirmeye uygun ölçme araçları hazırlama; okul ortamı boyutu için: okulunun bulunduğu çevrenin sosyo-kültürel özelliklerini analiz etme; okul-aile ilişkileri boyutu için: öğrencilerimin ailelerini tanımaya yönelik etkinlikler düzenleme; program ve içerik bilgisi boyutu için: branşımın/ alanımın öğretim programında yapılan değişiklikleri izleme gibi maddeler örnek verilebilir.

### Verilerin toplanması

Araştırma için öncelikle Mardin Artuklu Üniversitesi Bilimsel Araştırma ve Yayın Etiği Kurulundan (05/06/2024 tarih; E-79906804-020-145782) gerekli etik izin alınmıştır. Araştırma, Helsinki Deklarasyonu'na ve sosyal bilimler

alanındaki etik ilkeler ve uygulamaları standartlarına uygun olarak yürütülmüştür (WMA, 2013; APA, 2002). Araştırmada veriler çevrimiçi ortamda Google Form uygulaması aracılığıyla toplanmıştır. Google Form, veri toplama sürecinde zaman ve kaynak tasarrufu sağlarken, katılımcıların yanıtlarını kolaylıkla iletmelerini de sağlamaktadır (Couper, 2000). Google Forms üç bölümden oluşturulmuştur. Bölümlere geçmeden önce araştırmanın amacı hakkında bilgi verilmiş ve toplanan verilerin yalnızca bilimsel amaçlarla kullanılacağı vurgulanarak araştırmanın herhangi bir aşamasında çalışmadan ayrılabilirlikleri açıkça belirtilmiştir. Ardından araştırmaya katılanların gönüllü onamları için bir onay kutusu (tik işareti) eklenmiştir. Katılımcılar, bu onayı işaretledikten sonra bölümlere geçiş yapabilmıştır. Birinci bölümde, katılımcıların demografik özelliklerine ilişkin dört soru; ikinci bölümde, katılımcıların öğretmenlik uygulamaları sürecinde, uygulama öğretmenlerinin yeterliklerine ilişkin görüşlerini, üçüncü bölümde ise mesleki yeterlik algılarını belirleyen ölçek maddelerine yer verilmiştir. Google Form'a yalnızca tek seferlik erişim sağlanmış, bu da veri toplama sürecinin güvenliğini ve katılımcıların verilerinin gizliliğini artırmıştır. Google Form linki, sosyal medya platformları ve katılımcıların e-posta adreslerine gönderilmiştir. Veriler 15 Haziran-30 Haziran 2024 tarihleri arasında toplanmıştır.

### Verilerin analizi

Verilerin analizinde SPSS (version 27.0) ve JASP (versiyon 0.19) programları kullanılmıştır. Analizlerde betimsel istatistik teknikleri yanı sıra, DFA, korelasyon ve çoklu doğrusal regresyon analizlerinden yararlanılmıştır. Betimsel istatistikler kapsamında, örneklem grubundan toplanan verilerin ortalama ve standart sapmaları ile tek yönlü normallik dağılımları çarpıklık (Skness) ve basıklık (Kurtosis) incelenmiştir. DFA ile ölçeklerin yapısal geçerlikleri ve güvenilirlikleri test edilmiştir. Korelasyon ve çoklu doğrusal regresyon analizi ile değişkenler arasındaki ilişkiler incelenmiştir. DFA ve regersyon analizleri öncesinde gerekli varsayımlar kontrol edilmiştir. Analizlerden elde edilen bulgular %95 güven aralığı ve  $p < 0.05$  anlamlılık düzeyinde yorumlanmıştır.

### BULGULAR

Örneklem grubundan ölçeklerle elde edilen verilerin betimsel istatistik sonuçları Tablo 2'de gösterilmektedir. Aritmetik ortalama değerlendirme aralığına göre, katılımcıların genel olarak uygulama okulu öğretmenlerini yeterli gördükleri görülmektedir. Alt boyutların ortalamalarına göre ise katılımcılar, uygulama okulu öğretmenlerini en çok mesleki rehberlik ( $M= 18.94$ ,  $SS= 3.44$ ), en az gözlem ( $M= 17.95$ ,  $SS= 3.31$ ) boyutunda yeterli görmüşlerdir. Tüm alt boyutlarda verilerin tek değişkenli normallik dağılımı incelendiğinde, çarpıklık değerlerinin 0.07 ile -1.13 arasında, basıklık değerlerinin ise 0.04 ile 1.78 arasında değiştiği görülmektedir. Çarpıklık ve basıklık değerlerinin  $\pm 2$  aralığında olması, tek değişkenli normallik dağılımının sağlandığını göstermektedir (George & Mallery, 2011).

**Tablo 2.** Ölçeklerden elde edilen verilerin betimsel istatistik sonuçları

| Veriler   | Ort.  | SS   | Çarpıklık | Basıklık |
|---|-------|------|-----------|----------|
| Uygulama öğretmeni yeterlikleri                     |       |      |           |          |
| <i>Sınıf yönetimi</i>                               | 18,50 | 3.68 | -0.95     | 0.54     |
| <i>Gözlem</i>                                       | 17,95 | 3.31 | -1.05     | 0.81     |
| <i>Mesleki rehberlik</i>                            | 18,94 | 3.44 | -0.95     | 0.79     |
| <i>Uygulamaya Hazırlık</i>                          | 18,01 | 3.37 | -0.97     | 0.18     |
| Öğretmen adaylarının mesleki yeterlik algısı        |       |      |           |          |
| <i>Kişisel ve mesleki değerler</i>                  | 18,21 | 3.05 | -0.77     | 0.81     |
| <i>Mesleki gelişim</i>                              | 17,54 | 4.44 | -0.84     | 0.04     |
| <i>Öğretimi ve gelişimi izleme ve değerlendirme</i> | 22,06 | 4.49 | -1.13     | 1.78     |
| <i>Okul ortamı</i>                                  | 14,08 | 2.27 | 0.07      | 0.99     |
| <i>Okul-aile ilişkileri</i>                         | 11,20 | 2.21 | -0.75     | 0.38     |
| <i>Program ve İçerik Bilgisi</i>                    | 15,59 | 2.91 | -0.82     | 0.56     |

Verilerin dağılımı incelendikten sonra DFA ile ölçeklerin yapısal geçerlilikleri analiz edilmiştir. Analiz öncesi DFA için gerekli varsayımlar kontrol edilmiştir. Her iki ölçek için bu varsayımlardan; örneklem yeterliliği ve tek yönlü normallik dağılımının sağlandığı, verilerde eksik ve/veya herhangi bir uç değer yer almadığı, ancak Mardia test katsayısı ile incelenen çok değişkenli normallik varsayımının karşılanmadığı görülmüştür. ( $p < 0.01$ ). Gerek çok değişkenli normallik varsayımının karşılanamaması ve gerekse her iki ölçekteki verilerin Likert tipli ölçümle elde edilmesi nedeniyle DFA modelinde, Diagonal Ağırlıklandırılmış En Küçük Kareler (DWLS) tahmin metodu tercih edilmiştir (Brown, 2015). DFA sonucunda elde edilen uyum indekslerinin gerek uygulama öğretmeni yeterlilik ölçeği için ( $\chi^2/sd= 2.83$ ,  $CFI= .98$ ,  $TLI=.99$ ,  $NNFI= .98$ ,  $RMSEA= 0.05$  90%CI [0.05, 0.06]  $SRMR= 0.06$ ) ve gerekse öğretmen adayları için mesleki yeterlik ölçeği için ( $\chi^2/sd= 1.79$ ,  $CFI= .99$ ,  $TLI=.99$ ,  $NNFI= .98$ ,  $RMSEA= 0.03$  90%CI [0.03, 0.04]  $SRMR= 0.06$ ) çok iyi düzeyde olduğu görülmüştür (Hu & Bentler, 1999). Ayrıca ölçeklerin yakınsak geçerliliğine ilişkin açıklanan ortalama varyans (AVE) değerlerinin uygulama öğretmeni yeterlilik ölçeği için 0.53 ile 0.75, öğretmen adayları için mesleki yeterlik ölçeği için 0.61 ile 0.76 arasında

değiştirdiği ve her iki ölçeğin iraksak geçerliğine ilişkin Heterotrait-Monotrait Oran (HTMT) değerlerinin 0.90'dan küçük olduğu tespit edilmiştir. Bu sonuçlar ölçeklerin yapısal geçerliklerini desteklemektedir (Hair vd., 2010; Hancock & Mueller, 2001). Ölçeklerin güvenilirliğine yönelik Cronbach alfa iç tutarlık katsayıları; uygulama öğretmeni yeterlilik ölçeği için .84 ile .96 arasında, öğretmen adayları için mesleki yeterlik ölçeği için ise .86 ile .97 arasında hesaplanarak ölçeklerin oldukça güvenilir olduklarını göstermiştir (Nunnally & Bernstein, 1994).

Ölçeklerin yapısal geçerlik ve güvenilirlikleri sağlandıktan sonra beden eğitimi öğretmen adaylarının, alt boyutlarda uygulama öğretmenlerinin yeterliklerine ilişkin görüşleri ile toplam mesleki yeterlik algıları arasında ilişki, Sperman's rho korelasyon analizi ile incelenmiştir. Tablo 3'teki analiz sonuçlarına göre; beden öğretmen adaylarının mesleki yeterlik algıları ile uygulama öğretmenlerinin; sınıf yönetimi ( $r = 0.63$ ,  $p < 0.01$ ) alt boyutunda gözlemedikleri yeterlikleri arasında pozitif yönde yüksek düzeyde, gözlem ( $r = 0.48$ ,  $p < 0.01$ ), mesleki rehberlik ( $r = 0.56$ ,  $p < 0.01$ ) ve uygulamaya hazırlık ( $r = 0.54$ ,  $p < 0.01$ ) alt boyutlarında gözlemedikleri yeterlikleri arasında pozitif yönde orta düzeyde anlamlı ilişkilerin olduğu görülmektedir.

**Tablo 3.** Korelasyon analizi sonuçları

|                         | Sınıf yönetimi | Gözlem | Mesleki rehberlik | Uygulamaya hazırlık |
|-------------------------|----------------|--------|-------------------|---------------------|
| Mesleki yeterlik algısı | 0.63**         | 0.48** | 0.56**            | 0.54**              |

\*\* $p < 0.01$

Korelasyon analizi sonuçları, değişkenler arasında anlamlı ilişkilerin bulunduğunu göstermektedir. Bu bulguların ardından çoklu doğrusal regresyon analizine geçilmiştir. Analizde, bağımsız değişkenler arasında çoklu doğrusallık (multicollinearity) probleminin oluşmadığı ( $VIF < 10$ ; Tolerance  $> 0.2$ ), incelenen standartlaştırılmış kalıntılara ait grafiğe göre eşdeğişkenlik (homoscedasticity) varsayımının ihlal edilmediği görülmüştür (Field., 2013). Enter metodu ile yürütülen çoklu doğrusal regresyon analizi sonuçları Tablo 4'te sunulmuştur. Analizde, beden öğretmen adaylarının uygulama öğretmenlerinde sınıf yönetimi, gözlem, mesleki rehberlik ve uygulamaya hazırlık boyutlarında gözlemedikleri yeterlikler yordayan, mesleki yeterlik algıları ise yordanan değişken olarak yer almıştır. Analiz sonucunda elde regresyon modelinin anlamlı olduğu ( $F(4, 668) = 109.89$ ,  $p < 0.01$ ) ve beden eğitimi öğretmen adaylarının uygulama öğretmenlerinde gözlemedikleri yeterliklerin, mesleki yeterlik algılarındaki değişimin %39.3'ünü (Adj.  $R^2 = .393$ ) açıkladığı tespit edilmiştir. Standardize edilmiş yordama gücü katsayılarına göre; ise uygulama öğretmenlerinin sınıf yönetimi ( $\beta = .37$ ,  $p < .001$ ,  $t = 6.22$ ) ve mesleki rehberlik ( $\beta = .38$ ,  $p < .001$ ,  $t = 6.92$ ) boyutlarında gözlemlenen yeterlikleri, beden eğitimi öğretmen adaylarının mesleki yeterlik algılarını pozitif yönde anlamlı olarak yordarken, gözlem ( $\beta = -.08$ ,  $p > 0.05$ ,  $t = -1.10$ ) ve uygulamaya hazırlık ( $\beta = .03$ ,  $p > 0.05$ ,  $t = .05$ ) boyutlarında gözlemlenen yeterlikleri anlamlı olarak yordamamaktadır.

**Tablo 4.** Çoklu doğrusal regresyon analizi sonuçları

|                     | B     | SH   | $\beta$ | t     | p    |
|---------------------|-------|------|---------|-------|------|
| Sabit               | 40.46 | 2.14 |         | 18.88 | 0.00 |
| Sınıf yönetimi      | 1.21  | 0.19 | 0.37    | 6.22  | 0.00 |
| Gözlem              | -0.27 | 0.24 | -0.08   | -1.10 | 0.27 |
| Mesleki rehberlik   | 1.32  | 0.19 | 0.38    | 6.92  | 0.00 |
| Uygulamaya hazırlık | 0.01  | 0.18 | 0.00    | 0.05  | 0.96 |

$F(4, 668) = 109.89$ ,  $p < 0.01$ ,  $R = .63$ , Adj.  $R^2 = .393$

## SONUÇ

Bu araştırmanın bulguları beden eğitimi öğretmen adaylarının, öğretmenlik uygulaması sürecinde uygulama öğretmenlerinde gözlemedikleri yeterlikleri ile mesleki yeterlik algıları arasında bir ilişki olduğuna işaret etmektedir. Öğretmen yetiştirme sürecinin en kritik aşamalarından biri olan öğretmenlik uygulaması, öğretmen adaylarının teorik bilgilerini pratiğe dökmeye fırsatı buldukları önemli bir deneyimdir. Beden eğitimi öğretmen adayları yürütülen çalışmalar sınırlı kalsa da genel olarak öğretmenlik uygulamasına katılan öğretmen adayları ile yürütülen araştırmalarda, uygulama öğretmenlerinin danışmanlık rolüne vurgu yapılmaktadır. Bircan (2024) çalışmasında, öğretmen adaylarının %95'inin uygulama öğretmenlerinin rol model olduğunun bilincinde olmaları ve planlı ders anlatımını teşvik etmelerini beklediklerini belirlemiştir. Ünal ve Akdeniz (2024) nitel araştırmalarında, öğretmen adaylarının mesleğe yönelik tutumlarının etkilenme durumlarına ilişkin görüşlerini "olumlu etki" kategorisi altında, mesleğe yönelik tutumlarını etkileyen durumlara yönelik görüşlerini ise dört kategori altında toplamışlardır. Bu kategorilerden birinin, uygulama öğretmeniyle iletişim konusunda uygulama öğretmenleriyle ilgili durumlardır. Bir başka araştırmanın bulgularına göre (Çetin, 2018), öğretmen adaylarının uygulama öğretmenlerini, öğretmenlik uygulaması dersinin içeriği hakkında bilgili, mesleki iletişim becerisi yüksek, rehberlik rolünü üstlenmek için hazır ve istekli bulmakta, fakat okul içi gözlem ve öğretim süreci gerçekleştirme aşamalarında, öğretmen adaylarının rehberlik beklentilerinin ve ihtiyaçlarının, uygulama öğretmeni tarafından daha detaylı irdelenmesi gerektiği belirlenmiştir. Can ve Can (2024), beden eğitimi ve spor öğretmen

adaylarının öğretmenlik mesleğine karşı yaklaşımlarını inceledikleri çalışmalarında ise öğretmen adaylarının kişisel ilgileri temelinde ve eğitim hayatlarında karşılaştıkları öğretmenlerinin etkisi ile mesleki tercihlerini yaptıkları görülmüştür.

Öğretmen adaylarının, uygulama öğretmenleri ile yapılan iş birliği ve sağlanan geri bildirim yeterliklerini yüksek algıladıklarında, kendi mesleki yeterlik algılarının arttığını, öğretmenlik uygulamasıyla birlikte öğretmen adaylarının özellikle sınıf yönetimi inançlarının değişme eğiliminde olduğunu raporlayan çalışma bulguları da mevcuttur (İyson & Sezer, 2019; Horvath vd., 2018; Kösterelioğlu & Kösterelioğlu, 2008; Yılmaz & Çavaş, 2008). Alanda yürütülen bazı araştırmalarda ise, uygulama öğretmenlerinin ve öğretmen adaylarının etkili bir mentörlük süreci için sahip olmaları gereken özellikler ve gerçekleştirmeleri gereken roller açısından yeterli olmadığına ilişkin bulgular da mevcuttur (Canlı, 2023; Sarıkaya, 2019). Örneğin Kasap vd. (2022) çalışmalarında, aday öğretmenlerin neredeyse tamamının uygulama öğretmenlerinin kendilerine model olamayacak kadar yetersiz olduğunu ve aday öğretmenleri derse almaya istekli olmadıklarını çünkü ders için gerekli yöntem ve becerilerle sahip olmadıklarını ifade ettiklerini belirlemişlerdir. Shulman (1986), sınıf yönetimi ve etkili iletişim yeterliklerine sahip olmayan öğretmenlerin, uygulama sürecinde rol model olamayacağını öne sürmektedir. Bu nedenle bir mentör olarak uygulama öğretmenlerinin uygulama sürecinde gerekli pedagojik ve alan bilgisi yeterliklerine sahip olması gerekmektedir (Inzer & Crawford, 2005; Walshaw, 2004). Bu noktada Sarıkaya (2019), danışman/uygulama öğretmenlerinin tercihen deneyimli ve mesleğinde başarılı bulunan gönüllü öğretmenler arasından seçilmesi gerektiğini vurgulamaktadır. Çünkü uygulama öğretmenlerinin deneyim ve bilgi düzeyleri, öğretmen adaylarının kendilerine olan güvenlerini artırmakta ve mesleki yeterlik algılarını olumlu yönde etkilemektedir (Alptekin & Kingır, 2021; Uçar, 2017).

Sonuç olarak bu çalışmada, öğretmen adaylarının mesleki algıları ile uygulama öğretmenlerinin yeterlikleri arasında güçlü bir ilişki olduğu ve literatürdeki araştırma bulgularıyla uyum gösterdiği görülmüştür. Öğretmen adaylarının mesleki algıları, onların eğitim süreçlerine ve gelecekteki mesleklerine yönelik tutumlarını, öz-yeterlik inançlarını, motivasyonlarını ve beklentilerini şekillendirmesi nedeniyle, uygulama öğretmenlerinin; alan bilgisi ve pedagojik yeterlikler, sınıf yönetimi, iletişim ve rehberlik becerileri gibi mesleki gelişim süreçlerine ilişkin yeterliklerini artırmaları beklenmektedir (Bandura, 1997; Burke vd., 2009; Eti & Karaduman, 2020; Shields vd., 2021; Tschannen-Moran & Woolfolk Hoy, 2001). Öğretmen adaylarının mesleki algılarını güçlendirmek ve bu alandaki gelişimlerini desteklemek için şu öneriler dikkate alınabilir: (i) Öğretmen adaylarını deneyimli öğretmenlerle eşleştirecek mentörlük programları sunulabilir. (ii) Uygulama sürecinde etkileşimli eğitim yöntemlerine yer verilerek düzenli ve yapıcı geri bildirimler sağlanabilir. (iii) İmkânlar dahilinde öğretmen adaylarına yönelik sürekli mesleki gelişim atölyeleri ve seminerler düzenlenerek, adayların pedagojik yeterliklerini artırmaları ve mesleki algılarını geliştirmelerine katkı sağlanabilir. (iv) Öğretmen adaylarının, meslektaşları ve eğitimcileri etkileşimde bulunabilecekleri topluluklar oluşturulmaları teşvik edilebilir. (v) Öğretmen adaylarının, öğretim uygulamaları ve deneyimleri hakkında yansıtıcı günlükler tutmaları teşvik edilerek adayların kendi yeterlik algılarını değerlendirmelerine ve mesleki gelişimlerini izlemelerine yardımcı olunabilir.

Her çalışmada olduğu gibi bu çalışmanın da bazı sınırlılıkları bulunmaktadır. Öncelikle bu çalışma Türkiye bağlamında sonuçlar üretmiştir. Bu durum, bulguların uluslararası genelleştirilebilirliğini kısıtlamıştır. İkincisi, araştırma yalnızca beden eğitimi öğretmenleri adayları ile gerçekleştirilmiştir. Bu nedenle, farklı branşlardaki adayların mesleki algıları ile uygulama öğretmenlerinin yeterlikleri arasında ilişki, nicel ve/veya nitel yaklaşımlarla sistematik olarak yeni araştırmalarla incelenebilir. Üçüncüsü bu araştırma kesitsel sonuçlar üretmiştir. Boylamsal çalışmalarla araştırma konusu daha derinlemesine incelenebilir. Dördüncüsü veri toplama sürecinde kullanılan ölçeklerin geçerliliği ve güvenilirliği, katılımcıların öz bildirimlerine dayandığı için yanlılık riski taşıyabilir. Bu noktada katılımcıların, sosyal istenebilirlik etkisi nedeniyle gerçek algılarını yansıtmada konusunda tereddüt yaşayabilecekleri göz önünde bulundurulmalıdır. Bu sınırlamalar, elde edilen bulguların yorumlanmasında dikkate alınmalı ve gelecekteki araştırmalarda daha geniş ve çeşitli örneklerle çalışılması önerilmektedir.

# BİPOLAR TÜKETİCİ DAVRANIŞININ YENİ NESİL ALIŞVERİŞ DENEYİMİNE ETKİSİ

Öğr. Gör. İlknur ÇAKAR  
ilknurcakar@subu.edu.tr

Doç. Dr. Ayda SABUNCUOĞLU İNANÇ  
aydainanc@sakarya.edu.tr

## ÖZET

Tüketen bir varlık olan insan davranışlarının çeşitli faktörlere göre değişkenlik gösterdiği bir gerçektir. Günlük hayatın vazgeçilmez olan zorunlu tüketim ürünleri ve gösteriş kültürünün belirleyicisi olan lüks tüketim ürünleri bireyler arasında farklılık oluşturmaktadır. Bu çalışmada, yeni bir kavram olan bipolar tüketicilerin alışveriş deneyimlerine yönelik fiili davranışlarını tespit etmek ve bu deneyimleri anlamlandırmak amaçlanmıştır. Bu çerçevede, bilgiye kolay erişen yeni nesil tüketicilerin özellikle Covid-19 pandemi dönemi olan Mart 2020 öncesi ve sonrasında ortaya çıkan duygu-durum değişkeninin tüketim alışkanlıklarında meydana getirdiği değişiklikleri ortaya çıkarmak hedeflenmiştir. Tüketicilerin demografik özelliklerine, gelir durumuna ve ürünlerin fiyat politikasına göre tüketim deneyimlerinin incelendiği bu çalışmada nitel araştırma yöntemi kullanılmıştır. Literatür taraması sonucunda oluşturulan görüşme soruları ve derinlemesine mülakat yöntemi ile veriler toplanmıştır. Elde edilen verilerden; bireylerin zorunlu ve sık tekrarlı tüketim ürünlerinde fayda-fiyat değerlendirmesine öncelik verdikleri tespit edilmiştir. Özellikle Mart 2020 sonrasında bireylerin, alışveriş motivasyonunun ihtiyaç özelinde şekillendiği fakat kendilerini ödüllendirdikleri ürünlerde fiyat değişikliklerini dikkate almadıkları gözlemlenmiştir. Bu çalışma, bipolar tüketici kavramının literatüre kazandırılması ve yeni nesil alışveriş deneyimindeki yansımalarını ilişkilendirebilme açısından önemlidir.

**Anahtar Kelimeler:** Tüketici Davranışı, Yeni Nesil Alışveriş Deneyimi, Bipolar Tüketici

## GİRİŞ

Tüketimin öznesi olan insan davranışını anlamlandırabilmek adına farklı disiplinlerde incelenen sonuçları ele almak oldukça önemlidir. İnsan ve tüketim konusunda öngörülebilir bulunabilmenin yolu, her iki kelimenin de anlam ötesi farkındalığına ulaşabilmektir. Yüzyıllar boyu süregelen tüketim davranışının çeşitli kişisel ve çevresel faktörler sebebiyle şekillendiği varsayırsa psikolojik açıdan incelenmesi gereken ciddi bir durum olduğu kabul edilmektedir. Özellikle, Türkiye’de Covid-19 vakalarının ilk görüldüğü Mart 2020 sonrasında ele almak değişen yönelimleri keşfetmek açısından faydalıdır.

Tercih, duygu, inanç, tutum gibi faktörlerin satın alma davranışına sevk etmesi ve tüketimi tetiklemesiyle bireyler arasında farklılık oluşturmaktadır. Bunun yanında yaşam standardı, gelir ve eğitim düzeyi, alışkanlıklar ve deneyimler de satın alma performansına etki etmektedir. Tüm bu değişkenler haricinde bireydeki satın alma davranışının kontrolünü ele geçiren psikolojik faktörlerden biri olan duygu-durum bozukluğu yani bipolar kavramı tartışılmaya başlamıştır.

Tüketicilerin duygu-durum özelinde yaşadığı git-gel’ler ile rutin tüketimleri dahil neredeyse tüm tüketimlerinde ürünler, markalar ve miktarlar arasında bir kıyaslama yaptığı gözlemlenmektedir. Tüketim davranışında meydana gelen değişim yönelimlerinin sebepleri kadar sonuçları da ortaya çıkan yeni nesil tüketim davranışının oluşmasına ve tüketim değerlerini anlamaya katkı sağlamaktadır.

### 1. Tüketim ve Yeni Nesil Alışveriş Deneyimi

İhtiyaçların giderilmesi olarak tanımlanan tüketim kavramı için benzer ve sayısız tanımlama yapılmaktadır. Üretilmiş şeylerin kullanılması ve harcanması (Püsküllüoğlu, 2003), bedeli karşılığında bir ihtiyacın giderilmesi (Altunışık vd., 2020) ve tüketicinin kaynaklarını ihtiyaç ve haz özelinde kullanması, tüketime karşılık gelmektedir. Tüketim, aynı zamanda tüketen birey için bir motivasyon kaynağıdır. Tüketimde amaç, ihtiyacın giderilmesiyken Fichter’e göre (2019) önemli olan bu ihtiyacın nasıl belirlendiği ve nasıl giderildiğidir. Yaşanılan çağda ihtiyaçların medya tarafından belirlendiğini ve genellikle şursuz alışveriş deneyiminin yaşandığını belirten Baudrillard (2015), tüketimin kişiselleştirilmiş bir olgu olduğunu ifade etmektedir.

İhtiyaçlar temelinde şekillenen tüketim için Maslow’un (1943) ihtiyaçlar hiyerarşisi modelinde; bireylerin fizyolojik, güvenlik, sosyal, saygı ve kendini gerçekleştirme ihtiyaçları yer almaktadır (Koç, 2019). Bireyin yaşamını devam ettirmesi hatta anlamlı kılması adına edindiği araçlar ve edinim şekli sayesinde bir alışkanlık-kültür oluşmaktadır (Karaca, 2010). Böylece, bireyde davranış oluşmakta ve deneyim şekillenmektedir. Kotler ve Armstrong (2018); kültürel, sosyal, kişisel ve psikolojik faktörler ile tüketici davranışlarının şekillendiğini ve belli amaçlara ulaşmak adına tüketimin gerçekleştiğini ifade etmektedirler.

Bireylerin satın alma süreçlerinde etkili olan tüketimin geleneği, tarzı, biçimi (Odabaşı, 2013) zaman içinde evrilmekte ve istek, ihtiyaç, amaç dışında maddi varlığın yansıtılması motivasyonunu karşılamaktadır. Özellikle yaşanan dijital çağda, her şeyin hızla harcandığı kabulü ile tüketim deneyiminde toplumsal bir değişmeden söz

etmek mümkündür. Teknolojik gelişmeler ve hızla değişen tüketim olgusu sebebiyle yeni bir alışveriş deneyimi ortaya çıkmıştır. Dijital platformlar ve mobil uygulamaların hayatın merkezinde yer alması, yaşanan deneyimin hız ve değişkenliğini ifade etmek için yeterlidir. Dijital dünyanın imkanları ve bireylerin ekonomik sahiplikleri ile yeni nesil bir alışveriş modeli (kültürü) tartışılmaktadır. Özellikle günümüzde mobile taşınan uygulamalar ve pazarlama modelleri ile bu değişim de desteklenmektedir.

Pantano ve Priporas'a (2016) göre; akıllı mobil cihazlar ile ödeme yaparak işletmelerden ürün-hizmet satın almayı sağlayan kanallar, yeni nesil alışveriş platformları olarak adlandırılmaktadır. Ürün ve hizmetin tüketiciye kolay ulaşması, kişisel ve etkileşimli olması ile özellikle yeni nesil tüketicilerin sıklıkla deneyimlediği alışveriş şeklinin her geçen gün yaygınlaşmasına kaynaklık etmektedir. Mobil cihazlar kullanılarak yapılan alışveriş, zaman ve mekân açısından tüketimi kolaylaştırmakta ve artırmaktadır (Rangaswami ve Gupta, 2000).

Benzer bir gerekçe de, tüketicilerin sosyal medya kullanımları ve gösterimleridir. Günümüzde tüketim tarzının değişmesinin en önemli belirleyicilerinden olan sosyal medya ve tüketim dengesi için literatürde oluşan genel kanı; sosyal medya kullanımının tüketim davranışını artırdığıdır. Sabuncuoğlu'na göre (2015), tüketicilerin sosyal medya aracılığıyla tüketimlerini göstermeleri ve beğeni olgusunun teşviki ile tüketim zincirinin oluşturulması, her zaman daha fazla tüketimi teşvik edici davranışları oluşturmaktadır.

## 2.Yeni Bir Tüketici Kavramı Olarak Bipolar Tüketici

Bipolar Bozukluk; mani, hipomani ya da depresyon dönemlerinde açığa çıkan duygu-durum değişimlerinin yaşandığı psikolojik bir bozukluk (Stange ve ark. 2011) olarak tanımlanmaktadır. Bireyin kendisini, ailesini ve toplumsal yaşamını derinden etkileyen bir duygu-durum bozukluğu olan BB, önemli bir yaşamsal süreci gerektirmektedir (Kırkpınar, 2012). BB tanısı verilen bireylerde; dikkatini daim kılamama veya dikkat dağınıklığı, düzensiz düşünüş ve gelişim becerileri meydana geldiği görülmektedir. Köroğlu ve Güleç'e göre (2007), özellikle bozukluğun ilk evrelerinde yaygın olarak gerçeklikle bağdaşmayan, abartılı neşe, mutluluk, özgüven, enerji düzeyi, hareketlilik, dikkat ve uyku ihtiyacında azalma görülmektedir. Ya da bu hallerin tam tersi hırçınlık, taşkınlık, öfke ve saldırganlık da açığa çıkabilmektedir.

Bireylerin içinde bulunduğu duygu-durum değişikliği, tüketim özelinde satın alma niyetlerindeki tutumu da etkilemektedir. Tüketicinin kendini değerli hissetmesi adına gerçekleştirdiği tüketim davranışından elde ettiği değer, benimsediği düşünüş ve yaşayış ile özdeşleşmektedir. Tüketicinin bir ürüne sahip olmak ya da birini diğerine tercih etmek için yüzlerce sebebi bulunabilir. Üründen elde edilecek değer bireydeki satın alma niyetini teşvik etmektedir. BB bozukluğu olan bireylerin kendilerini değerli hissetmeleri adına bipolar tüketimi gerçekleştirdikleri tartışılmaktadır.

Yeni nesil alışveriş deneyimi sayesinde bilinçli sayılan tüketicilerin ürünlerde fayda, fiyat, değer çerçevesinde yaptıkları mübadele açığa çıkmaktadır. Özellikle zorunlu ve lüks tüketim ürünlerinin maruz kaldığı bu durumda galip gelen ya da değişmeyen tek şeyin; bireyin kendine ödül olarak sunduğu özel tüketim ürünleri olduğu görülmektedir. Alışveriş öncesinde yapılan araştırma ve esnasında yaşanan karşılaştırma ile bireyin tercihlerinde bütçe ve hazzıya göre anlık değişimler yaşanmaktadır. Bu durum özellikle ülkenin içinde bulunduğu ekonomik koşullar, bireyin satın alma gücü ve bireyin tüketimden elde ettiği maddi-manevi doyumlar ile şekillenmektedir. Belirtilen değişkenler ve yaşanan duygu-durum bozukluğunun etkileşimi ile tüketim kültürü içinde yeni bir kavramı açığa çıkardığı gözlemlenmektedir. Bipolar tüketici olarak tanımlanan bu kavramla bireylerin yeni nesil alışveriş deneyimlerinde tercihlerini nasıl, hangi gerekçeler ve amaçlarla şekillendirdiği incelenmeye değer görülmektedir. Farklı yaşam biçimlerinde farklı sonuçlar doğuran bipolar bozukluğun tüketiciye, tüketime, tüketim deneyimine ve kültürüne etki ettiği kabul edilmektedir.

## YÖNTEM

Bu araştırmada sosyal bilimlerde sıklıkla tercih edilen nitel araştırma yöntemi kullanılmıştır. Veriler, literatür taraması, alan çalışmalarında kullanılmış ölçeklerden elde edilmiş sorular ve derinlemesine mülakat yöntemi ile elde edilmiştir. Tüketici bakış açısını, tüketim deneyimini ve satın alma eğilimindeki duygu-durum değişikliğini tespit edebilmek amacıyla 3 erkek ve 3 kadın ile yüz yüze görüşmeler yapılmıştır. Ankete yanıt veren bireylerin derinlemesine görüşme sorularına içtenlikle yanıt verdiği varsayılmaktadır. Bu araştırma, Sakarya ili ve 9 – 12 Ocak 2023 tarihleri ile sınırlandırılmaktadır.

**BULGULAR VE YORUM****Katılımcıların Demografik Özellikleri**

Araştırmada görüşleri alınan katılımcılar kodlanıp demografik özellikleri ile Tablo.1’de gösterilmiştir.

**Tablo 1. Katılımcıların Demografik Özellikleri**

| Katılımcı | Cinsiyet | Yaş | Eğitim          | Medeni Durum | Meslek-İş    | Çalışma Yılı | Aylık Ort. Gelir |
|-----------|----------|-----|-----------------|--------------|--------------|--------------|------------------|
| K1        | Kadın    | 38  | Lisansüstü (DR) | Evli         | Akademisyen  | 4            | 20,000.00 TL     |
| K2        | Kadın    | 45  | Lisans          | Evli         | Ev Hanımı    | 15           | 10,000.00 TL     |
| K3        | Kadın    | 37  | Lisansüstü (DR) | Evli         | Akademisyen  | 2            | 20,000.00 TL     |
| K4        | Erkek    | 29  | Lisans          | Evli         | Memur        | 7            | 11,000.00 TL     |
| K5        | Erkek    | 44  | Lisans          | Evli         | Yönetici     | 19           | 50,000.00 TL     |
| K6        | Erkek    | 28  | Lisansüstü (YL) | Bekar        | Satış Müdürü | 7            | 25,000.00 TL     |

Tablo 1’e göre; araştırmaya katılan katılımcıların 3’ü kadın, 3’ü erkektir. Kadın katılımcıların 37-45 yaş aralığında, erkeklerin ise 28-44 yaş aralığında olduğu görülmektedir. Kadınların evli, erkeklerin ise 2’si evli, 1’i bekardır. Erkek katılımcıların tümü özel sektör, kadın katılımcıların tümü ise kamu sektörü çalışandır. Katılımcı kadınların eğitimleri, lisans ve doktora düzeyinde; erkeklerin eğitimleri ise lisans ve yüksek lisans düzeyindedir. Kadın katılımcıların ortalama çalışma yılı; 7 iken erkek katılımcıların ortalama çalışma yılı; 11’dir. Ortalama gelir durumuna bakıldığında, kadınların 16,666.00 TL, erkeklerin ise 28,666.00 TL gelirinin olduğu görülmektedir.

**Katılımcıların Değerlendirme ve Yorumları**

Mart 2020 öncesi ve sonrasındaki tüketim alışkanlıklarının karşılaştırılıp incelendiği sorularda K1; özellikle gıda, temizlik, giyim ve sağlık ürünlerinin kendisi için zorunlu ürün kategorisinde yer aldığı belirtmiştir. Mart 2020 öncesinde bu ürünler için fiyat değişikliğini dikkate almazken, şu an fiyat yüksekliklerinin kendisini ürünlerdeki muadil markalara yönelttiğini ifade etmiştir. İhtiyaç dışı alışveriş yapma durumuyla ilgili Mart 2020 öncesinde ihtiyacı giderme ihtimali olan ürünleri kaçırmazken şimdilerde sadece ihtiyaç gereği olan ya da %100 ihtiyaca cevap verebilecek ürünlerin satın almaktadır. *“Elbette bazı markaları kullanmak kendimi rahat hissettiriyor fakat bende bir sosyal sınıf aidiyeti oluşturmuyor”* söylemiyle marka beklentisinin olmadığı anlaşılmaktadır. K1; *“genelde planlı ve hesaplı alışveriş yaparım, zevkimden ziyade bütçeme göre alışverişini benimserim”* ifadesiyle bilinçli tüketici kimliğini yansıtmaktadır.

*“Kendimi ödüllendirdiğim bazı ürünler var ve bunlarda fiyat karşılaştırması pek yapmam. Hatta bu ürünlerde marka değişikliğine de pek gitmem. ve bu ürünlerle ilgili sosyal medya paylaşımları asla yapmam. Sosyal medya hesaplarım var ve hesaplarımı aktif kullanıyorum fakat tükettiğim ürünleri sergilemekten hoşlanmam, bu konuda kendime sınırlamalarım var”* söylemiyle sosyal medyadaki konumuyla ilgili de fikir vermektedir. Ürünlerin ihtiyaca uygunluk, kalite ve mutluluk hissi sıralamasıyla tercihlerini belirlediğini söyleyen K1, satın aldığı ürünler tarafından çevresine kendisiyle ilgili bir fikir verdiğini düşünmektedir. Özendiği yaşam tarzının gereği olan ürünleri satın aldığı ve bunda hiçbir şekilde fiyat araştırmasına girmediğini fakat özellikle sık tekrarlı alınması gereken zorunlu tüketim ürünlerinde fayda-fiyat değerlendirmesi yaptığını ifade etmiştir.

K2; Mart 2020 öncesinde ve sonrasında, zorunlu-lüks ürün kategorisinin kendisinde herhangi bir değişikliğe sebep olmadığını ve marka tercihlerinde de sabit fikirli olduğunu dile getirmiştir. Bunun en büyük sebebinin kendisinin alışveriş tutkunu biri olmadığını, ihtiyaç dışı alışverişini benimsemediğini ifade etmiştir. *“Her zaman az, öz ve kaliteli ürünleri satın almaktan yanayım”* söylemiyle alışveriş deneyimi konusunda sabit fikirli olduğu anlaşılmaktadır. Lüks tüketim ürünlerinde zaman kıyaslamasından çok medeni durum kıyaslaması yaparak, evli ve bekar tüketici olarak kendisinde meydana gelen duygu-durum değişikliğini belirtmiştir. *“Hesapsızca alışveriş yapmayı tercih etmiyorum ve mantıklı da bulmuyorum”* ifadesiyle planlı bir tüketim kültürünü benimsediği anlaşılmaktadır. Tüketimleriyle ilgili herhangi bir sosyal medya paylaşımı yapmadığını belirten K2; marka fiyat kıyaslamasını ürünün kalitesine ve kullanım zamanına göre değerlendirmektedir.

*“Alışveriş yaparken kendini kaptıranlardan değilim ayrıca bütçeme ve zevkime uygun alışveriş yapmayı tercih ederim”* diyen K2’nin Mart 2020 öncesi ve sonrasında alışveriş alışkanlıklarında herhangi bir değişiklik yaşamadığı görülmektedir. Önceliğini her zaman zorunlu tüketim ürünlerinden yana kullanan K2, alışverişin keyif ve zevk işi olduğunu fakat ihtiyaçların bütçeye oranlanarak karşılanması gerektiğini savunmaktadır.

Araştırmaya katılan K3, Mart 2020 öncesi ve sonrasında zorunlu tüketim ürünlerinde marka, sıklık ve miktar bazında değişiklik yaptığını ifade etmiştir. Özellikle giyim ürünlerinde bu değişikliği yaşayan K3; *“Mart 2020 öncesinde ihtiyacım olmasa da kıyafet, ayakkabı, takı gibi ürünleri alırdım fakat şimdi sadece ihtiyacıma*

*odaklanıyorum*” söylemiyle görüşünü desteklemektedir. *“Bir ürünü almam için onu beğenmem yeterliydi fakat şimdi beğeni yanında bütçemi de değerlendiriyorum hatta bazı ihtiyaçlarımı öteliyorum”* diyen K3, ekonomik kısıtların alışveriş alışkanlığını değiştirdiğini belirtmiştir. Örnek olarak: Mart 2020 öncesinde genellikle her hafta sonu gezi ve dışarıda yemek yeme alışkanlıklarının olduğunu, Mart 2020 sonrasında ise bu tüketimin şeklinin ve sıklığının değiştiğini ifade etmiştir. *“Robot süpürge aldım ama bunu bir gösteriş ya da statü sağlama amaçlı almadım. Bana kolaylık olsun ve kendime ayırdığım zaman artsın diye satın aldım”* ifadesiyle, bir ürünün kişiliğine ve imajına bir değer katmadığını belirtmiştir. Bir ürünü ilk önce kalitesine göre değerlendiren K3, kendini ve yaşam tarzını yansıtan ürünler tercih ettiğini ve bunu yaparken de fayda-fiyat değerlendirmesini önemseydiğini ifade etmiştir.

Kişisel bakım, gıda ve giyim ürünlerinin kendisi için zorunlu tüketim olduğunu belirten K4, özellikle çalışıyor olmasının kıyafet konusunda bu zorunluluğu doğurduğunu ifade ediyor. *“Mart 2020 öncesindeki fiyat değişkenlikleri benim tercihlerimi hiç değiştirmiyordu fakat şimdilerde israf boyutunu düşünmeye başladım. Ne zaman ki fiyatlar yükseldi bütçeler daraldı bende israf etme kaygısı başladı ve muhtemel atacağım bir ürüne para harcamak istemiyorum”* diyen K4, ürün tercihlerinde zorunlunun zorunlusu kategorisinin kendisinde oluştuğunu belirtti. Mart 2020 sonrasında yaşanan fiyat yüksekliklerinin K4’ü bilinçli tüketici olma eğilimine itmiştir. *“Bir ürünü alacakken gerçekten ihtiyacım var mı? diye sorguluyorum”* söylemiyle K4’ün tüketim şeklini dengelemeye çalıştığı anlaşılmaktadır. Satın aldığı ürünlerin kendisine statü, sosyal sınıf katkısı sağlamadığını ürünleri markaları yada sosyal faydalarından dolayı değil de kendisine sağladığı kolaylık sebebiyle satın aldığını belirtmiştir. Mart 2020 öncesinde ihtiyaç dışı alışveriş yapma eğiliminde olduğunu fakat fiyat değişikliklerinin tüketim alışkanlığında herhangi bir etkisinin olmadığını belirtmiştir.

*“Herhangi bir ürünü kullanıyor ya da tüketiyor olmam beni değerli ya da değersiz yapmaz”* ifadesiyle, kullandığı ürünün kendisine ve kişiliğine artı bir değer katmadığını düşündüğünü göstermektedir. *“Lüks tüketim özellikle tercihim değil ve marka takıntım yok”* söylemiyle K4; kullandığı ürünleri sadece araç olarak görmektedir. Hesapsız ve plansız alışveriş yapma eğiliminde olmadığını fakat alışveriş zevklerinde kendini kısıtlamadığını belirtmiştir. *“Sevdiğim ve kullandığım ürünlerde fiyatlarına önem vermediğimi ve sorgulamadığımı şu an daha iyi anladım”* diyen K4, tercihlerinde fiyatların etkili olmadığını belirtmiştir. Özel hayatın gizliliğini önemseyen K4, tükettiği ürünlerle ilgili sosyal medyada herhangi bir paylaşım yapmadığını, tüketimin yaş ve deneyim özelinde duygu-durum değişikliğinde etkili olduğunu ifade etmiştir. Önce zevkini sonra bütçesini düşünerek alışveriş yapan K4, alışveriş tetikleyicisinin tamamen ihtiyaç olduğunu belirtmiştir.

Gıda, kişisel bakım, tütün ve alkol gibi ürünleri zorunlu tüketim kategorisine alan K5, *“fiyat değişiklikleri olsa da kullandığım ürünleri, alışkanlıklarımı pek değiştirmem”* ifadelerini kullanmıştır. İhtiyaç dışı alışveriş deneyiminde usta olduğunu belirten K5’in özellikle tatil dönemlerindeki harcamalarında pek kısıtlama yapmadığı anlaşılmıştır. Kişisel değerleriniz satın alma davranışınızı etkiler mi? ifadesine; *“elbette, bireysel seçimlerin kendime yakıştırdıklarımı almak, giymek ya da tüketmek satın alma davranışımı etkiler. Kıyafet özelinde düşüneneceksek, alacağım ürün önce kendime yakışmalı”* yanıtını vermiştir. Bu söyleme ilave lüks tüketimden ve kendini mutlu hissettiren ürünlerden vazgeçmediğini söyleyen K5, hesapsız ve plansız alışverişini Mart 2020 öncesinde daha sık yaptığını, günümüzde ise bu konuda biraz daha dikkatli davrandığını ifade etmiştir.

Satın aldığı ürünlerin, kendisini mutlu ettiği ve yaşamını kolaylaştırdığı için kendisini değerli hissettirdiğini dile getirmiştir. K5: *“Bazı ürünlerde marka-fiyat karşılaştırması tabii ki yaparım. Bunlar özellikle uzun vadeli kullanacağım ev, araba, elektronik ve teknolojik ürünler diyebilirim”* açıklamasıyla, zevkine ve bütçesine göre hareket eden bir tüketici olduğunu işaret etmektedir. Tüketiminin yaşamını ve kişiliğini yansıttığını düşünen K5 için zorunlu ve lüks tüketim tarzlarının birbirini ikame edebilecek durumda olmadığı anlaşılmıştır. K5’in Mart 2020 öncesi ve sonrasında yaşanan ekonomik değişimlerin bütçesini etkilediğini fakat ürün tercihlerinde değişim yapmadan tüketim sıklığını değiştirmeyi tercih ettiği görülmüştür. *“Ekonomik değişimler beni biraz daha planlı alışveriş yapmaya itti”* ifadesiyle K5’in alışveriş konusunda kararlı olduğu açığa çıkmıştır.

K6, kendisi için fiziksel ihtiyaçlarını gideren her ürünün zorunlu olduğunu ifade etmiş ve bu ürünlerde fiyat değişiklikleri sebebiyle marka tercihlerinde rahatlıkla değişiklik yaptığını belirtmiştir. *“Her zaman satın aldığım bir peynirin fiyatı aşırı yükseldiyse farklı bir peynirle değişiklik yapabilirim”* ifadesiyle bunu örneklendirmiştir. Genellikle ihtiyaç dışı alışveriş yapmayan, serbest zaman tüketimlerinde de lükse kaçmayan bir satın alma davranışını benimsediğini söyleyen K6 için alışveriş planlı ve hesaplı yapılması gereken bir davranıştır. Dolayısıyla satın aldığı ürünlerin kendisinde bir anlam oluşturmadığını ve karşısındakiler için de oluşturulması gerektiğini benimsemektedir.

Sosyal medya takipçisi olan K6, kendi paylaşımlarının genelde doğa içerikli olduğunu, tüketimle ilgili yapılan paylaşımları doğru bulmadığını ifade etmiştir. *“Alışveriş sırasında pek duygu-durum değişikliği yaşamam çünkü genelde önceden araştırır planımı yaparım, bütçemi ayarlarım ve satın alırım”* söylemiyle K6, bilinçli bir tüketici olduğunu kanıtlamıştır. Kendini ödüllendirdiği ürünlerde ise bazen opsiyonlu davrandığını belirtmiş,

zaman zaman zevkine göre hareket edebileceğini belirtmiştir. Alışverişlerindeki motivasyonun genelde ihtiyaç odaklı olduğunu ifade eden K6, “önceliğim her zaman zorunlu tüketim ürünleridir” derken bu ürünleri birbirine tercih etmediğini göstermiştir. “Son 2 yılda yaşadığımız fiyat artışları benim bütçemin küçülmesine sebep oldu ve tüketim davranışım bundan çok etkilendi. Şimdi bütçeme göre ve daha çok araştıran biri oldum, maalesef” ifadesiyle K6’nın ekonomik şartlar sebebiyle tüketim davranışının diğer katılımcılara oranla daha fazla değiştiği anlaşılmıştır.

## SONUÇ

Bipolar tüketici davranışının yeni nesil alışveriş deneyimine etkisini belirleyebilmek amacıyla yapılan bu araştırma, yeni bir kavram olan bipolar tüketici özelinde şekillenmektedir. Literatürde bu konuya dair sınırlı sayıda çalışma bulunmasına rağmen elde edilen bulgular, tüketici davranışlarının ne kadar dinamik ve bireysel özelliklere sahip olduğunu ortaya koymaktadır.

Ürün kullanımı ve tüketicinin kişisel özellik taşıdığı kabul edilerek yapılan araştırmanın bulgularına göre; gıda, temizlik, giyim, kişisel bakım ve sağlık ürünlerinin katılımcılar tarafından genellikle zorunlu tüketim kategorisinde ele alındığı saptanmıştır. Bireylerin zorunlu ve sık tekrarlı tüketim ürünlerinde fayda-fiyat değerlendirmesi yapmayı alışkanlık haline getirdikleri tespit edilmiştir. Alışverişin zevk ve keyif odaklı olduğunu kabul eden bireyler bütçelerine göre hareket etmeyi benimsemektedirler. Mart 2020 öncesi ve sonrasında ele alındığı araştırma verilerinden, özellikle Mart 2020 sonrasında alışveriş motivasyonlarının genelde ihtiyaç özelinde şekillendiği fakat mutluluk sebebi olan ve kendilerini ödüllendirdikleri ürünlerde bir değişim olduğu sonucu elde edilmiştir.

İşletmeler ve tüketiciler arasında önemli bir araç olan sosyal medya konusunda bireylerin, özel hayat ve tüketim paylaşımında bilinçli ve hassas oldukları açığa çıkmıştır. Tüketim deneyimlerini paylaşmayı tercih etmeyen bireylerin planlı ve hesaplı alışveriş yapma eğiliminde oldukları anlaşılmaktadır. Özellikle Mart 2020 sonrasında bireylerin lüks tüketim kategorisinde olan ürünlerinde tüketim sıklıklarını değiştirdikleri gözlemlenmiştir.

Bu araştırmanın önemli bulguları özetlenecek olursa;

*Pandeminin Etkisi:* COVID-19 pandemisi, tüketici davranışlarında önemli değişikliklere neden olmuş ve bireyleri daha çok ihtiyaç odaklı alışveriş yapmaya yönlendirmiştir.

*Sosyal Medyanın Rolü:* Sosyal medya, tüketici kararlarını etkileyen önemli bir faktör olarak öne çıkmaktadır.

*Bipolar Tüketici Kavramı:* Bu kavram, tüketicilerin aynı anda hem rasyonel hem de duygusal kararlar alabildiğini göstermektedir.

Sonuç olarak bu çalışma, bipolar tüketici davranışının karmaşık ve çok boyutlu bir yapıya sahip olduğunu göstermektedir. Tüketici davranışlarını anlamak için, bireylerin psikolojik, sosyal ve ekonomik faktörlerin bir araya geldiği bir bağlamda değerlendirilmesi gerekmektedir. Bu araştırma, gelecekte yapılacak çalışmalar için yeni bir perspektif sunmakta ve tüketici davranışları üzerine daha kapsamlı araştırmalara zemin hazırlamaktadır.

## **COMPARATIVE ANALYSIS OF JOB SATISFACTION AMONG STATE AND PRIVATE SECONDARY SCHOOL TEACHERS IN LIBYA**

**Noura ALHMALI ALQFAR**  
m.elborsi@gmail.com

### **ABSTRACT**

This study investigates the factors influencing job satisfaction among secondary school teachers in Libya, differentiating between state and private school contexts. Utilizing content analysis of teacher responses, distinct themes emerge, encompassing financial concerns, working conditions, colleague relationships, and the administration's role. State teachers emphasize challenges with low salaries and unsupportive environments, while private teachers highlight positive aspects such as travel opportunities and recognition. Skepticism about the administration's effectiveness is expressed by state teachers, contrasting with the importance of positive engagement for private teachers. The findings reveal nuanced differences in perceptions and point to areas requiring attention for enhancing overall teacher job satisfaction in Libya.

**Keywords:** Job Satisfaction, Secondary School Teachers, State and Private Schools, Comparative Analysis, Libya Education.

### **INTRODUCTION**

Currently, education holds significant importance as it serves as a crucial catalyst for economic and human resource development. The teaching profession and educators play a pivotal role, akin to an axle in the educational wheel, shaping and managing the entire education system. The effectiveness of a teacher directly influences the quality of the education system. Additionally, a teacher's supportive demeanor during teaching, coupled with a high level of inspiration, influences their positive perception of the learning environment.

### **Job Satisfaction**

Ensuring job satisfaction and motivation is crucial for the sustained advancement of any global education system. Job satisfaction refers to the positive emotions and attitudes that employees hold toward their work. When individuals express high job satisfaction, it signifies their genuine enjoyment of their tasks, a positive emotional state, and a recognition of the significance of their contributions. Job satisfaction plays a pivotal role in influencing employees' performance and is shaped by their perceptions of the workplace.

### **Performance Of Educators**

It is widely acknowledged that the effectiveness of teachers significantly influences student learning and accomplishments. Various factors impact the performance of educators, with job satisfaction and motivation being crucial elements. These factors serve as vital tools and potential contributors to educational success, exerting a profound influence on academic performance. Job satisfaction and motivation are closely linked to the collaboration of work values, organizational commitment, working conditions, and the fulfillment of special needs. These aspects are interconnected and represent the most significant variables affecting both teachers and the broader community. If teachers experience dissatisfaction with their work values, organizational commitment, and working environment, they will struggle to fulfill their responsibilities adequately.

### **The Significance Of Motivation In Performance**

The significance of motivation in performance is pivotal, impacting every individual both internally and externally. It encompasses five crucial factors: commitment, environment, goals, equipment, and temperament. Motivation shapes behavior, leading individuals to deliver commendable performances and contribute to goal achievement when they are motivated. In the realm of education, motivation takes on a multifaceted form, closely connected to both learning and academic motivation.

### **Levels Of School In Libya Educational System**

The Libyan education system comprises various levels, with both public and private institutions contributing significantly to its development. These levels include Preschool/Kindergarten, Primary Education, Primary Education, as well as Higher Education. Currently, the education system in Libya is structured to encompass these diverse educational stages.

## RESEARCH QUASTIONS

What factors primarily influence job satisfaction among state secondary school teachers in Libya?

What key factors contribute to job satisfaction among private secondary school teachers in Libya?

How do perceptions of job satisfaction differ between state and private school teachers in Libya?

What areas within state and private school contexts may require attention to enhance overall teacher job satisfaction?

## LITERATURE REVIEW

In a study by Xu, Y et al. (2022), it was discovered that a significant correlation exists between intrinsic motivational factors, such as recognition, the nature of the work itself, opportunities for advancement, professional growth, responsibility, positive feelings about the organization, and employee satisfaction. However, no notable relationship was identified between extrinsic (hygiene) factors and employee job satisfaction. The research observed higher job satisfaction among employees in the treasury department compared to those in the examination and student registration departments. Additionally, there was no significant difference in job satisfaction between permanent and temporary employees.

Abdullah Muhammad Madi et al. (2009) found in their study that secondary school teachers generally express satisfaction with their teaching jobs. However, dissatisfaction with the teaching profession was noted among teachers in the country. Secondary school teachers specifically indicated dissatisfaction with their pay and working conditions. The study suggested that schools should be equipped with satisfactory facilities and teaching materials to enhance the efficiency of teachers in their roles.

Rahim Nadia et al. (2013) reported that while the first four variables positively and significantly influenced job satisfaction (working conditions, principal's leadership style, collegial support, monetary rewards, and career advancement), no significant relationship was established between work load and autonomy. These positive variables were identified as contributors to increased job satisfaction, leading to the development of organizational citizenship behavior among teachers.

Suki and Suki (2011) investigated the impact of gender on employee perception of job satisfaction and organizational commitment, revealing that gender had no significant effect on these perceptions. Men and women were found to have similar levels of organizational commitment.

Ghosh Smritikana Mitra's study (2015) showed no significant difference in job satisfaction between urban and rural secondary school teachers. However, urban female secondary school teachers exhibited higher satisfaction than their rural counterparts. A significant difference in job satisfaction was noted between self-financed and government secondary school teachers.

Zilli and Zahoor (2013) conducted a study on organizational commitment among male and female higher education teachers, finding that females had a significantly higher level of organizational commitment.

Silman et al. (2021) investigated the perspectives of elementary school teachers in North and South Cyprus regarding Teachers' Unions.

## METHODOLOGY

### Research Model

This study was structured as a comparative case study. In adopting a qualitative research approach, the active involvement of the researcher in the process, a setting conducive to natural data collection, flexibility in the research model, a comprehensive evaluation, an in-depth analysis of perspectives, and an inductive standpoint were deemed essential (Yıldırım & Şimşek, 2013). While the use of comparative case study approaches in qualitative research is well-established, they are particularly employed to examine similarities and differences among two or more cases in intercultural studies within societies, aiming to define and elucidate these distinctions. Comparative case studies prove effective in gaining profound insights into fundamental issues in various countries globally, explaining novel concepts, addressing potential gaps in data, and unveiling hitherto unseen facets, thereby broadening perspectives (Balci, 2013). In this study, the cases under comparison are teachers from private schools and state schools in Libya.

### Sample Of Research

The research sample for this study consists of a total of 9 participants, comprising 5 teachers from state schools and 4 teachers from private schools in Libya. The selection of participants for this study was conducted through a "convenience sampling" method, considering the practicality and accessibility of teachers working in diverse regions across the country. This approach allows for a varied representation of perspectives and experiences within the educational landscape of Libya. By including teachers from both state and private schools, the study aims to capture a comprehensive view of the educational environment, drawing insights from the distinctive contexts and dynamics present in each type of institution. The diverse backgrounds of the selected participants contribute to the richness and

depth of the research findings, enhancing the overall understanding of the factors influencing teachers in different educational settings within Libya.

### **Data Collection**

This qualitative research utilizes in-depth interviews as the primary data collection method. Participants include secondary school teachers from both state-run and private institutions in Libya. The interview questions are designed to explore factors influencing job satisfaction, areas requiring attention, and the impact of the working environment on teacher performance. Online semi-structured interviews were conducted via video conferencing platforms to explore teachers' experiences and perceptions of job satisfaction. Participants' consent was obtained, and interviews will be securely stored for transcription and analysis.

### **Analysis Of Data**

Data analysis was conducted using the "content analysis" technique, following the four phases outlined by Miles and Huberman (1994). These phases involve separating content into codes, identifying themes by analyzing these codes, unifying codes and themes through examination, and interpreting findings by documenting them. Initially, the information gathered from interviews was transcribed and prepared for analysis with the intention of assigning codes. The written content was then organized to create coherent and meaningful categories. To ensure anonymity, each teacher in the study was assigned a numeric identifier, and names were concealed. Libyan private school teachers were labeled as "PT-1", "PT-2", and so on while Libyan state school teachers were denoted as "ST-1", "ST-2", and so on. Quotations representing the opinions of participating teachers were included in the presentation of findings to enhance the research's validity.

## **FINDINGS**

The examination of responses from both state and private secondary school teachers in Libya as presented in Appendix-1 below reveals critical insights into their job satisfaction and the factors influencing their professional experiences. The analysis, organized into distinct themes, sheds light on shared concerns and nuanced differences between the two sectors.

### **State Teachers' Job Satisfaction Analysis**

#### **Negative Factors:**

**Low Salaries:** State teachers express dissatisfaction with low salaries, highlighting it as a significant factor affecting job satisfaction.

**Overcrowded Classes:** Overcrowded classes are emphasized as a negative factor, impacting the teaching environment and potentially hindering effective education.

#### **Positive Factors:**

**Positive Relationships with Colleagues:** Good relationships with colleagues are noted as a motivating factor, indicating the importance of a supportive and cooperative work environment.

**Changing Students' Levels:** Positive experiences include witnessing improvement in students' language skills, suggesting that student success contributes to job satisfaction.

#### **Psychological Impact:**

Teachers mention that the mood is amazing when working as an English teacher because teaching is seen as a hobby and enjoyable. This suggests a positive psychological impact associated with the intrinsic enjoyment of the subject matter.

#### **Overcoming Negative Feelings:**

Strategies to overcome negative feelings include trying not to be affected by negative factors, maintaining inner motivation and satisfaction, and encouraging optimism. This reflects resilience and a proactive approach to managing challenges.

#### **Professional Development and Resources:**

Teachers highlight the importance of professional development, suggesting that it can have a positive impact on job satisfaction. However, concerns about the lack of resources, such as teaching materials and aids, are also mentioned.

**Colleague Relationships:**

Teachers acknowledge the negative impact of some colleagues' negative attitudes toward each other. Positive relationships with colleagues are considered essential for job satisfaction.

**Administration's Role:**

Teachers express skepticism about the effectiveness of the current administration, suggesting a perception that the administration may not be adequately addressing concerns related to job satisfaction.

**Suggestions for Improvement:**

Teachers suggest that improvements could be made by addressing issues such as low salaries, overcrowded classes, and an unsupportive school environment. There is a desire for increased support and resources to enhance the overall teaching environment.

**Private Teachers' Job Satisfaction Analysis****Negative Factors:**

Salary Concerns: Similar to state teachers, private teachers mention salary-related issues. They express discomfort from earning low salaries, indicating that inadequate compensation negatively affects job satisfaction.

**Positive Factors:**

Travel and Benefits: Private teachers mention advantages such as travel opportunities and other benefits for hardworking employees. These positive aspects contribute to job satisfaction.

**Psychological Impact:**

Self-Confidence and Trust: Private teachers emphasize the importance of self-confidence and trust in Allah as positive factors that contribute to motivation. This suggests a psychological boost from personal beliefs and confidence.

**Overcoming Negative Feelings:**

Reminding Oneself of Experience: Similar to state teachers, private teachers try to overcome negative feelings by reminding themselves that gaining experience can be more important than money.

**Professional Development and Resources:**

Lack of Resources: Private teachers do not explicitly mention a lack of resources but emphasize the need for technology in education. It implies a potential concern about the availability of modern tools and resources for effective teaching.

**Colleague Relationships:**

Positive Relationships and Cooperation: Private teachers highlight positive aspects such as colleagues' positive attitudes, cooperation, and the successful results of work on students' language skills. Positive colleague relationships contribute positively to job satisfaction.

**Administration's Role:**

Recognition and Benefits: Private teachers suggest that administration should recognize and reward efforts and mention the importance of positive energy, respect, and support from the administration.

**Suggestions for Improvement:**

Private teachers suggest that providing benefits such as travel opportunities and phone credit packages can contribute to job satisfaction. Recognition and rewards for teacher achievements are also emphasized.

Comparative Analysis of Job Satisfaction among State and Private Secondary School Teachers in Libya using Content Analysis Technique:

**Commonalities:**

Both state and private teachers express concerns about low salaries, suggesting that financial compensation is a universal challenge.

Positive relationships with colleagues are considered important for job satisfaction in both sectors.

Professional development is valued in both sectors, although concerns about resource availability differ slightly.

**Differences:**

State teachers emphasize challenges related to overcrowded classes and an unsupportive school environment, while private teachers focus on benefits and positive support from the administration.

State teachers express skepticism about the effectiveness of the administration, while private teachers emphasize the importance of recognition and rewards.

**Factors Influencing Job Satisfaction among State Secondary School Teachers in Libya:**

Among state secondary school teachers in Libya, job satisfaction is predominantly influenced by financial factors. Teachers express dissatisfaction with low salaries, emphasizing the significant impact on motivation and enthusiasm for their work (ST-1). Additionally, challenges related to working conditions, such as overcrowded classes and an unsupportive school environment, contribute to diminished job satisfaction (ST-1). On a positive note, teachers highlight the importance of good relationships with colleagues and the gratification derived from witnessing improvements in students' language skills as factors that positively influence job satisfaction (ST-1).

**Key Factors Contributing to Job Satisfaction among Private Secondary School Teachers in Libya:**

Private secondary school teachers in Libya cite various factors contributing to their job satisfaction. Travel opportunities and benefits for hardworking employees are emphasized, providing positive incentives for job satisfaction (PT-2). Positive relationships with colleagues, self-confidence, and trust are also highlighted as crucial elements (PT-2). Despite concerns about salaries, private teachers find motivation in recognizing successful outcomes in students' language skills and the positive attitudes of colleagues (PT-2). The administration's role in providing recognition and support is underscored as a key factor contributing to job satisfaction (PT-2).

**Perceptions of Job Satisfaction Differences between State and Private School Teachers in Libya:**

Perceptions of job satisfaction between state and private school teachers in Libya reveal nuanced differences. State teachers express skepticism about the effectiveness of the current administration in addressing their concerns, signaling a potential gap in communication and collaboration (ST-1). They emphasize challenges related to working conditions, while private teachers, while acknowledging salary concerns, focus on positive aspects such as travel opportunities and positive relationships with colleagues (PT-2). Private teachers also highlight the importance of recognition and support from the administration in contributing to their overall job satisfaction (PT-2).

**Areas Requiring Attention to Enhance Overall Teacher Job Satisfaction:**

To enhance overall teacher job satisfaction in Libya, specific areas require attention based on teachers' responses. Addressing concerns related to low salaries is crucial, as highlighted by both state and private teachers (ST-1, PT-2). Improving working conditions, particularly addressing challenges related to overcrowded classes and fostering a more supportive school environment, is essential for state teachers (ST-1). Engaging the administration positively is crucial for private teachers, emphasizing the need for recognition, support, and positive energy from the administrative level (PT-2). Ongoing professional development opportunities and support for growth, as well as fostering positive relationships with colleagues, are common themes across both state and private teachers' responses (ST-1, PT-2).

**DISCUSSION**

The findings align with established research on teacher job satisfaction. Similar to existing literature (Bogler, R. 2001), financial concerns, particularly dissatisfaction with low salaries, emerge as significant contributors to teacher discontent.

Our findings are also in line with that of Mohamed and Demirel (Mohamed, T. & Demirel, Y. 2020) that expresses dissatisfaction as a result of stress

Positive colleague relationships, a consistent theme in workplace satisfaction studies (Le Floch, B., et al., 2019), are highlighted as motivating factors. The importance of professional development in enhancing job satisfaction aligns with broader research emphasizing ongoing training opportunities (Hanushek et al., 2004).

**CONCLUSION**

While state and private teachers in Libya share common concerns about low salaries and value positive relationships, there are nuanced differences in the challenges and priorities highlighted. Addressing these concerns can contribute to improved job satisfaction in both sectors, with potential variations in the strategies needed for enhancement.

**Appendix 1**

|                  |  |   |   |
|------------------|--|---|---|
| <b>ST-5</b>      | Some students' motivation and negative attitude toward learning foreign language. Some colleagues' negative attitude toward each other. Lack of teaching materials and aids. | Appreciation of my effort by superiors. Some colleagues' positive attitude and cooperation. The successful result of my work on my students' language skills. | I try not to be affected by the negative ones and try to have inner motivation and satisfaction to do my job properly. However, it affects me when I observe inequality between colleagues. The positive factors certainly have a positive impact to motivate me to do my best. |
| <b>ST-4</b>      | Too much job   | One of the advantages of my job is that it grants travel and beautiful benefits to the hardworking employee, as well as                                       | It keeps me motivated.  |
| <b>ST-3</b>      | In general, there are no specific factors  | For example, but not limited to money, the first purpose is to obtain a monthly   | Providing a pension on a monthly basis that is equivalent to a living will not make you   |
| <b>ST-2</b>      | Lack of salary, overcrowded classes, and an unsupportive   | Positive factors include parental involvement and support, while  | Negative factors lead to feelings of isolation, anxiety, helplessness, decreased motivation, and  |
| <b>PT-4</b>      | The bad idea about English e.g. it's impossible to understand it, it's a hard subject So I am trying to  | Changing the level of my students, like being better than before.   | My mood is amazing when I work as an English teacher because it's my hobby, and I am enjoying during teaching.  |
| <b>PT-3</b>      | Money, everyone, not just myself, can feel discomfort from earning low salaries. Receiving less than what I  | Work environment. I have a good relationship with my colleagues, and that is what makes me want to continue in this job despite having low salaries.          | As I said, the first one (money) makes me demotivated to work hard, while the second one (work environment) motivates me to keep working  |
| <b>ST-1</b>      | Shortening time, lack of material, and overloaded students at class. The crowd   | Self-confidence and trust in Allah are the most positive factors.   | They keep me motivated.   |
| <b>PT-2</b>      | Currently, I do not believe that there are any factors that  | One of the advantages of my job is that it grants travel and beautiful benefits to  | If the factors are positive, they will raise the ceiling of work and motivation more and make   |
| <b>PT-1</b>      | Too much job   | Technology  | Stress  |
| <b>Questi on</b> | <b>1a. What factors of your current job do you think negatively affect your</b>  | <b>1b. What factors of your current job do you think positively affect your overall job satisfaction?</b>   | <b>1c. How do these factors affect your psychology?</b>   |

|                 |   |  |  |
|-----------------|---|--|--|
| <b>ST-5</b>     | Motivate and encourage myself to be optimistic and positively motivated to convey that in my teaching, which is worth rewarding in terms of keeping students motivated to learn best and providing a safe class | Yes, once all teachers in my school were required to bring up our teaching materials for assessment. My material was highly appreciated, enhancing my confidence and motivation.                       | Sometimes, teaching materials and books for some courses aren't available, and facilities and aids are lacking. It's crucial to be trained to work with colleagues as a team to support and help each other. |
| <b>ST-4</b>     | Just trying to remind myself that gaining experience can be more important than money.  | Positively when my students tell me we did well in the exam. Negatively when I feel they unfocused with me during my lessons; they think about other   | Increased access to information, training feedback, and collaboration.   |
| <b>ST-3</b>     | Sports like running and playing football  | No, not in public  | For example, providing medical insurance and providing modern  |
| <b>ST-2</b>     | Steps include building connections with supportive  | Positive experiences include parental involvement, while negative experiences involve dismissive   | Increased access to information, training feedback, and collaboration.   |
| <b>PT-4</b>     | Sport like running, playing football, the salary at the end of the month.   | Positively when my students tell me we did well in the exam. Negatively when I feel they are unfocused during my lessons and think about other things  | We need to use technology to make everything easy for them that will help me to teach all four skills (listening, reading, writing, speaking)  |
| <b>PT-3</b>     | Just trying to remind myself that gaining experience can be more important than money.  | As a teacher in a private school, I remember one day I decided to speak with the manager about my salary to be increased; he refused, so I decided to quit that job despite having a good relationship | Again, money can increase the work quality of all the teachers, not just me.   |
| <b>ST-1</b>     | Just seeing the achievement of most students.   | As a public school teacher, when students participate positively in my class and their tests are good, that is the most positive experience I have   | Paying attention to the practical aspect of language teaching, reducing the number of students in classes, and   |
| <b>PT-2</b>     | By writing everything negative on a white piece of  | I did not work as a teacher in private or public schools   | To learn a lot about the cultures of other countries and expand my knowledge   |
| <b>PT-1</b>     | Nothing special   | Yes  | Teaching resources   |
| <b>Question</b> | <b>1d. What do you do to overcome your negative feelings?</b>   | <b>1e. Can you share specific experiences or instances that have positively and negatively impacted your job satisfaction as a private and</b>   | <b>2a. In your opinion, what specific aspects of your current job might require attention to improve your</b>  |

|                  |   |   |   |
|------------------|---|---|---|
| <b>ST-5</b>      | Providing authentic and various teaching materials and aids. Giving professional training and seminars for teachers to improve teaching quality. Rewarding well-performed teachers. | Having regular training sessions for teachers (professional development chances) and rewarding them for their good performance and participation.                             | Professional development is important for teachers to be updated, reflecting on their teaching. Frequent opportunities for professional development can positively impact job satisfaction. |
| <b>ST-4</b>      | The administration, in its current work, does not have individual powers that are subordinate to the education controller, who in turn is subordinate to a                          | I think there are many policies, such as increasing teacher pay and benefits, increasing teacher autonomy and decision-making power, and                                      | Professional development opportunities are crucial for job satisfaction. Improvements could   |
| <b>ST-3</b>      | The administration, in its current work, does not have individual powers that are subordinate to the  | Introducing modern technology to classes and forming clubs for students to provide a lot of time  | Professional development will certainly have a positive impact on   |
| <b>ST-2</b>      | Recognizing and rewarding teacher achievements, involving teachers in decision-making, and creating   | Suggestions include increasing teacher pay and benefits, granting more autonomy, and providing  | Professional development is crucial, and improvements involve more  |
| <b>PT-4</b>      | It has an important role, like giving positive energy to the teachers, respecting them, helping them, and mentioning the positive points.   | Limited number in every class, e.g., 20 students in every class.  | It's good.  |
| <b>PT-3</b>      | I do not think that they care a lot about their employees' satisfaction. As long as they have some people who can work with low salaries, they are the ones who are satisfied       | Having breakfast or lunch with all members of the department can positively affect all the staff. Also, giving simple gifts to teachers on Teacher's Day can mean a lot to us | We do not have big opportunities in our school, but any school can encourage their teachers to attend workshops, seminars, or conferences   |
| <b>ST-1</b>      | The administration must work hard to provide the appropriate environment for students as well as solve the bottlenecks that appear from time to time.                               | Increasing time and dividing the students. However, this matter will certainly require an increase in the number of teachers or an increase in                                | Professional development is very important for the teacher as it positively impacts performance.  |
| <b>PT-2</b>      | To grant promotions to every hardworking employee and to cultivate the spirit of competition  | At the moment no  | Professional career development is one of the most important successful   |
| <b>PT-1</b>      | Supporting the schools with teaching resources  | No  | I don't know  |
| <b>Questi on</b> | <b>2b. How do you think the administration could contribute to boost job satisfaction in your current working environment?</b>  | <b>2c. Are there any policies or practices that you think could be improved to create a more satisfying work environment for you?</b>   | <b>2d. How important do you think professional development opportunities are in influencing</b>   |

|                 |   |   |   |
|-----------------|---|---|---|
| <b>ST-5</b>     | Positive relationships with colleagues create a safe work environment. Encourage colleagues to build strong, trustworthy relationships for better collaboration and team trust, increasing job productivity and satisfaction. | Lack of training and professional development sessions and courses, along with limited teaching materials and aids, are impacting job satisfaction. | Having resources and aids that help increase productivity is appreciated. However, lacking these resources affects teaching. Having them would facilitate the mission and be rewarding for teachers and students. |
| <b>ST-4</b>     | Strong collegial relationships are essential to job satisfaction, providing a sense of belonging, support, and camaraderie. This can be strengthened through investing in open communication.                                 | Helpful resources include sharing ideas between colleagues and motivating each other to be  | Overloaded work with low salaries can make any teacher quit their jobs, as happened with two of my  |
| <b>ST-3</b>     | The family atmosphere within the school has a good influence on the teacher   | Yes, it is possible to work on providing special clubs for teachers   | In my experience, when the monthly salary was weak, the effect  |
| <b>ST-2</b>     | Strong collegial relationships foster a sense of belonging and support, and open communication, mutual respect, and shared  | Yes, lacking resources include teacher autonomy, professional development opportunities, and  | Proper lighting, ventilation, and comfortable chairs exist, but poorly  |
| <b>PT-4</b>     | It's helpful, like sharing ideas between colleagues, maybe also motivating each other to be creative, doing some groups in social media.  | Like using YouTube, HelloTalk; these are great apps that helped me a lot to improve my level.   | Sometimes I have backache, which is not good for me as an English teacher. Using body language is essential during explaining the   |
| <b>PT-3</b>     | As I said, I have a good relationship with colleagues, which affects me positively.   | I think having access to most journals and academic websites can be increased to help teachers find the resources that they need                    | Overload work with low salaries can make any teacher quit their jobs, as happened with two of my colleagues   |
| <b>ST-1</b>     | Colleague relationships are crucial; discussion enriches understanding. Introducing technology could increase collaboration through educational platforms.  | Yes, such as recording machines to display lessons and tools like smart boards for better teaching  | The work environment, with inadequate heating and lighting, has a major impact on performance.  |
| <b>PT-2</b>     | If the relationship is based on diligence and fair competition, then this is an excellent relationship that you will benefit from   | No  | It is better for there to be a strong financial income so that the teacher  |
| <b>PT-1</b>     | They can share knowledge with you   | Yes, the teaching resources   | No physical work in my job  |
| <b>Question</b> | <b>2e. From your experience, how does the relationship between colleagues in your current job environment impact your job satisfaction, and what steps can be taken to</b>  | <b>2f. Are there specific resources or support systems lacking in your current job that, if</b>   | <b>3a. In your experience, how does the physical working environment in your current job</b>  |

|                      |  |  |   |

| <b>ST-1</b>          | Unfortunat<br>ely, no.   | Despite adverse effects, honesty requires<br>continuing despite all obstacles.   | Not completely sure, but a salary<br>increase over the past period may have<br>had a positive impact.                                   |
| <b>PT-2</b>          | Yes. There<br>are several  | I don't care about any culture or general<br>character. I care about myself, my  | No  |
| <b>PT-1</b>          | No   | As an English teacher the cultures of my   | Maybe the holidays are too much that  |
| <b>Questi<br/>on</b> | <b>3c. Are<br/>there<br/>specific</b>  | <b>3d. How does the overall atmosphere and<br/>culture within your current job<br/>environment influence your morale and,</b>              | <b>3e. Can you share any instances where<br/>changes in your working environment<br/>positively or negatively affected your</b>         |

|                  |  |
|------------------|--|
| <b>ST-5</b>      | Frequent training and development opportunities, providing helpful resources and aids, and encouraging cooperative work within institutional associations would enhance the working environment. |
| <b>ST-4</b>      | Focusing on using technology and modern ways could enhance the working environment.  |
| <b>ST-3</b>      | For example, providing us with a smart display screen to work on instead of the traditional blackboard also helps it to be interactive.  |
| <b>ST-2</b>      | Suggestions encompass improvements in physical conditions, resources, support, work culture, and   |
| <b>PT-4</b>      | Focusing on using technology, modern ways.   |
| <b>PT-3</b>      | As I said earlier, increasing salaries can help a lot, and having smart classes can also help.   |
| <b>ST-1</b>      | Yes, suggesting providing auxiliary equipment, increasing class duration, or adding more classes per week.   |
| <b>PT-2</b>      | Nothing  |
| <b>PT-1</b>      | Teaching resources are the most important thing  |
| <b>Questi on</b> | <b>3f. Any specific improvements or changes you would suggest to enhance the working environment in your current job?</b>  |

## COMPARATIVE ANALYSIS OF POST-QUANTUM KEY EXCHANGE ALGORITHMS

Aysel ASKERLI SAFAR

Azerbaijan Technical University, Baku, Azerbaijan  
aysel.asgerli@aztu.edu.az

### ABSTRACT

One of the problems that "threaten death" to cryptography is the progress achieved in recent years in the field of creating quantum computers, and in the coming years, the computing power of these computers may reach a level that will pose a threat to modern cryptosystems. Therefore, the development and application of post-quantum cryptography algorithms is an important issue, standardization of these algorithms is also being carried out by NIST. This article reviews lattice-based post-quantum algorithms such as Kyber, NTRU, and FrodoKEM. Post-quantum key exchange algorithm processes were simulated using Liboqs library and Python programming language. Python's ctypes module uses Liboqs library functions. The results of the comparative analysis of these algorithms are presented, taking into account performance parameters such as key sizes, encapsulation and decapsulation times, security level.

**Keywords :** post-quantum cryptography, NIST, Kyber, NTRU, FrodoKEM, liboqs (libOpenQuantumSafe).

### INTRODUCTION

Cryptography is one of the main methods of ensuring the security of cyber technologies, which have become an important part of all areas of our lives. Most of the cryptographic methods we use today are unstable to quantum computers. The use of post-quantum cryptography and quantum cryptography is proposed as a solution for long-term security of cryptographic keys [1]. This article reviews the post-quantum algorithms Kyber, NTRU, and FrodoKEM.

NIST has launched the NIST Post-Quantum Cryptography Standardization Project (NIST Post-Quantum Cryptography Standardization Project) to develop and standardize stable cryptographic algorithms for quantum computers. Started in 2016, this project focuses on the development of new post-quantum algorithms and evaluation of existing algorithms. The project consists of several stages: proposal and evaluation of algorithms, selection of algorithms, creation of standards. The first step was to collect algorithm samples from researchers. The proposed algorithms were lattice-based (Kyber, NTRU), code-based, hash-based and other mathematically based algorithms. As of November 30, 2017, 82 algorithm examples were submitted, of which 69 met the minimum acceptance criteria and submission requirements. The next stage was the stage of evaluation of these algorithms. In the first phase, the proposed algorithms were evaluated according to criteria such as security, performance, efficiency and application suitability. After the evaluation phase, the list of 26 selected algorithms was announced. In the final phase of the standardization process, NIST conducted additional security testing and analysis of the algorithms selected in the final phase. In 2022, for Kyber key exchange, Dilithium was chosen as one of the leading algorithms for digital signature [2].

**Cyber [3]. Kyber is a post-quantum secure key encapsulation mechanism (key-encapsulation mechanism -KEM) that provides IND-CCA2 (Indistinguishability under Adaptive Chosen Ciphertext Attack), one of the highest security levels for cryptographic protocols . It involves three basic operations: Key generation, encapsulation, and decapsulation.**

*Key generation:* The receiver generates a public and private key pair. While the private key is kept secret, the public key is shared publicly.

*Encapsulation:* The sender uses the receiver's public key to encrypt their message and obtains the ciphertext.

*Decapsulation:* The receiver uses the secret key to decapsulate the ciphertext.

Kyber is offered in three variants based on security levels defined by NIST. These variants differ in module sizes and coefficient distributions, which affect safety and performance.

- Kyber-512: NIST security level 1 compliant.
- Kyber-768: NIST security level 3 compliant.
- Kyber-1024: NIST security level 5 compliant.

Internal Modes in Cyber:

- Pseudorandom Functions (PRFs): Kyber uses SHAKE256 to generate pseudorandom functions, which are important for generating polynomial coefficients.
- Hash functions:

- H: Implemented as SHA3-256.
- G: Implemented as SHA3-512.
- Key-Derivation Function (KDF): Kyber uses SHAKE-256 to derive keys from input values, providing secure conversion of random data into cryptographic keys.
- Polynomial Arithmetic: Kyber uses NTT (Number Theoretic Transform) to perform polynomial multiplication operations efficiently. Also supported for polynomial addition and subtraction.
- Samplers: In the context of the Kyber algorithm and similar post-quantum cryptographic systems, samplers are critical components used to generate random numbers or polynomials that are integral to the encryption and key encapsulation processes. It plays an important role in ensuring both the security and efficiency of the cryptographic process. A breakdown of the types of selectors used in Kyber:
  - Uniform sampler is used to generate open polynomials using the Parse algorithm . Generates equal random values from a specified range. This uniform distribution helps increase security by making it difficult for an attacker to guess or reverse engineer the public key.
  - Binomial sampler generates latent and error polynomials using CBD ( Centered Binomial Distribution ). This plays an important role in the security of a cryptographic scheme as it helps control the amount of noise we add to the calculations. Noise is essential to the security of lattice-based schemes like Kyber and makes it difficult for potential hackers to solve basic mathematical problems.
- Encode/Decode : This is important for converting polynomials to byte arrays for transmission and vice versa. They ensure that the mathematical structures used in cryptographic algorithms are effectively transmitted over channels that primarily operate on byte data, thereby protecting the integrity and security of the transmitted information.
- Compress/Decompress: These functions are important for reducing the size of ciphertext. Compression discards the low-level bits of the ciphertext without losing the underlying information needed for decryption. Decompression reconstructs the original ciphertext, or a close approximation, from the compressed form.

**NTRU** [4]. NTRU (N-th degree Truncated Polynomial Ring Units) was introduced in 1998 by Hoffstein, Pipher, and Silverman. NTRU is based on hard lattice problems such as short vector problem (SVP) and learning with error (LWE). It performs encryption and key exchange using polynomial arithmetic. This cryptosystem is based on three main parameters: N (polynomial degree), p and q (moduli). Here, the interdependence of p and q plays an important role in the security of NTRU. Cryptographic operations  $Z[X]/(X^N - 1)$  are performed in a ring. This allows you to work with polynomials instead of working with very large numbers, thus improving performance. The main key components of the NTRU cryptosystem consist of three main steps: key generation, encryption and decryption.

*Key generation:* The key generation process in an NTRU system involves two basic polynomials: one used for the secret key and the other for the public key.

- Secret key polynomial (f): This polynomial is used as a secret key, which is secure as it is difficult to calculate over modules. This polynomial must have inverse elements for both mod q and mod p. This is necessary to recover the encrypted message. These reverse elements ensure that calculations are performed correctly in the process of decoding the message and, as a result, the original message is recovered. At the same time, the presence of Reverse elements indicates that the secret key is not chosen randomly and has a special structure, that is, the secret key takes special values when calculated according to mod q and mod p. This makes it difficult for malicious individuals to guess the key and find a weakness in the encryption system.
- Public key polynomial (h): The public key is derived from the inverse polynomial mod q of the secret key. More precisely, the public key is the product mod q of a randomly chosen polynomial (g) with a secret key polynomial:

$$h = f_q * g \pmod{q}$$

*Encryption process:* The message is converted to a certain degree of polynomial form and encrypted with the public key.

$$e = p * r + h * m \pmod{q}$$

$p * r$  to the expression  $h * m$  makes the message even more confusing. The ciphertext sent  $m$  here  $e$  is a polynomial representation of the message,  $r$  a random polynomial.

*Decryption process:* The message is decrypted using the secret key (f).

$$a = f * e \pmod{q}$$

$f_p$  message is retrieved using . At this time, the noise value is cleared and the message is restored.

$$m = f_p * a \pmod{p}$$

Each of these processes allows messages to be securely encrypted and decrypted using polynomial arithmetic and a noise factor.

**FrodoKEM** [5]. FrodoKEM is a key encapsulation mechanism (KEM) based on random matrices and error terms, developed based on the LWE (Learning With Errors) problem. Its main operation consists of three main stages: key generation, encapsulation, decapsulation.

*Key generation* : The receiver obtains a matrix containing the secret key and another matrix containing the public key by generating random elements.

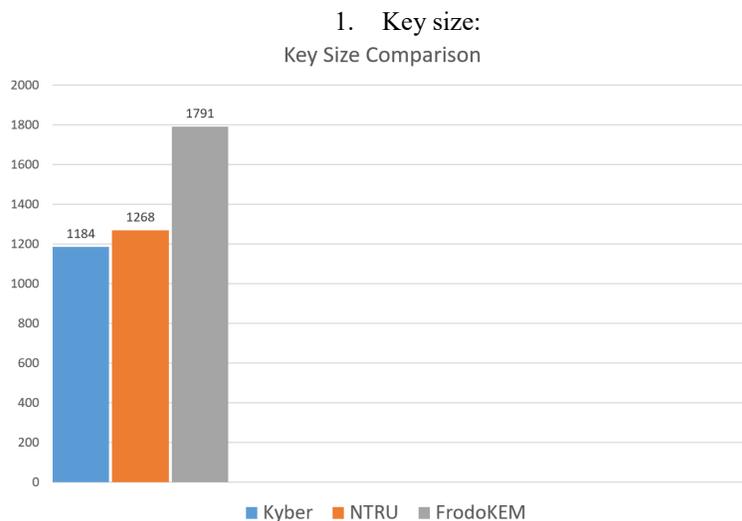

*Encapsulation*: The sender encrypts the message using the receiver's public key. The message is modified with a randomly selected noise value. This ensures that the data can only be retrieved using the secret key.

*Decapsulation*: The receiver decrypts the data using a secret key. The secret key is used to clear the noise value created during encapsulation.

The FrodoKEM family is designed in three variants based on the security levels defined by NIST.

- FrodoKEM-640: AES-128 equivalent, NIST level 1 compliant.
- FrodoKEM-976: AES-192 equivalent, NIST level 3 compliant.
- FrodoKEM-1344: AES-256 equivalent, NIST level 5 compliant.

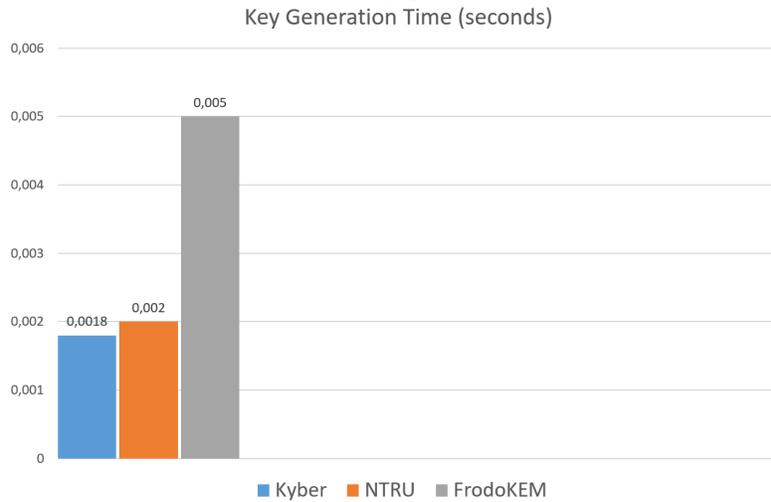

In this paper, using the Python programming language and the liboqs library, the effectiveness of all three algorithms is evaluated according to various metrics. The liboqs library facilitates the implementation of post-quantum KEMs such as Kyber, NTRU, and FrodoKEM. Algorithms were compared using the functions of liboqs library by Python's ctypes module.

**Figure 1.** Comparison of key sizes

Smaller key sizes result in lower memory usage and faster processing. Kyber and NTRU have relatively small key sizes, making them more efficient in terms of storage and memory usage. FrodoKEM, on the other hand, has larger key sizes, making it highly secure (Figure 1).

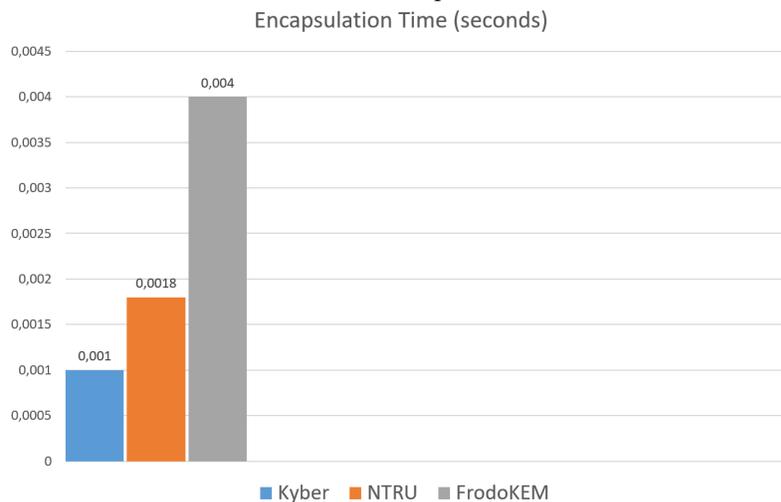

## 2. Key generation :

**Figure 2.** Key generation time

Less time required to generate key pairs of each algorithm has a positive effect on the speed of the system. Kyber demonstrated an effective key generation time of approximately 0.0018 seconds in simulation. Almost close performance is also shown in NTRU. However, FrodoKEM is significantly different from other algorithms. Due to the complex structure, the key generation time is 2-3 times longer than others. Therefore, FrodoKEM performs poorly in terms of speed (Figure 2).

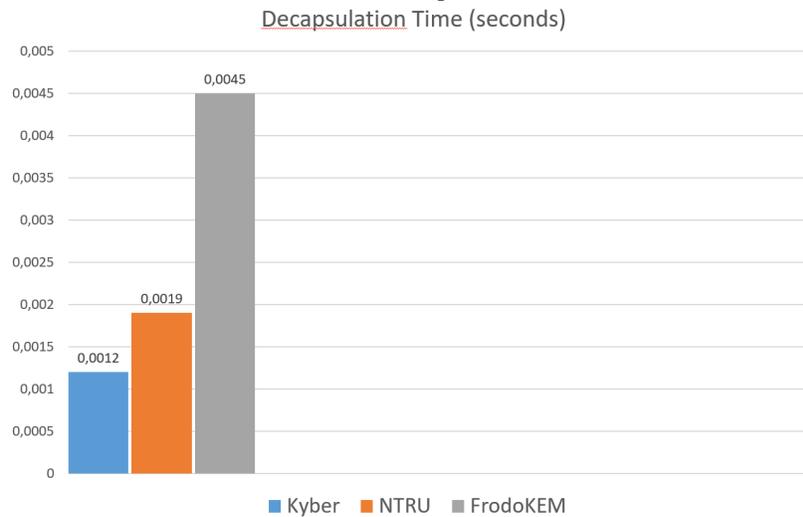

## 3. Encapsulation:

**Figure 3.** Key encapsulation time

Encapsulation time is the time required to encrypt user data. Due to its high index, FrodoKEM differs from other algorithms. This makes its key generation time longer (Figure 3).

#### 4. Decapsulation:

**Figure 4.** Decapsulation time

Decapsulation is the reverse process where the receiver decrypts the message. Kyber performs well with a decapsulation time of around 0.0012 seconds. NTRU is a bit slow but still efficient. FrodoKEM still gets the highest value (Figure 4).

#### THE RESULT

I was able to compare the performance of post-quantum algorithms such as Kyber, NTRU and FrodoKEM using the liboqs library and the Python programming language. Each algorithm has its strengths. Kyber has a small key size and transaction time. This makes it suitable for high-speed applications. NTRU strikes a balance between both security and performance. That is, it is the optimal choice in situations where both speed and safety are important. FrodoKEM has the highest level of security, although it has larger key sizes and slower performance values. Therefore, it is used in situations where safety is a priority.

The choice of algorithm depends on the specific needs of the system in question, balancing security, performance, and resource availability.

## **CONFLICTS BETWEEN TEACHERS AT A LIBYAN SCHOOL: CAUSES AND ITS MANAGEMENT STRATEGIES (QUALITATIVE STUDY)**

**Yousa MOFTAH ELDAIK**  
yousaeldaik@gmail.com

**Prof. Dr. Fatoş SILMAN**  
y.eldaik@zu.edu.ly

### **ABSTRACT**

The purpose of this study is to investigate the reasons behind conflict and the techniques that teaching staff members and managers use to resolve it. This study used the descriptive case study method and qualitative research. The research involved eight Libyan primary school teachers and managers. Semi-interviews were used to collect the data, which was then analyzed by thematic analysis. The result reveals that task conflict is the most prominent type of conflict. After investigating the reasons behind the disputes between teachers and managers, the findings show misunderstanding, breaking the principles, work overload, individual differences, and poor communication are the primary causes of their disagreement. The finding also shows that the strategies that are used to handle these conflicts are dominating, avoidances, collaboration, effective communication, accommodation, and compromising. This study has crucial implications: while dominating and avoidance might be better not used or used wisely, collaboration, effective communication, accommodation, and compromising should be used widely for their effectiveness

**Keywords:** Primary teachers, managers, conflict management strategies

### **INTRODUCTION**

The word "conflict" often evokes negative feelings in our thoughts. When we hear the word conflict, we often think of various conflicts, such as global wars or disputes between people over minor or major matters. However, conflict is a multifaceted phenomenon that can happen anywhere and in a variety of ways. Conflict is defined simply as the emergence of differences in ideas, viewpoints, and interests (Wallensteen, 2015). Rahim 2023 defines it as an interacting process that results in incompatibility, disagreement, or inconsistency inside or between social entities. Conflict is inevitable and can arise in homes, workplaces, and educational institutions. Normally, an organization has many employers and employees, and there is a possibility of conflict between them. Every interaction between two or more individuals has the potential to result in conflict. Due to conflict, members may find it difficult to communicate with one another, which will reduce commitment to completing duties and advancing the business. As a result, workers may become anxious and distrustful, which may affect their productivity. Recently, conflict has been shown to have positive impacts if it is managed in the right way.

Many recent studies carried out in many countries around the world study conflict on multiple perspectives (Anderson, 2023; Ashraf at all., 2023; and Whincup at all, 2023). However, there is no study about the conflict in primary schools in Libya. Therefore, this study will fill the gap and be a valuable resource for researchers who are interested in studying conflict in schools in general. It tries to investigate the reasons of conflict between primary teachers and managers and how they address this issue through various strategies.

### **LITERATURE REVIEW**

Handling any problem effectively using different styles is called a conflict management strategy. These approaches are employed to resolve a dispute in a way that prevents unfavourable outcomes. The purpose of conflict management is to prevent threatening impacts within the organization (Abdulraheem, 2020). When conflicts are handled properly, they can inspire creative thought, which makes them both beneficial and important (Kim and Leung, 2012). While it is crucial to be aware of each aspect of a conflict and to use an appropriate style of conflict management, it is just as crucial to understand how people view conflict, accurately diagnose and comprehend its types and causes, and choose a response strategy (Shanka & Thuo 2017). Each of these three important matters is discussed, respectively.

### **Types of Conflict**

Any kind of organization may have some kind of dispute. These are task conflict, relationship conflict (Daft and Marcic, 2013), and process conflict (Robbins, 2014). The first type is task conflict. It has to do with both the goals and the topic of the task. It happens when there are disagreements between individuals over the objectives to be met or the nature of the duties that must be done. The second type is relationship conflict: Interpersonal interactions are

the main focus of relationship conflict. It relates to the arguments that happen between different managers. When they are not compatible with one another, it leads to interpersonal conflict and personal dislike. The last type is process conflict. It refers to the process of completing a task. Surprisingly, these types of conflicts might be functional or dysfunctional. Both task conflict and process conflict are functional. They are generally thought to be advantageous since they improve decision-making as well as problem-solving skills. When conflict leads to better decisions, it is beneficial because it provides an opportunity for the discussion of issues and the release of anxieties, creates an atmosphere suitable for self-evaluation and development, and inspires imaginative thinking in group members. Conversely, the existence of relationship conflict is considered dysfunctional because it is believed that the previously stated results have been greatly decreased (Daft and Marcic, 2013).

### **Causes of conflict**

Conflict can arise from various sources. A major contributing factor is inadequate communication. Communication problems can lead to conflict (Daft and Marcic, 2013). Any team can experience poor communication while they are discussing different matters related to their work. This may lead to a dispute between them. In addition, conflict can appear due to individual differences and cultural differences (White, 2008). In one working place, many individuals might be from different areas with different cultures, thoughts, experiences, and beliefs. Such a reason probably might lead to an argument between them. Moreover, Dai and Chen (2017) add that misunderstandings and misperceptions cause some issues in the majority of interpersonal disagreements. Instead of making an effort to comprehend the viewpoints of others, people frequently assume what others mean by their actions and intentions without really knowing them. They also add that competition over resources like funds, services, or products causes arguments between different managers. Conflict is almost unavoidable when people or teams have to fight for limited or diminishing resources. The last reason might be due to different goals. Each employee and employer have their own goals connected to their job. These differences might lead to a dispute between them in their organization. Conflict between a manager and a subordinate, for instance, can arise when the subordinate's job is unclear and each side understands it differently (Whitlam & Cameron, 2012). To sum up, conflict can result from poor communication, competition, individual and cultural differences, goal differences, misunderstandings, competition over resources, and others.

### **Conflict management strategies**

There are many approaches for handling and resolving disputes. These are conflict management strategies and conflict resolution, and both of them are similar. They might be different on four faces. Firstly, while "conflict resolution" is the process of ending conflict, "conflict management" aims to lessen the detrimental effects of disputes. (Redpath et al., 2013). Secondly, conflict strategies vary from forcing to the other extreme of conflict avoidance. Conversely, conflict resolution refers to a scenario in which parties involved in a conflict reach a mutual understanding to resolve their fundamental differences, acknowledge each other's ongoing status as parties, and put an end to any violent actions taken against one another. Thirdly, conflict management can occur prior to, during, or following a disagreement, but conflict resolution frequently occurs "after" the conflict arises (Wallensteen, 2015). Finally, negotiation, arbitration, bargaining, and mediation fit under the heading of conflict resolution. On the other hand, conflict management strategies have five main strategies. Skilled individuals adapt their approach to the particular circumstance. There are situations where each of the five styles is acceptable. When someone disagrees with others, these conflict resolution techniques are often helpful. (Daft and Marcic, 2013). These strategies are:

#### 1- Avoiding style

It is characterized by low care for oneself and others. It is described as uncooperative (Wilmot and Hocker, 2001); it is ineffectual and unsuitable (Gross and Guerrero, 2000). When the administrator wishes to stay out of the conflict, they utilize this style. Under such a style, the administrator is neither interested in imposing his own behavior nor in assisting others in reaching their aims. When the issue is unimportant to the administrators, they will employ this approach, which is called the passive approach. Administrators who adopt an avoidance strategy don't feel satisfied with themselves or the other person (Farooqi et al. 2013). Rahim (2002) stated that using this method to make rash decisions is improper. If success is impossible to achieve, this approach is appropriate.

#### 2 - The dominating styles

It is also called forcing or competing strategy. Conducting this strategy shows that one has a high regard for oneself and a low regard for others. Rahim (2002) asserts that this is behaviour that is forced in order to win. When managers utilize a dominant style, they use harsh tactics to attain their aims and satisfy their own worries while also acquiring authority, all without regard for others. This style might not be suitable and effective in a democratic society (Wilmot and Hocker, 2001).

### 3- The collaboration style

It is called integrating, or problem solving. This strategy's outcome is win-win. Both parties are winners. The collaborative style is crucial. When diverse viewpoints must be combined to create a comprehensive solution and when commitment from all parties is required for a consensus. It is suitable and effective because it gives both parties access to the other person's perspectives on incompatible aims, allowing them to work together to find a solution that meets their requirements and achieves their goals. By using style, managers can generate positive results. Managers are able to generate positive results by incorporating style. However, it is believed that the diversity of human behavior and interests makes it challenging to implement an integrated style due to their differences (Griffin & Moorhead, 2007).

### 4 The compromising style.

It is considered a medium ground when self- and other-care concerns are almost prominent. Depending on its nature, compromise can be either active or passive. Additionally, this tactic is seen as appropriate, successful, and relatively direct (Griffin & Moorhead, 2007). It is appropriate in situations where both parties have equally vital aims, when opponents are equally powerful and both sides wish to make a compromise, or when quick decisions must be made. Furthermore, some professionals believed it to be more giving up than desired. It is a mixture of agreeable connections between the parties. Rahim (2023) asserts that this approach works well when both sides have significant objectives to meet.

### 5 The accommodating style.

It shows a high level of concern for others and a low level of concern for oneself. Put differently, it's a tactic used by people to give up on their own demands and comply with the desires of others. It denotes a high degree of cooperation; the main goal of this strategy is to preserve the relationship. People who employ this tactic are seen as suitable but ineffective (Griffin & Moorhead, 2007).

### **Different studies from literature**

In literature, there are different studies conducted in different countries, and these studies relate to the conflicts that happen in schools. This research investigates this issue from different perspectives and using different methods.

The study of Shanka and Thou (2017) examines the various strategies taken to handle and settle disputes between teachers and administrators in Wolaita government primary schools in Ethiopia. Their study is a quantitative study. Their data were collected using 146 questionnaires and 70 interviews. Their findings show that primary school conflicts can be categorized into three areas: institutional, work, and leadership. Institutional conflicts include inadequate resource distribution and infrastructure, work issues like low performance, lack of competence, and absenteeism. Work conflicts involve low performance, work overload, and poor implementation of policies. The research highlights issues with leadership, including false reports, poor rule implementation, poor communication, and a lack of involvement in decision-making, as well as training opportunities. They also found that conversations, force, punishment, compromise, avoidance, and ignorance are different strategies used to handle their conflict. In another study conducted in two Greek regions (Saiti, 2015), the findings demonstrated that interpersonal and organizational factors are the primary causes of school conflicts, which frequently occur in educational settings. Furthermore, the findings indicated that, compared to other areas, urban schools have a higher likelihood of experiencing these disputes. This study backs up the idea that developing a positive conflict management approach and improving student performance require integration, teamwork, and coherence.

Throughout their study, Morake and others (2019) found that the primary reason for conflict between teachers in Botswana's southern regions is personality conflicts, a communication breakdown, and scarce or nonexistent resources. Depending on the nature of the disagreement, the educational managers suggested using cooperation, avoiding, competing, and compromising techniques to resolve it. The finding implies that there is an issue when educational administrators take on leadership roles without receiving sufficient preparation previously. Another study's investigation was to ascertain how conflict management approaches relate to secondary school teachers' effectiveness. The study's target population consisted of male and female secondary school students in the Punjab Province. The results of the investigation showed a strong correlation between secondary school teachers' performance and their conflict management approaches. Additionally, data showed that teachers' success was positively correlated with integrating, obliging, and dominant styles, but that avoided and compromised styles had a negative impact on the effectiveness of teachers. They also found that the integrating, dominating, and accommodating styles have a favorable correlation with output. Teachers in secondary schools perform better at work when they use these dispute resolution techniques. Conversely, the avoidance and compromising approach to dispute resolution has a negative impact on teachers' performance (Faroqi et al., 2016).

### **The case study**

Before revealing the finding of the study, the explanation of the organizational structures is provided making certain that readers are fully aware of the background circumstances. The data was collected from three different public schools in Libya. These public school are administered by the Libyan ministry of education which focuses on the management and organizational structure of the schools. The majority of participants in this study are from the same public school while the two participants from two different schools. All the three schools from the same city, Al\_Zawia, and they are not far away from each other. All the three schools have only primary level (1-6) and preparatory level (7-9). They do not have secondary levels. Each school has a hierarchical organizational structure and is led by a director. Each level has their own director. The leader of primary level is different from the leader of the preparatory level. Before 2020, the system of administration consists only from one department relate to the director and two secretaries. However, recently there are many departments and many mangers cooperate together with the teachers, such as financial supervisor, store keeper, library manager, the manager of information technology and social workers. It is significant to note that the primary school level was chosen for this study's focus on investigating the conflicts that happen in these schools between teachers and managers.

### **The research's objective**

The purpose of this study is to investigate ‘How do teaching staff members and mangers manage their conflicts?’. In order to address the primary research issue, the following questions were developed:

1. What types of conflicts usually happen between teaching staff members and mangers?
2. What are the common sources of conflict between teachers and mangers?
3. What strategies do teachers and managers use to solve their conflicts?

The study is an original research. It allows the reader to view and read the subject in all of its aspects. It's believed that the research will contribute to the subject of education management. The findings, the recommendations and implementation will provide insight for researchers, teachers, and school administrators.

## **METHOD**

### **Research design**

This research is a qualitative study and it was designed as a descriptive case study. A qualitative study is a collection of methods for gathering and analyzing data that seeks to understand and explore real-world issues. It also helps in generating a new hypothesis. In addition, participants' views, behaviors, feelings, and experiences are gathered in qualitative research (Tonon, 2015). Conversely, it is not like a quantitative study that addresses quantity or number, and which starts with hypotheses in order to support or refute them (Gray et al., 2007).

As a descriptive case study, this research was planned. An in-depth examination of a single person or small sample size is used in a qualitative descriptive case study, which limits its conclusions to that person or group in a particular context (Glesne, 2016). In order to investigate a particular aspect of a complicated phenomenon, this descriptive-qualitative methodology is employed. Case studies that are descriptive attempt to fully explain in detail an event within its specific context (Ayton, 2023). The descriptive case in this research is teachers from different primary schools and the study topic is conflict management. This topic is examined deeply and the findings only present the teachers who were included in this study.

### **Sample of the Research**

The sample for this study consists of eight teachers and managers who work at different schools in Al-Zawia, Libya, during the autumn term of 2023–2024. One could argue that the research project's time frame restricts the number of participants, which could have an impact on the study's reliability (Bryman & Bell, 2011). Maylor and Blackmon (2005) argue that a qualitative multiple participant study could have eight individuals in order for the results to be generally applicable. Purposive sampling and criterion sampling was used to select the sample. Purposive sampling is based on the evaluation of the researcher who will provide the greatest amount of data to achieve the study's objectives. criterion sampling allows for the acquisition of rich data and detailed information (Etikan and Bala, 2017). As a result, the study's requirement is that teachers had to experience conflict in their school in order to share their opinions about the causes of conflicts and how to handle them. The aim of this research paper is to investigate how mangers and teachers manage conflict between them. In order to address such a matter, the researcher decided to choose teaching staff members who have been teaching for more than two years. Although the conflict is inevitable, the researcher believes that having experienced members will absolutely help in addressing the objectives of this study in detail.

### **Data Collection Tool and Collection of Data**

The tool that is used in this study is a semi-structured interview. Some of the open-ended questions were initially prepared by the researchers, while the rest were asked during the interview to explore the matter in more detail (Newcomer et al, 2015). Galletta (2013) states that semi-structured interviews are ideal for many valuable tasks, especially when several of the open-ended questions call for additional questioning. Semi-structured data collection is used in the majority of qualitative descriptive studies since it is a dependable method compared to other qualitative research. The data analysis techniques are typically more categorical and less conceptual. Thus, student researchers would find this study design ideal for their research. The investigations can be carried out more quickly than with other study designs because of their simple methodology (Ayton, 2023).

The authors' interview questions were intended to investigate the causes and the types of conflicts that the teachers face with their colleagues, with their boss and with the rules of their schools. In addition, the teachers were asked how to manage the dispute that they had with their supervisors, their coworkers, and the regulations of their educational institutions. Two management professionals were asked for their thoughts in order to assess the internal validity of the research's questions. Following that, the pilot study was carried out using two primary school teachers to investigate the effectiveness of the questions. The investigation of the pilot study shows that two questions were not effective, so they were rephrased to obtain further details.

To confirm the validity and reliability of the study, two research experts looked over the data at each stage. The research findings were presented in detail, and the data were presented exactly as they were. In order to guarantee consistency, the researcher applied the data's coding and theming. The researcher was able to generate themes and analyze the data more easily by labeling and grouping comparable types of data using this technique.

Interviews with participants were conducted using different social media platforms. This tool was used because the researcher is not in the study context. Each teacher was met individually after finishing their work and when we agreed on a specific time. During the interview, the answers were written, and then the answers were translated from Arabic to English by the researcher, who specializes in this topic. Each participant was seen individually to conduct a detailed exploration of the matter, and interviews typically lasted between forty and fifty minutes.

### **Analysis of Data**

The "thematic analysis" (TA) methods were used to analyze the data. It is defined as a technique for determining, evaluating, and understanding "themes," or meaningful patterns, in qualitative data. TA is used in experiential research to identify patterns in data related to participants' experiences, perspectives, and behaviors (Clarke & Braun 2017). According to Braun and Clarke (2013), there are six stages of TA. These are: 'familiarisation with the data', coding, searching for themes, reviewing themes, defining and naming themes and writing up'. Firstly, the interaction was thoroughly transcribed and read multiple times for a comprehensive understanding of the content. Then, the codes were tentatively identified. These codes correspond to the aspects of the data that seem significant and fascinating. These codes give an idea of the conversation's context, although they are more numerous and detailed than themes. The third step was finding the themes and connecting them with codes. Later, the themes are reviewed, defined, and named. In the last step, the analysis was used to address the research question, how do teachers and managers handle their conflicts?'

Each teacher was given a unique number to represent their ideas in the survey; names were kept secret to ensure participant privacy. The first teacher was presented as T1, and the tenth teacher as T8. In an effort to give the research validity, the participating teachers' comments were given as quotes.

### **Ethical considerations**

Confidentiality and anonymity were ensured, and all participants were made aware of the study's aim. The informed consent form that participants signed stated that they were under no obligation to continue with this study and that their participation was entirely optional.

### **FINDINGS**

Three research questions listed in the research introduction served as the foundation for the presentation of the research findings. To answer the main question; how Libyan teachers and managers manage their conflicts? three main themes are presented respectively in this part: types of conflicts, causes of conflicts and strategies they use for managing their conflicts.

#### **Theme one: types of conflicts**

Under this theme, there are three subthemes according to three different types of conflict: task conflict, relationship conflict, and process conflict. According to the result, the majority of conflicts are task conflicts in which teachers

have a dispute with other teachers regarding their work. Under the first subtheme, there are four subthemes. First subtheme, the majority of problems relate to ‘problems from the teachers whom their children are taught by other teachers’. Secondly, issues relate to the ‘attendance record’. Thirdly, issues relate to the class time. Fourthly, other issues relate to different contexts.

Firstly, five teachers mention that they have a dispute with ‘the teachers whom they teach their children’. These are teachers T1, T4, T6, T7, and T8. They say:

I had many problems with teachers who taught their daughters. If they find out that their daughters do not understand the lesson, they would like me to teach them in order to teach their daughters at home. I mean that the teachers come to me and ask me to explain something that they do not understand. **T1**

They come up to me in class and nervously inquire about their children's missing marks. Why did you reduce their children's marks even though they got a perfect mark on the exam? **T6**

They like to get into everything. During this year, approximately 7 to 8 teachers come to me to ask about their children whom I teach. Most of their questions are: Why did you give my son an incomplete mark in the English language subject that I teach? And every time I have to explain to them the reason, **T7**

It may occur as a result of a complaint from the teacher's son or daughter, telling the teacher's mother that one of the teachers is not good at teaching and giving information. **T8**

Second subtheme, four teachers state that most of the disputes that happen between teachers relate to ‘attendance record’. These are T2, T3, T6, and T8. During the interview, they say

Being responsible for the attendance and absence record, most of the problems happen to me regarding this matter. Some teachers come late to the school and I prevent them from signing. **T2**

Each teacher should come on time and leave on time. These are some of the principles of the school, and we should apply them. These principles are established by the Ministry of Education in order to carry on the education process; neglecting these principles will absolutely lead to corrupting our school. **T8**

Third subtheme, disagreements relate to the ‘class time’. This problem is mentioned by T1 and T5.

Yes, another problem happened, and it still happens sometimes between me and the teacher who has a lesson before me. Her lesson should finish, but most of the time she takes five minutes from the limited time of my lesson. **T1**

There was a problem that happened between me and a teacher last semester. The whole semester, on Wednesday, she took the time for my lesson. She told me that ‘this is her time, and it is not mine’. **T1**

Most of the problems occur when another teacher takes my class time. Most of the time, she takes 10 minutes, and I may have 35 minutes left for explaining my lesson, and this time may not be enough. This actually makes me annoyed. **T5**

Fourth subtheme, there are other disagreements that occur between teachers. These relate to the task type of conflict and relate to different contexts, as they were mentioned by many participants:

When I heard it, I was upset. I went to her, and I told her why you let the inspector get inside my class and evaluate my students instead of me. What you did is against the rule of the education ministry. **T1**

The only problem that bothered me was with the Islamic education teacher who teaches in the other classrooms. She had a circumstance, and as a result, I taught on her behalf. It took days, and I was exhausted, to do her job. **T3**

The problem that occurred between me and the teacher was because of the exam topic. We put the questions together, but our typical answers were different. It became problematic to determine which answers would be accepted. **T3**

Problems from some colleagues who are teaching the sixth grade primary students in the same academic year. When I ask about something in the curriculum or when I ask them to clarify some points for me, they do not give an answer and do not like to help me. This makes me hesitate to speak with them or ask them any questions. **T7**

Under the second subtheme, 'relationship conflict', there are a few cases that show that the conflict that happened between them relates to the social relationship between them and does not relate to their work. These are mentioned by two participants, T7 and T8.

Sometimes problems may occur between teachers as a result of their presence in their room during rest periods between lessons. **T7**

Some problems may also occur as a result of their presence and dialogue in one room, especially for female teachers, during their free time. These problems may be social and not related to the work. **T8**

Under the third subtheme, 'process conflict', there is only one case where a teacher and the boss mention it. This appears at the beginning of the study and during the conference between teachers when they discuss the distribution of the subjects. In other words, what each teacher is going to teach and how many classes will be taught by them. One teacher mentions it, and the boss talks about the same dispute:

Teachers who have experience do not argue or oppose the distribution of schedules, and this causes us to suffer psychologically. They force us to teach more classes than others under the claim that we are experienced teachers, and this creates discussion and debate between us. We are often not satisfied about that. I am also forced to teach mathematics, which is not my specialty. My specialty is science. Due to a shortage of mathematics teachers, I am forced to teach it. **T5**

Most problems occur at the beginning of the semester, when the schedule is distributed. Some teachers are dissatisfied with the division of subjects and the study schedule. They have disputes with each other, especially when they compare their work. **T8**

### **Theme two: causes of conflicts**

Most of the conflicts that happen between the teaching staff members and the managers are identified as having five main causes: misunderstanding, breaking the regulation, **work overload**, individual differences, and poor communication. These are classified into five main subthemes according to the results.

Starting with the misunderstanding subtheme, many cases show a misunderstanding between the teachers. The majority of teachers ask other teachers (T1, T4, T6, T7) who teach their children about reducing their marks. The teachers who teach have to explain and clarify the reason. For example, as with what happened with teachers 6 and 7, They come up to me in class and nervously inquire about their children's missing markets. Why did you reduce their children's markets even though they got a perfect mark on the exam? I have to clarify to them that participation in the class is the most important part of evaluation. **T6**

They like to get into everything. During this year, approximately 7 to 8 teachers come to me to ask about their children whom I teach. Most of their questions are: Why did you give my son an incomplete mark in the English language subject that I teach? And every time I have to explain to them why **T7**

Another subtheme: 'breaking the regulation' and the laws of the school is another reason behind the conflict between managers and teachers. This relates to breaking three main principles: 'attendance record, class time', and 'breaking the rules'. Many teachers and managers state that most of the disputes that happen between them relate to 'attendance records'. Many teachers, as stated, do not come on time. They come late. The manager T2 and the boss T8 clarify the point by saying:

Being responsible for the attendance and absence record, most of the problems happen to me regarding this matter. Some teachers come late to the school, and I prevent them from signing. **T2**

Each teacher should come on time and leave on time. These are some of the principles of the school, and we should apply them. These principles are established by the Ministry of Education in order to carry on the education process; neglecting these principles will absolutely lead to corrupting our school. **T8**

Not following the principle of 'class time' causes disagreement between teachers. This problem is mentioned by T1 and T5.

Yes, another problem happened, and it still happens sometimes between me and the teacher who has a lesson before me. Her lesson should finish, but most of the time she takes five minutes from the limited time of my lesson. **T1**

There was a problem that happened between me and a teacher last semester. The whole semester, on Wednesday, she took the time for my lesson. She told me that 'this is her time, and it is not mine'. **T1**

Most of the problems occur when another teacher takes my class time. Most of the time, she takes 10 minutes, and I may have 35 minutes left for explaining my lesson, and this time may not be enough. This actually makes me annoyed. **T5**

The teacher, the boss, and the inspector—all of them might 'break the rules' and this is what happened in case T1. T1 left the school on party day, and she should stay till the end of departure time according to the rules of the education ministry. Here is what she says:

When I heard it, I was upset. I went to her, and I told her why you let the inspector get inside my class and evaluate my students instead of me. What you did is against the rule of the education ministry. **T1**

Under the subtheme of work overload, the participants' speech may indicate that. This is clear from the speeches of teachers T3, T5, and their boss T8:

The only problem that bothered me was with the Islamic education teacher who teaches in the other classrooms. She had an urgent circumstance, and as a result, I taught on her behalf. It took 2 weeks, and I was exhausted to do both my job and her job as well. **T3**

Teachers who have experience do not argue or oppose the distribution of schedules, and this causes us to suffer psychologically. They force us to teach more classes than others under the claim that we are experienced teachers, and this creates discussion and debate between us. We are often not satisfied about that. I am also forced to teach mathematics, which is not my specialty. My specialty is science. Due to a shortage of mathematics teachers, I am forced to teach it. **T5**

Some teachers are dissatisfied with the division of subjects and the study schedule. They argue because they took more subjects than others. I do not divide equally and fairly because some teachers have more experience than others in the field of teaching, and the rest of the teachers do not have experience or competence, especially in teaching students in advanced stages. **T8**

Under another subtheme, individual differences as a reason for a conflict emerge from the data. This might be clear from the speeches of participants T3, T7, and T8.

The problem that occurred between me and the teacher was because of the exam topic. We put the questions together, but our typical answers were different. It became problematic to determine which answers would be accepted. **T3**

Sometimes problems may occur between teachers as a result of their presence in their room during rest periods between lessons. **T7**

Some problems may also occur as a result of their presence and dialogue in one room, especially for female teachers, during their free time. These problems may be social and not related to the work. **T8**

Finally, poor communication is only presented in one case that shows that one teacher asks other teachers for help but they prevent it. This might also show competition and grudges between them.

Problems from some colleagues who are teaching the sixth grade primary students in the same academic year. When I ask about something in the curriculum or when I ask them to clarify some points for me, they do not give an answer and do not like to help me. This makes me hesitate to speak with them or ask them any questions. **T7**

**Theme three: strategies are used.**

The majority of the strategies that are known to solve the conflict are used by the participants in different contexts. Under this theme, there are six subthemes: dominating, avoidances, collaboration, effective communication, accommodation, and compromising.

Starting with the dominating or forcing strategy, this strategy was mentioned by three participants. It was used by participant T1 in a suitable and appropriate manner with another teacher. It is mentioned by Manager 8 to enforce the principles and rules of the school. Conversely, it was used forcedly against participant 5, which led her to leave the school, and against participant 3 as well, instead of finding another solution to solve the problem, such as having substitute teachers, and here is what they say:

The first and second times, I knocked on the door, and I told her that it was my time now. But later, I started to get into the class and put my bag on the table inside the class. She does not understand. I have to do that. **T1**

Each teacher should come on time and leave on time. These are some of the principles of the school, and we should apply them. These principles are established by the Ministry of Education in order to carry on the education process, neglecting these principles will absolutely lead to corruption and the collapse of our school. **T8**

I was given more classes compared to other teachers, in addition to being forced to teach mathematics, which is not my specialty. My specialty is science. Due to a shortage of mathematics teachers, I am forced to teach it. **T5**

They force us to teach more classes than others under the claim that we are experienced teachers, and this creates debate between us, and we are often not satisfied about that. Last year, I had to transfer from one school to another as a result of these problems that happened to me. I am now at another school teaching science, and I am in a better situation. **T5**

The only problem that bothered me was with the Islamic education teacher who teaches in the other classrooms. She had an urgent circumstance, and as a result, I taught on her behalf. It took weeks, and I was exhausted from doing her job. **T3**

The second subtheme is avoidance. Although it is believed that using this strategy might not be effective and the person might not be satisfied, as what happened with participants 7, 4, and 5, the manager's speech T8 indicates that avoidances might be used effectively if it is not his duty. As stated by them:

Problems from some colleagues who are teaching the sixth grade primary students in the same academic year. When I ask about something in the curriculum or when I ask them to clarify some points for me, they do not give an answer and do not like to help me. This makes me hesitate to speak with them or ask them any questions. **T7**

I always tell him about the problem that happened to me. He just listened to me, and he has never put any solution forward. I saw him listen to the other teachers and give solutions to the others, but he did not give any solutions to me. He started to avoid me each time. I really feel upset and annoyed. **T4**

It may occur as a result of a complaint from the teacher's son or daughter, telling the teacher's mother that one of their teachers is not good at teaching and conveying information. As an administrator, this is not my work. This is the work of the educational inspection. He is the one who evaluates the teacher, and his evaluation is taken into consideration. **T8**

The third subtheme is collaboration. It is used by many participants to solve the problems that they face.

We met the director after the discussion. We decided that it is necessary to adhere to the attendance time, and only five minutes of delay are permitted. **T2**

Last year, we faced this problem, and we tried to solve it. We told the students to print the books themselves. In the middle of the school year, we identified the students who did not have books, and we copied the books at the school using the teachers' budget. **T7**

I had a problem as a result of uploading a photo of my son on the school's social media page. This is because his notebook was perfect and organized. The parents of another student who attended the school said that you put the teachers' children at the top and neglected our children. Problems always arise as a result of comparing teachers' children with other students. We solved the problem by stopping the publication of photos of students on social media sites. We only published a photo of their note books with their names on it. **T4**

The fourth subtheme is effective communication. It is used by many teachers to handle their conflicts. They state:

At first, they refused to give me a record of attendance and absence, but when I explained the reason to them, they agreed and gave me the record to sign. **T6**

They come up to me in class and nervously inquire about their children's missing markets. Why did you reduce their children's markets even though they got a perfect mark on the exam? I have to clarify to them that participation in the class is the most important part of evaluation. **T6**

Most of the problems arise from teachers who teach their children. They like to get into everything. During this year, approximately 7 to 8 teachers come to me to ask about their children whom I teach. Most of their questions are: Why did you give my son or daughter an incomplete mark in the English language subject that I teach? And every time I have to explain to them the reason, **T7**

There was a problem that happened between me and a teacher last semester. The whole semester, on Wednesday, she took the time for my lesson. She told me that this is her time and not mine. I told her this was my lesson time, but she did not believe me, so I took her under the stairs to look at the time table to convince her that she took the time for my lesson. **T1**

The fifth subtheme is accommodation. Two participants in two different situations show a low level of concern for themselves and a high level of concern for the other teachers.

I don't like problems. I often knock on the door and wait until she finishes and goes out. I have to wait. **T5**

I had many problems with teachers who taught their daughters. If they find out that their daughters do not understand the lesson, they would like me to teach them in order to teach their daughters at home. I mean that the teachers come to me and ask me to explain something that they do not understand. The first time, when she called me at 11 p.m., I responded. **T1**

The sixth subtheme is compromising. This strategy is believed to be an effective technique for solving conflict. It is also called a win-win strategy. It consists of a moderately balanced area where self- and other-care are present. The participant says,

The problem that occurred between me and the teacher was because of the exam topic. We put the questions together, but our typical answers were different. It became problematic to determine which answers would be accepted. After the dialogue, it was agreed to take the two answers into consideration. **T3**

## **DISCUSSION**

This part is divided into three main parts connected to the research question: types of conflicts, causes of conflicts and strategies used to handle them.

### **Types of conflicts**

The finding reveals that task or work conflict is the most prominent type of conflict. It means that most conflicts that happen between teachers and managers relate to their work. Other disputes that occur are identified as relationship and process conflicts, but these are minor compared with task conflicts. The results of this prominent type of study are consistent with those of Shanka and Thuo's study (2017). Their results show that work is one of the main factors in conflict. Their study looked into different conflict management and resolution techniques employed in government primary schools in the Wolaita zone between teachers and school administrators. They found out that the sources of conflict that relate to work are pressure at work, unfair timetable scheduling, teachers' unhappiness with their jobs, and poor responsibility. All of these sources are similar to the causes of conflicts that happen between teachers and managers in Libya.

Conversely, another study shows that relationships or interpersonal factors are the main types of conflicts in Greek (Saiti, 2015). The main difference between task conflict and relationship conflict is that while task conflicts are functional, relationship conflicts are dysfunctional. When conflict leads to better decisions, it is beneficial because it provides an opportunity for the discussion of issues and the release of anxieties, creates an atmosphere suitable for self-evaluation and development, and inspires imaginative thinking in group members. Conversely, the existence of relationship conflict is considered dysfunctional (Daft and Marcic, 2013) because it has been shown to be disruptive in professional environments (Henkin and Holliman, 2009). Some researchers also noted that task conflict fosters creativity in interorganizational teams and improves team learning in areas like cooperative problem solving and interorganizational interactions (Garcia et al., 2018). However, an excessive amount of task conflict might result in cognitive strain or a negative mood, both of which are harmful to the creativity of the team (Ayoko, 2016). Therefore, it can be stated that task conflicts might be useful for Libyan schools as an organization if they do not occur excessively.

### **Causes of conflicts**

Identifying the causes of conflict that happen inside any organization is helpful and useful for both leaders and managers. It helps them initially understand the nature of the source of conflict (Eslamdoost et al., 2020; Bajwa et al., 2020; Shanka & Thuo, 2017). In this study, most of the conflicts that happen between the teaching staff members and the managers are identified as having five main causes: misunderstanding, breaking the regulation, work overload, individual differences, and poor communication.

The study's findings are partially in agreement with the study that was conducted in schools in Bostana. This study was carried out to investigate the difficulties facing managers in handling disagreements (Morake et al., 2011). The results show communication breakdown, clash of personalities, and lack of resources lead to conflict in Bostana's school. While miscommunication and clash of personalities are similar causes to this research's result, lack of resources is not. Most of the Libyan participants mention they don't lack resources this year; they mention that they lacked books last year, and this did not cause any dispute between them because they were able to find a solution due to discussion on this issue.

Regarding poor communication, many studies have confirmed that miscommunication and misunderstandings are sources of disputes between teachers (Barmao, 2012; Isabu, 2017; Shanka & Thuo, 2017; Antwi, 2013; Sintapertiwi & Andika, 2023). According to Saiti (2015), effective communication is the most crucial element in ensuring increased effectiveness in school teacher performance within the teaching team. He also adds that high levels of understanding are needed to reduce disruptive conflicts and for better communication, and the rules can be applied more easily inside the schools and between the managers and teachers. Thus, it can be said that misunderstanding and poor communication are sources of conflicts that emerge between teachers and managers in different contexts.

Breaking the regulations and work overload that are practised in Libyan schools is another source of conflict. The investigation of the data reveals that most of the teachers do not obey the rules of their schools. The rules of the 'attendance record' and 'class time' are the most prominent rules that are not followed by the teachers. The data also shows that the leader might not follow other rules that are conducted by the Ministry of Education. The results of the investigation are consistent with the study of Shanka and Thuo (2017). The data in their study was collected from ten different schools in Ethiopia. They stated that poor implementation of education policies by teachers and poor implementation of rules and regulations by leaders produce conflicts in schools. Therefore, they suggest that teachers, managers, and leaders should implement and follow the rules. In addition, their finding in terms of work overload is also in line with this study, and it agrees with Antwi's study (2013), which was conducted in high schools in Ghana. The data from the semi-interview of Libyan teachers and managers show, for instance, that experienced teachers have more classes compared with non-experienced teachers. It also shows that if teachers have urgent circumstances, other teachers, who have their own work, take the absent teachers' work and become overloaded with work. This is unfair and probably makes them tired and exhausted from their work. Therefore, their performance

might not be effective. To sum up, breaking the rules and work overload are possible sources that lead to disagreement, and these two sources are similar to other studies.

Individual differences seem to be another source behind the conflicts between teachers. However, the investigation of the data only shows one case where two teachers argue about identifying the typical answers to the final exam. They dispute because each has their own beliefs and knowledge. Individuals might be different in their languages, cultures, beliefs, thoughts, and knowledge, and this might lead to conflict while they are communicating. Most of the participants in this study are from the same place. They live near each other, they have the same language, and they nearly have the same culture. This might explain the reason behind the investigation: there is no significant dispute connected to their individual differences. There are also other studies that show that conflicts occur because of individual differences (Shanka & Thuo, 2017; Isabu, 2017; Yaras & Gunduzalp, 2021). The conflict that appears between two individuals in their school does not only affect them. According to Ward (2017, whenever two individuals do not get along with each other, such interpersonal conflict can affect everyone in the organization and their performance as well.

In addition to the five main causes that occurred in this study, there are various sources mentioned in other research. These are limited resources, overlapping authority (Isabu, 2017), inequality in the distribution of school resources, poor infrastructure, lack of competence in teaching, intolerance among workers, lack of responsibilities, lack of training, lateness and absenteeism, lack of involvement in decision-making, lack of clarity in the educational training policies and guidelines, lack of leadership skills (Shanka & Thuo, 2017), lack of reward systems (Antwi, 2013), unfair treatment (Sintapertiwi & Andika, 2023). In addition, it was added that school size is a probable source behind the conflict. As schools grow in size, teacher disagreements are more likely to occur. Saiti (2015) clarifies that small schools have better flexibility in making decisions. What he means is that teaching staff members can meet and make their decisions easily. Conversely, those school-limited members may lack information and knowledge and this might lead to difficulty to find solution to their conflict.

In addition to the causes that appeared from comparing and contrasting this study with different studies, the data shows four harmful effects on Libyan participants. One of the participants feels annoyed and upset by the avoidance of the leader. Another participant feels unwilling to communicate with others due to poor communication from others. The third case feels stressed and tired, and the fourth case is unable to work anymore. The fourth effect led the teacher to leave the school. This is a spurious loss to the school, especially if these teachers are qualified teachers. Other researchers show other negative effects of not handling the conflicts. Turan (2014) states that improperly managed disagreements have the potential to be quite harmful. In actuality, an improperly handled conflict process can result in unfavorable emotions and circumstances, including interdependence, reduced collaboration, jealousy among group targets, and instability. Ertürk (2022) mentions some destructive effects, some of which are similar to those described in this study, such as stress and anxiety, refusal to work, and the desire to leave school. The results of his study also add to the tiring and exhausted state of teachers due to conflict, burnout, decline in productivity and performance, decline in organizational commitment, loneliness, dissatisfaction, cynicism, lack of motivation, disappearance of moral behavior, withdrawal, and anger. Although the aim of this study is not to investigate the negative or positive effects of conflicts, the destructive and harmful effects of conflicts on Libyan participants make the researcher highlight them. It is aimed at warning leaders, teachers, and managers about the damaging effects of conflicts inside schools in order to know how to manage their conflicts.

### **Conflict management strategies**

The majority of the strategies that are known to manage the conflict are used by the participants in different contexts. These are dominating, avoidances, collaboration, effective communication, accommodation, and compromising. Other studies have similar results. For example, the study's findings by Isabu (2017) show that their participants use avoidance, competition accommodation, and collaboration to manage their conflicts. Another study shows that teachers and managers use avoidance, punishing, compromising, forcing, ignorance, and discussions (Shanka & Thuo, 2017). The study of Morake and others (2011) states that most of his individuals use competing accommodations, avoidance, and compromising. From these results, it can be seen that most of the schools' leaders, managers, and teachers use similar strategies between them in their schools.

However, it is argued that using these strategies is seen as effective or destructive. Starting with the dominating or forcing strategy, this strategy was used by three participants. It was used by participant T1 in a suitable and appropriate manner with another teacher. when she gets into the class to force her to leave the class because it was her class time. It is practised effectively by the manager, the administrator, to enforce the principles and rules of the school. Conversely, it was used forcefully against participant 5, which led her to leave the school, and against participant 3 as well. Using the forcing strategy makes her overloaded with work and upset. Instead of finding another solution to solve the problem, such as having substitute teachers, she is overloaded with work. From this

finding, it can be inferred that dominating strategies can be effective if used properly and destructive if they are practised improperly. In contrast, the researchers Farooqi and others (2016) argue that if the forcing style is used by heads, effective output in terms of teachers' work will be gained. The data from his study shows a positive correlation between using a forcing style and teachers' performance. Another study also reveals that forcing style can change workers' performance effectively (Rouzbahani et al., 2013). However, both of these studies use quantitative studies and do not use qualitative studies. In other words, both of them deal with numbers and neglect the feelings of the participants. Thus, dominating style should be utilized carefully when thinking about its negative, harmful, and destructive effects.

Avoidance is another strategy that is used to manage the disagreement between Libyan participants. Although it is believed that using this strategy might not be effective and the person might not be satisfied, as happened with many Libyan teachers, the boss's speech indicates that avoidances might be used effectively if it is not his duty. Although it is not his duty, it is believed that effective communication should be used to clarify that to the teachers instead of feeling upset and dissatisfied due to his avoidances. Another study shows the relationship between the avoidance style and the low performance of teachers (Abdulraheem et al., 2020). It implies that teachers' performance will suffer if heads follow this approach (Farooqi et al., 2016). It is also added that decision-making and creativity can be negatively affected if this style is dominantly used in organizations (Abdulraheem et al., 2020). Moreover, individuals who employ this method are viewed as being unfit to handle a situation that requires attention, and they are unlikely to be able to comprehend and resolve the issues of others due to their lack of concern for others and themselves (Jehn et al., 2015). To sum up, using this approach seems to be destructive. Therefore, leaders, managers, and teachers should take care when they use them inside their organizations.

Using collaboration, accommodation, and effective communication is helpful in managing conflicts. This present study and other studies confirm that using these methods is effective in handling problems. It is also believed that using these essential strategies can enhance school performance (Sailti, 2015). In addition, by using collaboration and integration, leaders, managers, and teachers will be able to solve the problems that they face and reach the aims of their schools (Momanyi, 2011). By applying accommodation style, individuals display a low degree of self-interest and a great degree of concern and respect for others. This shows the sacrifices made by some for others in order not to cause conflicts. Some matters might be simple and not cause conflicts. Moreover, using effective communication is a suitable strategy to handle conflicts. In order to resolve disagreements, communication is crucial. It is ensured that conflicts can be addressed in a way that benefits the schools by having open communication with all parties involved (Yaras and Gunduzalp, 2021). Ertürk (2022) states that effective communication helps the administrator and employees work in harmony. They don't refuse when work is given to them, and they cooperate together to achieve the mission and vision of their schools. Thus, collaboration, accommodation, and effective communication should be widely used inside schools.

## CONCLUSION

This study revealed three main findings. It shows that task- or work-related conflict is the most prominent type of conflict. It means that most of the conflicts that happen between teachers and managers relate to their work. Other disputes are identified as relationship and process conflicts, but these are minor compared with task conflicts. After investigating the reasons behind the disputes between teachers and managers, the findings show that misunderstanding and breaking the principles that relate to record attendance and class time are the most prominent causes that lead to disputes between managers and teachers. In addition, work overload, individual differences, and poor communication are other reasons that lead to disagreement. Furthermore, the strategies that are used to handle these conflicts are various. These are dominating, avoidances, collaboration, effective communication, accommodation, and compromising.

It should be stated that this study has certain limitations and that more research would be beneficial in the field of school conflict management in Libya. Additional data from other parts of Libya that function in distinct socioeconomic contexts might be required for a more comprehensive inquiry and to confirm the findings and analysis of the present study. The present study did not examine the impact of personal characteristics of Libyan school leaders, including gender, age, family status, educational background, and total years of service in public primary education. Thus, more investigation is required. Additionally, the personality and features of the school environment have a significant impact on how effective school leaders are, so more research on these factors and how they affect managing conflict in school would undoubtedly provide a deeper understanding of the factors that influence conflict management techniques. Finally, finding the best dispute resolution strategy for each educational level is a crucial area of study.

## IMPLICATION

The finding implies that most of the problems that happen between teachers and managers relate to their work. This suggests that leaders, managers, and teachers should pay more attention to their work and should follow the principles and laws of their schools. Teachers should be consistent with the regulations of 'register record' and 'class time'. The study reveals that misunderstanding is another reason behind their disagreement, and it can be solved by effective communication. In addition, individual differences should be clarified to all of them in order to respect their beliefs, opinions, and thoughts. Moreover, work overload seems to be a serious issue not only for Libyan teachers but also in other countries, and the leaders of the schools should pursue solutions to solve this problem. Finally, and the most important is the implying of using conflict management strategies. While dominating and avoidance might be better not used or used wisely, collaboration, effective communication, accommodation, and compromising should be used widely for their effectiveness.

## ABSTRACT

The objective of this study is to examine the self-efficacy beliefs of physical education teachers employed in public secondary and high schools in the Diyarbakır province with regard to education for sustainable development. Furthermore, the study aims to determine whether these beliefs manifest any discernible differences according to the teachers' demographic characteristics. The study group comprises 291 physical education teachers from public secondary and high schools in the city center of Diyarbakır, enrolled in the spring semester of the 2022-2023 academic year. The research was designed using a descriptive survey model based on quantitative research methods. The data were gathered for the study using the Personal Information Form and the Education for Sustainable Development Self-Efficacy Belief Scale. The data were analyzed using the SPSS 27.0 software package. The findings of the study indicate that physical education teachers recognize the significance of education for sustainable development; however, they exhibit ambivalence in their self-efficacy beliefs. With regard to the demographic variables, no significant differences were observed in the self-efficacy beliefs of physical education teachers in education for sustainable development according to gender, school level, or knowledge level of education for sustainable development. However, significant differences were identified with regard to educational level and professional seniority. The findings indicated that teachers with postgraduate education and those with six to ten and 11 to 15 years of seniority exhibited elevated self-efficacy beliefs in education for sustainable development. It is of the utmost importance that physical education teachers cultivate their self-efficacy beliefs in education for sustainable development and integrate these beliefs into their pedagogical practices with resolve. It is thus recommended that the professional development of physical education teachers be provided at the point of education for sustainable development, with the development process being subject to continuous and systematic monitoring.

## INTRODUCTION

The sustainability challenges that humanity currently faces are the result of complex, frequently non-linear interactions between humans and the natural environment. Our comprehension of these issues is frequently inadequate and, to some extent, obscured by significant uncertainty (Voulvoulis & Burgman, 2019). It is widely acknowledged that human behavior is the underlying cause of the majority of sustainability challenges, regardless of whether it is deliberate or inadvertent. The actions of individuals and collective entities have the potential to exacerbate environmental, economic, and social problems (De Pauw et al., 2015). It is therefore evident that fundamental changes are required in our conceptualization of, actions toward, and behaviors with respect to other biotic and abiotic systems. This necessitates a transformation in sustainability. Such a transformation must be systemic, societal, and cultural (Linnér & Wibeck, 2019). Researchers from a multitude of scientific disciplines have addressed a plethora of sustainability challenges. However, despite this extensive research, sustainable solutions to these challenges have yet to be identified (Lotz-Sisitka et al., 2015). Teachers exert a profound influence on future generations, which is why it is of the utmost importance that they receive the best possible training. It is of the utmost importance that educators who possess the necessary competencies in sustainability be invested in the future of our children. It is therefore imperative that teachers be equipped with the requisite skills, knowledge, and competence to fulfill their role of promoting sustainable values and actions from the earliest stages of education, namely primary school. The learning outcomes targeted in sustainability education encompass knowledge, skills, motivation, attitudes, and values. In this context, the "skills and competencies" that individuals are expected to acquire occupy a pivotal position among the outcomes targeted by sustainable education (Uslu & Özdemir, 2023). Competence is defined as a set of skills, attitudes, and knowledge that are necessary for the successful completion of tasks and the resolution of problems. Recently, it has emerged as a subject of interest,

---

\*This study is based on research conducted by the first author as part of their master's thesis.

particularly in the context of teaching, course, and curriculum planning with a competence-based perspective. Researchers and academic institutions are developing sustainability-focused competency-based training programs with clearly defined assessment objectives and learning goals (Brundiens et al., 2021).

It is beyond dispute that education has the capacity to reshape worldviews and values, and thus holds considerable potential for addressing the sustainability challenges facing humanity. It is of the utmost importance that educators facilitate their students' comprehension of the concept of sustainability in the context of development, education, the environment, and other domains. Furthermore, educators must encourage their students to adopt this concept as a guiding principle in their daily lives. (IIASA, 2018; Rauch & Steiner, 2013; UNFCCC, 2015). However, lifestyle choices are frequently the consequence of external pressures exerted by institutions, structures, and practices that are beyond the control of the individual. In light of these considerations, it becomes evident that an individual's sense of personal responsibility must be situated within a dialectical relationship with the notion of collective responsibility (Wals, 2015). The concept of sustainability competence in education has been the subject of study in the context of basic education (Vesterinen & Ratinen, 2023). However, an analysis of students' learning data indicates that the objective of education for sustainable development at the university level has not been fully achieved. The integration of the sustainability competence framework at the higher education level is not yet fully evident at the basic education level, indicating that there is still scope for enhancement in teacher education (Sánchez-Carracedo et al., 2021). The planning, implementation, and assessment of education for sustainability frequently entails the consideration of five core competencies, as outlined by Wiek et al. (2011). The aforementioned competencies are as follows: (i) Systems thinking competence is defined as "the ability to collectively analyze complex systems in different domains (e.g., society, environment, economy, etc.) and at different scales (local to global) in order to identify cascading effects, inertia, feedback loops, and other systemic influences relevant to sustainability issues and sustainability problem-solving frameworks." (ii) Anticipatory/future thinking competence is defined as "the ability to collectively analyze, evaluate, and foresee the future in relation to complex sustainability issues." (iii) Normative/values thinking competence The ability to grasp the intrinsic values associated with sustainability. (iv) Strategic Thinking Competence: The capacity to collectively delineate, identify, implement, reconcile, and negotiate sustainability interventions, transitions, and transformative governance strategies. (v) Interpersonal and collaborative competence: The capacity to motivate, enable, and facilitate collaborative and participatory sustainability research and problem-solving. In conclusion, sustainability competence is comprised of these interrelated clusters of competencies (Brundiens et al., 2021).

The concept of self-efficacy, as defined by Bandura (1977), pertains to an individual's confidence in their capacity to plan, execute, and evaluate actions, including the ability to solve problems or to achieve desired outcomes. In this study, the term "teachers' self-efficacy beliefs about emotions, feelings, and empathy" is defined as "teachers' confidence in their ability to understand their own and others' emotions and feelings, to express their emotions in a meaningful manner, and to regulate and utilize their emotions" (Sleurs, 2008). The efficacy beliefs held by teachers exert an influence on the achievements of their students. Each efficacy belief comprises a set of dispositions that are indispensable for the successful completion of a task. In order to achieve success in these dispositions, it is essential to possess the ability to speak, listen, motivate, influence, read body language, feel, and learn the atmosphere of the conversation (Brundiens et al., 2021; Caprara et al., 2006; Wiek et al., 2016). Malandrakis et al. (2018) examined the relationship between education for sustainable development and self-efficacy. The results of the self-efficacy scale for teachers indicated a significant correlation between the teachers' perceived sustainability knowledge and their perceived sense of self-efficacy. The acquisition of knowledge is related to systems thinking and, more generally, to sustainability efficacy (Wiek et al., 2016). At this juncture, Ho (2021) proposes that self-efficacy can exert a beneficial influence on sustainability efficacy through the acquisition of knowledge. In their study investigating the link between self-efficacy and changeability beliefs in one's behavior related to motivating environmentally sustainable behavior, Schutte and Bhullar (2017) found that participants with high self-efficacy for sustainable behavior and changeability reported engaging in such behaviors more frequently than those with low self-efficacy for sustainable behavior and changeability. In a study conducted by Wiek et al. (2016), it was found that enhancing self-efficacy beliefs regarding sustainable purchases had the greatest impact on sustainable purchase intentions. These findings indicate that self-efficacy beliefs are a significant factor in strategic competence.

The capacity to apply ethical values and critical thinking skills is indispensable for addressing sustainability-related issues (Warren et al., 2014). Education is regarded as an inherently ethical and values-based endeavor (Sutrop, 2015). The existing literature illustrates that values are a crucial factor influencing sustainable behavior and action. However, a discrepancy has been identified between environmental attitudes and behaviors, with values failing to consistently translate into action (Leiserowitz et al., 2006). Moreover, the relationship between future thinking competence and self-efficacy among potential entrepreneurs (Fuller et al., 2018) and the relationship between collaborative educational approaches and sustainability competence are regarded as pivotal (Bassachs et al., 2020).

Akça (2019) found that pre-service teachers' self-efficacy beliefs were a significant predictor of their solution-focused skills and their beliefs about education for sustainable development, accounting for 29% of the variance. As demonstrated by Alibakhshi et al. (2020), the self-efficacy of teachers has been extensively examined, and the findings indicate that those with elevated self-efficacy are more inclined to undertake challenging tasks. Moreover, there has been a recent increase in interest in the development and validation of scales for measuring student teachers' self-efficacy beliefs and their capacity to engage in education for sustainable development (Handtke et al., 2022; Malandrakis et al., 2018). In the extant literature, the competencies and attitudes of teachers toward the teaching profession are regarded as an integral aspect of the teaching profession itself (Yeşilyurt, 2014).

In the contemporary era, a multitude of global preventive objectives are being established and operationalized with the objective of addressing a plethora of social issues, particularly those pertaining to vital and environmental concerns. One such overarching measure is the Sustainable Development Goals (SDGs), which the United Nations (UN, 2015) has established as a conceptual framework for all countries. The SDGs are comprised of three interrelated components: the environment, society, and the economy. The aforementioned goals are designed to facilitate the development of innovative technologies and methodologies that will create new employment opportunities, thereby enabling future generations to enhance the quality of life in economic, environmental, and social dimensions (Blewitt, 2015). It is thus apparent that teachers' attitudes, competencies, and beliefs about the concept of sustainable development play a pivotal role within the educational process, beginning at the elementary level and continuing until higher education. It is imperative that educators possess a high level of awareness and self-efficacy in order to achieve the objectives set forth for sustainable development. While studies have been conducted on teachers in various disciplines within the scope of the subject, the lack of a comprehensive study on physical education teachers underscores the importance of this research. The objective of this study is to examine the self-efficacy belief levels of physical education teachers employed in public secondary and high schools in the Diyarbakır province with regard to education for sustainable development. Moreover, the study aims to ascertain whether these belief levels exhibit variation in accordance with various demographic variables. In alignment with this objective, the following research questions (RQ) were posed for investigation:

RQ 1: What are the self-efficacy beliefs of physical education teachers with regard to education for sustainable development?

RQ 2: Are there significant variations in the self-efficacy beliefs of physical education teachers with regard to education for sustainable development as a function of their demographic characteristics?

## **METHOD**

### *Research model*

The research was designed in accordance with the descriptive survey model, which is one of the quantitative research methods. Descriptive research is a methodology that seeks to investigate, define, and explain events, phenomena, and relationships in their natural state. Survey models are research approaches that seek to describe a past or current situation in its actual state, taking into account the existing situation or phenomenon (Karasar, 2007).

### *Population and sampling of the study*

The study population comprises 420 physical education teachers employed in official secondary and high schools affiliated with the Ministry of National Education in the province of Diyarbakır during the spring semester of the 2022-2023 academic year. Given the impracticality of reaching the entire population in terms of time and cost, a sample of a size deemed representative of the target population was selected. To facilitate the determination of the requisite sample size, the table of sample sizes presented by Yazıcıoğlu and Erdoğan (2004) was utilized. As indicated in the table, a sample size of 278 participants would be sufficient to achieve a 95% confidence interval and  $\pm 0.05$  sampling error. A total of 291 physical education teachers were included in the study sample. Table 1 presents the distribution of participants according to their demographic characteristics. It was thus determined that 40.2% of the teachers participating in the study were female, 59.8% were male, 48.5% of them were employed in secondary schools and 51.5% in high schools. In terms of educational level, 83.5% of the teachers had obtained an undergraduate degree, 16.5% had pursued postgraduate studies, 75.3% of the teachers had between one and five years of professional seniority, 5.2% had between six and ten years of professional seniority, 9.3% had between eleven and fifteen years of professional seniority, and 10.3% had sixteen or more years of professional seniority. Furthermore, 76.3% of the teaching staff demonstrated an understanding of the principles of education for sustainable development.

**Table 1.** Demographic characteristics of the participants

| Demographic characteristic           | Group                  | f   | %     |
|--------------------------------------|------------------------|-----|-------|
| Gender                               | Female                 | 117 | 40.2  |
|                                      | Male                   | 174 | 59.8  |
| School level                         | Middle School          | 141 | 48.5  |
|                                      | High School            | 150 | 51.5  |
| Education level                      | Undergraduate          | 243 | 83.5  |
|                                      | Postgraduate Education | 48  | 16.5  |
| Professional seniority               | 1-5 years              | 219 | 75.3  |
|                                      | 6-10 years             | 15  | 5.2   |
|                                      | 11-15 years            | 27  | 9.3   |
|                                      | 16 years and above     | 30  | 10.3  |
| Knowledge of sustainable development | Yes                    | 222 | 76.3  |
|                                      | No                     | 69  | 23.7  |
|                                      | Total                  | 291 | 100.0 |

#### Data collection

The data for this study were collected using two instruments: the Personal Information Form and the Education for Sustainable Development Self-Efficacy Belief Scale. The instruments were developed by the researcher. The Personal Information Form includes inquiries pertaining to the participants' gender, educational level, professional seniority, and familiarity with the concept of education for sustainable development. The "Education for Sustainable Development Self-Efficacy Belief Scale," developed by Stants (2014) and adapted into Turkish by Gürbüz (2020), is unidimensional and consists of 13 items. The confirmatory factor analysis conducted by Gürbüz (2020) to verify the original structure of the scale yielded fit index values that fell within the acceptable range ( $\chi^2/df = 2.02$ , RMSEA = .070, AGFI = .873, GFI = .910, CFI = .960, NNFI = .910, NFI = .900, SRMR = .071). Moreover, the Cronbach alpha coefficient was determined to be 0.92, indicating high internal consistency. In this study, the Cronbach alpha coefficient was determined to be 0.74, indicating satisfactory internal consistency. The scale items were rated on a five-point Likert scale, with values ranging from 1 (strongly disagree) to 5 (strongly agree). The scale items are comprised of the following statements: "I consistently identify novel and enhanced pedagogical approaches for teaching sustainable development," "Despite my best efforts, I do not teach sustainable development in a manner that is consistent with my approach to most other subjects," and "I am cognizant of the essential steps to effectively teach sustainable development concepts." The scale allows for a maximum score of 65 and a minimum score of 13. The requisite permissions were duly obtained from the Scientific Research and Publication Ethics Committee of Mardin Artuklu University on June 19, 2023, with the decision numbered E-79906804-020-100143. Furthermore, the educators provided their consent to participate in the study.

#### Data analysis

The data were analyzed using the SPSS 27 software package, which is designed for the statistical analysis of quantitative data. Prior to commencing the analysis, the data were examined to ascertain the presence of any missing or extreme values. It was thus determined that no such values were present. Subsequently, an examination was conducted of the skewness and kurtosis coefficients, which revealed that the data did not exhibit a normal distribution. In this context, in addition to descriptive statistical techniques, non-parametric tests were employed in the analysis. The Mann-Whitney U test was employed for bivariate groups, the Kruskal-Wallis H test was utilized for multivariate groups, and Tamhane's T2 test was applied to ascertain the discrepancy between groups. All findings were evaluated at the p 0.05 level of statistical significance.

## RESULTS

Table 2 presents the descriptive statistical results of physical education teachers' educational self-efficacy beliefs regarding sustainable development. The findings indicate that physical education teachers' educational self-efficacy beliefs about sustainable development are predominantly positive, with an average rating of 3.11 on a 5-point scale (SD = 0.54). Moreover, the data set exhibits a lack of normal distribution, as evidenced by the skewness (-0.43) and kurtosis (2.80) values falling outside the range of  $\pm 1.50$  (Tabachnick & Fidell, 2013).

**Table 2.** Descriptive statistics results of physical education teachers' self-efficacy beliefs in education for sustainable development

|  | M    | SD   | Skewness | Kurtosis |
|--|------|------|----------|----------|
| Self-efficacy beliefs in education for sustainable development | 3.11 | 0.54 | -0.43    | 2.80     |

The results of the Mann-Whitney U test regarding the self-efficacy beliefs of physical education teachers in relation to education for sustainable development, stratified by gender, school level, educational level, and the possession

of sustainable development education knowledge, are presented in Table 3. The findings indicate that there is no statistically significant difference in physical education teachers' self-efficacy beliefs about education for sustainable development according to gender ( $U=9450.00$ ,  $p>0.05$ ), school level ( $U=10228.50$ ,  $p>0.05$ ), or knowledge about sustainable development education ( $U=7393.50$ ,  $p>0.05$ ). Nevertheless, a notable discrepancy is apparent in the self-efficacy beliefs regarding education for sustainable development, contingent on the educational level of the physical education teachers ( $U=3118.50$ ,  $p=0.05$ ). The mean rank of teachers with an undergraduate education level ( $MR = 134.83$ ) was found to be lower than that of teachers with a graduate education level ( $MR = 202.53$ ). The findings indicate that physical education teachers with postgraduate qualifications exhibit heightened levels of self-efficacy beliefs in education for sustainable development.

**Table 3.** Comparison of physical education teachers' self-efficacy beliefs for education for sustainable development by gender, school level, education level, and knowledge of sustainable development

| Demographic characteristic           | Group         | N   | MR     | RS       | U        | Z     | p    |
|--------------------------------------|---------------|-----|--------|----------|----------|-------|------|
| Gender                               | Female        | 117 | 152.23 | 17811.00 | 9450.00  | -1.04 | 0.30 |
|                                      | Male          | 174 | 141.81 | 24675.00 |          |       |      |
| School level                         | Middle School | 141 | 143.54 | 20239.50 | 10228.50 | -0.48 | 0.63 |
|                                      | High School   | 150 | 148.31 | 22246.50 |          |       |      |
| Education level                      | Bachelor's    | 243 | 134.83 | 32764.50 | 3118.50  | -5.11 | 0.00 |
|                                      | Postgraduate  | 48  | 202.53 | 9721.50  |          |       |      |
| Knowledge of sustainable development | Yes           | 222 | 144.80 | 32146.50 | 7393.50  | -0.44 | 0.66 |
|                                      | No            | 69  | 149.85 | 10339.50 |          |       |      |

The results of the Kruskal–Wallis H test, which was conducted to assess the hypothesis that self-efficacy beliefs regarding sustainable development vary according to the number of years of professional seniority, are presented in Table 4. The findings indicate a statistically significant difference in self-efficacy beliefs regarding education for sustainable development according to years of professional seniority ( $\chi^2 = 7.25$ ,  $p = 0.05$ ). The mean ranks according to professional seniority are as follows: The mean ranks according to professional seniority were as follows: The mean ranks for the respective groups are as follows: The mean ranks for the respective groups were as follows: 1-5 years ( $MR= 140.43$ ), 6-10 years ( $MR= 189.00$ ), 11-15 years ( $MR= 187.83$ ), and 16 years and above ( $MR= 141.50$ ). The PostHoc Tamhane's T2 test, conducted to ascertain the discrepancy between the groups, revealed that teachers with 6-10 years and 11-15 years of seniority exhibited elevated self-efficacy beliefs in education for sustainable development relative to teachers with 1-5 years and 16 years or more seniority.

**Table 4.** Comparison of physical education teachers' self-efficacy beliefs in education for sustainable development according to their professional seniority

| Professional seniority | N   | MR     | $\chi^2$ | df | p    | Tamhane's T2 |
|------------------------|-----|--------|----------|----|------|--------------|
| 1-5 years              | 219 | 140.43 |          |    |      |              |
| 6-10 years             | 15  | 189.00 | 7.25     | 3  | 0.04 | 2,3>1,4      |
| 11-15 years            | 27  | 187.83 |          |    |      |              |
| 16 years and above     | 30  | 141.50 |          |    |      |              |

## DISCUSSION and CONCLUSION

The study yielded two principal findings. Firstly, physical education teachers demonstrated a predominantly positive outlook with respect to their educational self-efficacy beliefs pertaining to sustainable development. However, a comprehensive analysis of the items representing each belief level revealed a discrepancy between the professed knowledge, attitude, behavior, and skills of teachers and their actual capacity to teach sustainable development. Another outcome of the study was that no significant differences were observed in the self-efficacy belief levels of physical education teachers with regard to sustainable development education according to their gender, school level, educational level, or knowledge of sustainable development education. However, a notable discrepancy was identified with respect to the participants' educational backgrounds and years of professional experience. The study demonstrated that physical education teachers with postgraduate qualifications and intermediate seniority in the profession (6-10 years and 11-15 years) exhibited elevated levels of self-efficacy beliefs in education for sustainable development. It is of the utmost importance that physical education teachers possess robust self-efficacy beliefs about education for sustainable development, as this directly impacts both their pedagogical practices and the development of their students' awareness of sustainability. The concept of sustainable development has a direct impact on an individual's educational experience, knowledge base, interest in current affairs, and motivation. This indicates that when an individual comprehends and is inclined towards a phenomenon, they will engage with it willingly (Atasay & Ertürk, 2008). While studies in this field have yielded disparate results, there is a general consensus that there are shortcomings in the domain of sustainable development self-efficacy (Cross, 1998; Gil-Perez et al., 2003; Spiropoulou et al., 2007). Teksöz et al. (2010) discovered that,

despite the fact that pre-service teachers from various universities exhibited environmental literacy and environmental awareness, their environmental knowledge remained inadequate. Similarly, Demirbaş (2015) found that pre-service teachers demonstrated high levels of awareness regarding environmental ethics and social-societal factors, as well as medium levels of awareness regarding environmental economic factors. Some studies have indicated that pre-service teachers demonstrate positive awareness, perceptions, and attitudes toward sustainable development; however, their achievement scores remain low (Çobanoğlu & Türer, 2015; Gökmen et al., 2017; Soysal, 2016).

A review of the literature reveals that physical education teachers' self-efficacy beliefs are shaped by a multitude of factors and are manifested in their pedagogical practices. Self-efficacy beliefs represent an individual's perception of their capacity to successfully complete a specific task. For educators, this conviction has a significant impact on their selection and implementation of instructional strategies. Bandura's (1997) self-efficacy theory underscores the influence of teachers' self-perceptions on the enhancement of instructional quality and student engagement. For those engaged in the teaching of physical education, these beliefs are of significant consequence with respect to encouraging students to participate in physical activity and developing healthy life habits. A number of factors, including gender, level of education, experience, and school culture, have been identified as influencing the development of these beliefs. The effect of gender on physical education teachers' self-efficacy beliefs has been addressed in the existing literature with a variety of findings. In his study, Tekin (2021) found no statistically significant difference in teachers' beliefs about education for sustainable development according to gender. In contrast, Tuncer (2008) identified a significant discrepancy in the perceptions of sustainable development held by university students according to gender. Saracaloğlu et al. (2012) discovered that female physical education teachers exhibited higher degrees of self-efficacy with respect to sustainable development than their male counterparts. This was associated with the observation that female teachers demonstrate greater sensitivity to environmental issues and are more adept at integrating sustainability practices into the classroom environment. This may be attributed to the observation that male teachers have accumulated more experience in physical activity and sports. However, it was also emphasised that female teachers are capable of developing more sophisticated and inclusive pedagogical approaches towards their students (Huang, 2013). Nevertheless, some studies indicate that gender does not exert a substantial influence on self-efficacy beliefs in the context of education for sustainable development. This finding suggests that self-efficacy beliefs are more influenced by factors such as education, experience, and personal interest than by gender.

The self-efficacy beliefs of teachers in education for sustainable development were found to remain unchanged when the school level variable was taken into account, indicating that this variable does not significantly influence these beliefs. However, this finding is not consistent with those reported in the existing literature. Annelin and Boström (2024) discovered that, despite high school teachers' comprehensive subject-specific knowledge regarding education for sustainable development, they perceive themselves to be less proficient in sustainability issues that necessitate an interdisciplinary approach. Conversely, Yang et al. (2024) discovered that instructors at vocational high schools exhibited heightened self-efficacy in integrating sustainability concerns with practical applications. It is also noteworthy that studies have been conducted on teachers working in preschool education institutions. Köklü Yaylacı and Olgan (2021) discovered that preschool educators exhibited elevated levels of self-efficacy in integrating education for sustainable development into their routine activities. However, they also expressed reservations about their ability to effectively convey complex sustainability concepts in a way that is understandable to children. The education and professional experience of physical education teachers have been identified as significant determinants of their self-efficacy beliefs. A study conducted on physical education teachers revealed a correlation between practical training experiences and increased self-efficacy beliefs (Braksiek, 2022). This finding indicates that teachers' acquisition of experience in a genuine classroom setting enhances their self-assurance. In a study conducted by Işıkgöz et al. (2022), it was determined that the self-efficacy beliefs of pre-service teachers regarding sustainable development education were directly correlated with the pedagogical training they had received. Moreover, the study revealed that experienced teachers exhibited higher levels of self-efficacy beliefs regarding sustainable development than those with less experience (Durmuşoğlu & Yamak, 2022). In a study conducted by Berglund et al. (2020), it was demonstrated that the formal education received by pre-service teachers on sustainability education had a positive effect on their self-efficacy beliefs. Similarly, Evans et al. (2019) discovered that in-service training reinforced the self-efficacy beliefs of teachers in regard to education for sustainable development. It is similarly important to consider the impact of professional experience on self-efficacy beliefs related to education for sustainable development.

Moreover, self-efficacy beliefs impact the pedagogical practices employed by physical education instructors. A study conducted by Lee et al. (2024) demonstrated that physical education teachers with high self-efficacy beliefs were more successful in increasing students' participation in physical activity. This has a beneficial effect on students' interest and participation in physical education classes. This enables educators to deploy their expertise

in sustainable development in an efficacious manner. Moreover, the school culture and the administrative support available to physical education teachers are significant factors that influence the self-efficacy beliefs of these educators. Martínez-Borreguero et al. (2020) discovered that educators employed in institutions with a supportive school culture on sustainable development demonstrated elevated self-efficacy beliefs. This finding underscores the significance of school administrations offering assistance for teachers' professional growth and development. The relationship between teachers' academic majors and their self-efficacy beliefs in education for sustainable development is also a topic of investigation in the research literature. In a study conducted by Nousheen et al. (2022), it was demonstrated that science teachers exhibited higher levels of self-efficacy than teachers in other disciplines. It is evident that the degree of support provided by the school culture and management also has an impact on the self-efficacy beliefs of teachers in the field of education for sustainable development. In conclusion, the preceding discussions encapsulate the findings of the research on the self-efficacy beliefs of physical education teachers in the context of education for sustainable development. Moreover, they underscore the implications of these findings for educational practice.

In conclusion, it can be stated that a holistic approach should be adopted in the development of physical education teachers' self-efficacy beliefs in education for sustainable development. It is of the utmost importance to reinforce pre-service and in-service training programs, foster a supportive school culture, and promote interdisciplinary collaboration. In this context, the development of strategies for the professional development of physical education teachers will prove beneficial for both teachers and students. In the context of sustainable development, it is of the utmost importance that state authorities, the media, non-governmental organizations, industry, sports institutions, and other relevant entities, particularly state authorities, prioritize sustainable development and facilitate the implementation of sustainable practices at the societal level. It is anticipated that all individuals, particularly those engaged in the education and training sector, will assume a significant responsibility in disseminating information and fostering awareness about sustainable development among students and the broader public. This will require the acquisition of knowledge, skills, and competencies related to sustainable development. In light of the aforementioned factors, the following recommendations have been formulated: It is recommended that the principles of sustainability be integrated into the curricula of physical education and sports activities in academic institutions. It is recommended that physical education teachers assume a proactive and leading role in considering sustainability as an integral component of their educational activities. It is recommended that all stakeholders in the field of sports integrate sustainability into their organizations and activities.

In order to gain a more nuanced understanding of the findings of this study, it is essential to consider the limitations of the study itself. As the study was confined to physical education teachers in the city center of Diyarbakır, the findings are not readily generalizable to other contexts. In future research, it would be beneficial to expand the sample group to include physical education teachers from a greater number of regions, thus enhancing the generalizability of the findings. This will enhance the generalizability of the findings. It is possible that participants may have exhibited a tendency to present themselves in a socially desirable manner or may have demonstrated other forms of bias when responding to the questionnaire. Furthermore, as the research was confined to a singular semester (spring semester 2022-2023), any alterations or advancements occurring outside the parameters of this semester were not taken into account. A similar study conducted in different semesters would be beneficial for monitoring changes over time. A longitudinal study can facilitate a more nuanced understanding of trends and changes over time. The use of mixed methods (quantitative and qualitative) can facilitate the acquisition of more comprehensive data sets. This will enhance the depth and validity of the research findings. It is recommended that these suggestions be taken into account in order to enhance the quality of the research and ensure that the findings are more reliable and valid. It is recommended that future studies endeavor to surmount these limitations in order to gain a more profound understanding of the experiences of physical education teachers.

### **ABSTRACT**

In this study, it was aimed to determine the relationship between primary school 4th grade students' reading comprehension level and mathematics course success. The study group of the research consists of 80 students selected by purposive sampling method, studying in the 4th grade of official institutions in the Pazar district of Tokat province. The research was prepared using the relational survey model in the perspective of quantitative research methods. The research data were obtained through the Reading Comprehension Level Determination Test and the Mathematics Achievement Test. SPSS program was used in the analysis of the data obtained as a result of the research, Pearson Product-Moment Correlation Coefficient was used to determine the relationship between reading comprehension and mathematics achievement, and unrelated sample t-test was calculated to determine the significance between students' reading comprehension level and mathematics course success according to gender variable. In this context, in the study, a positive and significant high-level relationship was found between the reading comprehension level of 4th grade students and their success in mathematics courses. According to the gender variable, a significant difference was found in favor of female students when both the reading comprehension levels and mathematics course achievements of the students were compared.

**Keywords :** Reading, reading comprehension, mathematics achievement.

### **INTRODUCTION**

When the Turkish Education System is examined, it is possible to say that students of different ages and education levels experience problems at almost every stage of the education system, especially in the field of mathematics. As a matter of fact, the PISA (Programme For International Student Assessment) results, which evaluated the achievements of students in the 15-year-old group in some basic fields, in which 79 countries participated in 2018, confirm the assertion we have put forward above. When the research results are examined, although Turkey has progressed 8 steps in the ranking among OECD (Organization for Economic Co-operation and Development) countries in the field of mathematics, according to the previous research, it could only find itself in the 42nd place (Ministry of National Education, [MEB], 2019).

In addition to this research conducted at the international level, the statistical information shared with the public by ÖSYM (Student Selection and Placement Center) of the Higher Education Institutions Examination, which is held every year for student admission to universities in our country, shows that the students taking the exam experience some problems in the field of mathematics. In the Higher Education Institutions Exam, which consists of two different sessions: Basic Proficiency Test and Field Proficiency Test, the correct answer averages in the two tests of 40 questions in the field of mathematics applied to students are 5.54 and 5.29, respectively. (Student Selection and Placement Center, [ÖSYM], 2022) Recently, the data put forward by students, whom we can consider as the most important part of the education system in Turkey, regarding the field of mathematics, has begun to be responded to by the competent authorities. In this context, we see that some projects have been put forward by the Ministry of National Education with the concern that the undesirable attitudes and anxiety that students at different grade levels may develop regarding mathematics course may negatively affect the students' course success in this field. The Mathematics Digital Education Platform, developed by the Ministry of National Education, aims to associate life and mathematics, to endear mathematics to students with various games that vary according to grade and age levels, and to increase curiosity in the field of mathematics with interesting hypotheses.

Likewise, Support and Training Courses, which are carried out by the Ministry of Education (Ministry of National Education) and enable secondary and secondary school students to receive additional training in basic courses, especially mathematics, aim to improve students' mathematical skills. Although we accept that all the studies carried out will definitely have positive reflections on the students, we can say that the mathematical skills of students, especially those with low socio-economic levels, are not at the desired levels, based on our conversations and observations with education stakeholders working in the field. It is very easy to observe the academic status of students who have completed their primary school education in educational institutions that include primary and secondary school levels during their secondary school education. The opinions of the

teachers who taught mathematics to 5th grade students in these schools were that the problems experienced by the students in reading comprehension negatively affected their mathematics success. Again, the same teachers stated that especially the question styles that are described as new generation questions, in which the questions are associated with daily life and contain more than one outcome in their structure, cannot be understood by the students; Accordingly, he expresses his opinion that the questions cannot be answered by the students. In addition, mathematics teachers working in secondary schools argue that some students who have moved from primary school to secondary school level have problems in reading, and that some children who are learning to read have problems understanding what they read.

As a result, considering the opinions of education stakeholders, it is thought that students who have problems with reading comprehension experience failure in mathematics lessons, and the problem of reading comprehension begins at the primary school level and continues. Therefore, determining the relationship between 4th grade students' reading comprehension levels and mathematics course success constitutes the problem part of this research.

### **PURPOSE OF THE RESEARCH**

This study aims to find out whether there is a relationship between the reading comprehension levels of 4th grade primary school students and their mathematics success, and if there is a relationship between two variables (reading comprehension and mathematics success), in which direction (+, -) this relationship is.

Within the framework of the above main purpose, answers were sought to the questions regarding the following sub-objectives.

- 1) Is there a significant relationship between 4th grade primary school students' reading comprehension levels and mathematics course success?
- 2) Is there a significant relationship between 4th grade primary school students' reading comprehension levels and mathematics course success according to gender?

### **IMPORTANCE OF RESEARCH**

According to Deniz (2013), students whose reading comprehension skills are not developed cannot achieve success in mathematics classes. For this reason, it is very important for students to read correctly and interpret what they read correctly in terms of understanding the problems in mathematics lessons.

In this study, it is thought that the relationship between 4th grade primary school students' reading comprehension levels and mathematics course success will be determined, and the results obtained will contribute to other researchers. The results obtained from the study will benefit from redefining the vision of Turkish teaching in primary schools, examining the reading comprehension processes of primary school students, and investigating the relationships between the reading comprehension levels of the same students and other courses and fields.

### **RELATED LITERATURE**

#### **Read**

According to Aytas (2003), reading is a complex activity that includes various activities of the five senses and the brain's attempts to make sense of it. In order for the act of reading to occur, five sense organs must be used effectively. Of course, in addition to directly associating the act of reading with the visual sense organ, it should not be forgotten that other sense organs also play an important role in making sense of concepts in the learning process. Based on this, the complex mental process mentioned must be completed with a holistic approach. As a matter of fact, it is very important to have a purpose that motivates the mind in order to increase the efficiency of reading and to achieve success in this action. Because it is of great importance that the reading meets the needs determined by the human mind at that moment. A reading action in which the mind is not included in the process will not achieve its purpose. In this context, the most important purpose of reading is to see objects, shapes, texts, numbers, visuals, etc. It means making sense of and comprehending all kinds of stimuli in the mind. Then, it is possible to say that the acts of reading and understanding are a whole and that the mental process that begins with reading continues with understanding.

#### **Reading Comprehension**

According to Kanmaz (2012), reading comprehension is the completion of two different processes, reading and comprehension, with a cause-effect relationship. Reading comprehension has an important place in the realization of learning. In purposeful learning activities, the act of reading comprehension contributes greatly to the success of the process. As a matter of fact, it is not possible to say that information that is not given meaning in the mind has been learned. In this context, it is critical to provide students with reading comprehension skills in order to achieve their teaching goals. Reading comprehension skill constitutes one of the learning areas of the Turkish course, and it is aimed to provide students with this skill in the Turkish course. However, when we consider the impact of reading comprehension skills on learning, it would not be an exaggeration to say that it is

wrong to limit reading comprehension skills only to Turkish lessons. As a matter of fact, when the literature is examined, many studies show that reading comprehension skills directly or indirectly affect students' success in other courses, especially mathematics.

In Erdem's (2016) study to determine the relationship between mathematical reasoning and reading comprehension in 8th grade students, he found a significant positive relationship between the two variables.

In his research, Yılmaz (2011) concluded that there was a positive relationship between the reading comprehension skills of fourth grade primary school students and their mathematics achievement, and determined that students who could understand what they read well received better scores in mathematics.

## METHOD

In this study, the relational screening model, one of the quantitative research methods, was used to determine the relationship between the reading comprehension skills and mathematics achievements of 4th grade primary school students. These research models aim to determine the existence or degree of relationship between two or more variables. The relationship scan model includes two types: correlation type relationship scan and comparison type relationship scan. (Köse, 2017: 113) While the study examined whether there was a significant relationship between the reading comprehension skills and mathematics achievements of 4th grade primary school students, the reasons for the possible positive or negative relationship between these two variables were not focused on. In this context, the correlation type relational screening model was used in the research.

### Population and Sample

This research was completed by focusing on the 4th grade students of primary school in Pazar district of Tokat province. The population of the research consists of 4th grade students studying in Pazar district of Tokat province, and the sample consists of 80 students determined by purposeful sampling method, which is one of the non-probability sampling methods. According to Ural (2011: 43), in the purposeful sampling method, the researcher determines the units to be tested based on prior knowledge, experience and observation, according to the purpose of the research, at his own discretion. Since the researcher bases his judgments and judgments on the sample determination process, he must have an idea about the universe.

The distribution of the 80 students who participated in the research in Pazar district of Tokat province according to their gender is shown in Table 1.

**Table 1:** Distribution of students included in the sample by gender

| Gender | f  | %   |
|--------|----|-----|
| Female | 48 | 60  |
| Male   | 32 | 40  |
| Total  | 80 | 100 |

When Table 1 is examined, out of a total of 80 students included by the purposeful sampling method, 48 are girls and 32 are boys, and 60% of the total number of students are girls and 40% are boys.

### Data Collection Tools

In the research, the Reading Comprehension Level Determination Test and the Mathematics Achievement Test, consisting of 20 multiple-choice questions, were prepared in order to determine the relationship between the reading comprehension levels of primary school 4th grade students and their mathematics course success. While preparing these tests, 4th grade primary school Turkish and mathematics textbooks were used.

### Reading Comprehension Level Determination Test

While preparing the Reading Comprehension Level Determination Test, the reading comprehension questions in the End of Theme Evaluation Studies in the last parts of the eight units in the primary school 4th Grade Turkish textbook were examined and the ones suitable for the purpose of the study were determined. In the relevant test, which included five different texts, four multiple-choice questions were selected for each text, resulting in a total of 20 multiple-choice questions. While selecting reading comprehension questions suitable for the purpose of the study from the End of Theme Evaluation Studies of the Turkish textbook, expert opinions were taken from two Turkish teachers and one classroom teacher.

### Mathematics Achievement Test

While preparing the Mathematics Achievement Test, the topics that should be covered until the date of the research were determined according to the united annual plan from the themes in the primary school 4th grade curriculum. In this context, 20 multiple-choice questions that require problem-solving skills on related topics have been prepared.

The topics that should be covered in the 4th grade Mathematics course until the date of the research and the question distribution of the topics are shown in Table 2.

**Table 2:** Distribution of topics and number of questions in the mathematics achievement test

| Topics              | Question Number |
|---------------------|-----------------|
| Addition            | 4               |
| Subtraction Process | 4               |
| Multiplication      | 4               |
| Division            | 4               |
| Fractions           | 4               |
| Total               | 20              |

When Table 2 is examined, it can be seen that in the Mathematics Achievement Test, 4 questions were taken from each of the subjects of addition, subtraction, multiplication, division and fractions with natural numbers, and a total of 20 questions were reached.

During the preparation of the questions in the Mathematics Achievement Test, expert opinions of two mathematics teachers and two classroom teachers were consulted, and care was taken to include intermediate level questions appropriate to the student's level, which include problem-solving skills, in the test.

#### **Determining Reading Comprehension Level and Scoring Mathematics Achievement Test**

The tests used in the study were evaluated independently of each other. In two tests consisting of 20 questions, "1" point was given for each correct answer, and "0" point was given for each incorrect or unanswered question. In this context, the minimum score that can be obtained from the Reading Comprehension Level Determination Test and Mathematics Achievement Test is 0; The maximum score is 20.

#### **Reliability and Validity Procedures for Determining Reading Comprehension Level and Mathematics Achievement Test**

##### **Reliability**

According to Kabakçı Yurdakul (2013), reliability is an indicator of how precisely a measurement tool measures the feature or features it measures. According to Karasar (2012), Kr-20 is used when analyzing items such as item difficulty and item discrimination in the test. According to some studies, a reliability coefficient of 0.70 and above in performance tests indicates a good reliability coefficient. In this context, both tests were tested on ten 4th grade students who were not included in the sample in order to calculate the reliability coefficients before the data collection phase, and the reliability coefficient of the reading comprehension level determination test was found to be 0.91, and the reliability coefficient of the mathematics achievement test was found to be 0.70. In light of these data, it is possible to say that both tests are safe.

Item difficulty (p) is the percentage of correct answers. Questions with a difficulty level of 0.81 and above are considered very easy, between 0.61-0.80 are considered easy, 0.41-0.60 are considered medium, 0.21-0.40 are considered difficult, and below 0.20 are considered very difficult. It is desirable for the estimated correct answer rate to be around 0.50, and both relatively easy and difficult questions can be included (Baştürk, 2014). According to Büyüköztürk (2012), item discrimination is the capacity to distinguish between people who have the characteristic measured by the test at the maximum level and those who have it at the minimum level. According to Baştürk (2014), items with an item discrimination index of 0.40 or higher are considered very good, while items with an item discrimination index between 0.30 and 0.39 are considered quite good. Items with an item discrimination index between 0.20 and 0.29 should be developed and added to the test. . However, those with an item discrimination index below 0.20 should be excluded from the test without even being subjected to the development process.

Item difficulty and item discrimination values of the reading comprehension level determination test and the mathematics test are given in Table 3.

**Table 3:** Item difficulty and discrimination of the reading comprehension level determination test and the mathematics test

| Reading Comprehension Level Determination |                 |                | Mathematics Achievement Test |                 |                |
|---|-----------------|----------------|------------------------------|-----------------|----------------|
| Questions Item                            | Difficulty Item | Discrimination | Questions Item               | Difficulty Item | Discrimination |
| M1  | .73             | .51            | M1*                          | .44             | .19            |
| M2  | .78             | .36            | M2                           | .65             | .47            |
| M3*                                       | .80             | .24            | M3*                          | .63             | .27            |
| M4  | .78             | .32            | M4*                          | .63             | .21            |
| M5*                                       | .80             | .29            | M5                           | .70             | .31            |
| M6  | .79             | .31            | M6*                          | .64             | .25            |
| M7  | .74             | .42            | M7                           | .65             | .44            |
| M8*                                       | .79             | .23            | M8                           | .53             | .30            |
| M9*                                       | .80             | .23            | M9                           | .61             | .35            |
| M10                                       | .75             | .40            | M10                          | .64             | .31            |
| M11                                       | .80             | .40            | M11                          | .59             | .50            |
| M12                                       | .81             | .47            | M12                          | .53             | .50            |
| M13                                       | .74             | .45            | M13                          | .68             | .59            |
| M14                                       | .78             | .63            | M14                          | .68             | .43            |
| M15                                       | .80             | .35            | M15                          | .70             | .51            |
| M16                                       | .83             | .53            | M16                          | .74             | .57            |
| M17                                       | .86             | .49            | M17                          | .73             | .31            |
| M18                                       | .83             | .32            | M18*                         | .78             | .21            |
| M19*                                      | .86             | .21            | M19*                         | .69             | .29            |
| M20                                       | .84             | .53            | M20                          | .65             | .37            |

When Table 3 is examined, the questions M3=.24, M5=.29, M8=.23, M9=.23 and M19=.21, which had a discrimination value of less than 0.30 in the reading comprehension level determination test, were developed to increase the discrimination value and were used in the test. . In the Mathematics Achievement Test, the questions M1=.19, M3=.27, M4=.21, M6=.25, M18=.21, M19=.29 were developed and used in the test to increase the discrimination value.

#### VALIDITY

Expert opinion was taken for the reading comprehension level determination test and mathematics achievement test developed by the researcher; A specification table was prepared to determine the content validity of the tests. A preliminary application was made to determine the validity of the prepared tests; Students included in the preliminary application were not included in the determined sample.

#### Collection of Data

The data obtained from the research were collected from 80 primary school 4th grade students in the Pazar district of Tokat province. Before the data collection process, Pazar District Directorate of National Education was informed. The schools included in the sample of the previously determined research were visited one by one and all necessary explanations were made to the school principals and 4th grade teachers about the Reading Comprehension Level Determination and Mathematics Achievement Test to be applied to the students and the way the tests were applied. During the application phase of the tests, students were given 40 minutes for each test. The tests were administered to students by classroom teachers. It was specifically requested from the classroom teachers that the students should be informed that the tests to be applied will be used for a research and that there is no purpose of grading. In this way, it was aimed to prevent any test anxiety that may occur in students.

#### Analysis of Data

In the study, correct answers in the Reading Comprehension Level Determination Test and Mathematics Achievement Test applied to the students were coded with the value "1" and the items that were incorrect or left

blank were coded with the value "0" and converted into numerical data. The answers given to two tests by 80 students included in the sample for the research were entered into the SPSS (Statistical Packet For Social Studies) program, taking into account the gender variable.

Pearson Product Moment Correlation ("r") was used to determine the relationship between students' reading levels and mathematics achievement. According to Şahin (2017), the Pearson Product Moment Correlation coefficient, which is used when the relationship between two variables is desired to be determined, indicates that there is a relationship between two variables ranging between -1.00 and +1.00, while a coefficient of .00 indicates that there is no significant relationship between the two variables.

To determine how the relationship between students' reading levels and mathematics achievement changes according to the independent variable gender; The t test, one of the parametric tests, was used. The t test is used to find out whether there is a significant difference between two unrelated groups.

## RESULTS

As a result of the data obtained from the study, the average scores of the students from the Reading Comprehension Level Determination Test and Mathematics Achievement Test are given in Table 4.

**Table 4:** Average scores from the reading comprehension level determination test and mathematics achievement test

| Test  | Mean (X) | Standart Deviation (S) | N  |
|-------|----------|------------------------|----|
| OADBT | 15,96    | 3,08                   | 80 |
| MBT   | 12,92    | 3,55                   | 80 |

When Table 4 is examined, it is seen that the students' average OADBT score is 15.96 and their MBT score average is 12.92. According to the results in Table 4, it can be said that the general averages of the students in OADBT and MBT are at the medium level. These averages, which are thought to be close to the same level (average level), show that there may be a relationship between students' reading comprehension levels and mathematics skills. In this context, the Pearson Moment Multiplication Coefficient (r) obtained as a result of the correlation analysis to reveal the relationship between students' reading comprehension levels and mathematics skills is shown in Table 5.

**Table 5:** Correlation between students' reading comprehension levels and mathematics course success

| Reading Comprehension Level | Pearson Moment Multiplication Coefficient (r) | Mathematics Achievement |
|-----------------------------|---|-------------------------|
|                             |   | ** .72                  |
|                             | p   | .00                     |
|                             | N   | 80                      |

\*\*Correlation is significant at the .01 level.  $p < .01$

Looking at Table 5, it was observed that there was a high-level positive relationship ( $r = .72 > .70$ ) at the level of  $r = .72$  ( $p < .01$ ) between the reading comprehension levels of the fourth grade primary school students and their success scores in the mathematics course. Based on the research findings, we can say that students who have a good reading comprehension level at the fourth grade level of primary school reflect this on their mathematics course success and, accordingly, they are also successful in mathematics. Regarding the second sub-problem of the research, an unrelated groups t-test was applied to determine whether the reading comprehension levels and mathematics course success of fourth grade students differed significantly according to the gender variable. Findings regarding how students' reading comprehension levels change according to gender are shown in Table 6.

**Table 6:** T test results of reading comprehension levels by gender

| Gender | N  | X     | ss   | t    | df | p    |
|--------|----|-------|------|------|----|------|
| Female | 48 | 16.75 | 3.15 | 2.92 | 78 | .005 |
| Male   | 32 | 14.78 | 2.59 |      |    |      |

p<0,05

When Table 6 is examined, the reading comprehension level scores of the students included in the sample indicate a significant difference in favor of female students according to the gender variable ( $t=2.92$ ,  $p<.05$ ). In addition, when the arithmetic averages of the scores of the two groups from the reading comprehension level test are examined, it is seen that the scores of female students ( $X = 16.75$ ) are higher than those of male students ( $X = 14.78$ ).

Findings regarding how students' mathematics course success varies according to gender are shown in Table 7.

**Table 7:** T-test Results of Mathematics Course Achievement by Gender

| Gender | N  | X     | ss   | t    | df | p    |
|--------|----|-------|------|------|----|------|
| Female | 48 | 13.93 | 3.15 | 3.31 | 78 | .001 |
| Male   | 32 | 11.40 | 3.61 |      |    |      |

p<.05

When Table 7 is examined, the mathematics course success scores of the students included in the sample indicate a significant difference in favor of female students according to the gender variable ( $t=3.31$ ,  $p<0.05$ ). In addition, when the arithmetic averages of the scores of the two groups in the mathematics achievement test are examined, it is seen that the scores of female students ( $X = 13.93$ ) are higher than those of male students ( $X = 11.40$ ).

## DISCUSSION AND CONCLUSION

The aim of the study was to reveal how the reading comprehension levels of 4th grade primary school students affect their mathematics course success and the relationship between these two variables. As a result of the analyses, it was concluded that there was a positive, highly significant relationship ( $r=.72$   $p=.000$ ) between students' reading comprehension levels and mathematics course success. This result is similar to the positive significant relationship between mathematical reasoning and reading comprehension found in Erdem's (2016) study. In Deniz (2013)'s study, a moderately positive relationship was found between reading comprehension and mathematics performance in fifth grade primary school students. Again, in Yılmaz's (2011) study, a highly positive relationship was found between fourth grade students' reading comprehension levels and mathematics scores. When looked at, it can be said that the results of the research are similar to similar studies in the literature. When all studies are examined, it is possible to say that there is a consistent relationship between reading comprehension skills and mathematics course success.

Regarding the second sub-problem of the research, it was concluded that the reading comprehension levels and mathematics course achievements of 4th grade students differ according to the gender variable. As a result of the analyses, it was seen that both the reading comprehension level scores and mathematics achievement scores of female students were higher than male students, and after the necessary analyses, it was determined that the reading comprehension levels and mathematics achievement scores differed significantly in favor of female students. In this context, when the results of other studies are examined, we can say that Deniz (2013) and Boz (2018) reached similar results in their studies. However, in their study where Özyılmaz and Alcı (2011) examined the effect of teaching reading comprehension strategies on seventh grade reading comprehension success, they could not find a significant difference between students' reading comprehension success according to the gender variable. When the studies are examined, it is not possible to say that the gender variable positively affects reading comprehension skills and mathematics course success.

## SUGGESTIONS

Based on the results obtained from the research, the following suggestions can be made:

1) In this study, a positive, highly significant relationship was determined between the reading comprehension level of 4th grade students and their mathematics course success. In this context, since students' reading

comprehension levels directly affect their mathematics course success, reading comprehension studies should be included in Turkish lessons in order to increase mathematics course success.

2) Educational institutions can include studies that will improve students' book reading skills in order to increase their reading comprehension levels.

3) Classroom teachers can organize different activities to understand the problem, especially in problem solving, during mathematics teaching. They may use different methods to understand the problem.

4) In the research, when students' reading comprehension levels and mathematics achievements were compared according to the gender variable, a significant difference was found in favor of female students. Therefore, problem statements regarding the reasons for this difference can be determined in academic studies.

5) Academic studies based on this research can include research on how the level of reading comprehension affects the academic success of students in different courses or fields.

6) In academic studies, achievement tests can be developed at different grade levels and research can be conducted to determine whether students' reading comprehension levels affect their mathematics course success.

## ABSTRACT

This study, which examines the satisfaction of patients hospitalized in the internal medicine intensive care unit with nursing care, was designed as a quantitative research. The population of the study consisted of patients hospitalized in the internal medicine intensive care unit in public/private hospitals in the Turkish Republic of Northern Cyprus (TRNC) between 01.01.2023 and 01.05.2023. The sample consisted of 278 patients who volunteered to participate in the study. The Newcastle Satisfaction with Nursing Care Scale was used to evaluate the quality of nursing care in the hospital. The data obtained were analyzed with SPSS for Windows 28.0 package program. At the end of the study; satisfaction levels were given according to nursing care parameters. It was determined that the majority of the patients were "satisfied and very satisfied" with the care they received. The highest mean level of "satisfaction" was found to be with "the nurses' respect for your privacy", whereas the lowest level of satisfaction was found to be with "the amount of freedom given to you in the ward". It was seen that the difference between the groups in the scores of the Satisfaction with Nursing Care Scale according to gender was significant. According to this, it can be said that the satisfaction status of female patients is higher than male patients. It was seen that the difference between the groups according to the age of the scale scores was not significant. It was seen that the difference between groups according to marital status of the scale scores was significant. Accordingly, it can be said that the satisfaction level of married patients is higher than single patients. It was seen that the difference between groups according to the educational level of the Satisfaction with Nursing Care Scale scores was significant. Accordingly, it can be said that the satisfaction level of patients with a master's degree is higher than that of patients with other education levels. It is seen that as the level of education increases, the level of satisfaction also increases. On the other hand, it was observed that the difference between the scale scores according to occupation was not significant. In addition, it was seen that the difference between the groups according to the previous hospitalization status of the scale scores was not significant.

**Keywords:** Internal medicine, Intensive care, Patient, Nurse, Satisfaction.

## 1. INTRODUCTION

### 1.1. Problem

Internal medicine busy care in the unit lying down patients nursing in terms of satisfaction situations, many to the factor connected aspect It changes. Nurses with patient effective communication establishment , patients your concerns to listen And understand , clear And understandable One way relating to doctorate information to give It is important . sick and family treatment process about informed , planned procedures , treatment methods like clear information on relevant topics , doctor by by taking to the patient Giving patient satisfaction increases (Aktaş and Arabacı, 2016) .

patients emotional your needs aware be them \_ comfort And to support It is important. of nurses with patients empathy establishing , understanding And kind to be , emotional support to provide and patient focused One approach Demonstrating patient satisfaction positive effects (Onganer et al., 2014) . Patients , busy care in the unit trustworthy And comfortable to feel whether...or . Cleanliness , hygiene , noise control like factors ensuring patient comfort increases . Additionally , patient safety for suitable measures receiving And infection under control attention It is also important to do so ( Akalın, 2005) .

Busy care units , multidisciplinary One team his work requires . of nurses other health with its employees effective One way communication establishment , collaboration to do And coordination inside work , patient care effective And productive One way execution provides . Busy care patients often with pain struggle (Ozkan, 2017). Of nurses the pain effective One way assessment, appropriate pain management strategies application And patients to relax to provide It is important. Of nurses patients and their families treatment to the process including, patient education to ensure and the patient is discharged when continue will care And treatment about informative resources to present It is important (Yinal, Kalkan et al., Çakıcı, 2022). Sick and family of treatment at home to do the one which in the section by being informed And by being trained to treatment active participation, patient satisfaction increases (Kara, 2007) . Patient satisfaction, patients experiences and to your

expectations connected aspect It changes. Every patient is different and needs difference shows. Therefore, nurses individualized one approach to adopt and patients special needs to understand It is important. Patients back notifications listen, dissatisfaction in cases problems to solve and improvements It is also important to do (Kummbasar, 2016). Additionally , patient satisfaction to evaluate for surveys And back notification mechanisms is used . patients , nursing with care relating to your thoughts And experiences to share encouragement is done . this back notifications , nursing services improving And more Good a patient experience by providing important informations get is done And to the patient positive contribution provides (Akdere et al., 2020).

Conclusion as , internal medicine busy care in the unit lying down patients nursing in terms of satisfaction situations , communication , empathy , security , comfort , team work , pain management and patient education like to factors It depends . Nurses are patient- oriented One approach exhibit , patients to your needs sensitive to be And effective One communication establishing , patients your satisfaction increases And more positive One health experience provides .

## 1.2. Aim

The aim of this study is to determine the satisfaction level of nursing care patients in the internal medicine intensive care unit.

### 1.2.1. Hypotheses

The research hypotheses are given below:

H<sub>1</sub>: Patients' gender and satisfaction with nursing care There is a significant relationship between

H<sub>2</sub>: Patients' age and satisfaction with nursing care There is a significant relationship between .

H<sub>3</sub>: : Patients' marital status and satisfaction with nursing care There is a significant relationship between

H<sub>4</sub>: Patients' satisfaction with education level and nursing care There is a significant relationship between

H<sub>5</sub>: Patients' satisfaction with their profession and nursing care There is a significant relationship between

H<sub>6</sub>: Patients' satisfaction with previous hospitalization and nursing care There is a significant relationship between

### 1.2.2. Assumptions

The assumptions of the research are listed below;

- The method preferred in the research was assumed to be suitable for the purpose of the research.
- The scales and questions chosen to collect data were assumed to be reliable and valid.
- The data obtained were assumed to be valid and reliable.

### 1.2.3. Researched Areas

This research; In the Turkish Republic of Northern Cyprus (TRNC) It is limited to patients hospitalized in the internal medicine intensive care unit in public/private hospitals between 01.01.2023 and 01.05.2023 . The resources used and the scale questions were limited to the participants to whom the survey was applied.

### 1.2.4. Definitions

**Intensive care unit (Intensive resort unit):** It is one of the medical units and is a department where patients with serious health problems or life-threatening conditions are intensively followed, treated and monitored (Orucu and Geyik, 2008).

**Internal medicine intensive care unit:** The care unit is an intensive care unit specialized in internal medicine (Hintistan et al., 2009).

**Patient:** It refers to a person who has a health problem or illness ( Atıcı, 2007) .

**Nurse satisfaction:** It expresses the level of satisfaction of patients with the care service provided by nurses (Gülen and Zaybak, 2023 ) .

## 1.3. Importance of the Study

Nurses in intensive care units constantly monitor patients' vital signs (pulse, blood pressure, respiratory rate, body temperature, blood oxygen value, etc.) and other vital functions. Additionally, it performs the correct use and management of medical devices such as respirators, heart monitors, enteral or parenteral nutrition systems for patients in intensive care units. Nurses also plan patients' medication treatments, administer medications in the correct doses and on time, and perform smart medication administration. They work carefully to prevent medication errors, keeping patient safety at the forefront. Intensive care nurses ensure the comfort and hygiene of patients, take precautions to prevent bedsores, and assist with patient posture . Additionally, they communicate with patients and their families, providing them with information about the treatment process and providing support such as a social worker. Based on all this information, it is thought that this study will not only contribute to other colleagues but also guide nurses in achieving its goal.

## 2. CONCEPTUAL FRAMEWORK

### 2.1. Intensive Care and Intensive Care Unit

Busy care (MS), serious diseases or injuries because of vital functions unable to sustain patients busy surveillance, treatment and of your care is provided. One health service is the area. Busy care units (ICU) are usually in hospitals is found and high to technology owner medical with equipment is equipped. Busy care, life threatening who makes situations managing vital functions to support and patients improvement to their processes helper to be for the purpose of It was designed (Güler, 2018). Busy care patients Generally severe respiratory distress, serious heart failure, organ failure, severe burns, intense surgical operations post- or serious infections like with situations they apply (Kutlu, 2000).

Busy care process, patients on both physical and psychological to the effects owner it could be. patients, long duration bed rest, mechanical ventilation or other invasive transactions due to muscle weakness, joint hardness and coordination problems like physically problems They can live. Therefore, physiotherapists and work therapists, patients your strength and movement ability again to win helper It is possible. Speech therapists, respiratory support area to patients respiratory exercises and speech rehabilitation provides. Busy care process Moreover in patients anxiety, depression, trauma post- stress disorder and other psychological Problems are also on the way can open. psychosocial support and consultancy services, patients and their families This tough by process start over to come out helper It is possible. psychologists or psychiatrists, patients emotional their kindness supports and when necessary medicine treatment provides (Foreword, 2013).

Busy care of the process Then, patients discharged to be made or more low One care to the level to pass may be required. At this stage, follow-up services It is important. patients organised checks, medication management, health of their situation monitoring and when necessary support ensuring is provided. In this process, patients and family, health with his team partnership by doing improvement in the process to the requirements suitable way is directed. Busy care, vital danger supply who makes situations to manage for critical One health service presents. However, this period same in time patients and families for stressful and compelling it could be. Therefore, patients and family for holistic One approach should be adopted, information, communication and support must be provided. Busy care units, expertise, technology and experience requiring One team his work requires and patients health their situation to improve for various disciplines between partnership does (Özdemir and Biçer 2019).

### 2.2. Patient Satisfaction

Patient satisfaction can be defined as the harmony between the patient's expectations and perception of the services during the treatment process. However, it should not be forgotten that diversity in the field of health also manifests itself in expectations, and it should be remembered that different expectations make satisfaction difficult. Different expectations and wishes should not be ignored, but everything that needs to be done is for the treatment and well-being of the patient, there should be no other expectations. The biggest disadvantage of health services compared to other branches of service is that it is a field that does not accept errors, is of vital importance and requires advanced expertise, and the buyer of the service has insufficient knowledge about the service he receives. In the health sector, it is very difficult for patients to make scientific or technical evaluations of the service and its providers, both during the service delivery and after benefiting from the service. Since technical quality cannot be made by the consumer society, technical quality evaluation in health care services remains among the experts (Kamakshaiyah and Venugopal, 2018). In other words, in the field of health, since the patient does not have sufficient knowledge and skills about his health, he cannot decide what kind of treatment or examination will benefit him, or cannot participate consciously in the decision. Technical and scientific quality in the field of health is related to the abilities of personnel to demonstrate their knowledge. For example; Issues such as a physician's presentation of knowledge in the clinic or during an operation, a nurse's understanding of the diagnosis, recognition of medications, a laboratory technician's ability to perform and transmit tests, infection rates, and the duration of a patient's hospital stay are within the scope of technical quality (Devebakan, Aksaraylı 2003).

In healthcare institutions, patient satisfaction is expressed as providing service above expectations. Considering this statement, it can be seen that two factors determine patient satisfaction. The first element is buyers' expectations. Expectations in healthcare businesses include what patients want to find in the organization in terms of scientific, managerial and behavioral features (Derin and Demirel, 2013). However, these expectations vary depending on the individual's age, gender, education level, socio-economic characteristics and past experiences in the field of health. The second factor that determines patient satisfaction is the individual's perception of the service he receives. During the evaluation phase of this service, patients differ in terms of their demographic characteristics and experiences. The person who benefits from health services decides whether or not to purchase the same service again, depending on their satisfaction with the service provided. The patient compares his decision with other institutions where he has received treatment before and expresses his satisfaction if he is satisfied. (Kavuncubaşı 2000).

### 3. METHOD

#### 3.1. Research Model

This study was designed as research. The relational screening model, which is considered as a research method, was used in the study. The relational screening model is one of the research methods and is used by the researcher to examine the relationships between variables. In this model, the researcher conducts statistical analysis to determine the relationship between two or more variables and explain this relationship. In the relational screening model, the researcher determines variables on the basis of a hypothesis or research question and collects data to test the relationship between these variables ( Karasar , 2011).

#### 3.2. Sampling Method

The population of the research is in the Turkish Republic of Northern Cyprus (TRNC). It consisted of patients hospitalized in the internal medicine intensive care unit in public/private hospitals between 01.01.2023 and 01.05.2023. The purpose of the study was selected using the sampling method. In this method, researchers determine and select the sample in line with the sampling objectives and research questions ( Kılbaş and Cevahir, 2023). The sample consisted of 278 patients who volunteered to participate in the study.

#### 3.3. Collection of Data

Newcastle test used to evaluate the quality of nursing care in hospitals. Satisfaction with Nursing Care Scale (NHMSS), Thomas et al. (1996) by evaluating, through individual and group-based interviews, how 150 patients hospitalized in internal medicine and surgery clinics in a hospital in England perceived nursing care as "good" or "bad". In their study to measure patients' satisfaction with nursing care, Walsh and Walsh (1999) tested the use of NHBMS in practice and stated that using NHBMS to create nursing standards is a useful measurement tool. With NHBMS, the patient's satisfaction with nursing care is evaluated as long as he stays in the patient room. Patients describe their satisfaction with various aspects of nursing care using a 19-item, 5-point Likert scale. In the scoring used to determine the degree of satisfaction; The following statements are included: "1- I was not at all satisfied," 2- "I was rarely satisfied," 3- "I was satisfied," 4- "I was very satisfied," 5- "I was completely satisfied." In our country, Uzun studied 280 patients in 2003 and concluded that the scale can be safely applied to Turkish people and surgical patients. Chronbach's alpha coefficient of the Nursing Care Satisfaction Scale was determined as  $r = 0.94$  (Uzun, 2003).

#### 3.4. Analysis Method

In this study, which examined the satisfaction levels of nursing care patients in the internal medicine intensive care unit, the data obtained as a result of the application of measurement tools for the size were analyzed with the SPSS for Windows 28.0 package program.

Percentage, frequency, mean and standard deviation statistics were used to determine the descriptive characteristics of the findings regarding demographic variables. Reliability analysis of the scales was applied. Kruskal Wallis test was applied when comparing the scale scores according to age and educational status variables . In case of differences, Mann Whitney U tests with Bonferroni correction were used.

The error rate ( $\alpha=0.05$ ) was determined in all tests, and the difference between comparisons was considered statistically significant when  $p<0.05$ . Ms -Excel 2010 and SPSS Statistics 28.0 were used for statistical analysis and calculations .

### 4. FINDINGS

#### 4.1. Demographic Information of Participants

**Table 1.** Frequency and Percentage Values of Participants' Demographic Variables

|                        |                             | N    | %    |
|------------------------|-----------------------------|------|------|
| Gender                 | Woman                       | 127  | 45.0 |
|                        | Male                        | 155  | 55.0 |
| Age                    | 22-30 years old             | 11th | 3.9  |
|                        | 31-40 years old             | 52   | 18.4 |
|                        | 41-50 years old             | 88   | 31.2 |
|                        | 51+ years old               | 131  | 46.5 |
| marital status         | Married                     | 191  | 67.7 |
|                        | Single                      | 91   | 32.3 |
| Educational background | Primary-Secondary Education | 63   | 22.3 |
|                        | High school                 | 140  | 49.6 |

|                                 |                 |      |       |
|---------------------------------|-----------------|------|-------|
|                                 | Licence         | 39   | 13.8  |
|                                 | Degree          | 40   | 14.2  |
| Job                             | Employee        | 57   | 20.2  |
|                                 | Officer         | 26   | 9.2   |
|                                 | Housewife       | 90   | 31.9  |
|                                 | Small business  | 13   | 4.6   |
|                                 | Self-employment | 15   | 5.3   |
|                                 | Retired         | 70   | 24.8  |
|                                 | Student         | 11th | 3.9   |
| Previous Hospitalization Status | Yes             | 245  | 86.9  |
|                                 | No              | 37   | 13.1  |
|                                 | Total           | 282  | 100.0 |

When Table 1 is examined, 55% of the participants are male; 45% are women. 46.5% of the participants are in the age group of 51 and over, while 49.6% are high school graduates. 31.9% of the participants are housewives, 24.8% are retired and 20.2% are workers. It was observed that 86.9% of the participants had been hospitalized before.

#### 4.2. Analysis of Satisfaction Status with Nursing Care

**Table 2.** Distribution of Satisfaction with Nursing Care (N=282)

| Nursing Care Parameters   | SATISFACTION LEVELS    |      |                        |      |                 |      |                    |       |                            |     |
|---|------------------------|------|------------------------|------|-----------------|------|--------------------|-------|----------------------------|-----|
|   | I was not happy at all |      | I was rarely satisfied |      | I was satisfied |      | I was very pleased |       | I was completely satisfied |     |
|   | n                      | %    | n                      | %    | n               | %    | n                  | %     | n                          | %   |
| The amount of time nurses devote to you   |                        |      | 78                     |      | 129             | 45.7 | 75                 | 46.6  |                            |     |
| Nurses' skill in their work   | 13                     | 4.6  | 80                     | 28.4 | 148             | 52.5 | 41                 | 14.5  |                            |     |
| Having a nurse nearby to take care of you at all times                                      |                        |      |                        |      | 190             | 67.4 | 92                 | 32.6  |                            |     |
| The level of knowledge nurses have about your care  |                        |      | 93                     | 33   | 72              | 25.5 | 117                | 41.5  |                            |     |
| Nurses come immediately when you call   |                        |      |                        |      | 190             | 67.4 | 92                 | 32.6  |                            |     |
| feel like you're at home.   |                        |      | 50                     | 17.7 | 151             | 53.5 | 81                 | 28.7  |                            |     |
| Ensuring that nurses give you adequate information about your condition and treatment       |                        |      | 48                     | 17   | 157             | 55.7 | 77                 | 27.3  |                            |     |
| Make sure nurses check you are okay frequently enough                                       |                        |      | 15                     | 5.3  | 164             | 58.2 | 103                | 36.5  |                            |     |
| Nurses helping you  |                        |      |                        |      | 131             | 46.5 | 149                | 52.8  | 2                          | 0.7 |
| The way nurses explain things to you  |                        |      |                        |      | 127             | 45   | 155                | 55    |                            |     |
| The way nurses comfort relatives and friends  | 38                     | 13.5 | 52                     | 18.4 | 116             | 41.1 | 76                 | 27.27 |                            |     |
| Nurses' attitudes towards doing their job   |                        |      | 11th                   | 3.9  | 118             | 41.8 | 153                | 54.3  |                            |     |
| The adequacy of the information the nurses give you regarding your condition and treatment. |                        |      | 11th                   | 3.9  | 116             | 41.1 | 155                | 55    |                            |     |

|  |     |      |     |      |
|--|-----|------|-----|------|
| treat you like an important person                                     | 131 | 46.5 | 151 | 53.5 |
| nurses listen to your concerns and fears                               | 130 | 46.1 | 152 | 53.9 |
| The amount of freedom given to you in the service                      | 126 | 44.7 | 156 | 55.3 |
| voluntary response to your requests regarding your care and treatment. | 16  | 5.7  | 169 | 59.9 |
| Nurses' respect for your privacy                                       | 48  | 17   | 196 | 69.5 |
| are aware of your needs regarding your care and treatment              | 115 | 40.8 | 167 | 59.2 |

Satisfaction levels according to nursing care parameters are given in Table 2. It was determined that the majority of patients were "satisfied and very satisfied" with the care they received. The highest average "satisfaction" rate It was observed that the lowest satisfaction was with "The respect that nurses show to your privacy" with 69.5% (n=196), whereas the lowest satisfaction was with "The amount of freedom given to you in the service" with 44.7% (n=126).

#### 4.3. Average Scores of Satisfaction Level with Nursing Care

Table 3 shows the distribution scores of the average scores of satisfaction level with nursing care.

**Table 3.** Distribution of Average Scores of Satisfaction Level with Nursing Care (N= 282)

| Nursing Care Parameters   | Minimum | Maximum | mean   | Ss .    |
|---|---------|---------|--------|---------|
| The amount of time nurses devote to you   | 2       | 4       | 2.9894 | 0.73781 |
| Nurses' skill in their work   | one     | 4       | 2.7695 | 0.74989 |
| Having a nurse nearby to take care of you at all times                                      | 3       | 4       | 3.3262 | 0.46967 |
| The level of knowledge nurses have about your care  | 2       | 4       | 3.0851 | 0.86027 |
| Nurses come immediately when you call   | 3       | 4       | 3.3262 | 0.46967 |
| feel like you're at home.   | 2       | 4       | 3.1099 | 0.67384 |
| Ensuring that nurses give you adequate information about your condition and treatment       | 2       | 4       | 3.1028 | 0.65896 |
| Nurses check you are okay frequently enough   | 2       | 4       | 3.3121 | 0.56763 |
| Nurses helping you  | 3       | 5       | 3.5426 | 0.51313 |
| The way nurses explain things to you  | 3       | 4       | 3.5496 | 0.49841 |
| The way nurses comfort relatives and friends  | one     | 4       | 2.8156 | 0.98098 |
| Nurses' attitudes towards doing their job   | 2       | 4       | 3.5035 | 0.57373 |
| The adequacy of the information the nurses give you regarding your condition and treatment. | 2       | 4       | 3.5106 | 0.57364 |

|  |     |   |        |         |
|--|-----|---|--------|---------|
| treat you like an important person                                     | 3   | 4 | 3.5355 | 0.49963 |
| nurses listen to your concerns and fears                               | 3   | 4 | 3,539  | 0.49936 |
| The amount of freedom given to you in the service                      | one | 2 | 1.5532 | 0.49805 |
| voluntary response to your requests regarding your care and treatment. | 2   | 4 | 3.2872 | 0.5651  |
| Nurses' respect for your privacy                                       | 2   | 4 | 2.9645 | 0.55208 |
| are aware of your needs regarding your care and treatment              | 2   | 3 | 2.5922 | 0.4923  |
| Satisfaction Level Score with Nursing Care ( Evaluated out of 5)       |     |   | 3.12   | 0.60    |

Table 3 shows the average score distribution of satisfaction level with nursing care. Accordingly, the average satisfaction level calculated out of five was determined to be  $3.12 \pm 0.60$ . Since I am completely dissatisfied was scored as "1" and completely satisfied was scored as "5", the highest satisfaction rate ( $3.5496 \pm 0.49$ ) was " The way the nurses explained to you ", whereas the lowest satisfaction rate ( $1.5532 \pm 0.49$ ) was " In the service ". It was determined that the amount of freedom given to you was.

#### 4.4. Descriptive Analyzes Between Demographic Variables and Nursing Care Satisfaction Scale

, " H<sub>1</sub> : Patient satisfaction with nursing care based on gender The analysis carried out to test the hypothesis " There is a significant relationship between " is given in Table 4.

**Table 4.** Satisfaction Scale with Nursing Care Comparison of Scores by Gender

| Gender | N   | Median (IQR) | Group Comparison  |
|--------|-----|--------------|-------------------|
| Woman  | 127 | 60.11 (4.03) | Z= 30.09; p=0.000 |
| Male   | 155 | 58.84 (2.62) |                   |

p <0.05

Satisfaction with Nursing Care It was tested whether the difference in the scale scores between the groups according to the gender variable was significant or not, and it was found that the difference in the scale scores between the groups according to gender was significant (p <0.05). Accordingly, it can be said that the satisfaction level of female patients is higher than male patients ( $60.11 \pm 4.03$ ). In this case, H<sub>1</sub> hypothesis was accepted.

In the study, "H<sub>2</sub> : Patients' age and satisfaction with nursing care" The analysis performed to test the hypothesis " There is a significant relationship between " is given in Table 5.

**Table 5.** Satisfaction Scale with Nursing Care Comparison of Scores by Age

| Age             | n    | Median (IQR) | Group Comparison           |
|-----------------|------|--------------|----------------------------|
| 22-30 years old | 11th | 60.18 (1.16) | $\chi^2 = 0.568$ ; p=0.636 |
| 31-40 years old | 52   | 59.53 (4.51) |                            |
| 41-50 years old | 88   | 59.62 (2.93) |                            |
| 51+ years old   | 131  | 59.16 (3.27) |                            |

p >0.05

Satisfaction with Nursing Care It was tested whether the difference in the scale scores between the groups according to the age variable was significant or not, and it was found that the difference in the scale scores between the groups according to age was not significant (p>0.05). Accordingly, it can be said that the satisfaction levels of patients in all age groups are close to each other. In this case, the H<sub>2</sub> hypothesis was rejected. In the study, "H<sub>3</sub> : Patients' marital status and satisfaction with nursing care The analysis performed to test the hypothesis "There is a significant relationship between" is given in Table 6.

**Table 6.** Satisfaction Scale with Nursing Care Comparison of Scores by Marital Status

| marital status | n   | Median (IQR) | Group Comparison  |
|----------------|-----|--------------|-------------------|
| Married        | 191 | 59.83 (3.58) | Z= 7.822; p=0.006 |
| Single         | 91  | 58.53 (2.73) |                   |

p <0.05

Satisfaction with Nursing Care It was tested whether the difference in the scale scores between the groups according to the marital status variable was significant or not, and it was found that the difference in the scale scores between the groups according to the marital status was significant (p <0.05). Accordingly, it can be said that the satisfaction level of married patients is higher than single patients ( 59.83 ± 3.58 ). In this case, H<sub>3</sub> hypothesis was accepted.

In the study, "H<sub>4</sub> : Satisfaction of patients with education level and nursing care The analysis performed to test the hypothesis "There is a significant relationship between" is given in Table 7.

**Table 7.** Satisfaction Scale with Nursing Care Comparison of Scores by Education Level

| education level             | n   | Median (IQR) | Group Comparison                  |
|-----------------------------|-----|--------------|-----------------------------------|
| Primary-Secondary Education | 63  | 58.80 (3.20) | □□ <sup>2</sup> = 5, 639; p=0.001 |
| High school                 | 140 | 59.75(3.73)  |                                   |
| Licence                     | 39  | 57.92 (2.15) |                                   |
| Degree                      | 40  | 60.62 (2.70) |                                   |

p <0.05

Satisfaction with Nursing Care It was tested whether the difference in the scale scores between the groups according to the education level variable was significant or not, and it was seen that the difference between the groups in the scale scores according to the education level was significant (p <0.05). Accordingly, it can be said that the satisfaction level of patients with a master's degree is higher than patients with other education levels ( 60.62 ± 2.70). It is seen that as the level of education increases, the level of satisfaction also increases. In this case, H<sub>4</sub> hypothesis was accepted.

In the research, "H<sub>5</sub> : Satisfaction of patients with their profession and nursing care The analysis performed to test the hypothesis "There is a significant relationship between" is given in Table 8.

**Table 8.** Satisfaction Scale with Nursing Care Comparison of Scores by Profession

| Job             | n    | Median (IQR) | Group Comparison                |
|-----------------|------|--------------|---------------------------------|
| Employee        | 57   | 59.35 (4.55) | □□ <sup>2</sup> = 2.564; p=0.20 |
| Officer         | 26   | 57.92 (1.29) |                                 |
| Housewife       | 90   | 60.07 (3.48) |                                 |
| Small business  | 13   | 57.15 (0.80) |                                 |
| Self-employment | 15   | 59.46 (0.74) |                                 |
| Retired         | 70   | 59.45 (3.26) |                                 |
| Student         | 11th | 60.18 (1.16) |                                 |

p >0.05

Satisfaction with Nursing Care It was tested whether the difference in the scale scores between the groups according to the profession variable was significant or not, and it was found that the difference in the scale scores between the groups according to the profession was not significant (p>0.05). In this case, H<sub>5</sub> hypothesis was rejected.

In the study, "H<sub>6</sub> : Patients' satisfaction with previous hospitalization and nursing care The analysis performed to test the hypothesis "There is a significant relationship between" is given in Table 9.

**Table 9.** Satisfaction Scale with Nursing Care Comparison of Scores According to Previous Hospitalization Status

| Previous hospital stay | n   | Median (IQR) | Group Comparison |
|------------------------|-----|--------------|------------------|
| Yes                    | 245 | 59.31 (3.50) | Z= 5.169; p=0.24 |
| No                     | 37  | 60.05 (2.41) |                  |

p >0.05

Satisfaction with Nursing Care Previous hospitalization status of the scale scores It was tested whether the difference between the groups was significant according to the variable and the scale scores were determined according to previous hospitalization. It was observed that the difference between groups was not significant ( $p>0.05$ ). In this case, hypothesis H6 was rejected.

## CHAPTER 5. CONCLUSION AND RECOMMENDATIONS

### 5.1. Conclusion

At the end of this study, which examined the satisfaction levels of nursing care patients in the internal medicine intensive care unit; Satisfaction levels were given according to nursing care parameters. It was determined that the majority of patients were "satisfied and very satisfied" with the care they received. It was observed that the highest level of "satisfaction" average was "With the respect that nurses show to your privacy", whereas the lowest satisfaction was with "The amount of freedom given to you in the service". The average satisfaction level was determined to be  $3.12\pm 0.60$ . Since completely dissatisfied was scored as "1" and completely satisfied as "5", it was determined that the highest satisfaction rate was "The way the nurses explained to you", while the lowest satisfaction rate was "The amount of freedom given to you in the service".

It was observed that the difference between the groups in Nursing Care Satisfaction Scale scores according to gender was significant. Accordingly, it can be said that the satisfaction levels of female patients are higher than male patients. It has been observed that the difference in scale scores between groups according to age is not significant. It was observed that the difference in scale scores between groups according to marital status was significant. Accordingly, it can be said that the satisfaction levels of married patients are higher than single patients.

It was observed that the difference between the groups in the Satisfaction with Nursing Care Scale scores according to the education level was significant. Accordingly, it can be said that the satisfaction level of patients with a master's degree is higher than patients with other education levels. It is seen that as the level of education increases, the level of satisfaction also increases. On the other hand, it was observed that the difference in scale scores between groups according to profession was not significant. In addition, it was observed that the difference in scale scores between groups according to previous hospitalization was not significant.

### 5.2. Suggestions

The following suggestions have been developed to increase the satisfaction of nursing care of patients in the intensive care unit:

- Communication and Empathy: It is important for nurses to communicate effectively with the patient, understand the patient's needs and provide emotional support. Taking time to show empathy to the patient and his family, listening to their concerns and providing open communication can increase satisfaction.
- Patient Safety: Patient safety is of great importance in the intensive care unit. To ensure the safety of patients, nurses must act in accordance with infection prevention protocols, be careful to prevent medication errors, and take measures to reduce the risk of falls.
- Providing Information and Education: Informing patients and their families about the treatment process is among the duties of nurses. Nurses should help patients understand the treatment plan and procedures and provide education about medication use and care instructions.
- Pain Management: Patients in intensive care units often struggle with pain. Nurses must follow pain management protocols, regularly assess patients' pain, and provide appropriate analgesic treatments.
- Comfort and Hygiene: Patients' comfort and hygiene are important. To prevent bedsores, nurses should practice regular turning and changing beds, provide a hygienic environment, and meet the cleaning needs of patients.
- Patient Participation: Active participation of patients in the treatment process can increase satisfaction with nursing care. Nurses should inform patients about treatment options, involve them in decision-making processes, and consider patients' preferences as part of the treatment plan.
- Psychosocial Support: It is important for patients in the intensive care unit to receive psychological and emotional support. Nurses must understand patients' concerns, provide moral and emotional support, and help patients cope with stress and anxiety.

## ÖZET

Çalışmanın temelini oluşturan araştırma sorusu, “dezenformasyon ve misenformasyon ekseninde kullanılan tık tuzağının sosyal medya kullanıcıları üzerindeki etkisi nedir?” şeklindedir. Bu problem çevresinde literatür taraması yapılarak önceden yapılan çalışmalar incelenmiştir. İnternetin ortaya çıkmasıyla birlikte geleneksel medya internet ortamında yerini almaya başlamıştır. Gazetelerin internet ortamına girişiyle birlikte rekabet internet ortamına taşınmıştır. Özellikle tık alma isteği etik olmayan yöntemleri beraberinde getirmiştir. Bu yöntemler her geçen gün internete daha fazla erişim sahibi olan kullanıcıları olumsuz etkilemeye başlamıştır. Kullanıcılara uygulanan bu yöntemlerin nedenlerinden bir tanesi sarı gazeteciliğin ortaya çıkışıdır. Sarı gazeteciliğin yanı sıra, dezenformasyon, misenformasyon ve tık tuzağı kendisini çok fazla hissettiren yöntemlerdendir. Bu yöntemlerin kullanılmaya başlanması internet ortamında habere olan güveni sarsmaya başlamıştır. Dezenformasyon ve misenformasyon sosyal medya kullanıcılarını olumsuz etkilemektedir. Yanlış habere ve yanlış algılara sebebiyet veren tık tuzakları dezenformasyon ve misenformasyonu yaygınlaştırmakta ve bu kavramlar üzerine daha fazla çalışma yapma zorunluluğu oluşturmaktadır. Birçok etiğe uymayan kaynak dezenformasyonun ortaya çıkmasında etkilidir. Tık tuzağı sarı gazeteciliğin ortaya çıkışıyla başlamıştır ve kullanıcıların merakı sayesinde sürekli kullanılır hale gelmiştir. Tık tuzağı sarı gazetecilik ile ortaya çıkan sansasyonel haber biçiminin sorunlu yanlarını içerisinde barındırmaktadır. Bu çalışma dezenformasyonu ve misenformasyonu ele almakla birlikte sosyal medya kullanıcılarına uygulanan tık tuzağı konusunda kadın ve erkek kullanıcıların ayrı ayrı misenformasyon ve dezenformasyon ile ilgili bilinç düzeylerini belirlemek, kullanıcıların tık tuzaklarına maruz kalma sıklığını ve farkındalıklarını incelemek, tık tuzağının kullanıcıların düşünce ve davranışlarına etkisini değerlendirmek amacıyla yapılmıştır. Araştırmanın evreni, interneti kullanan ve tık tuzağıyla karşılaşabilecek olan kadın ve erkeklerdir. Araştırmaya katılacak kişiler nicel araştırma yöntemi olan basit rastlantısal örnekleme yöntemi kullanılarak seçilmiştir. Sosyal medyayı aktif kullanan 10 kadın ve 10 erkek öğrenciye söz konusu kavramlar ve bu kavramlar hakkındaki farkındalıklarını ölçmek için sorular yöneltilmiştir. Veriler betimsel analiz yöntemiyle incelenmiştir. Erkek ve kız öğrenciler arasında bu kavramlara ve tık tuzağına ait algı düzeyi farklılık göstermektedir.

**Anahtar Kelimeler:** Misinformasyon, Dezenformasyon, Tık Tuzağı, Sosyal Medya

## ABSTRACT

The research question that forms the basis of the study is “what is the impact of clickbait used in the axis of disinformation and misinformation on social media users?”. Within the framework of this problem, a literature review was conducted and previous studies were examined. With the emergence of the Internet, traditional media started to take its place in the Internet environment. With the entry of newspapers into the Internet environment, competition has moved to the Internet environment. Especially the desire to get clicks has brought unethical methods. These methods have started to negatively affect users who access the Internet more and more every day. Another reason for this unethical method applied to users is the emergence of the concept of yellow journalism. In addition to yellow journalism, disinformation, misinformation and clickbait are among the methods that make themselves felt very much. The use of these methods has shaken the trust in news on the Internet. Disinformation and misinformation negatively affect social media users. Clickbait, which causes false news and false perceptions, popularizes disinformation and misinformation and creates the necessity to study more on these concepts. There are many sources of ethical violations. Clickbait emerged with yellow journalism and has become a method of constant use thanks to the curiosity of users. Clickbait contains the problematic aspects of the sensationalist news format that emerged with yellow journalism. The study was conducted to determine the level of awareness of male and female social media users about disinformation, to examine the frequency and awareness of users exposure to clickbait, and to evaluate the impact of clickbait on users thoughts and behaviors. The population of the research is men and women who use the Internet and may encounter

clickbait. The participants were selected using simple random sampling method, which is a quantitative research method. Questions were asked to 10 male and female students who actively use social media to measure their awareness of these concepts and their awareness of these concepts. The data were analyzed by descriptive analysis method. The level of perception of these concepts and clickbait differed between male and female students.

**Keywords:** Misinformation, Disinformation, Clickbait, Social Media

## GİRİŞ

İletişim, insanlığın ortaya çıkışı ve yükselişi boyunca önemli bir yere sahiptir. Sosyal bir varlık olan insan daima çevresinde olan biteni öğrenmek, yaşadıklarını başkalarına duyurmak, bunlar üzerine düşünmek ve düşündüklerini de diğer insanlara iletmek istemiştir. İşte bu ihtiyaç, yani yaşananları, olup bitenleri öğrenme merakı haberleşme eylemini yaratmıştır. Bu eylemin oluşumunda sırası ile yazının icadı, kâğıdın icadı, matbaanın icadı ve on dokuzuncu yüzyılda basım, haberleşme ve dağıtımını geliştiren birçok icadın eklenmesiyle bugünkü çağdaş basın meydana gelmiştir (Vural&Sütcü, 2019, s.20). Günümüzde ise iletişim disiplinlerarası bir bilim dalı olarak varlığını sürdürmektedir. İletişim bilimi çalışmalarından önce iletişim, telgraf, mektup ve telefon gibi araçlarla gerçekleştirilen bireylerarası bilgi alışverişi olarak görülüyordu. Daha sonralarında iletişim üzerine çalışmalar gerçekleştirilerek iletişim olgusu incelenmeye başlanmıştır. Chicago Okulu'na göre iletişim olgusu sosyolojiktir ve birçok sürece tabiidir. Bu süreçleri, duysal, ruhsal ve zihinsel şeklinde sıralayabiliriz. Elektronik iletişim, teknolojinin gelişmesi ve elektriğin hayatımıza girmesiyle birlikte gelişimini sürdürmüştür. Elektronik iletişim alanında birçok çalışma yapılmıştır. Bunlara bir örnek olarak Nobert Wiener'in elektronik bilgi aktarım sistemi gösterilebilir. Wiener'in çalışmalarında iletişim sibernetik kuramla analiz edilmiştir. Sibernetik kurama göre, iletişim matematiksel ve teknik bir bilgi aktarım sürecidir. Shannon ve Weaver matematiksel modelin temsilcileridir. Bu modele göre iletişimde birçok öge yer alır. Bunlar, gönderici, alıcı, ileti, kanal, kodlama, kod açımı, geri besleme şeklindedir. Günümüz teknolojisiyle birlikte internet ve sosyal medya hayatımızda önemli bir yere sahip hale gelmiştir. Haberlere ulaşmak kolaylaşmış, enformasyon akışı hızlanmıştır. Bilgi ücretsiz hale gelmiştir ancak bilginin doğruluğu tartışma konusu olmaya başlamıştır. Günümüzde değişen ve hızlı şekilde gelişen teknoloji internet kullanımını artırmış, geleneksel medya kullanıcılarının internet ortamıyla tanışması hızlanmıştır. İnternet haberciliği 90'lı yılların başından itibaren özellikle Türkiye'de kullanılmaya başlanmıştır. Bireyler de artık haber almak amacıyla sosyal medyayı ve internet gazetelerini tercih etmeye başlamıştır. Günlük basılı gazeteler dünün haberini verirken internet basını ve sosyal medya anlık olarak her türlü olayı aktarmaktadır. Bu durum gazetelerin tirajlarını da etkilemektedir. Yoğun bilgi akışı tık tuzaklarını, dezenformasyon ve misenformasyonu beraberinde getirmiştir. Sarı gazetecilik önemli bir sorun haline gelmiştir. Dezenformasyon ve misenformasyon konusu günümüz dijital dünyasında çok önemli bir sorundur. Dezenformasyonun amacı yanlış, doğruluğu bilinmeyen ancak bireyleri etkilemek amacıyla kasıtlı olarak bilgi yaymaktır. Dezenformasyonda bilgiler çarpıtılır ve bu bilinçli şekilde yapılmaktadır. İnternetin bu denli hızlı yükselişi dezenformasyon ve misenformasyonu ortaya çıkardığı gibi tık tuzağı kullanımını da en üst düzeye taşımıştır. Daha fazla para kazanma ve tık alma hırsı, dezenformasyonun uygulanma nedenleri arasında gösterilebilmektedir. Özellikle sosyal medya kullanımının bu denli fazlalaşması dezenformasyon ve misenformasyon ile karşılaşılma sıklığını arttırmakla kalmayıp ayna zamanda tık tuzağı ile karşılaşılma oranını da ciddi boyutlara yükseltmiştir. Bilgiler çarpıtılmaya başlanmış, sarı gazetecilik yükselmiş ve üzerinde oynanmış görseller yayılmaya başlamıştır. Bu durum kullanıcıların vaktinin çalınmasına, duygularının sömürülmesine neden olmaktadır. Dijital okuryazarlık ve medya okuryazarlığı bilgisine sahip olmak bu durumlarla karşılaşıldığına aksiyon almak açısından çok önemlidir. Yapılan literatür taramasında dezenformasyon, misenformasyon ve tık tuzağı konusunda birçok araştırma yapıldığı görülmüştür. Gerçekleştirilen çalışmanın dezenformasyon ve misenformasyon ekseninde tık tuzağı kullanımının kadın ve erkeklerde oluşturduğu etkinin belirlenmesi ve literatüre katkı sunması hedeflenmiştir.

## İnternet Gazeteciliği ve Gelişim Süreci

Bireysel ve toplumsal bilgilerin sonraki nesillere aktarımında, kamuoyu oluşturmada önemli bir yeri olan geleneksel türdeki gazetelerin yanına, gelişen teknolojiyle ortaya çıkan internet kullanımıyla birlikte yeni bir gazetecilik türü eklenmiştir (Akman&Yedig, 2002: 30). Bu yeni gazetecilik türü dijital gazetecilik, sanal gazetecilik ya da çevrim içi (online) gazetecilik gibi adlarla anılmaktadır. Bu çalışma boyunca "internet gazeteciliği" terimi kullanılacaktır. İnternet gazeteciliği, teknolojinin ilerlemesiyle birlikte ortaya çıkmıştır. İnternet öncesinde haberlere ulaşmak için gazetelere yoğun ilgi gösterilmiştir. 1990'lı yıllarından başından itibaren ortaya çıkan World Wide Web ile birlikte gazeteler internet ortamına taşınmaya başlamıştır. İnternetin çok hızlı bir şekilde yayılmaya başlamasıyla birlikte basılı gazeteler elektronik ortama taşınmaya başlamıştır. Elektronik ortama geçen ilk online gazete, 1994 yılında İngiltere'de yayınlanan The Sunday Telegraph gazetesidir. Geleneksel gazetecilikte haberler basılı gazetelerden ve televizyondan yayınlanır, aynı zamanda radyo ve dergiler de tercih edilirdi. Ancak basılı gazeteler bir önceki günün haberlerini verdikleri için son dakika kavramından kopuk olmuştur. Gün içinde olan olaylar ise televizyon haberlerinden öğrenilmiştir fakat bunun

için haber saatlerini beklemek gerekmektedir. İnternet gazeteciliğiyle birlikte bu durum değişmiş ve haberlerin anlık olarak yayımlanması sağlanmıştır. İnternet gazeteciliğinin amacı geniş kitlelere daha hızlı ulaşmaktır. İnternet basını aynı zamanda içeriklerini çevrimiçi platformlarda yayımlayarak okurlarını da arttırmıştır. World Wide Web ile haber siteleri ve bloglar ortaya çıkmıştır. İnternet gazeteciliğinin tercih edilmesindeki en büyük nedenlerden bir tanesi hızlı habercilik ve anlık olarak yayın yapma ihtiyacıdır. Haberler internet ile birlikte kamuoyuna hızlı bir şekilde ulaştırılabilmektedir. Sadece bununla kalmayıp gazetelerde sağlanamayan sesli ve videolu haberler de internet medyası sayesinde gerçekleştirilebilmektedir. Tüm dünyada aynı zamanda aynı haberlere ulaşmak mümkündür. Bu nedenle okuyucu etkileşimi internet haberciliği ile en üst noktaya ulaşmıştır. Okurlar, haberler hakkında yorumlarını ve kanaatlerini en kolay şekilde dile getirebilir hale gelmiştir. Bunun ortaya çıkışında sosyal medyanın rolü de büyüktür. Sosyal medya platformlarının ortaya çıkması ve haber sitelerinin bu platformlara giriş yapmasıyla birlikte haber akışı daha hızlı gelmiştir. Haberler artık daha geniş kitlelere ulaşmakta ve ses getirmektedir. Her ne kadar hızlı bir haber akışı olsa da bu durum her zaman mükemmel değildir. Hızlı haber akışı nedeniyle doğru haber yapmak, etik ilkeleri gözetmek her zaman mümkün olmamaktadır. Hızlı bilgi akışı sağlamak ve internet üzerinde ilk sıraya çıkmak için teyit yapılmadan paylaşılan haberler nedeniyle bilgi kirliliği okurları yanlış yönlendirmektedir. Koloğlu'na göre (Koloğlu, 2013: 179), internet gazeteciliği alanında ilk girişimin ABD'de 1979 yılında yapılmıştır ancak başarılı olunamamıştır. Medyanın ve iş çevrelerinin kitle halinde internete ilk girişi 1993 yılında gerçekleşmiştir. İnternet sitelerinin ortaya çıkışıyla birlikte ortaya çıkan gelişmeler hemen yayına verilmeye başlanmıştır. Bununla birlikte anlık haberler dönemi başlar ancak hız nedeniyle, geleneksel gazeteciliğin haberleri kaynağından doğrulama ve bütün unsurlarını tamamlama ilkesi, dijital mecrada hakkıyla yerine getirilemez; yeterince araştırılmamış haberler yayına verilir (Bildirici, 2018, 296-297). Etik ilkeler gazetecilikte önemli bir konuma sahiptir. Bu ilkeler haber yapım aşamasında her zaman göz önünde bulundurulmalıdır. Etik ilkelerin göz önünde bulundurulması medyayı daha güvenli bir ortam haline getirebilir. İnternet gazeteciliği, her zaman hızlı ve pratik bir haber ortamı oluşturmaktadır. Ayrıca eski, hiyerarşik, bir kişiden birçok kişiye doğru yönelmiş iletişim yapısı yerine, interneti ve onun sunduğu olanakları kullanarak yeni, birçok kişiden yine birçok kişiye doğru yönelmiş bir iletişim biçimi sunmaktadır (Putman, 2000'den aktaran Törenli, 2005: 208). Bu yeni iletişim biçimi, hızla gelişmekte ve gün geçtikçe daha geniş kitlelerin kullanım alanına girmektedir (Aral, 2019, s. 156).

### **Türkiye'de İnternet Gazeteciliği**

Türkiye'de internet 1990'lı yılların sonlarında yaygınlaşmaya başlamıştır. İnternet kullanımının başlangıcı biraz geç olsa da internet gazeteleri faaliyete geçmeye başlamıştır. Türkiye'de internet ortamına yayınlarını taşıyan ilk kuruluş Aktüel Dergisi olmuştur. 1995 yılının Temmuz ayında Aktüel Dergisi geleneksel basından internet medyasına geçen ilk kuruluş olarak tarihe geçmiştir. Aktüel Dergisi'ni Ekim ayında internet yayıncılığına başlayan Lemana Dergisi izlemiştir. Türkiye'de ilk internet gazetesi ise Zaman Gazetesi'dir. 2 Aralık 1995 yılında internet yayınına başlayan gazete 27 Temmuz 2016'da kapatılmıştır. Bu dergiler ve gazeteler Türkiye'de internet ortamına ilk giriş yapanlar olarak gösterilebilmektedir. Aral'ın çalışmasına göre (Aral, 2019: 158) bilgisayarın ve internetin Türkiye'ye yıllarca rötarlı gelmesine karşın, internet gazeteciliği kavramı ve uygulamaları Amerika ve Avrupa ile aynı zamanda Türkiye'de de kendinden söz ettirmeye başlamıştır. Özellikle 1990'lı yılların ikinci yarısında tüm dünyada olduğu gibi, Türkiye'de de internet gazeteleri açılmış ve okuyucular internet üzerinden de gazetelerini okuma şansını yakalamıştır. Batı'da yaşanan sanal dönüşümün Türkiye'deki yankıları kısa sürede duyulmaya başlamıştır. Geleneksel ortamlarda yayın yapan bu kuruluşların internet gazeteciliği yapmaya başlamaları teknik ve finansal açıdan pek zor olmamıştır. Günümüzde ise bu gazetelerin sayısı artmaya devam etmektedir. Neredeyse tüm gazeteler internet üzerinden yayın yapabilmektedir. Özellikle gerek amatör gerek uzman gazeteciler tarafından birçok site ve blog kurulmuştur. İnternet gazeteciliği Türkiye'de son yıllarda çok hızlı bir şekilde gelişmiştir. Mobil cihazların yaygınlaşması ve Türkiye'deki altyapının geliştirilmesi sayesinde internete ulaşım kolay bir hale gelmiştir. Bu durum Türkiye'de internet gazeteciliğinin tercih edilme nedenidir. Geleneksel medya kuruluşları haber sitelerini kurarak daha fazla kullanıcıya ulaşmayı hedeflemektedir. Bu nedenle haberler çevrimiçi platformda yayınlanmaktadır. İnternet gazeteleri Türkiye'de sosyal medya platformlarını da etkin bir şekilde kullanmaktadır. Haberler sosyal medyada yayınlandıkça internet gazeteleri daha fazla tık elde etmektedir. Aynı zamanda haberlere kullanıcıların tepki göstermesi daha kolay hale gelmiştir. Zaman zaman internet gazetelerine sansür uygulanabilmektedir. İnternet gazetelerine erişim yasağı verilebilmektedir. Birçok gazete, okurları için ücretli abonelikler çıkartmıştır. Bu abonelikler sayesinde alternatif medya olarak varlıklarını sürdürebilmektedirler. Bu durum internet üzerindeki varlıklarını sürdürebilmelerine de katkı sağlamaktadır. Ancak etik, ifade özgürlüğü, sansür gibi konular hala tartışılmaktadır. İnternet gazeteciliğinde okur da çok önemli bir yere sahiptir. İnternet gazeteciliği sayesinde etkileşim artmıştır. Gazetelerin sosyal medya hesaplarından paylaşılan haberlere okurlar hızlı bir şekilde yorum yapabilirler. Bu durum geribildirim sağlanmasını da ön plana çıkarır. Aynı zamanda haberlerin, özellikle X'te, yeniden gönderilmesiyle birlikte haberler daha fazla kullanıcıya ulaşır. Bununla birlikte haberin okunurluğu artar ve daha fazla kullanıcı haberdar olur. Okurların kendi düşüncelerine uygun haberleri seçme şansı internet gazeteciliğinin artı yönü olarak ortaya çıkmaktadır. Herkes kategorilere ayırarak okumak istediği haberi seçebilir, görmek

istemedikleri haberleri kısıtlayabilmektedir. Yurttaş gazeteciliği de kendisini hissettirmeye başlamıştır. Yurttaşlardan gelen haberler internet gazetelerinin sosyal medya hesaplarından paylaşılmaktadır. Böylelikle kamuoyu haber üretim sürecinde aktif bir rol almaya başlamıştır. Türkiye’de televizyon ve radyo kuruluşları da 1997 yılından itibaren internette yerlerini almaya başlamıştır. Televizyon kanalları içinde Kanal D, 12 Haziran 1997’de internete giren ilk televizyon kanalı olmuştur. Kanal D’yi, ATV, Show TV, Star, NTV ve diğer kanallar izlemiştir. Televizyon kanallarının web siteleri, günlük ve haftalık olarak yayın programlarının ve çeşitli haberlerin yer aldığı bir içerikle kullanıcıya ulaşmıştır. Radyoların internet sitelerinde ise yine benzer olarak günlük ve haftalık program akışı, program ve programcı tanıtımları yer almıştır (Balcı, 2010, s.160).

### **Misenformasyon ve Dezenformasyon**

Çağımızda internet büyük bir bilgi kaynağı olmasının yanı sıra yanlış bilginin yayılmasını da kolaylaştırmıştır. Misinformasyon (misinformation) medya aracılığıyla gerçek bilginin eksik veya yanlış şekilde sunulması olarak ifade edilir. Oxford İngilizce sözlüğünde “yanlış ya da yanıltıcı bilgiler” olarak tanımlanan misinformasyon kavramı üzerinde yeterli çalışma yapıldığını söylemek zordur (Toprak, 2015, s.36). Misinformasyon bilmeden veya bilerek ortaya çıkarılmış yanlış bilgilerdir. Özellikle internet haber medyasında ve sosyal medyada misinformasyon sıklıkla ortaya çıkmaktadır. Ortaya çıkmasının birçok nedeni vardır ve bunlardan en önemlileri; bilginin yetersiz olması, bilgi kirliliği, doğruluğundan emin olunmayan kaynakların kullanılması ve elde edilen bilginin yanlış yorumlanması şeklinde sıralanabilmektedir. Misinformasyonun bir diğer önemli kaynağı ise hükümetler ve politikacılarıdır. Örneğin, 2003 yılında ABD yetkililerinin Saddam Hüseyin’in kitle imha silâhi sahibi olduğuna dair kesin deliller sunması üzerine, ABD öncülüğünde Irak’ın işgal edilmesi ve işgal sonunda bu tür silâhlara hiçbir şekilde rastlanmaması bilgisi gösteriyor ki, hükümetler tarafından kullanıldığında misinformasyon etkin bir silâha dönüşebilmektedir. (Toprak, 2015, s.38) Ancak unutulmamalıdır ki misinformasyonun ortaya çıkışı bilerek veya bilmeyerek de olabilmektedir. Sosyal medya aracılığıyla misinformasyonun neden olduğu yanlış bilgi hızlı bir şekilde yayılmaktadır. İnsanlar algısı yönlendirilir ve kamuoyunun yanlış düşüncelere sahip olmasına neden olunmaktadır. Aynı zamanda kargaşa da ortaya çıkabilmektedir. Günümüz dünyasında internet ve sosyal medya kullanımı çok fazlaşmıştır. Sosyal medya misinformasyonun yayılmasına etkili bir araç haline almıştır. Özellikle günümüzde bilgiler sosyal medya aracılığıyla kullanıcılara hızlı bir şekilde aktarılmaktadır. Ancak yanıltıcı bilgilerin çok hızlı paylaşılması ve milyonlarca kullanıcıyı etkilemesi mümkün hale gelmiştir. Misinformasyondan korunmak için medya okuryazarlığı eğitimi çok önemlidir. Teyit platformları da okurlar için önemli bir yer tutmaktadır. Gazetecilik meslek etiğinin gözetilmesi de misinformasyonun vurucu gücünü düşürebilmektedir. Güvenilir haber kaynaklarını taramak ve onları tercih etmek misinformasyondan korunmak için en etkili yöntemlerden bir tanesidir.

Dezenformasyon, bilinçli şekilde yanlış bilgilerin yayılması ve kitlelere ulaştırılabilmesidir. Dezenformasyonun amacı kitleleri etki altına alıp algı yönetimi yapmak ve fikirleri değiştirebilmektir. Dezenformasyonun tipik örnekleri içine aldatıcı reklâm, hükümet propagandası, kötü içerikli fotoğraflar, sahte belgeler ve haritalar, internet dolandırıcılığı, sahte web siteleri girer. Dezenformasyon çok tehlikelidir çünkü temelinde yalan yer almaktadır. Haberlerin ekonomi, tıp, siyaset, kültür alanlarında yanlış ve yanıltıcı bilgi içermesi, insanda ciddi anlamda duygusal, finansal, hatta fiziksel tahribata sebep olabilmektedir (Toprak, 2015, s. 38). Sosyal medya platformları dezenformasyon uygulanan yerler arasında en çok dikkat çeken platformlardır. Dezenformasyon yalnızca sosyal medya ile sınırlı kalmamakla birlikte geleneksel medya, haber siteleri ve diğer platformlar nedeniyle de ortaya çıkabilmektedir. Sosyal medyada ortaya çıkan dezenformasyon geniş kitlelere hızlı bir şekilde ulaşmaktadır. Dezenformasyon kamuoyunun karar verme şeklini etkileyebilmektedir. Aynı zamanda kutuplaşmalara da neden olabilmektedir. Özellikle Türkiye’de seçim dönemlerinden sıklıkla rakipler hakkında dezenformasyon haberler yapılarak itibar zedelenmesi yaşatmak istenilmektedir. Misinformasyon konusunda olduğu gibi dezenformasyonda da medya okuryazarlığının yeri çok önemlidir. Medya okuryazarlığının artması dezenformasyondan korunmak için etkili bir araçtır. Dezenformasyon sosyal medya kullanıcılarını olumsuz etkilemektedir. Birçok kaynak dezenformasyonun ortaya çıkmasında etkili olmaktadır. Bu kaynakların amacı hedef kitle olan sosyal medya kullanıcılarını etki altına almaktır.

Dijital iletişim ortamları da dezenformasyon yayımı için de eşsiz fırsatlar sunmaktadır. Dezenformasyon her ne kadar bir organizasyon ya da kişi eliyle üretilse de zaman zaman bazı haber kanalları ve gazeteler de kasıtlı üretilmiş bilgiyi referans kabul ederek gerçek dışı haberler üretebilmektedir. Medya burada asli dezenformasyon kaynağı olmamakla birlikte, bu maksatla üretilmiş bilgiyle taşıyıcılık ve kitle geneline yayıcılık görevini yapabilmektedir (Erkan&Ayhan, 2018, s. 206). Şüphesiz bilginin bir çeşidi olan misinformasyon eksik bilgi olarak ifade edilebilir. Diğer taraftan bilgileri saklamak, çarpıtmak, bilgiler üzerinde oynama yapmak da misinformasyon kavramıyla açıklanabilir. Eksik ve konu dışı gibi görünen bilgiler hâlâ doğru, güncel ve bilgilendirici olabilir (Toprak, 2015, s.37). İnternet haberciliğinde etik, misinformasyon ve dezenformasyon ön plana çıkmaktadır. Bu durumlar haberlerin üretim ve dağıtım süreçlerini ilgilendirmektedir. Misinformasyon yanlış bilgilendirme, dezenformasyon ise bilgi kirliliği anlamına gelmektedir. Habercilikte etik unsuru ise önemli bir yere sahiptir. Haberlerin doğru şekilde yazılarak kamuoyuna ulaştırılması bir zorunluluktur. Tarafsızlık her ne

kadar pratikte tartışılrsa da haber yazımında uygulanması gereken bir etik ilke olarak karşımıza çıkmaktadır. Orhan Koloğlu çalışmasında (Koloğlu, 2006, s. 160) basın güvenilirliliğinin diğer kurumların gerisine düştüğünü belirtmiştir. Koloğlu'na göre gazeteciler rakipleriyle yarışmak ve iktidarlara uyumlu olmak istemektedir. Gazeteciler propaganda yapmaya başlamıştır. Bunun sonucu olarak basının güvenilirliliğinin diğer kurumların gerisine düştüğü, gazetecilerin kendilerinin yayınladıkları kamuoyu araştırmalarıyla saptanmıştır. Aynı zamanda haberlerde kamu yararı gözetmek ve objektif olmak haberin doğruluğu açısından önem taşımaktadır. Gazeteciler haber kaynaklarının seçiminde tüm bu unsurları göz önünde bulundurmalı ve güvenilir haber kaynaklarına ulaşmalıdır. Unutulmaması gereken nokta ortaya çıkan haberlerin toplum yararına hizmet etmesi gerektiğidir. Haberlerin yanıltıcı olmaması da kamuoyunun etkilenmesi açısından önemlidir. Misinformasyon kelimesinin anlamı yanlış bilgilendirme şeklinde açıklanabilmektedir. Özellikle internet haberciliğinin bu denli yaygınlaşmasıyla birlikte misinformasyonun ortaya çıkması fazlaşmıştır. Misinformasyonu dezenformasyondan ayıran en önemli unsur, misinformasyonun kasıtlı veya bilmeden yapılabilmesi ancak dezenformasyonun istenerek yapılmasıdır. Misinformasyon ortaya çıktığına istemsizce veya isteyerek yanıltıcı bilgi haberle birlikte dolaşıma sokulmuştur. Bu haberin doğruluğu ve güvenliği tartışma konusu haline gelmiştir. Dezenformasyonda ise amaç bilerek ve isteyerek yanlış bilgilerin yayılması ve kamuoyunu etkilenmesinin sağlanmasıdır. Dezenformasyonun yayılması çok hızlı bir şekilde gerçekleşmektedir ve büyük bir okur kitlesini etki altına almaktadır.

Şüphesiz enformasyon ve iletişim teknolojilerine bağlı olarak özellikle son yıllarda tüm dünyada yapısal ve toplumsal bir dönüşüm yaşanmaktadır. Bilgi teknolojilerinin temelinde gerçekleşen bu dönüşüm genel olarak "ağ toplumu" kavramıyla ifade edilmektedir (Erkan&Ayhan, 2018, s. 205). Van Dijk'e göre ağ toplumu sosyal ve medya ağlarından oluşan bir yapının toplumun her seviyesindeki bireysel, grupsal/örgütsel ve sosyal-örgütlenme tarzını belirlediği modern bir toplum türüdür. Bu ağlarla beraber toplum her birimi ve parçası birbirine bağlanmaya başlamıştır. Asparagas haberlerle toplumu galeyana getiren, yetkilileri zan altında bırakabilen, toplumda önemli bir role sahip olan insanların hayatlarını kaybettiği yönünde içeriklerle sıkça karşılaştığımız sosyal medyada etik ilkelere uygun habercilik için önemli adımlar atılması gerekmektedir. Yegen'in aktardığına göre (Yegen, 2018, s.107) sosyal medyada uygulanan dezenformasyona karşı kullanıcılar gördükleri içerikleri başat konvansiyonel medya organlarını referans olarak doğrulamaktadır. Bu durum, haber söz konusu olduğunda, konvansiyonel medyaya duyulan güvenin sosyal medyaya duyulan güvenden daha fazla olduğunu göstermektedir. Dezenformasyon ve misinformasyon aslında çeşitli propaganda faaliyetlerinin kampanya görünümüdür. Doğruluk ve güvenilirlik önemli olduğundan kullanıcı, içeriği anlamak ve dezenformasyondan kaçınmak için araştırmakta, doğrulama yapmaya çalışmakta, doğru bilgiye erişmek adına bireysel çaba sarf etmektedir. Sosyal medya kullanıcıları kimi zaman gerçek kişiler bile olmayabilir. Örneğin "sosyal botlar" (socialbots), bir bilgisayar yazılımı tarafından kontrol edilen ve otomatik mesaj üretebilen sosyal medya hesaplarıdır; bunların bazıları yalan haber üretip yaymak amacıyla özel olarak tasarlanmaktadır (Taş&Taş, 2018, 196). Misinformasyon ve dezenformasyon kamuoyunu etkilemek için kullanılmıştır ve kullanılmaya devam etmektedir.

### **Tık Tuzağı ve Uygulanma Şekli**

Tık tuzağı merak uyandıran başlıklar ve görseller kullanılarak yayımlanan içeriklere verilen isimdir. Tık tuzağının amacı kullanıcıların ilgisini çekerek içeriği tıklamalarını sağlamaktır. Kullanıcıları etkileyip tık tuzağına neden olduğu zaman genellikle tıklanılan içerikte önemli bir bilgiye rastlanılmamaktadır. Kullanıcıların dikkatini çeken haber başlıkları tık tuzağı için vazgeçilmezdir. Bu tür başlıklar kullanıcıların merak duygularının kabarmasına ve tıklamak için hevesli hale gelmesine neden olmaktadır. Aynı zamanda kullanılan görseller de kullanıcıyı etkilemektedir. İlginç Photoshop ürünleri, görsel dezenformasyon gibi durumlar kullanıcının ilgisini çekmektedir. Genellikle görseller üzerinde oynanılarak merak duygusunun daha fazla hale gelmesi de amaçlanmaktadır. Fotoğraf üzerine yazılan açıklamalar da kullanıcıyı etki altına almaktadır. Tık tuzağının amacı dikkat çekmek ve daha fazla tık almaktır. Her ne kadar daha fazla tık alınmak istense de içeriğin değeri oldukça düşük kalmaktadır. Tık tuzağı ile sansasyon içermeyen haberler bile sansasyonel hale getirilmektedir.

Tık tuzağı haberlerin ortaya çıkması gazetecilik meslek ilkelerini görmezden gelmektir. Bu tür haberler yalnızca fazla tık almak için yapılmaktadır. Bu nedenle etik ilkelerle çatışmaktadır. Clickbait içeriklerde en önemli özellik haber içeriğinde yer alan görsellerin ve başlıkların kitleyi harekete geçirebilecek şekilde uyarlanabilmesidir. Clickbait odaklı haber sunumlarında vurgu genellikle haber başlıklarında olsada haber sunumunun hazırlanma sürecinde kullanılan görsel ve multimedya fonksiyonları da clickbait odaklı habercilik açısından önemlidir. Haber başlığına iliştirilen görüntüler haber konusundaki anlaşmazlığı, aşırılığı ve merak uyandırıcılığı haberin tıklanma amacına başlık metni ile beraber hatta çoğu zaman yalnız başına hizmet etmektedir. Bu kullanım sayesinde zayıf bir içerik dahi kolaylıkla haber haline getirilmekte ya da haber değeri düşük bir içerik en fazla okunan habere dönüştürebilmektedir. Clickbait odaklı haber sunumunda genellikle haberlerle ilgili yanıltıcı, ilgisiz ve abartılı başlıklarda kullanılan kelime oyunlarına uygun görüntüler tercih edilmektedir (Kortak, 2020, s. 54).

İnternet gazeteciliğiyle birlikte habercilik değişime uğramaya başlamıştır. Tık tuzağı haberlerde okuyucuyu etkilemek ve tık almak amacıyla anlaşılması zor ancak dikkat çeken ve merak uyandıran başlıklar ve görseller kullanılmaktadır. Meraklanan okur kitlesi bu sitelere tıklayarak sayfaları ziyaret etmektedir. Ancak bu yöntemde başlıklar ve görseller yanlış bilgiler içermektedir. Tık tuzağı haberler abartılı ve gerçeklikten uzak başlıklar kullanılarak, kullanıcıların ilgisini çekmek ve tık almak amacıyla yapılan haberlerdir. Bu durum gazetecilik etiğine aykırı olsa da birçok haber sitesi sosyal medya hesaplarında bu duruma yer vermektedir.

Haber siteleri, sosyal medya hesapları üzerinden haberlerin başlığını paylaşarak okurların haberin geri kalanını okuyabilmeleri için web sitesine yönlendirmektedirler. Ayrıca web sitesine giriş yapan ziyaretçilere okudukları haberlere benzeyen veya dikkat çeken başka haber başlıkları da gösterilmekte ve böylece okuyucuların web sitesinde daha fazla zaman geçirecek bu haberleri de tıklamaları sağlanmakta ve böylece ziyaretçi sayısının artırılması amaçlanmaktadır (Kortak, 2020, s. 58).

Haber sitelerinin sosyal medya hesaplarında yayınlanan bu tür fotoğraflı tık tuzağı başlıklar kullanıcıların dikkatlerini çekmekte ve merak uyandırmaktadır. Haberin içeriğini merak eden kullanıcılar linklere tıklayarak web sitelerine giriş yapmaktadır.

Sarı gazetecilik, bilinen gazetecilik etiklerine uymamakla birlikte çarpıtılmış ve manipülatif haberlerin yapılması şeklindedir. Sarı gazeteciliğin amacı para kazanmak ve geniş çaplı bir kullanıcı kitlesinin ilgisini çekmektir. Amaç büyük bir izleyici kitlesini hiçbir gazetecilik etiğine uymadan etki altına alarak ticari kazanç elde etmektir. Sansasyonel haber başlıkları sarı gazetecilik için kullanılmaktadır. Bu başlıklar abartılı bir şekilde yazılmaktadır. Başlıklarda gerçeklik yoktur ve amaç dikkat çekmektedir. Görsellerde yine etik ilkelere uyulmamaktadır. Manipülatif görsellere sıklıkla yer verilmektedir. Bu görseller genellikle abartılıdır ve kullanıcıyı yanıltma amacı güdülmektedir. Etik kurallar gözetilmediği gibi kaynak konusunda da tartışmalı bir durum bulunmaktadır. Sarı gazetecilikle haberler yazılırken kaynaklar doğrulanmaz ve objektiflik gibi ilkeler göz ardı edilmektedir. Haberler tıpkı tık tuzağında olduğu gibi tık almak amacıyla üretilmektedir. Amaç büyük bir kitleye hakim olmak ve dikkatini çekmektir. Haberlerin ortaya çıkarılma amacı, bu kitle üzerinden daha fazla tık alma arzusudur. Sarı gazetecilik herhangi bir gazetecilik etiğiyle uyum sağlamadığı için gazeteciliğe en çok zarar veren yöntemlerden bir tanesidir. Sarı gazetecilik toplumu yanlış yönlendirebilir ve sorunlara neden olabilir. Gazetecilikte objektiflik ve doğruluk ilkeleri çok önemlidir. Bu ilkelere uyulmaması kamuoyunu yanlış yönlendirmektedir. Daha fazla merak uyandırma adına haber dilinde ve sunumunda; haber materyallerine mozaikleme yapma, çeşitli semboller kullanma, sesleri değiştirme, hareketli resim kullanma ve görüntüyle oynama (fotomontaj) gibi genellikle yanıltıcı uygulamalar yapılmaktadır (İnce, 2018: 311). Dolayısıyla okuyucunun daha fazla kâr elde etmek uğruna manipüle edilmesi, bugüne özgü olmasa bile bu sorunu günümüz yeni medya eko-sistemi içerisinde kritik bir noktaya taşımaktadır. Haber siteleri tarafından diğer haber sitelerinin önüne geçebilmek ve daha fazla kâr elde edebilmek adına kasıtlı biçimde üretilen yalan, aldatıcı, düşük kalitedeki içeriklerin üretim ve dağıtımının 'gazetecilik mesleği' adına gerçekleştiriliyor olması ise üzerinde durulması gereken bir başka önemli noktadır (Çavuş&Ede, 2021: 48).

## YÖNTEM

Gerçekleştirilen çalışmanın problem cümlesi, “dezenformasyon ve misenformasyon ekseninde kullanılan tık tuzağının sosyal medya kullanıcıları üzerindeki etkisi nedir?” şeklindedir. Bu problem çerçevesinde daha önceden yapılmış çalışmalar literatür taraması yapılarak incelenmiştir.

Çalışma nitel araştırma yönteminden yararlanılarak gerçekleştirilmiştir. Nitel araştırmada, soyut fikirleri araştırma sürecinin erken aşamalarında kuramsal tanımlar şeklinde rafine etmek yerine, tam gelişmemiş “fikir taslaklarını” veri toplama ve analiz süreçlerinde rafine ederiz. Kavramlaştırma; verilere ve verilerle ilgili ön fikirlere “anlam vermek” ya da bir düzen kazandırmak için mücadele ederken tutarlı kuramsal tanımlar oluşturma süreci halini alır (Neuman, 2022, s. 348). Bu kapsamda çalışmada Sakarya Üniversitesi okumakta olan 20 öğrenciyle derinlemesine görüşme yapılmıştır. Araştırmanın evreni belirli bir dijital okuryazarlık düzeyine sahip olduğu düşünülen ve internet kullanarak tık tuzağına maruz kalabilecek sosyal medya kullanıcılarıdır. Gerçekleştirilen çalışmada örnekleme yöntemi olarak basit rastlantısal örnekleme kullanılmıştır. Bu yöntem ile yola çıkılarak, Sakarya Üniversitesi’nde öğrenim gören, rastgele seçilen üniversite öğrencileriyle derinlemesine görüşme yapılmıştır. Nitel yöntemlerden olan derinlemesine görüşme yapılarak toplanan veriler analiz edilirken betimsel analiz tekniği kullanılarak veriler yorumlanmıştır. Gerçekleştirilen araştırma sosyal medya kullanıcılarını kapsamaktadır.

## BULGULAR

Çalışmanın gerçekleştirilmesi için Sakarya Üniversitesi’nden nitel araştırma yöntemlerinden olan basit rastlantısal örnekleme ile 10 kadın ve 10 erkek öğrenci seçilmiştir. Katılımcılarla derinlemesine görüşme tekniğiyle sorular yöneltilmiştir. Bu öğrencilerin demografik bilgileri ve araştırma sorularına verdikleri cevaplar şöyle betimlenebilir.

Erkek katılımcıların 3'ü 19, 2'si 21, 4'ü 22, 1'i 24 yaşındadır. Kadın katılımcıların ise 1'i 19, 2'si 21, 5'i 22, 2'si 24 yaşındadır.

| Yaşlar        | Erkek     | Kadın     |
|---------------|-----------|-----------|
| 19            | 3         | 1         |
| 21            | 2         | 2         |
| 22            | 4         | 5         |
| 24            | 1         | 2         |
| <b>Toplam</b> | <b>10</b> | <b>10</b> |

**Tablo 1:** Katılımcıların Yaşları

Erkek katılımcıların 9'u lisans, 1'i ön lisans öğrencisidir. Kadın katılımcıların 7'si lisans, 2'si ön lisans ve yalnızca 1'i yüksek lisans öğrencisidir.

| Eğitim Düzeyi | Erkek     | Kadın     |
|---------------|-----------|-----------|
| Ön Lisans     | 1         | 2         |
| Lisans        | 9         | 7         |
| Yüksek Lisans | 0         | 1         |
| <b>Toplam</b> | <b>10</b> | <b>10</b> |

**Tablo 2:** Katılımcıların Eğitim Düzeyi

Erkek katılımcılara sorulan “dezenformasyon ve uygulanış şekli hakkında bilginiz var mı?” sorusuna, katılımcıların 3'ü “biliyorum”, 4'ü “daha önce duydum ama tam olarak bilmiyorum”, 3'ü “bilmiyorum” cevabını vermiştir.

Kadın katılımcılara aynı soru sorulduğunda, 5'i “biliyorum”, 3'ü “daha önce derslerde duydum”, 2'si “bilgim yok” cevabını vermiştir.

Verilen cevaplar incelendiğinde erkek katılımcıların 7'si dezenformasyondan ve uygulanış şekline haberdarken, kadınlarda bu sayı 8'dir.

Erkek katılımcılara sorulan bir diğer soru olan “misenformasyon ve uygulanış şekli hakkında bilginiz var mı?” sorusuna, katılımcıların 7'si “ilk kez duyuyorum”, 3'ü “daha önce internette görmüştüm” cevabını vermiştir.

Kadın katılımcılara aynı soru sorulduğunda, katılımcıların 8'i “ilk kez duyuyorum” cevabını verirken, 1'i “misenformasyondan haberdarım ve uygulanış şeklini biliyorum” cevabını vermiştir. Diğer katılımcı ise “misenformasyon ifadesini duymuştum” cevabını vermiştir.

Misenformasyon hakkında farkındalığın ölçülmesi amacıyla sorulan soruya katılımcıların verdiği cevaplar incelendiğinde erkek katılımcıların 7'si ilk kez duyduğunu ifade ederken, kadın katılımcıların 8'i ilk kez duyduğunu belirtmiştir.

Erkek katılımcılara sorulan diğer soru “Tık tuzağından haberdar mısınız? Hangi sıklıkta karşılaşıyorsunuz?” şeklindedir. Katılımcıların 8'i “haberim var, her gün görüyorum” cevabını verirken 2'si “pek karşılaşmıyorum” cevabını vermiştir.

Kadın katılımcılara aynı soru sorulduğunda, katılımcıların 6'sı “haberim var, her gün karşılaşıyorum” şeklinde cevap verirken, 3'ü “haberim var ama pek karşılaşmıyorum”, 1'i “haberim yok ve karşılaşp karşılaşmadığımı bilmiyorum” cevabını vermiştir.

Tık tuzağı farkındalığı ve karşılaşma sıklığının ölçüldüğü diğer bir soruya cevap veren erkeklerin 8'i haberdar olduğunu ve her gün tık tuzağıyla karşılaştığını belirtmiştir. Kadınlarda tık tuzağı konusunda farkındalığı olanların sayısı 9 iken tık tuzağıyla sıklıkla karşılaşanların sayısı 6'dır. Kadın katılımcılardan yalnızca 1'i tık tuzağından habersizdir ancak erkek katılımcıların tümü tık tuzağından haberdardır.

Erkek katılımcılara sorulan “Tık tuzağı sosyal medya kullanım davranışlarınızı etkiliyor mu?” sorusuna verilen cevaplar incelendiğinde, katılımcıların 4'ü “Evet etkiliyor, Teyit platformlarına yöneliyorum”, 3'ü “Evet

etkiliyor, diğer haber sitelerini ziyaret ediyorum”, 2’si “Evet etkiliyor, sosyal medyada daha güvenilir hesapları takip ediyorum”, 1’i “Hayır etkilemiyor, sosyal medyayı her zamanki gibi kullanıyorum” cevabını vermiştir. Kadın katılımcılara aynı sorular sorulduğunda, 3’ü “Evet etkiliyor, Google üzerinden araştırma yapıyorum”, 2’si “Evet etkiliyor, güvendiğim televizyon kanallarını izliyorum”, 2’si “Evet etkiliyor, yazılı basına yöneliyorum”, 2’si “Evet etkiliyor, güvenilir hesapları takip ediyorum”, 1’i “Hayır etkilemiyor” cevabını vermiştir.

Tık tuzağının sosyal medya kullanım davranışlarını ne şekilde etkilediğinin ölçüldüğü bir diğer soruda, erkek katılımcıların 9’u ve kadın katılımcıların 9’u tık tuzaklarından etkilendiklerini ve haber alma davranışlarını değiştirdiklerini belirtmiştir. Erkek katılımcıların 1’i ve kadın katılımcıların 1’i tık tuzağından etkilenmediğini belirtmiştir.

Erkek katılımcılara sorulan diğer bir soru, “Tık Tuzağı ile karşılaştığımızda tepkiniz nasıl oluyor?” şeklindedir. Katılımcıların 3’ü “şikayet ediyorum”, 3’ü “hesabı engelliyorum”, 2’si “tık tuzağı olduğuna dair yorum yapıyorum”, 2’si “hiçbir şey yapmıyorum” cevabını vermiştir.

Aynı soru kadın katılımcılara sorulduğunda, 4’ü “şikayet ediyorum”, 3’ü “hesabı engelliyorum”, 3’ü “hiçbir şey yapmıyorum” cevabını vermiştir.

Tık tuzağına karşı kullanıcı tepkilerinin ölçüldüğü bir diğer soruya erkek katılımcıların 3’ü ve kadın katılımcıların 4’ü şikayet ettiklerini belirtirken, erkek katılımcıların 3’ü ve kadın katılımcıların 3’ü hesabı engellediklerini belirtmiştir. Erkek katılımcıların 2’si hiçbir şey yapmadığını ifade ederken bu sayı kadınlarda 3 olarak ölçülmüştür.

Tık tuzaklarının sosyal medyadaki haberler hakkındaki düşüncelerine olan etkilerinin anlaşılmasına çalışıldığı bir diğer soruya erkek katılımcıların 5’i “daha fazla araştırma yapmaya ihtiyaç duyuyorum”, 3’ü “güvendiğim hesapları takip ederek bilgiye doğrudan ulaşıyorum”, 1’i “sosyal medyada sitelerine güvendiğim haber platformlarını takip ediyorum”, 1’i de “fikrim yok” cevabını vermiştir.

Aynı soru kadın katılımcılara yöneltildiğinde, 4’ü “gazetelere karşı bakış açım değişiyor”, 3’ü “güvendiğim gazetecileri takip ediyorum”, 2’si “haberleri televizyondan takip ediyorum”, 1’i “haberler düşüncelerimi etkilemiyor” cevabını vermiştir.

Katılımcıların tık tuzaklarının sosyal medyadaki haberler hakkında düşüncelerine etkilerinin sorulduğu soruya verdikleri cevaplar incelendiğinde erkeklerin 5’i daha fazla araştırma yaptığını belirtmiş, kadınların 4’ü gazetelere karşı bakış açılarının değiştiğini söylemiştir. Erkeklerin 3’ü ve kadınların 3’ü güvendikleri haber kaynaklarına yönelmektedir.

Öte yandan tık tuzaklarının öğrencileri sosyal medya kullanımına dair davranışsal bir farklılık yaratmadığı sonucu görülmektedir. Öğrencilerin tamamı yanlış haber yayılımına karşı ‘olabilirlik, yeni medyanın güvensizliği, algı yönetimi vb. şekilde yeni medyada dolaşımda olan içeriklere olan güvensizliklerini ifade etmişlerdir.

## SONUÇ

Gerçekleştirilen araştırmanın bulguları incelendiğinde, araştırmaya katılanların 10’u kadın, 10’u da erkektir. Araştırmaya katılan kişi sayısı toplam 20’dir. Nitel araştırma kapsamında açık uçlu sorular sorulduğu çalışmada alınan cevaplar titizlikle incelenmiş ve birbirine yakın olan cevaplar birleştirilerek anlamlı bir sonuç elde edilmiştir. Katılımcılara sorulan ilk soruda, dezenformasyon ve uygulanış şekli açısından bilgilerinin ölçülmesi amaçlanmıştır. Erkek katılımcıların 3’ü dezenformasyon ve uygulanış şekli hakkında haberdarken, kadın katılımcıların dezenformasyon bilinci konusunda daha hassas oldukları ve 5 kişinin bu durumdan haberdar olduğu görülmüştür. Erkek katılımcıların 4’ü ise dezenformasyon ifadesine daha önce rastlamıştır ancak kadın katılımcıların yalnızca 3’ü önceden duymuştur. Erkek katılımcıların 3’ü dezenformasyon konusunda bilgisinin olmadığını ifade ederken, bu sayı kadın katılımcılarda yalnızca 2’dir. Kadın katılımcıların dezenformasyondan daha fazla haberdar olduğu söylenebilmektedir. Bununla birlikte kavramın kullanımına dair bilgi sahibi olunmasa da yalan haber ve onun yayılımı konusunda farkındalık mevcuttur.

Katılımcılara sorulan bir diğer soru ise misenformasyon ve uygulanış şekli hakkında bilgilerinin olup olmadığıdır. Erkek katılımcıların 7’si bu soruya “ilk kez duyuyorum” cevabını verirken kadın katılımcıların 8’i ilk kez duyduklarını belirtmiştir. Erkek katılımcıların 3’ü misenformasyon ifadesi ile daha önce karşılaştığını belirtirken, bu sayı kadınlarda 1’dir. Ancak kadın katılımcılardan yalnızca 1 tanesi misenformasyon ifadesiyle daha önce karşılaştığını belirtmiştir. Verilen cevaplar incelendiğinde misenformasyon konusunda erkek katılımcıların daha fazla haberdar olduğu aşikardır.

Diğer bir soruda, katılımcılara tık tuzağıyla karşılaşma sıklıkları sorulmuştur. Erkek katılımcıların 8’i “haberim var, her gün görüyorum” cevabını verirken, kadın katılımcıların 6’sı “haberim var, her gün görüyorum” cevabını

vermiştir. Erkeklerin 2'si "pek karşılaşmıyorum" cevabını verirken, kadın katılımcılardan 3'ü "haberim var ama pek karşılaşmıyorum", 1'i de "haberim yok ve karşılaşıp karşılaşmadığımı bilmiyorum" cevabını vermiştir. Verilen cevaplar incelendiğinde erkek katılımcıların tık tuzağıyla çok daha fazla karşılaştığı ve 1 kadın katılımcının tık tuzağı konusunda herhangi bir bilgisinin olmadığı gözlenmiştir.

Bir diğer soruda, tık tuzağının katılımcıların sosyal medya kullanım davranışlarını nasıl etkilediği incelenmiştir. Erkek katılımcıların 4'ü "evet etkiliyor, teyit platformlarına yöneliyorum", 3'ü "Evet etkiliyor, diğer haber sitelerini ziyaret ediyorum", 2'si "Evet etkiliyor, sosyal medyada daha güvenilir hesapları takip ediyorum", 1'i de "Hayır etkilemiyor, sosyal medyayı her zamanki gibi kullanıyorum" cevabını vermiştir.

Kadın katılımcılara aynı soru sorulduğunda 3'ü "Evet etkiliyor Google üzerinden araştırma yapıyorum", 2'si "Evet etkiliyor, güvendiğim televizyon kanallarını izliyorum", 2'si "Evet etkiliyor, yazılı basına yöneliyorum", 2'si "Evet etkiliyor, güvenilir hesapları takip ediyorum, 1'i "Hayır etkilemiyor" cevabını vermiştir.

Katılımcıların verdiği cevaplar incelendiğinde erkek ve kadın katılımcıların tık tuzaklarından etkilendikleri görülmüştür. Katılımcılara sorulan diğer bir soruda tık tuzağı ile karşılaştıklarında tepkilerinin ne yönde olduğunu öğrenmek amaçlanmıştır. Erkek Katılımcıların 3'ü "şikayet ediyorum", 3'ü "hesabı engelliyorum", 2'si "tık tuzağı olduğuna dair yorum yapıyorum", 2'si "hiçbir şey yapmıyorum" cevabını vermiştir. Aynı soru kadın katılımcılara sorulduğunda, 4'ü "şikayet ediyorum", 3'ü "hesabı engelliyorum", 3'ü "hiçbir şey yapmıyorum" cevabını vermiştir.

Cevaplar incelendiğinde, erkek ve kadın katılımcıların tık tuzağından rahatsız oldukları ve karşılaşmamak için gerekli adımları attıkları gözlenmiştir.

Tık tuzaklarının sosyal medyadaki haberler hakkındaki düşüncelerine olan etkilerinin anlaşılmasına çalışıldığı bir diğer soruya erkek katılımcıların 5'i "daha fazla araştırma yapmaya ihtiyaç duyuyorum", 3'ü "güvendiğim hesapları takip ederek bilgiye doğrudan ulaşıyorum", 1'i "sosyal medyada sitelerine güvendiğim haber platformlarını takip ediyorum", 1'i de "fikrim yok" cevabını vermiştir. Aynı soru kadın katılımcılara yöneltildiğinde, 4'ü "gazetelere karşı bakış açım değişiyor", 3'ü "güvendiğim gazetecileri takip ediyorum", 2'si "haberleri televizyondan takip ediyorum", 1'i "haberler düşüncelerimi etkilemiyor" cevabını vermiştir.

Verilen cevaplar incelendiğinde erkek katılımcıların tık tuzaklarıyla karşılaştıklarında daha fazla araştırma yapmaya yöneldikleri gözlenmiştir. Kadın kullanıcılar ise güvendikleri haber kaynaklarına yönelmektedir.

İnternetin yaygın kullanımı sosyal medya platformlarının aktif kullanımı ve sarı gazeteciliğin ortaya çıkmasıyla birlikte tık tuzağı habercilik de etkili bir şekilde yapılmaya başlanmıştır. Özellikle sosyal medya platformlarında kullanıcılar hemen her geçen gün fazlasıyla tık tuzağına, dezenformasyona ve misenformasyona maruz kalmaya başlamıştır. Gerçekleştirilen bu çalışmada dezenformasyon ve misenformasyon ekseninde sosyal medyada tık tuzağına maruz kalan kadın ve erkek kullanıcılara sorular sorulmuş ve cevaplar analiz edilmiştir. Katılımcıların çoğunluğu dezenformasyondan haberdarken, misenformasyon konusunda aynı durum geçerli değildir. Çoğunluk misenformasyondan haberdar değildir ve nasıl ortaya çıktığını bilmemektedir. Araştırmaya katılan katılımcılar incelendiğinde tık tuzağı konusunda kullanıcıların çoğunun haberdar olduğu gözlenmiştir. Sosyal medya kullanıcıları kendilerine karşı uygulanan clickbait içeriklerden haberdardır. Aynı zamanda tık tuzağının sosyal medya kullanma davranışlarını nasıl etkilediği de katılımcılara sorulmuştur. Tık tuzağı ile karşılaşan katılımcılar teyit platformlarına, yazılı basına ve televizyon haberlerine yöneldiklerini söylemiştir. Tık tuzaklarıyla karşılaşan katılımcılar rahatsız olduklarını ve bu durumla karşılaştıklarında hesapları engellediklerini ve şikayet ettiklerini dile getirmiştir. Katılımcıların cevapları incelendiğinde dezenformasyon, misenformasyon ve tık tuzağının sosyal medya kullanıcılarının ortak sorunu haline geldiği söylenebilmektedir. Bu durumlardan korunmak amacıyla medya okuryazarlığı eğitiminin gerekli olduğu söylenebilir. Kullanıcılara medya okuryazarlığı eğitiminin verilmesi hem interneti daha güvenli hale getirebilir hem de kullanıcıların yanlış yönlendirilmesine engel olabilir. Kullanıcıların tık tuzağı, dezenformasyon ve misenformasyon durumlarından haberdar olması internet haberlerine daha sorgulayıcı şekilde yaklaşmalarını sağlayabilir. Aynı zamanda doğru haberlere ulaşmalarını da kolaylaştırabilir.

### ABSTRACT

The research paper aims to extensively investigate how customers of Uber in Jordan have been using innovation in the theory of diffusion. The major purpose researchers noticed is that the diffusion process needs a platform which is peer-to-peer and the balance that is examined on the required difference. The technology platform will be investigating the Uber case if the diffusion process was over to peer balance. Uber is in many countries besides Jordan and is having a robust network which is spreading every time. The purpose of the study is to get the views on technology and innovation from drivers and passengers of Uber, on how diffusion of the technology of innovation has brought efficient services in transport and Uber's business.

The study will use a qualitative research approach through online interviews which constitute a combined 10 participants of both clients of Uber taxis and the drivers. The data instrument data collection method through interviewing participants aims to receive 9 valid responses out of 10 which will be a 90.0 per cent response rate.

The expected results on the diffusion of innovation in technological platforms, the Uber cases in Jordan show a significant positive relationship between technological innovation and the Uber users in utilizing the app platform. The findings of the study showed that the majority of Uber taxi users are comfortable with the innovative platforms provided by the organization's services and the convenience at a cost-saving benefit. Above 90.0 per cent of Uber clients had to convince their friends and relatives to use the same services and close to 85.0 per cent of the Uber drivers interviewed online convincingly testified that the services Uber is providing are miles ahead of the ordinary metered taxis as far as innovation and technological advancement is concerned.

**Keywords:** Diffusion of innovation, Uber, Jordan

### 1. INTRODUCTION

Efficient urban transportation has become a perennial problem in Jordan's urban cities due to the high cost of meter-reading taxis, which used to charge exorbitant fees to their clients. Meter reading taxis for decades in Jordan had no other competitor, which gave them fertile ground for taxi fare increases whenever they felt it was necessary for them. This study will explore how Uber, as a new product, entered the taxi business in Jordan. The research will also unpack the level of acceptance from the clients, who at first were socially hesitant to switch from the traditional transport system to the newly affordable, efficient, and convenient Uber taxi system.

#### **Diffusion of Innovation in Technological Platforms**

Innovation diffusion is the process through which new products are either embraced or rejected by their target markets. It is advantageous for manufacturers and marketers to investigate the elements that influence the success of some products and the failure of others, especially extraordinary products. When something is successfully absorbed into a new concept or social system, as was the case with Jordan's Uber cabs, this is known as diffusion. The process is finished in a series of steps after a set length of time. Usually, one person transfers the procedure to a different one (Ferreira et al., 2021). Diffusion often occurs when a person influences a close friend or relative. At first, not everyone in Jordan felt comfortable switching to and using Uber, therefore some people choose to disregard the innovations and stick with the outdated procedures. The innovation will decrease adoption risk and increase accumulation. However, when the innovation is spread, diffusion will increase. Uber is one of the technological platforms that are spreading because of diffusion. The technological platform was causing the transportation markets to end up not functioning well since the time it appeared. The mobility of urban areas was also affected by the technological platform. People have to deal with the resources available because the transport market was affected. Many countries are now using the Uber network because it is available in most countries. There are platforms like peer-to-peer where users are connected directly. The consumers and drivers are transacted by diffusion, and they end

up winning the trade effects. The diffusion is sometimes complicated because of peer-to-peer. The technological platform of peer-to-peer is facing challenges in designing the system. The clients and supplies must balance so that they bring continuity to the system without collapsing.

### **Diffusion of innovation**

An intriguing case study of how innovation theory is applied is the adoption of Uber in Jordan. The year 2015 saw the launch of Uber in Jordan, and the company has grown significantly since then. The company had more than 80,000 registered users and 3,000 drivers in the country as of 2019 (Jordan Times). The elements of the diffusion of innovation theory can be utilized to analyse the adoption of Uber in Jordan. Uber's ability to provide a more trustworthy and affordable transportation option as compared to traditional taxis is one of its primary advantages in Jordan. Users in Jordan claim that Uber is more comfortable, convenient, and safe than traditional taxis (Lamm and Lamm 2019). In Jordan, Uber complies with customary practices to a rather high degree. Jordanians are early adopters of new technology and are accustomed to ride-sharing services like Careem, which is comparable to Uber in the Middle East (Min et, al, 2019). Due to its integration with frequently used payment methods like credit cards and mobile wallets, Uber is also now more easily accessible to users. In Jordan, Uber is relatively easy to use, and the app is easy to browse. However, there have been some challenges due to language barriers and the need to instruct both drivers and passengers on how to use the platform. Uber's trialability in Jordan has been impeded by regulatory barriers. Due to the government's procrastination in passing new legislation for ride-sharing businesses, there have been clashes with traditional taxi drivers and intermittent service interruptions. Uber is widely known in Jordan thanks to its popularity in big cities and substantial media coverage. This has helped to increase platform utilization and motivate new users to use it. The diffusion of innovation theory can be used to better understand how technology platforms like Uber are being adopted in Jordan (Silva and Jannuzzi, 2019).

### **Uber**

Uber was first made available by the government in the US, later it was done in Jordan. The majority of Uber users are between the ages of 18 and 65, and both drivers and customers routinely use the site. When Uber first arrived in Jordan in 2018, locals there had some time to adapt to the new technological phenomenon, much less adopt it. Innovation is the development of anything new that is more conventional than the status quo. It acts as the starting capital for new projects. When innovation is done, there will be new ideas that are practical and benefit most people in the community. Innovation counts as the new resources that were implemented through ideas and knowledge. However, if innovation is done, new products can be introduced, and many discoveries will be made. At the same time, diffusion is the communication that occurs when innovation is done so that members can share and begin to practice (Min, et, al, 2019). Many researchers utilize the term diffusion. One of the researchers suggested a concept for the process of diffusion and new products. The management of technological platforms and how they develop and spread is called diffusion. Diffusion has many different meanings when a technological platform is old and new technology is replaced; that's diffusion. When a company introduces new systems that are upgraded with technology, it is called diffusion. It can speed up innovation, which can be intense in the market. Sometimes people forget that innovation can be used in small groups, but after some time it can be abandoned because of diffusion. Innovation can have a great impact if it is considered a diffusion process. Members of certain groups can gain innovation and legitimacy, which can also be adopted by the community. Diffusion occurs as a process in society because of process groups, and adoption can occur for individuals. Adoption is a benefit that takes into account the innovation and quality of existing products. After using the product, the potential adopters can innovate it after testing it. The Rodgers adoption curve allows innovation to be done slowly in some sequences that are not permanent. It also allows the pace to be tested in the diffusion process. Members cannot adopt the novelty since they are not permanent according to how they distribute the curve of adopters. The curve of adoption has many segments. They are classified based on how quickly they progress through the adoption process. Innovators are beautiful, and the technology can be tested if it has effective ideas. Other individuals can be influenced by the early adopters' opinions in their communities. Although the early majority represents a large number of people in a group, they are not opinion-makers. Information is needed so that innovation can lead them to make a decision. The late majority can adopt innovation in a normal curve. Some potential adopters cause the curve to accelerate. As soon as this phase passes, the number of adopters will be slowly growing since the majority expands. As time goes on, the diffusion of innovations will start to show a curve showing growth that is slowing down. The innovation will start to move slowly, stabilize, and then fall again. Initially, diffusion occurs in two agents: adopters of innovations and imitators. Many studies are adopted, and the innovations reflect this. The adoption of innovation will occur through the study of potential adopters (Kiesling, et, al, 2012).

## Jordan

Jordan is a country in the Middle East, that borders Saudi Arabia, the West Bank, Israel, Syria, and Iraq in addition to itself. Despite having a tiny population of only about 10 million, Jordan has had a significant impact on the region due to its ideal location and strong economic and political influence. Because of its rapidly expanding technology industry in recent years, Jordan is currently the epicentre of innovation and entrepreneurship in the Middle East (World Bank, 2019). The majority of Jordanians first used Uber because of its early adopters, and those who were satisfied with the effectiveness, cost, and convenience of the service eventually notified numerous family members and friends about it. Early adopters and transportation users helped Uber's business grow swiftly, and the transition from the previous, non-app taxi system to the new one occurred without a hitch. Along with several essential components, the allowed technological platforms are taken into consideration. Due to a few things, using technology is permissible. To influence and deal with diffusion, knowledge is necessary. However, researchers take their time to verify if the technological behaviour is performing well. When there is no diffusion of innovation, innovation can reach a dangerous point. People must use innovative technology and adjust to it. The process of classifying people into segments also explained the slow adoption of platforms. The behaviour many individuals are shown by their attitudes, which influence them. There is a theory of behaviours, which is meant to highlight different factors that influence behaviour. Many people find it difficult to show their reality-based behaviour as per the variables. The theory is very well explained and includes many variables that need to be added to the equation. The technological adoption was accepted and developed so that the action of the theory would be adopted. Technological platforms are used as informational sources, and the performance is effective (Min, et, al, 2019). The useful variables are improving their performance because of the technological platforms. Because variables are useful and easy to use, individuals are supposed to expend the effort required for their technological uses. On the factors affecting technological use, there has been an increase in recent years. There are also some limitations on the success of the origination of a technological variable. There are complications with the variables whose power of increment is predicted. Some efforts have been made to develop useful technological platforms. The determination of technological performance is sometimes difficult because the variables used are large. The information and users of technological platforms are classified so that they utilize information. A unified theory of acceptance of the new system of technology. An ideal model can provide half of the available questions. The validation of the model is less considered, and the devotees are very few (Ferreira, 2022). The model is unified to provide an evaluation of how best the technology can be successful. The model of the "Unified Theory of Acceptance and Use of Technology (UTAUT) has the highest assertiveness. The observation explained that the information and technology identified are not possibly identifiable. There is a theory that interferes with how technology can be used and the factors involved. The use of technology is well explained by the models and their variables. The diffusion process is examined and its phases are explained in detail. The diffusion process considers peer-to-peer technological platforms. They can compete by generating the adopters of diffusion.

## Adoption of Uber in Jordan

According to Burchart (2011), diffusion in Jordan Uber occurred as a process within its society because of process groups, and people who later on adopted the Uber taxi. Adoption is a benefit that takes into account the innovation and perfection of existing products. After using the product, prospective buyers can improve it. The Rodgers adoption curve makes it possible to implement innovation gradually in some ad hoc sequences. It also makes it possible to monitor the speed of the diffusion process (Rodgers, 2003). Members are unable to adopt the novelty since they are not permanent depending on how they spread out the adoption curve. The adoption curve has numerous sections. They are divided into groups based on how rapidly they move through the adoption process. It is possible to test an innovator's ideas using current technology. Others may be impacted by the early adopters' attitudes in their communities. Even if they make up a sizable fraction of a group, the early majority does not influence opinion. People want information for innovation to lead them to a conclusion. The late majority's adoption of innovation can be modelled using a normal curve. A few potential adopters cause the curve to accelerate. When this phase is finished, the adopters

According to Ferreira et, al, (2021), the innovation of diffusion always encompasses novel technology. The novel technology was limited to the consumer and their variables. Uber also uses novel technologies together with the literature on the diffusion curve. Moreover, technological platforms have users that are more different during different phases of the process. Diffusion is the platform that needs to be balanced and necessary during the process. Other topics will be discussed in depth in the present papers, including the technological process. Diffusion was emphasized, and practical studies were also needed. However, peer-to-peer relationships are regarded as becoming practical. Adoption of diffusion in the technological process is necessary to avoid problems. The implementation of Uber in the markets of Jordan has been successful and understood by many customers. Some countries are not yet

getting technological systems. Various users of the platform technology are not understanding the similarities of the system. There is a gap that is evident in the peer-to-peer diffusion difference. People must research so that they understand diffusion and innovation theories. Some researchers are spreading the innovation theory through systematic literature reviews to the environment. The innovation will become known as time goes on. The users also made a curve that was adopted by the groups (Raynard, 2017). The predisposition toward innovation was used as a risk to advance the users and the majority. Recent research reflected that peer-to-peer platforms were becoming more understood by the public because of the diffusion process. The researchers are having issues with diffusion and a large number of users. Technological innovators have adopted the past of the majority. Consumers have adopted the Uber application and the diffusion platform that were addressed and accepted by the innovation theory. However, the convergent points between the innovations were discussed in a few studies. Authors searched the papers and did not understand the diffusion platform (Silva and Dornelas, 2016). Investigations of the innovation curve have all asked the international database to understand diffusion. Many available studies must explain how they accept technological platforms. Peer-to-peer diffusion is not well measured since there are not enough studies involving the users. The technological platforms were also lacking peer-to-peer balance in the diffusion process. The business networks are free, and there are many consumers and offers from independent individuals. There are facilitators in the business everywhere, amongst the consumers. The business network needs peer-to-peer platforms to balance their relationships; furthermore, the drivers and consumers must have a proper fit and a balance on the peer-to-peer platforms. If there is no balance, the system will collapse. If there is peer-to-peer balance, then the innovation of diffusion will occur between passengers and drivers. Offers between consumers are also part of the diffusion process. The Rodgers curve explains that technological readiness and innovators are among the adopters. If the latecomers and initial majority (Haung et, al, 2020).

## 2. GOALS AND OBJECTIVE

To better understand the factors that affect the adoption and use of mobile phones and the Uber application among Jordanians, the purpose of this research paper is to look into the spread of these technologies in Jordan. More than 75% of the population in Jordan now owns a mobile phone, according to recent statistics, which show a significant increase in the number of mobile phone users in recent years (Jordan Business News, 2021). Similarly to this, ride-sharing services like Uber are becoming more and more common in Jordan, especially among younger generations (Hammoud, 2019).

There are three goals of this research Firstly, Analyze the adoption and use of mobile phones in Jordan at the moment, taking into account the variables that affect the choice to buy a phone as well as the frequency and uses of mobile phones in daily life. This entails comprehending the variables that affect people's choice to buy a mobile phone as well as how frequently and for what uses they use their phones in daily life.

Secondly, investigate the variables that affect the acceptance and use of Uber in Jordan, such as attitudes towards ride-sharing, faith in the provider, and perceptions of the service's affordability and convenience. This includes comprehending how various Jordanian demographic groups have embraced the Uber platform and what factors have influenced this uptake.

Thirdly, look into how the use of mobile phones has affected the use of Uber in Jordan, as well as how they help make it easier to use ride-sharing services and improve customer satisfaction generally. Understanding how ride-sharing services have been adopted and how they are used to improve the general customer experience is part of this.

The adoption of new technologies is influenced by several factors, including the perceived relative advantage, compatibility, complexity, trialability, and observability of the innovation, according to Rogers' diffusion of innovations theory (2003). In the case of mobile phones and Uber in Jordan, these elements might be influenced by regionally specific cultural, economic, and social elements.

According to Statista's most recent statistics (2022), there were more than 111 million Uber users worldwide in 2021. This increase in users has been steady since 2017. Similarly, according to information on the Uber website, Amman and other major cities in Jordan are home to a growing number of Uber users (Uber, 2022). Jordan has experienced significant economic growth recently, according to the World Bank (2022), with a growing middle class and a booming technology industry.

This study will shed light on how widely used mobile devices and ride-sharing services are in Jordan, which may have significant repercussions for the larger Middle Eastern region. This study may help to improve understanding of how technology shapes consumer behaviour in rapidly developing economies by examining the factors that affect the adoption and use of these technologies.

### 3. IMPORTANCE OF THE STUDY

For several reasons, the study on the spread of innovation in technological platforms in Jordan, with a particular emphasis on the case of Uber, is very important. First, it fills a gap in the literature on how innovations spread in developing nations. Although there has been a lot of research on the diffusion and uptake of technology in developed nations, empirical studies on how technological innovations like Uber have been introduced and taken up in developing nations like Jordan are lacking (Rosenberg, 2017).

Second, the study has applications for decision-makers in government, business professionals, and users of technological platforms. Policymakers can create strategies to support the introduction and spread of cutting-edge platforms like Uber by understanding the elements that encourage or impede the adoption of new technologies. The results of this study can be used by business professionals to inform their business models and expansion plans in emerging markets. The introduction of Uber in Jordan and its effects on the traditional taxi industry and the larger community can also be better understood by users of technological platforms.

Finally, the study contributes to the theoretical understanding of innovation diffusion by analyzing the Uber case in Jordan and revealing new details about the factors that promote or prevent the adoption of technology platforms in developing markets. By shedding light on how contextual factors, such as cultural norms and regulatory frameworks, can affect the diffusion of innovation in technological platforms in emerging markets, the results of this study can add to the body of literature already available on innovation diffusion theory (Damanpour, 2010).

Both theoretically and practically, this study on the diffusion of innovation in technological platforms using Uber as an example in Jordan is essential. By examining the factors that affect the adoption of technological platforms in these markets, this study can assist policymakers, business professionals, and users in effectively promoting and profiting from the introduction of cutting-edge platforms like Uber in emerging markets.

The global transportation industry has undergone a significant transformation as a result of the widespread adoption of innovative technological platforms. Uber is one of the businesses that has had a significant impact on the sector. Uber offers a cutting-edge platform that connects drivers and passengers to access effective and affordable transportation services. This study examines how Uber users in Jordan have applied the theory of diffusion to innovation. The paper specifically examines how the diffusion process has been balanced and whether peer balance has been achieved. Additionally, the study will employ a qualitative research methodology to collect opinions on technology and innovation from Uber drivers and passengers about how the spread of technology has led to efficient services in transportation and Uber's business.

### 4. PROBLEM STATEMENT

In many parts of the world, the emergence of technology platforms has completely changed how people communicate, work, and access services. Among these services, Uber stands out as a model of cutting-edge innovation that has revolutionised global transportation and upended the traditional taxi business. There is little data on how Uber has impacted and been embraced in developing nations like Jordan, and the diffusion of technological innovation is not uniform across different regions.

The problem statement for this research is to investigate and comprehend the influences on the diffusion of technological innovation in Jordan, using the case of Uber as an example. Specifically, the study seeks to answer the following research questions:

What are the main factors influencing and impeding the use of Uber in Jordan?

What social and economic effects has Uber's entry into Jordan had, and how have they changed the local community and the traditional taxi industry?

What lessons can be drawn from these comparisons of the Uber experiences in Jordan to those in other nations?

The rapid growth and adoption of mobile platforms, such as Uber, have transformed the traditional transportation industry. However, there is a need to investigate the factors influencing the adoption of Uber's peer-to-peer mobile platform usage among users in Jordan. Despite the platform's popularity, there is limited research addressing the specific drivers and barriers to adoption that users encounter. Understanding these factors is essential for both researchers and industry practitioners to devise strategies that encourage widespread adoption and ensure the sustained success of peer-to-peer mobile platforms like Uber. Therefore, this study aims to explore the adoption of Uber's peer-to-peer mobile platform usage among users, identifying the key factors that influence their decision-making process.

### 5. THE THEORETICAL FRAMEWORK

The theory was first put by Everett Rogers as the diffusion of innovation theory in 1962. The basic presumption is that consumers progressively accept new concepts, goods, and technologies. The adoption of new technologies is said to follow a bell-shaped curve after the majority of consumers eventually catch up to early adopters, (Hamari et,

al, 2016). In addition, the theory considers a variety of elements that affect how quickly a technology is adopted, including perceived relative advantage, compatibility with current practices, complexity, trialability, and observability.

A recent innovation that has received a lot of attention is technology platforms. It is the goal of platforms like Uber and other alternatives to more established methods of connecting customers and service providers to be more successful and affordable. The adoption of technology platforms can be approached in a variety of ways using the diffusion of innovation theory. For instance, a platform like Uber may offer more practical and affordable transportation, but it may also comply with standards because of its compatibility with current technologies and payment options.

Haug et al, (2020), alluded that the value of a technological platform increases as more people utilize it, as shown by the theoretical paradigm known as network externalities theory. According to this theory, a platform's value is impacted by both the number of users who utilize it and its capabilities. This suggests that when more users join a platform, the platform's value increases for both existing and potential users due to growing network effects. The network externalities theory is particularly relevant to the adoption of new technological platforms in Jordan, such as Uber. The initial value proposition of a new technological platform might not be compelling enough to lure enough customers. However, when more users begin utilizing the platform, network effects begin to take hold and produce a positive feedback loop that boosts the platform's worth and popularity.

It is possible to utilize the network externalities theory to explain why Uber initially struggled but eventually became well-liked in Jordan. Because they had a more established clientele and a larger market share, traditional taxi services presented Uber with a lot of competition when it first entered Jordan. Moreover, cultural norms and legal restrictions controlling ride-hailing services may have limited the platform's initial popularity. As Uber attracted more users, developing network effects led to the platform becoming more beneficial for both drivers and passengers. Riders benefitted from shorter wait times and more dependable service thanks to the platform's expanding driver population. The platform's expanding user base of riders has increased the earning opportunities for drivers. This positive feedback loop of increasing value and utilization allowed the platform to eventually overtake its competitors in the Jordanian ride-hailing market.

The adoption of technological platforms is affected in several ways by the network externalities theory. It first demonstrates that early adoption is vital for a platform's success because the network effects are strongest when a critical mass of users is reached. Second, it highlights the importance of user recruitment and retention strategies because user counts directly influence a platform's value. Last but not least, it suggests that open ecosystems that enable seamless communication with other platforms and services may be good for technology platforms since they can enhance network effects and increase the platform's utility for users. The network externalities theory provides a helpful model for understanding how innovations spread through technological platforms like Uber in Jordan. By considering how network effects impact the value and adoption of a platform, we may be able to discover how to promote the adoption and spread of new technologies (Haug et al, 2020).

A paradigm that assists in understanding how technological improvements are welcomed and disseminated inside enterprises is the Technology Organization Environment (TOE) notion. According to the TOE theory, three important factors technological, organizational, and environmental influence the acceptance and spread of new technologies within organizations. A technology's traits include factors like its complexity, compatibility with other technologies, and competitive advantage over those of other technologies. Organizational variables include things like an organization's size, structure, culture, and resources. They have to do with the traits of the business using the technology. Environmental variables refer to outside elements, such as business and regulatory concerns, that may have an impact on how technology is adopted and disseminated. The link between these three variables affects how likely and quickly a company will adopt new technology. For instance, a company with a strong innovation culture and a flexible organizational structure may be more likely to quickly adopt and spread new technology than a company with a more rigid structure and culture.

Numerous research has used the TOE paradigm to better understand how technology is embraced and spread in a variety of contexts. For instance, a meta-analysis of research on technology adoption conducted in 1982 by Tornatzky and Klein revealed that organizational traits including size, complexity, and culture were significant predictors of technology acceptance. The TOE components were a part of the organizational innovation model that Ettlie and Bridges created in 1986. They discovered that appreciating the interactions between these elements was crucial to understanding the uptake and spread of new technology. The TOE framework can be utilized to comprehend how the company has been able to successfully integrate and disseminate its technology in the local market in the context of the ride-sharing platform Uber in Jordan. Al Mashhrawi (2018) used the TOE framework to analyze the development of ride-sharing services in Jordan and discovered that Uber's success was, at the very least, partially a result of the company's ability to take advantage of technological advantages like its user-friendly app and

real-time tracking technology in a market with a high demand for transportation services. To build a presence in the market, Uber was also permitted to operate inside Jordan's regulatory framework and form alliances with regional businesses (Jordan Times, 2019). The TOE theory offers a helpful framework for comprehending how businesses embrace and disseminate new technology. Researchers and practitioners can gain a better understanding of the aspects that facilitate or restrict the acceptance and spread of technical breakthroughs in various contexts by taking into consideration the interaction between technological, organizational, and environmental factors.

## 6. LITERATURE REVIEW

There are several studies that addressed the subject of application platforms' diffusion, acceptance and adoption. The first one was done by Choudrie et al. (2020) investigated the adoption, usage, and diffusion of smartphones within the older adult population in the United Kingdom, focusing on identifying the factors that encourage or inhibit smartphone usage and service provision in this age group. The study proposed a conceptual framework, the Model of Smartphone Acceptance, based on well-established theories of adoption and diffusion. Data from 984 participants living in north London were collected, and the Partial Least Square Structural Equation Modeling (PLS-SEM) technique was employed for data analysis.

It was found that Smartphones offer a range of features and applications that cater to various interests and needs. Older adults adopt smartphones for apparent pleasure because they tend to have different preferences when it comes to entertainment and technology. While action games might not be as appealing to some older individuals, using smartphones for capturing and sharing moments can be a great source of enjoyment and purpose for them. Importantly too, individual preferences vary, so it is crucial to understand the specific interests and needs of older adults when suggesting smartphone activities. Some prefer to explore other types of apps like puzzles, news, or gardening, while others might enjoy listening to music or podcasts. The key is to find activities that bring them joy, and a sense of purpose, as well as enhance their overall well-being.

The research contributes to bridging the digital divide among UK older adults and provides valuable insights for businesses to understand the significant factors influencing smartphone adoption within this population, enabling them to adapt their policies accordingly. This study is relevant to the current study because it focuses on the patterns of mobile applications among users.

The second study by Le (2022) examined the adoption and diffusion of mobile QR-code payment (MQP) in the context of the COVID-19 pandemic. The study integrated the Protection Motivation Theory (PMT), and the Unified Theory of Acceptance and Use of Technology (UTAUT) to develop a behavioural response model. Additionally, the research explores the influence of the physical distancing norm on the intention to use MQP. Data was gathered using a web-based survey from 411 validated respondents in Vietnam who have either used MQP or intend to use it. The results show that the physical distancing norm, important elements from UTAUT (performance expectancy, effort expectancy, and social influence), as well as key components from PMT (perceived severity, perceived susceptibility, and self-efficacy), are what motivate behavioural intention to use MQP. Furthermore, performance expectancy to MQP is positively impacted by perceived severity. This means that people are more likely to think that using MQP will lead to better performance or outcomes when they judge the seriousness of the situation (such as the COVID-19 pandemic). In other words, they view MQP as a remedy for the dire circumstances.

Similarly, the research indicates that self-efficacy positively influences effort expectancy regarding MQP. In this case, when individuals have a higher level of self-efficacy in using MQP, they are more likely to believe that their efforts in using the technology will result in positive outcomes. They feel confident in their ability to use MQP effectively and efficiently. Both perceived severity and self-efficacy play important roles in shaping individuals' expectations and beliefs regarding the use of MQP. Perceived severity highlights the urgency and importance of using MQP, while self-efficacy instils confidence in one's ability to navigate and benefit from the technology. Finally, behavioural intention and recommendation were identified as indicators of the diffusion of MQP during the COVID-19 pandemic.

The result of the study is relevant for the current study because it benefits service providers and firms in Jordan. This is because the Mobile QR-code payment is still in its early stages of adoption in the country, thus, findings can assist in developing effective marketing strategies that increase acceptance and recommendation of MQP to the general public.

Extant scholarship has explored the role of network effects in the diffusion of mobile applications. This includes understanding how users' social networks, interactions, and recommendations contribute to the viral spread of apps and the formation of critical mass.

The third study by Vasudevan and Chan (2022) analyzed how drivers responded to the gamification of work implemented in Uber's mobile application. This study, which focused on Uber drivers and their experiences with the redesigned mobile application released by Uber in 2018 found that Uber drivers had become dissatisfied with the

lack of autonomy, transparency, and flexibility while working on the platform. To address these concerns, Uber introduced a gamified system that linked individualized rewards to the company's goal of maintaining a frictionless marketplace.

The study discovered that workers in the gig economy, including Uber drivers, resisted the gamified algorithmic management by creating their work games. Two distinct player modes were identified: grinding and oppositional play. Grinding represents drivers who consent to the gamification system and actively participate in it, while oppositional play describes drivers who resist the gamification and find ways to challenge or subvert it. In addition to the player modes, the study also identified several work games that Uber drivers played as a form of resistance to Uber's gamification. These work games allowed drivers to exert some control and agency in their work, counteracting the power dynamics imposed by the platform-initiated algorithmic governance.

These findings find relevance in the current study as it contributes to understanding how the redesign of worker-facing applications, such as Uber's mobile app, can shape the power dynamics between the platform and the workers specifically in the case of Jordan. It also highlights ways in

which workers can adapt, resist, and create their strategies within the gamified systems implemented by platforms like Uber?

The fourth study by Miziriri et al. (2020) examined the factors influencing the intention to use the Uber application in the context of mobile commerce among consumers in the Johannesburg area using a quantitative methodology. The study aimed to determine the impact of perceived convenience, facilitation conditions, social influence, and price value on the intention to use the Uber application.

The hypotheses testing revealed that perceived convenience, facilitation conditions, social influence, and price value all had a significant and positive influence on the intention to use the Uber application. This suggests that factors such as convenience, ease of use, social influence, and perceived value for the price played a role in stimulating the intention to use the Uber app.

This study validates the importance of perceived convenience, facilitation conditions, social influence, and price value in driving the intention to use the Uber application, and can be applied to the case of Jordan.

The fifth study by Moon et al. (2022) investigated the accountability of the Technology Acceptance Model (TAM) in the context of Uber taxi applications. The study examined the applicability of the TAM in understanding users' acceptance of Uber taxi applications. Focusing on the antecedents of usefulness, including time information, price information, and driver information; the data for the study was collected through a survey administered using the Amazon Mechanical Turk platform. The participants of the survey were users of the Uber taxi application.

The findings of the study revealed that both time information and driver information significantly influenced the perceived usefulness of the Uber taxi application. It was also found that ease of use had a positive effect on both usefulness and attitude. Moreover, usefulness was found to significantly influence users' attitudes toward the Uber taxi application, and attitude, in turn, exerted a substantial effect on users' intention to use the application.

This study's implication demonstrates the relevance of the explanatory power of the TAM framework in the context of Uber taxi applications, and the same can be the case for Jordan. By focusing on specific antecedents of usefulness and examining the relationships between different constructs, the study provides insights into users' possible acceptance of the Uber app in Jordan as well.

The sixth study by Min et al. (2019) explored the consumer adoption of the Uber mobile application in the context of the sharing economy. The study incorporates two theoretical models, namely the Diffusion of Innovation Theory and the Technology Acceptance Model, to analyze the factors influencing consumer behaviour. The factors that were examined influenced consumer adoption such as relative advantage (how the innovation is perceived as better than existing alternatives), compatibility (how well the innovation aligns with consumers' needs and values), complexity (the degree of difficulty in understanding and using the innovation), observability (the extent to which the benefits of the innovation are visible to others), and social influence (the impact of others' opinions and recommendations).

It was found that these factors had a significant influence on consumers' perception of the usefulness and ease of use of the Uber mobile application. In turn, perceived usefulness and ease of use influenced consumers' attitudes toward the Uber app and their intentions to adopt it.

This study demonstrates the integration of the diffusion of innovation theory and the Technology Acceptance Model. It also highlights the compatibility and relevance of these classic theories in understanding consumer adoption behaviour in the context of the Uber mobile application in general and Jordan in particular.

The seventh study by Murad et al. (2019) investigated consumer adoption of the Uber mobile application through the lenses of two theoretical models: diffusion of innovation theory and the technology acceptance model. With the main aim of examining the service quality and the effect of its dimensions (tangibles, responsiveness, empathy, assurance, reliability) on customer satisfaction, two main transport applications in Jordan - Uber and Careem – were

used. This study found that reliability is significant in shaping customer satisfaction in the two transport mobile applications.

By indication, customers place a high value on receiving dependable and consistent service when using these platforms. Reliability could encompass factors such as prompt arrival of drivers, accurate estimated arrival times, and reliable vehicle conditions. In the case of Uber and Careem reliability is impacted by prompt arrival of drivers, accurate estimated arrival times, and reliable vehicle conditions. For example, customers expect the drivers to arrive at the designated location within a reasonable time frame, therefore, timely pickups contribute to a reliable and efficient service experience.

In the same way, transport applications typically provide estimated arrival times for drivers, so customers rely on these estimates to plan their journeys, so the apps provide accurate predictions, minimizing any unexpected delays. Lastly, customers expect the vehicles provided by Uber and Careem to be in good working condition such as cleanliness, comfort, and appropriate maintenance of the vehicles, all of which contribute to reliable and satisfactory service. By ensuring these factors are consistently met, Uber and Careem can enhance the reliability of their service, which in turn positively impacts customer satisfaction.

The study's findings also show a clear preference for smart apps like Uber and Careem over traditional taxis. These intelligent transport applications are preferred by 89.2% of the sample, which suggests that users find them more alluring and practical than conventional taxi services. This preference may be explained by elements like the simplicity of the booking, pricing transparency, accessibility of driver reviews, and the seamless overall experience offered by the smart app.

Because it emphasises the importance of reliability in determining customer satisfaction in the context of transportation applications like Uber and Careem, this study is particularly relevant to the case of Jordan. In the context of intelligent transport applications, this emphasises the value of reliability for customer satisfaction. Additionally, it shows a significant customer preference for Uber and Careem's smart apps over conventional taxis, demonstrating the favourable reception and acceptance of these platforms.

The eighth study by Imam (2022) explored the transport-sharing economy scene in Jordan and proposes unconventional approaches for regulators to address this issue. According to them, there is a shift from traditional product ownership to the sharing economy concept, where individuals can offer their underutilized assets or services to others without the need for ownership. It highlights the role of governments in regulating this new service industry to ensure consumer safety, prevent tax evasion, and uphold decent working conditions for employees. Based on their assertion, the traditional model of purchasing products for personal use is being replaced by the sharing economy, where individuals can share their assets or services with others.

Highlighting the existing situation in Jordan, the researchers argued that the transport-sharing economy allows people to benefit from services without the need for ownership. Governments have the responsibility to regulate the sharing economy, including maintaining safety standards, preventing tax evasion, and ensuring decent working conditions for employees in these sectors. The study presents three scenarios along with their potential consequences in terms of regulators' interventions. These scenarios likely consider different approaches to regulation and their potential impact on the industry and stakeholders. Also, the study highlights best practices from around the world, likely referring to successful regulatory approaches implemented in other countries or regions.

Again, this study specifically offers relevance for the current context because it is related to the regulation of two transportation network companies, Uber and Careem, in Jordan. The unconventional perspectives proposed for regulators to consider in regulating this sector largely present scenarios with their potential implications about how best to make the transport-sharing economy more beneficial.

The ninth study by Al-Masaeed et al. (2022) examined the factors influencing consumers' intention to use mobile ride-hailing services in developing countries. The rapid growth and popularity of the sharing economy services are difficult to go unnoticed. The drivers offer consumers services opportunity to coordinate and share rides. Data was collected from Jordanian consumers in June 2021 using an online questionnaire based on responses about the factors influencing consumer behaviour, such as personalized benefits, privacy concerns, and the role of laws and regulations.

Using Partial Least Squares Structural Equation Modeling (PLS-SEM), the findings indicate that personalized benefits positively influence consumers' attraction to use mobile ride-hailing applications. However, privacy concerns negatively affect consumers' intention to use these applications. Additionally, the findings indicate that the role of laws and regulations is significant in mitigating the negative impact of privacy concerns on consumers' intention to use ride-hailing applications.

This study proves relevant because it focuses on ride-hailing service which specializes in delivering more convenient services to attract consumers. At the same time, it offers beneficial recommendations for developing countries, of which Jordan happens to be one. The researcher insists that governments and policymakers should

implement protective legislation to address privacy concerns and create a supportive environment for ride-hailing services.

The tenth study by Dhanorkar and Burtch (2021) examines the transit implications of ride-hailing platforms like Uber and Lyft. It acknowledges that there are divergent perspectives on the impact of ride-hailing services on traffic. On one hand, ride-hailing can provide advantages such as pooling, which reduces traffic by efficiently matching customer demand with available vehicles or by facilitating car-sharing. On the other hand, ride-hailing may also lead to extra travel due to increased convenience and mode substitution, potentially resulting in crowding and increased traffic. Their main aim was to reconcile these differing perspectives by exploring the heterogeneous determinants of ride-hailing's effects. The study takes advantage of Uber's staggered entry into various geographic markets in California and employs a regression-based difference-in-differences analysis to estimate the impact of ride-hailing services on traffic volumes.

With the use of monthly microdata from over nine thousand vehicle detector station units deployed across California, it was found that the effects of Uber's entry on traffic depend on various contextual factors. For weekdays, some evidence of pooling effects suggests that ride-hailing can contribute to traffic reductions during weekdays. However, on weekends, Uber's entry leads to significant crowding effects, indicating that ride-hailing can contribute to increased traffic on weekends. Additionally, the study finds that the crowding effect is more pronounced on interior roads and in areas with high population density. Ride-hailing services also seem to have a substitution effect on public transportation, but they may have a complementary effect on carpooling users. This shows that premium ride-hailing services, such as Uber Black, predominantly lead to crowding effects.

This study is significant because it highlights the transit implications of ride-hailing platforms. Jordan as a developing country also records some of the factors that exist in California which happens to belong to the category of developed nations. This suggests that ride-hailing has a substitution effect on public transportation but can have a complementary effect on carpooling users, especially in Jordan.

Summarily, research has explored the role of network effects in the diffusion of mobile applications. This includes understanding how users' social networks, interactions, and recommendations contribute to the viral spread of apps and the formation of critical mass. Also, many explorations investigate the impact of user experience, design, and satisfaction on the adoption and diffusion of mobile applications. This includes examining the usability, functionality, and overall user satisfaction, as well as the role of positive user experiences in promoting word-of-mouth recommendations.

Studies have identified various barriers that hinder the adoption and diffusion of mobile applications. These barriers may include concerns related to privacy and security, lack of awareness or understanding, technological limitations, or resistance to change. considered the influence of contextual factors, such as cultural differences, socio-economic factors, and geographical location, on the diffusion of mobile applications. These factors shape users' preferences, needs, and access to technology, thus affecting the adoption process.

## **8. METHODOLOGY**

### **Research questions**

The study uses Jordan's Uber as a case study to investigate how ideas propagate across technological platforms. The following research queries are addressed by the study:

The first question is, what factors contributed to Uber's acceptance in Jordan and how did it enter the market there?

The second question is, how well-informed and what do Jordanian users think of Uber's technological infrastructure?

The third question is, how has Jordan's well-established taxi sector been impacted by Uber's technological platform?

The fourth question is, what factors are at play in the Jordanian market when it comes to the diffusion of technical innovation?

The fifth question is, To what extent does Jordan's adoption of the Uber platform reflect social influence?

### **Population**

According to Apuke (2017), a population is a group of items or individuals on which a study will be focused; in the case of this study, the population consists of the organizations taking part in the adoption and utilization of Uber's technical platform in Jordan. This comprises Uber drivers, users, normal taxi drivers, taxi companies, transportation companies, and relevant governmental entities with a base in Jordan. According to Dearing and Cox (2018) concerning Rogers' diffusion of innovation theory (1995), the population for this study will include innovators, Uber passengers, and most drivers who use Uber's technological platform in Jordan.

### **Sampling Technique**

The study will use non-probability sampling interviewing to collect data from the selected sample. A sampling method known as non-probability sampling does not select the sample from the population at random. Instead, the sample is chosen based on the researcher's judgment and a careful selection of individuals or organizations that meet specific criteria. This study will choose drivers and consumers who use the technological Uber platform in Jordan using the non-probability sample interview method. Purposive sampling will be utilized to ensure that the sample picked accurately represents the various Uber consumers in the Jordanian market. The non-probability sample interview approach might be useful when there is a small population and the researcher has to gather extensive data on the research problem. The researcher is better able to understand the participants' ideas and experiences thanks to face-to-face interactions with them during the data-gathering procedure known as an interview.

The non-probability sampling interview method has some disadvantages, including the potential for biased sample selection and the challenge of extrapolating the findings to a larger population. Purposive sampling and careful sample selection, however, can serve to lessen these limits and ensure the validity and trustworthiness of the results. In short, by using the non-probability sample interview method in this study, the researcher will be able to obtain comprehensive and rich data on the acceptance and growth of Uber's technical platform in the Jordanian market. By choosing a suitable sample and using the appropriate data analysis techniques, the validity and reliability of the results will be improved.

### **Purposive sampling method**

The method of non-probability sampling known as purposeful sampling involves selecting participants by specified criteria that are consistent with the objectives and research questions of the study. The drivers and passengers of Uber will be the study's target demographic, and a purposive sample of 50 persons will be selected. The sample will be chosen to ensure that they can provide relevant information on the platform's adoption and dissemination in the Jordanian market based on their familiarity and expertise with using or overseeing Uber's technological platform in Jordan. A few advantages of employing purposive sampling are as follows:

#### **Advantages of the purposive sampling method**

- a) Relevancy- ensures that the sample is relevant to the research subject since participants are selected for the study based on their unique features or experiences connected to the topic.
- b) Representativeness - By choosing participants who share the population's fundamental features, purposeful sampling can be utilized to ensure that the sample accurately represents a given population or group of interest.
- c) Effectiveness- Since researchers may swiftly discover and select individuals who match the study's eligibility requirements, purposeful sampling may be more effective than other sample procedures.
- d) Expertise- When examining a niche population or issue, researchers can select participants who have specialized knowledge or insight into the study's topic.
- e) Ethical considerations- could occasionally be morally preferable to other sample techniques. For instance, choosing study participants based on their willingness to participate might be more morally righteous than choosing volunteers at random who might not be interested.
- f) Ethics Consideration- analysis: When conducting qualitative research to completely comprehend a phenomenon, purposeful sampling is especially helpful. For those who have distinctive viewpoints or experiences that offer light on the research issue, an in-depth exploration of these occurrences is conceivable (Campbell et al., 2020).

#### **Advantages of non-probability sampling**

- a) Flexibility- Data collection and sample selection are both given additional latitude with non-probability sampling techniques. Researchers can choose people based on their accessibility, availability, and interest to participate.
- b) Cost-effectiveness- Non-probability sampling techniques usually perform better in terms of cost-effectiveness than probability sample techniques. They can help researchers save time and resources by selecting volunteers who are readily available or accessible.
- c) Speed- Techniques for non-probability sampling may be used more quickly than those for probability sampling. Researchers can collect data more rapidly by selecting participants who are accessible.
- d) Ethical considerations- non-probability sampling approaches may, in some cases, be more morally acceptable than probability sample procedures. Researchers can choose not to use probability sampling approaches, for example, if it would be unethical to exclude specific populations from the study (Lamm and Lamm 2019).

### Data Collection

The research used the interview approach to collect data. An interview approach is a useful tool for studying how technological platforms like Uber propagate innovation in Jordan because of a variety of advantages.

The first advantage of In-depth exploration is- Interviews provide for in-depth inquiry since they give researchers the chance to probe for further details and pose follow-up queries. This is especially useful for examining complex phenomena like the adoption and dissemination of technological platforms.

The second advantage is Personal connection- The ability for the researcher and participant to get to know one another better during an interview can help build rapport and trust. As a result, responses from participants may be more truthful and forthright, which is essential when studying sensitive or challenging topics.

The third advantage is Contextualization- To contextualize the research findings, researchers can ask participants about their unique perspectives and experiences related to the spread of innovation through technology platforms like Uber in Jordan. This might help us comprehend the subject at hand in a more complicated way (Campbell et al., 2020).

### Coding Schema

The study will follow the coding schema as follows:

- a) Main topic- The key theme is the diffusion of creativity across technological platforms.
- b) The other sub-topics- Case Study and Uber are subtopics.
- c) Period: 15th of June 2023
- d) Publication type- Research journal paper

This coding schema identifies the main theme and subtopics of the study, including the diffusion of innovation across technological platforms, the specific Uber instance, and the location of Jordan. The intended publishing date is June 15, 2023, and it has been designated as a journal article. Using this classification schema may aid in the structuring and analysis of future research on the spread of technological innovation both in Jordan and globally.

This coding schema identifies the main theme and subtopics of the study, such as the diffusion of innovation across technological platforms, the specific Uber instance, and the location of Jordan. It will be submitted for publishing on June 15, 2023, and has been recognized as a journal article.

### Data analysis

The paper will be evaluated using qualitative methods and interviews in the phases that follow;

The first step involves listening to the audio recordings of the interviewees and turning them into text. Manual labour was required.

The second step involves categorizing the data and searching for patterns. The areas connected to the study topics were reviewed by the researcher.

The third step involves the responses being classified. To do this, pertinent codes had to be gathered, and categories had to be created to represent the key ideas and concepts the data showed.

The fourth step involves the evaluation and analysis of the data, conclusions were to be made. This comprises going over the coded data and categories, looking for trends and connections, and figuring out the study's core ideas and conclusions (Campbell et al., 2020).

### Definition of terms

**Diffusion-** Through the process of diffusion, an innovation, such as a new technology or idea, gradually spreads throughout a social system. The diffusion process, which often comprises the adoption and acceptance of the innovation by individuals or groups within the system, may be influenced by social norms, communication channels, and the characteristics of the invention itself (Min et al., 2019).

**Innovation-** Innovation is the creation or dissemination of a fresh product, service, procedure, or idea. Particularly in the context of technological platforms and the sharing economy, innovation frequently implies the use of digital technology to produce new types of value and disrupt established sectors or business models (Raynard, 2017).

**Technology** – is the term used to describe the tools, software, and processes utilized in the development, production, and delivery of goods and services. When it comes to digital tools and platforms that enable the sharing of resources, information, and services in new and inventive ways, technology is typically employed in the context of technological platforms (Raynard, 2017).

**Uber** – Uber is a global transportation network firm that provides ride-hailing and other transportation services via a smartphone app. Since its launch in 2009, Uber has revolutionized the traditional transportation and taxi industries in many regions of the world. It has also spurred debates about how sharing economy platforms affect labour markets, laws, and urban mobility (Hamari et al., 2016).

**Jordan** – Jordan is a Middle Eastern country that borders Syria, Iraq, Saudi Arabia, the West Bank, Israel, and Jordan. With a population of only approximately 10 million, Jordan is a small nation, but due to its strategic location and strong economic and political influence, it has had a significant impact on the area. The Middle East's innovation and entrepreneurship hub is now Jordan thanks to the country's rapidly expanding technology sector in recent years (World Bank, 2019).

### Limitations of the study

Some of the research paper's limitations are as follows:

- The study mainly focused on Jordan, its findings might not be generalizable to other countries or regions. The cultural, economic, and governmental characteristics that are unique to Jordan could affect how swiftly technology spreads there and might not be present elsewhere.
- The study only covers a brief period; it might not take into account upcoming changes in the sector or advancements in technology. Given the situation of the market, it's possible that the results won't be appropriate or useful.
- The research report only discusses the Uber instance in Jordan, it's possible that it won't be representative of other technology platforms or industry verticals. The findings might not apply to other organizations or industries because each industry or company may have unique factors that influence how quickly innovations spread.
- The study only includes one case study; the results and depth of the research may be limited. A bigger sample size could provide a more complete view of the distribution of breakthroughs across technical platforms.

## 9. DATA ANALYSIS AND FINDINGS

Data analysis on the diffusion of innovation in technological platforms, the Uber cases in Jordan shows a significant positive relationship between technological innovation and Uber users in utilizing the app platform. The findings of the study showed that the majority of Uber taxi users are comfortable with the innovative platforms provided by the organization's services and the convenience at a cost-saving benefit.

- Do you agree that innovation contributed to Uber's acceptance in Jordan when it entered the market?
- Is it true that Jordanian Uber users prefer its services as compared to traditional taxis?
- Can you agree that Jordan's well-established taxi sector has been impacted by Uber's technological platform?
- Does the Uber innovation platforms spreading be an influence on the Jordanian transport market?
- Do you agree that Uber Jordan's adoption process was fast and influential at its initial stage?

### The Findings of to Diffusion of Innovation in Technological Platforms: The Uber Cases in Jordan

**Table 1:** Do you agree that innovation contributed to Uber's acceptance in Jordan when it entered the market?  
%

|  |      |
|--|------|
| <i>Agreed that innovation contributed to Uber's acceptance in Jordan when it entered the market</i>    | 100% |
| <i>Disagreed that innovation contributed to Uber's acceptance in Jordan when it entered the market</i> | 0%   |

Of the respondents who were interviewed on the first question wrote “Do you agree that innovation contributed to Uber's acceptance in Jordan when it entered the market?”, a total of 100% agreed that technological innovation contributed to Uber's acceptance in Jordan when it entered the market. Whilst 0% of participants disagreed that technological innovation contributed to Uber's acceptance in Jordan when it entered the market.

The result positively showed that technological innovation played a vital role in the acceptance of Uber's initial stages of penetrating Jordan.

**Table 2:** Is it true that Jordanians prefer Uber services as compared to traditional taxis?

|   | %   |
|---|-----|
| <i>Jordanians prefer Uber services as compared to traditional taxis.</i>                    | 80% |
| <i>It's not true that Jordanians prefer Uber services as compared to traditional taxis?</i> | 20% |

The second question to customers was “*Is it true that Jordanian Uber users prefer its services as compared to traditional taxis?*”, a total of 80% of taxi users prefer Uber’s services as compared to traditional taxis. Whilst 20% of participants disagreed on preferring Uber’s services as compared to traditional taxis.

The outcome of the second question is significant in that Jordanians prefer Uber services as compared to traditional taxis based on the technologically innovative application being used by Uber.

**Table 3:** Can you agree that Jordan's well-established taxi sector has been impacted by Uber's technological platform?

|  | %   |
|--|-----|
| <i>I agree the ordering app is less difficult and friendly to in operating</i>       | 70% |
| <i>I disagree with the ordering app it is difficult and friendly to in operating</i> | 30% |

Of the participants interviewed for the third question “*Can you agree that Jordan's well-established taxi sector has been impacted by Uber's technological platform?*”, a total of 70% agreed that Jordan's well-established taxi sector has been impacted by Uber's technological platform. The other participants who constituted 30% disagreed.

This showed that Jordan's well-established taxi sector has been positively and significantly impacted by Uber's technological platform and its existence was felt from its inception.

**Table 4:** Does the Uber innovation platform spreading an influence on the Jordanian transport market?

|   | %   |
|---|-----|
| <i>Does the Uber innovation platform spread an influence on the Jordanian transport market?</i>   | 60% |
| <i>Uber innovation platforms spreading was not an influence on the Jordanian transport market</i> | 40% |

Of the participants interviewed for the fourth question “*Does the Uber innovation platforms spreading be an influence on the Jordanian transport market?*”, a total of 60% agreed that Uber innovation platforms spreading is an influence on the Jordanian transport market. Whilst 40% of participants disagreed that Uber’s spreading was not an influence on the Jordanian transport market.

**Table 5:** Do you agree that Uber Jordan's adoption process was fast and influential at its initial stage?

|   | %   |
|---|-----|
| <i>Do you agree that Uber Jordan's adoption process was fast and influential at its initial stage</i> | 90% |
| <i>I disagree that Uber Jordan's adoption process was fast and influential at its initial stage</i>   | 10% |

The interview for the fifth question to customers was “*Do you agree that Uber Jordan's adoption process was fast and influential at its initial stage?*”, a total of 90% agreed that Uber Jordan's adoption process was fast and influential at its initial stage. Whilst 10% of the participants disagreed that Uber Jordan's adoption process was fast and influential at its initial stage.

The outcome positively showed that Uber's adoption process by customers in Jordan was fast and influential at its initial stage, there was a high level of diffusion within the Jordanian citizenry on the innovative technology platform of the Uber taxi facility.

## 10. DISCUSSION

Traditional transportation services have been disrupted by technological platforms like Uber, and people's acceptance of these platforms has been influenced by a variety of variables, including their usability, rewards, and social norms. Uber in Jordan is used as a case study to demonstrate how innovation dissemination processes operate on technological platforms. The diffusion of innovation theory offers a framework for comprehending how novel goods and services are eventually embraced by people, groups, and organizations. According to the hypothesis, there are five steps involved in adopting new technology: awareness, interest, evaluation, trial, and acceptance. The case study of Uber in Jordan illustrates the platform's adoption through these five stages, as well as the numerous factors that helped or hampered the adoption's success. The ease of use of a technological platform is one of the major determinants of its acceptability. Users can rapidly book a ride with only a few clicks on their mobile devices thanks to the platform's apparent simplicity of use. Incorporating GPS tracking and driver reviews improved consumers' perception of security and increased website traffic.

Benefit perception is a crucial element. The Uber platform offered a practical and affordable substitute for conventional cab services. Customers can use the service more readily because the platform uses a distance- and time-based pricing system as opposed to fixed fares. The normal practice of negotiating over prices, which is common in traditional taxi services, was also removed by this pricing technique. The introduction of Uber in Jordan was significantly influenced by social norms as well. The platform was appealing to specific social groupings, which contributed to its widespread acceptance. Additionally, the platform's visibility to potential users was improved by the usage of social media and relationships with surrounding businesses. Last but not least, the Uber case study in Jordan sheds important light on how cutting-edge technology platforms foster innovation. Understanding the innovation diffusion process and the variables affecting consumer acceptance may be useful for businesses planning to launch new products or services in untapped markets. Overall, the Uber case study in Jordan emphasizes how critical it is to comprehend the regional market and cultural environment before implementing a technical platform.

## 11. CONCLUSION

The Uber case study in Jordan provides insight into how cutting-edge technological platforms spread innovation. Jordan's adoption of Uber followed the five stages of the innovation diffusion process: awareness, interest, evaluation, trial, and acceptance. Several factors, including societal norms, the advantages of the platform as seen by consumers, and usability, had an impact on Uber's expansion in Jordan. These findings could be useful to companies wanting to expand into new areas with cutting-edge products or services. Businesses can develop strategies to increase consumer acceptance of their products and services by having a better understanding of the innovation diffusion process. The Uber case study in Jordan highlights how important it is to understand the local market and cultural context before putting a technology platform in place. A framework for understanding how novel products and services are eventually accepted by individuals, groups, and organizations is provided by the diffusion of innovation theory. Technological platforms like Uber have disrupted traditional transportation services, and people's acceptance of these platforms has been influenced by several factors, including their usability, rewards, and social norms. Jordan's Uber case study provides crucial insight into how cutting-edge concepts proliferate via contemporary technological platforms.

When Uber was adopted in Jordan, the five steps of the invention dissemination process were adhered to. Prospective users were made aware of the new platform during the awareness phase. Because there weren't enough users in Jordan at first, Uber encountered issues. The company initiated a marketing campaign to attract prospective clients that made use of social media and partnerships with local businesses. Because more people are becoming aware of the site, the interest stage has started. The exploration stage aimed to generate interest in the new platform. Uber's marketing campaign in Jordan highlights the benefits of the platform, such as convenience, accessibility, and safety, to draw in new users. As a result, potential users are more interested in the website. During the evaluation phase, the new platform's perceived benefits and drawbacks were evaluated. Jordanian potential customers evaluated the Uber platform's usability and security. Customers found the website to be simple to use, and the addition of driver ratings and GPS tracking increased their sense of security. Throughout the testing period, the new platform was put to the test. Uber provided free trips to new users in Jordan so they could use the service risk-free. As more users gave the platform a shot, its popularity increased. One aspect of the acceptance phase was the broad use of the new platform. As the service became more popular among specific social groups, social norms had an impact on how often Uber was utilized in Jordan. The platform's widespread success in Jordan can also be ascribed to how

well-liked and straightforward it is. Cultural norms, perceived benefits, and user-friendliness were only a few of the elements that contributed to Uber's success in Jordan. Due to the platform's usage of GPS tracking and driver ratings, customers felt safer than they otherwise would have, and it offered a practical and cost-effective alternative to conventional transportation services. Social norms also had an impact on the platform's adoption because it gained popularity among particular social groupings.

As demonstrated by the case study of Uber in Jordan, it is essential to understand the regional market and cultural setting to appropriately adapt technical platforms. Businesses can develop strategies to increase demand for their products and services in untapped markets by understanding how innovations spread. The case study provides important insights into the factors that influence how technological platforms are adopted, including perceived benefits, usability, and social norms. The Uber case study in Jordan makes it possible to comprehend how cutting-edge technological platforms spread innovation. According to the five steps of the innovation diffusion process, Uber was accepted in Jordan. User perceptions of the platform's advantages, usability, and cultural norms all had an impact on its success. By first comprehending the local market and cultural environment, businesses can establish strategies to increase the adoption of their goods or services in new locations, which can result in their effective diffusion.

## 12. RECOMMENDATION

The following recommendations are made for additional research study:

**Comparative studies:** Upcoming research may examine how Jordan adopted Uber in comparison to comparable nations in the same region or to nations with various regulatory frameworks. Thus, it becomes simpler to distinguish between concepts that are more generally applicable and those that are more particular to Jordan or the Middle East.

**Longitudinal studies:** These analyses can be used to track Uber's expansion in Jordan over time and spot changes to the variables impacting that expansion. This can assist in determining how regulatory changes have impacted the platform's acceptance.

**The drivers' viewpoint:** Future studies may concentrate on the drivers' viewpoint and their experiences using Uber in Jordan. This data can be used to determine the variables affecting drivers' platform adoption and service satisfaction.

**The viewpoint of the passenger:** Future research should concentrate on the viewpoint of the passenger and their experiences utilizing Uber in Jordan. By doing so, it will be possible to pinpoint the variables affecting platform adoption and passenger service satisfaction.

**The effect of Uber on conventional taxi drivers:** Future research can look at how Uber has altered the conventional taxi sector in Jordan. This will make it simpler to determine the level of disruption that the introduction of ride-sharing services would bring about and to suggest viable regulatory solutions that may be used to lessen any negative effects.

**Cultural factors:** Future research can look at how cultural factors affect the use of technology in Jordan, such as Uber. Understanding how cultural values and norms affect adoption can be useful for raising adoption rates.

**Government regulations:** Upcoming research may look at how regulations impacted the use of Uber in Jordan. This can aid in determining how to create government policies that encourage the usage of ride-sharing services and eliminate regulatory obstacles.

**Additional theories of technology adoption and their relevance to the use of Uber in Jordan may be examined in future research.** This makes it simpler to find alternative frameworks for comprehending the elements that affect how technology platforms are accepted.

## ÖZET

Dijital çağ, gazeteciliği etkileyen ve ona yeni bir boyut kazandıran bir dönem oldu. Bunun en önemli aktörlerinden biri olan “yapay zeka”, son yıllarda birçok sektörde önemli bir etkiye sahip oldu. Bu etkilerden biri de habercilik alanında görülmektedir. Geleneksel haber üretim süreçlerini dönüştürerek, bilgi akışını hızlandıran ve kişiselleştiren yapay zeka, habercilikte yeni bir çağın kapılarını araladı.

Teknolojide yaşanan değişimler, yeni gazetecilik formlarının ortaya çıkmasına neden olmuş, hem haberin anlatı dili ve sunumunda hem de izleyiciyle kurduğu ilişkide radikal değişimler yaratmıştır.

Multimedya uygulamalar ve interaktif gazetecilik örnekleriyle başlayan bu dönüşüm, bugün sanal gerçeklik teknolojilerinin kullanıldığı habercilik uygulamaları ve immersive gazetecilik ile boyut atlamıştır. Gazetecilik pratiğinde interaktif dijital medyanın kullanımı, illüstrasyon ve infografikten multimedya uygulamalarına kadar geniş bir yelpazeyi kapsamakta; “multimedya gazeteciliği”, “video oyunu gazeteciliği”, “sanal gerçeklik gazeteciliği” ve “immersive gazetecilik” gibi pek çok yeni gazetecilik formu üzerine konuşulmaktadır.

Bu çalışma, yapay zekanın habercilikte nasıl kullanıldığını ve bu kullanımın getirdiği ayrıntıları incelemektedir. Bu çalışmada nitel araştırma yöntemlerinden Literatür Taraması yöntemi ile elde edilen veriler doküman analizi yöntemi ile değerlendirilmiştir.

**Anahtar Kelimeler:** Gazetecilik, Haber Sunumu, Yapay Zeka, Sanal Gerçeklik, Immersive Habercilik, Immersive Teknolojiler.

## GİRİŞ

Teknolojide yaşanan değişimler, yeni gazetecilik formlarının ortaya çıkmasına neden olmuş, hem haberin anlatı dili ve sunumunda, hem de izleyiciyle kurduğu ilişkide radikal değişimler yaratmıştır. Multimedya uygulamalar ve interaktif gazetecilik örnekleriyle başlayan bu dönüşüm, bugün sanal gerçeklik teknolojilerinin kullanıldığı habercilik uygulamaları ve immersive gazetecilik ile boyut atlamıştır. Gazetecilik pratiğinde interaktif dijital medyanın kullanımı, illüstrasyon ve infografikten multimedya uygulamalarına kadar geniş bir yelpazeyi kapsamakta; “multimedya gazeteciliği”, “video oyunu gazeteciliği”, “sanal gerçeklik gazeteciliği” ve “immersive gazetecilik” gibi pek çok yeni gazetecilik formu üzerine konuşulmaktadır. New York Times’ın 2012’de, üç profesyonel kayakçının hayatını kaybettiği çığla ilgili hazırladığı “Snow Fall” adlı interaktif belgesel, video, fotoğraf ve grafiklerin bir araya getirildiği bir multimedya örneği olarak haberciliğin metin ve fotoğraf üzerine kurulu sistematiğini kırarken, eğitsel ya da güncel konulara dönük olarak tasarlanan ve “newsgames” olarak adlandırılan 3 boyutlu haber oyunları, izleyiciyi hikâyenin içine çekmeye odaklı kurgusuyla geleneksel habercilik pratiklerini değiştirmiştir. Haber oyunlarının tipik bir örneği olan KUMA/WAR epizodik çevrimiçi oyun serisi, katılımcıyı 3. kişi gözüyle sisteme dâhil eden oyun motorundan uyarlanmış olsa da savaşın yerinden canlandırılmasına yönelik sahneler ve misyonlar, Irak ve Afganistan’la ilgili haberlere dayandırılarak oluşturulmuştur.

“Darfur Ölüyor” (Darfur is Dying) adlı aktivist oyun da katılımcıyı gerçek trajediye işaret eden bir ortama yerleştirerek, soykırım kurbanları için empatiyi arttırmak üzere tasarlanmıştır (de la Peña vd.,2010: 291).

1990’lı yılların başında Somali kıyılarında artan ve 2008 yılının ilkbaharına kadar, Kızıldeniz, Süveyş Kanalı ve Aden Körfezi’ne kadar ulaşan korsan saldırıları karşısında, Wired Dergisi’nin 2009’da “Acımasız Kapitalizm” (Cutthroat Capitalism) adıyla hazırladığı oyun da bu yeni gazetecilik pratiğinin örneği olarak ele alınmaktadır. Kişisel dram ve siyaset yerine Somalili korsanların fidye ve yağmalardan sağladıkları kazanç odaklı oyun; infografikleri, haritaları, diyagramları ve kapitalist sistemin hareket tarzını tanımlayan açıklamalarıyla bir oyunun ötesinde bir gazetecilik formu olarak nitelendirilmektedir (Bogost vd., 2010: 1-2).

İzleyicinin haber hikâyesinin içine girmesini sağlayan sanal gerçeklik teknolojisinin gelişmesi, başta New York Times gibi büyük Amerikan medya kuruluşlarının kısa zamanda bu alana yatırım yapmasını sağlamış, Vice News, USA TODAY, The Guardian, Huffington Post, ABC News gibi tanınmış medya şirketleri 360 derece videolarla çekilmiş gazetecilik örnekleri sunmaya başlamışlardır. İzleyicinin, habere konu olan olayın gerçekleştiği çevreyi 360 derece görebildiği bu yapımlar, haber bombardımanı karşısında haber hikâyesine olan duyarlılığın azaldığı yeni medya çağında, izleyiciyi hikâyenin içine çekerek immersive deneyimler yaşatmayı amaçlamaktadır.

### Yapay Zekanın Habercilikte Kullanılması

Dijital çağ, gazeteciliği etkileyen ve ona yeni bir boyut kazandıran bir dönem oldu. Bunun en önemli aktörlerinden biri olan “yapay zeka” (YZ), son yıllarda birçok sektörde önemli bir etkiye sahip olmuştur. Bu etkilerden biri de habercilik alanında görülmektedir. Geleneksel haber üretim süreçlerini dönüştürerek, bilgi akışını hızlandıran ve kişiselleştiren yapay zeka, habercilikte yeni bir çağın kapılarını aralamaktadır (Girgin, 2008).

Teknolojide yaşanan değişimler, yeni gazetecilik formlarının ortaya çıkmasına neden olmuş, hem haberin anlatı dili ve sunumunda, hem de izleyiciyle kurduğu ilişkide radikal değişimler yaratmıştır (Yılmaz, 2018).

Multimedya uygulamalar ve interaktif gazetecilik örnekleriyle başlayan bu dönüşüm, bugün sanal gerçeklik teknolojilerinin kullanıldığı habercilik uygulamaları ve immersive gazetecilik ile boyut atlamıştır. Gazetecilik pratiğinde interaktif dijital medyanın kullanımı, illüstrasyon ve infografikten multimedya uygulamalarına kadar geniş bir yelpazeyi kapsamakta; “multimedya gazeteciliği”, “video oyunu gazeteciliği”, “sanal gerçeklik gazeteciliği” ve “immersive gazetecilik” gibi pek çok yeni gazetecilik formu üzerine konuşulmaktadır. New York Times’ın 2012’de, üç profesyonel kayakçının hayatını kaybettiği çığla ilgili hazırladığı “Snow Fall” adlı interaktif belgesel, video, fotoğraf ve grafiklerin bir araya getirildiği bir multimedya örneği olarak haberciliğin metin ve fotoğraf üzerine kurulu sistematiğini kırarken, eğitsel ya da güncel konulara dönük olarak tasarlanan ve “newsgames” olarak adlandırılan 3 boyutlu haber oyunları, izleyiciyi hikâyenin içine çekmeye odaklı kurgusuyla geleneksel habercilik pratiklerini değiştirmiştir (New York Times, 20 Aralık 2012).

Dijital medya, haberlere hızlı ve anlık erişimi mümkün kılmaktadır. Haberler anında paylaşılabilir ve insanlar dünyadaki gelişmeleri hemen öğrenebilir. İnternet, gazetecilere geniş bir kitleye ulaşma imkanı sunar. Bir haberin dijital ortamda paylaşılması, dünya çapında milyonlarca insana ulaşabilir. Dijital platformlar, metinlerin ötesine geçerek ses, video, interaktif grafikler gibi zengin içerikler sunar. Bu da okuyucuların ve izleyicilerin daha etkileşimli ve ilgi çekici bir deneyim yaşamasını sağlar. Sosyal medya, haberlerin hızla yayılmasını sağlar ve insanların haberleri paylaşma, yorumlama ve tartışma imkanı sunar. Dijital gazetecilik, okuyucuların görüşlerini almayı ve onlarla etkileşim halinde olmayı kolaylaştırır. Geri bildirimleri anlık olarak alıp değerlendirebilir ve içeriği buna göre şekillendirebilirler.

Ancak, dijital çağın getirdiği bu olanaklarla birlikte haberin doğruluğu, güvenilirliği ve manipülasyona açık olma gibi riskler de artar. Bu nedenle gazeteciler, doğruluk ve tarafsızlık ilkelerine bağlı kalarak, dijital medyada etik ve güvenilir haberler sunma sorumluluğunu taşırlar.

Dijital çağın gazetecilik pratiğine getirdiği en dikkat çekici unsurlardan biri, haber sunumunda sanal gerçeklik (VR) uygulamalarının kullanımıdır. Bu uygulamalar, okuyuculara ve izleyicilere daha etkileyici ve derinlemesine bir deneyim sunarak haberlerin daha özgün bir şekilde aktarılmasını sağlar. İşte gazetecilikte sanal gerçeklik uygulamalarının bazı örnekleri:

Gazeteciler, sanal gerçeklik teknolojisini kullanarak röportajları daha etkileyici hale getirebilirler. Okuyucular, olayın gerçekleştiği mekâna sanal olarak taşınabilir ve röportajın yapıldığı ortamı daha yakından deneyimleyebilirler (<https://www.youtube.com>).

Haberlerde bahsedilen mekânları sanal turlarla gezme imkanı sunulabilir. Örneğin, bir haberde anlatılan bir olayın geçtiği yerin sanal bir turu izleyicilere sunulabilir, böylece olayın geçtiği mekânı daha yakından görebilirler.

Sanal gerçeklik, görsel hikayelerin ve anlatıların daha derin ve etkileyici bir biçimde sunulmasına olanak tanır. Özellikle belgesel tarzı haberler, sanal gerçeklikle daha çarpıcı bir hale getirilebilir.

Önemli etkinlikler, konferanslar veya olaylar, sanal gerçeklikle canlı olarak izleyicilere aktarılabilir. Bu, izleyicilere etkinlikleri izleme ve katılma imkanı sağlar.

Sanal gerçeklik, haberlerin eğitim ve bilgilendirme amacıyla daha etkili bir şekilde sunulmasını sağlar. Özellikle karmaşık konular veya olaylar, sanal gerçeklikle daha iyi anlaşılabilir.

### Otomatik Haber Üretimi

Yapay zeka, metin analizi ve doğal dil işleme yetenekleriyle büyük veri setlerini hızlı bir şekilde tarayarak haberleri otomatik olarak üretebilmektedir. Bu, haber ajansları ve medya kuruluşları için büyük bir avantaj sağlamaktadır. Yapay zeka, anlık veri analizi yaparak önemli olayları tespit edebilir ve bunları anında haber formatında sunabilir.

Otomatik haber üretimi, yapay zeka teknolojisinin doğal dil işleme, metin analizi ve makine öğrenimi gibi yeteneklerini kullanarak haberlerin otomatik olarak oluşturulmasını ifade eder. Bu teknoloji, büyük veri setlerini tarayarak anlamlı içerikler üretebilir ve haber ajansları, medya kuruluşları, blog yazarları ve diğer içerik sağlayıcıları için önemli avantajlar sunar.

**Veri Toplama ve Analiz**

Otomatik haber üretimi, başlangıçta büyük miktarda veri toplama ve analiz süreçlerini içerir. Yapay zeka algoritmaları, sosyal medya, haber siteleri, resmi duyurular ve diğer kaynaklardan gelen verileri tarayarak önemli bilgileri belirler. Bu aşamada, haber konularını ve anahtar kelimeleri tespit etme yetenekleri ön plana çıkar.

**Veri Kaynakları Belirleme:** Yapay zeka tabanlı otomatik haber üretimi süreci, genellikle çeşitli veri kaynaklarından bilgi toplamakla başlar. Bu kaynaklar arasında haber siteleri, sosyal medya platformları, resmi bildirimler, kamuoyu anketleri, bilimsel makaleler ve diğer çevrimiçi veya çevrimdışı kaynaklar bulunabilir. Yapay zeka, bu veri kaynaklarını belirleyerek çeşitli konulardaki verilere ulaşır.

**Veri Toplama:** Belirlenen kaynaklardan gelen veriler, Yapay Zeka algoritmaları tarafından toplanır. Bu veriler genellikle metin tabanlıdır, ancak resimler, videolar veya diğer medya türlerini de içerebilir. Veri toplama aşamasında, metinlerin yanı sıra konu, tarih, kaynak ve diğer önemli meta veriler de elde edilir.

**Veri Temizleme ve Düzenleme:** Toplanan veriler genellikle çeşitli formatlarda ve kalitede olabilir. Yapay zeka, verileri temizleme ve düzenleme aşamasında, gereksiz karakterleri kaldırma, eksik veya hatalı verileri düzeltme, metinleri standart bir formata getirme gibi işlemleri gerçekleştirir. Bu adım, veri setinin homojen ve anlamlı hale getirilmesini sağlar (Hinton vd., 2006).

**Konu ve Anahtar Kelime Belirleme:** Yapay zeka, metin analizi tekniklerini kullanarak verileri anlamlandırır ve konuları belirler. Bu aşamada, önemli anahtar kelimeler, terimler ve bağlantılı konular tespit edilir. Anahtar kelimeler, haberin içeriğini ve önemli detaylarını anlamak için kullanılır.

**Duygu Analizi:** Bazı durumlarda, Yapay Zeka duygu analizi yöntemleri kullanarak metinlerdeki duygusal tonları belirleyebilir. Bu, haberlerin olumlu, olumsuz veya tarafsız bir ton içerip içermediğini anlamak için kullanılır. Duygu analizi, haberin algılanan duygusal etkisini değerlendirmede yardımcı olabilir.

**Trend ve Mönüler Analizi:** Veri setindeki zamanla değişen eğilimleri belirlemek için Yapay Zeka, trend analizi yapabilir. Bu, belirli konuların veya olayların zaman içindeki popülerliğini değerlendirme ve gelecekteki haber konularını tahmin etme konusunda faydalı olabilir. Ayrıca, belirli konuların ne sıklıkta ve hangi bağlamlarda geçtiğini değerlendirmek için metin madenciliği teknikleri de kullanılabilir.

**Doğal Dil İşleme ve Metin Analizi**

Yapay zeka, doğal dil işleme ve metin analizi teknikleriyle toplanan verileri anlamlandırır. Kelime dağarcığı, dilbilgisi kuralları, anlam çıkarımı ve bağlam analizi gibi yeteneklerle YZ, metinleri insan benzeri bir şekilde anlama kapasitesine sahiptir. Bu aşama, haber metinlerini daha iyi anlayabilmek ve içerik oluşturmak için önemlidir.

**Doğal Dil İşleme Nedir?:** Doğal Dil İşleme (NLP), bilgisayarların insan dilini anlamalarını, yorumlamalarını ve kullanmalarını sağlayan bir yapay zeka alt dalıdır. Bu teknoloji, metin, konuşma ve dilin diğer biçimleri üzerinde çalışarak dilin karmaşıklıklarını anlamak ve işlemek için algoritmalar geliştirir.

**Metin Analizi Nedir?:** Metin analizi, metin verilerini inceleyen ve anlam çıkarmaya yönelik teknikleri içeren bir disiplindir. Metin analizi, metin madenciliği olarak da adlandırılır ve metin verilerindeki desenleri, trendleri, duygusal tonları ve anlamları keşfetmeyi amaçlar.

**Tokenization (Sözcük Ayıklama):** Tokenization, bir metni daha küçük parçalara bölmek anlamına gelir. Bu parçalar genellikle kelimeler veya alt kelimeler olabilir. Bu adım, bir metni daha küçük ve işlenebilir parçalara ayırarak analiz işlemlerini kolaylaştırır.

**Stop Words (Durak Kelimeler):** Stop words, dil işleme sırasında genellikle göz ardı edilen yaygın kelimelerdir (örneğin, "ve", "ama", "veya"). Bu kelimeler genellikle önemli olmayan bilgiler içerir ve analiz sırasında dikkate alınmaz.

**Part-of-Speech Tagging (Sözcük Tür Etiketleme):** Bu, bir cümlenin içindeki her kelimenin dilbilgisel türünü (örneğin, isim, sıfat, fiil) belirleme işlemidir. Bu bilgi, metin analizinde anlamın daha iyi çıkarılmasına yardımcı olabilir.

**Named Entity Recognition (İsimli Varlık Tanıma):** Metindeki belirli varlıkları (örneğin, kişilerin adları, yer isimleri, tarihler) tanıma işlemidir. Bu, metindeki önemli bilgileri çıkarmak ve kategorize etmek için kullanılır.

**Sentiment Analysis (Duygu Analizi):** Duygu analizi, bir metnin içerdiği duygusal tonu belirleme sürecidir. Bu, metnin olumlu, olumsuz veya tarafsız bir ton içerip içermediğini değerlendirmek için kullanılır.

**Stemming ve Lemmatization:** Stemming, bir kelimenin kökünü çıkarma işlemidir (örneğin, "koştu" kelimesinin "koş" olarak alınması). Lemmatization ise kelimenin sözlük anlamına uygun bir biçimde kökünü çıkarma işlemidir.

**TF-IDF (Term Frequency-Inverse Document Frequency):** TF-IDF, bir belgede bir kelimenin önemini ölçen bir istatistiksel yöntemdir. Bir kelimenin bir belgede ne kadar sık kullanıldığını ve genel veri setinde ne kadar özgün olduğunu değerlendirerek belirli kelimelerin önemini belirler. Doğal Dil İşleme ve Metin Analizi, Yapay Zeka'nın dilin karmaşıklıklarını anlama, işleme ve çeşitli dil görevlerini gerçekleştirme yeteneğini sağlar. Bu teknikler, otomatik haber üretimi, duygu analizi, çeviri, özetleme ve daha birçok uygulama alanında kullanılabilir.

### Haber Üretimi

Veri toplama ve analiz aşamalarının ardından yapay zeka, belirlenen haber konuları üzerinde çalışarak haber metinlerini oluşturur. Metin oluşturma sürecinde dilin akıcılığı, haberin anlaşılabilirliği ve bilgilerin doğruluğu gibi faktörlere dikkat edilir. Yapay zeka, önceden belirlenmiş şablonları veya kuralları kullanarak haber başlıkları, giriş paragrafları, ana bölümler ve sonuçları oluşturur.

Haber üretiminde yapay zeka, bir dizi karmaşık süreci içerir ve bu süreçler haber ajansları, medya kuruluşları veya diğer içerik sağlayıcılarının daha etkili, hızlı ve kişiselleştirilmiş içerik üretmelerine yardımcı olur (Dalen, 2012: 648-649).

**Veri Toplama ve Analiz:** Yapay zeka, çeşitli veri kaynaklarından haberle ilgili bilgileri toplar. Bu kaynaklar arasında haber siteleri, sosyal medya, resmi duyurular ve diğer çevrimiçi veya çevrimdışı kaynaklar bulunabilir. Algoritmalar, metin madenciliği ve doğal dil işleme (NLP) teknikleri kullanarak veriyi anlamlandırır ve önemli anahtar kelimeleri, konuları ve duygusal tonları belirler.

**Otomatik İçerik Üretimi:** Yapay zeka, toplanan verilere dayanarak haber metinlerini otomatik olarak oluşturur. Metin oluşturma süreci, dil modeli ve makine öğrenme algoritmalarını içerir. Önceden belirlenmiş şablonlar veya dilbilgisi kuralları kullanılarak haber başlıkları, giriş paragrafları, ana bölümler ve sonuçlar üretilir.

**Kişiselleştirme:** Yapay zeka, okuyucuların geçmiş tercihleri, tıklama geçmişleri ve diğer kişisel bilgilerini analiz ederek kişiselleştirilmiş haber akışları oluşturabilir. Bu, her kullanıcıya özel bir haber deneyimi sağlar.

**Dil Çevirisi:** Yapay zeka, farklı dillerdeki haberleri anında çevirebilir. Bu, uluslararası haber ajansları arasında hızlı bir iletişimi mümkün kılar.

**Duygu Analizi:** Haber metinlerindeki duygusal tonları belirleyen duygu analizi, yapay zeka tarafından kullanılabilir. Bu, haberin olumlu, olumsuz veya tarafsız bir ton içerip içermediğini değerlendirmeye yardımcı olur.

**Doğruluk ve Güvenilirlik Kontrolü:** Yapay zeka, haberlerin doğruluğunu kontrol etme ve güvenilirlik analizi yapma konusunda kullanılabilir. Sahte haberleri tespit etme, çelişkili bilgileri ayırt etme ve haber kaynaklarını değerlendirme gibi görevlerde etkili olabilir.

**Veri Madenciliği ve Trend Analizi:** Yapay zeka, büyük veri setlerini analiz ederek trendleri belirleme ve gelecekteki haber konularını tahmin etme konusunda etkili bir araç olabilir.

**Geri Bildirim ve İyileştirme:** Haberlerin kalitesini ve etkileşimini artırmak için kullanıcı geri bildirimleri kullanılır. Yapay zeka, bu geri bildirimleri analiz ederek sürekli olarak haber üretim süreçlerini iyileştirir. Bu süreçler, yapay zekanın haber üretimindeki çeşitli aşamalarda nasıl kullanıldığını temsil eder. Yapay zeka, haber endüstrisinde daha hızlı, verimli ve kişiselleştirilmiş içerik üretimini mümkün kılarak geleneksel haber üretim yöntemlerine yenilikçi bir yaklaşım getirir.

### Editöryal Kontrol ve İyileştirmeler

Otomatik haber üretimi sürecinin son aşamasında editöryal kontroller yapılır. İnsan editörler, yapay zeka tarafından üretilen haberleri inceler, dilbilgisi hatalarını düzeltir, içeriği iyileştirir ve haberin kalitesini artırmak için gerektiğinde düzenlemeler yapar. Bu aşama, haberin güvenilirliği ve okunabilirliği açısından önemlidir.

Editöryal kontrol ve iyileştirmeler aşamasında yapay zeka, üretilen haber metinlerini inceleyerek dilbilgisel hataları düzeltme, içeriği geliştirme ve genel olarak haber kalitesini artırma görevini üstlenir.

**Dilbilgisel Kontrol:** Yapay zeka, yazım ve dilbilgisi hatalarını tespit edebilir. Metin üzerinde gerçekleştirilen dilbilgisel kontroller sayesinde, yazım hataları, cümle yapısı bozuklukları ve benzeri hatalar düzeltilebilir.

**Stil ve Ton Analizi:** Yapay zeka, belirli bir yayın kurallarına veya kullanıcı kitlesine uygun bir dil stili ve tonu koruma konusunda yardımcı olabilir. Örneğin, bir haber sitesinin tarzına uygunluk veya haberin duygusal tonunu belirli bir şekilde düzenleme gibi.

**Anlam ve Bağlam Analizi:** Yapay zeka, metindeki anlamı ve bağlamı anlama yeteneğine sahiptir. Bu, bir kelimenin çeşitli bağlamlardaki anlamlarını doğru bir şekilde tespit etme ve bu bağlamlara uygun düzenlemeler yapma becerisi anlamına gelir.

**Düzen ve Akıcılık Kontrolü:** Yapay zeka, metnin genel düzenini ve akıcılığını kontrol edebilir. Cümleler arası geçişleri düzeltme, paragraf yapılarını iyileştirme ve haberin bütünsel bir okuma akışını sağlama konularında yardımcı olabilir.

**Özgünlük ve Telif Hakkı Kontrolü:** Yapay zeka, metindeki özgünlüğü kontrol edebilir. Bu, başka kaynaklardan alınan veya önceki haberlerden kopyalanan içerikleri tespit etmeye yardımcı olur. Telif hakkı ihlallerini önlemek adına bu tür bir kontrol önemlidir.

**Anlamsal Analiz ve İçerik Zenginleştirme:** Yapay zeka, metin içeriğini anlamsal olarak analiz ederek eksik veya yetersiz bilgileri belirleyebilir. Ardından, bu bilgileri tamamlamak veya geliştirmek için ek içerik önerileri sunabilir (Kurbanoğlu, 1992: 189).

**Okuyucu Kitlesine Uygunluk:** Yapay zeka, haber metninin hedeflenen okuyucu kitlesine uygunluğunu değerlendirebilir. Belirli bir demografi veya ilgi alanına hitap etmeyen ifadeleri veya içeriği düzelterek haberin geniş bir kitle tarafından anlaşılabilirliğini artırabilir.

**Veri Tutarsızlıklarını Düzeltme:** Yapay zeka, haber metnindeki veri tutarsızlıklarını tespit edebilir ve bu tutarsızlıkları düzeltebilir. Örneğin, çelişen bilgileri belirleme ve çeşitli kaynaklardan gelen verileri eşleştirme yetenekleri kullanılabilir. Bu süreçler, yapay zekanın haber metinlerini inceleyerek kaliteyi artırma ve okuyucu deneyimini iyileştirme konusundaki rolünü temsil eder. Ancak, insan editörlerin gözden geçirme sürecinde hala önemli bir rol oynadığını ve etik konuların dikkate alınması gerektiğini unutmamak önemlidir.

**Geri Bildirim ve İyileştirme:** Otomatik haber üretimi süreci, kullanıcı geri bildirimleriyle sürekli olarak iyileştirilir. Okuyucuların tercihleri ve geri bildirimleri, yapay zeka algoritmalarının daha doğru ve etkili haberler üretmesine katkı sağlar. Otomatik haber üretimi, yapay zeka teknolojisinin habercilikteki önemli uygulamalarından biridir. Büyük veri setlerinin hızlı bir şekilde analiz edilmesi, haber konularının belirlenmesi ve metinlerin oluşturulması gibi yetenekler, haber endüstrisinde verimliliği artırırken, insan editörlerin kontrolüyle de haberin kalitesi ve güvenilirliği sağlanmaktadır. Bu yöntem, hızlı ve etkili bir şekilde geniş bir okuyucu kitlesine ulaşma potansiyeli sunarken, etik ve doğruluk konularında dikkatli bir yaklaşım gerektirir. Geri bildirim ve iyileştirme aşamasında yapay zeka, kullanıcıların ve sistem tarafından elde edilen verileri analiz ederek içeriği, kullanıcı deneyimini ve genel performansını iyileştirmek için kullanılır.

**Kullanıcı Geri Bildirimleri Toplama:** Kullanıcılar, haberleri okurken veya başka bir içerikle etkileşimde bulunurken geri bildirimde bulunabilir. Bu geri bildirimler, metin kalitesi, içerik ilgisi, kullanıcı dostu arayüz, hız ve benzeri konularda olabilir.

**Yapay Zeka Analizi:** Yapay zeka, toplanan geri bildirimleri analiz eder. Metin analizi ve duygu analizi gibi teknikleri kullanarak, kullanıcıların duygusal tepkilerini, önerilerini ve memnuniyet seviyelerini anlamaya çalışır.

**Trend Analizi:** Yapay zeka, benzer geri bildirimlerdeki ortak temaları ve trendleri tespit edebilir. Örneğin, belirli bir türde haberlerin daha fazla ilgi çektiğini veya belli bir dil veya üslubun daha çok tercih edildiğini belirleme yeteneğine sahiptir.

**İçerik Kalitesi Değerlendirmesi:** Yapay zeka, kullanıcı geri bildirimlerini ve analiz sonuçlarını kullanarak içeriğin kalitesini değerlendirebilir. Dilbilgisel hatalar, bilgi eksiklikleri, tutarsızlıklar ve benzeri sorunları tespit edebilir.

**Kişiselleştirme İyileştirmeleri:** Yapay zeka, kullanıcıların tercihleri ve geçmiş etkileşimleri üzerinden kişiselleştirilmiş öneriler ve içerikler sunma konusunda iyileştirmeler yapabilir. Bu, kullanıcı deneyimini artırabilir ve kullanıcıların daha fazla ilgi gösterdikleri içerikleri keşfetmelerine yardımcı olabilir.

**Hız ve Erişilebilirlik İyileştirmeleri:** Yapay zeka, kullanıcıların içeriklere ulaşma hızını ve erişilebilirliğini değerlendirebilir. Sayfa yüklenme süreleri, arama özellikleri, kullanıcı arayüzü gibi faktörleri inceleyerek iyileştirme önerilerinde bulunabilir.

**A/B Testleri ve Deneyler:** Yapay zeka, farklı içerik stratejileri veya kullanıcı arayüzü değişiklikleri gibi çeşitli deneyleri otomatik olarak yönetebilir. A/B testleri ile hangi özelliklerin veya içerik stratejilerinin daha etkili olduğunu belirleyerek iyileştirmeler sağlayabilir.

**Öneri ve İçerik Optimizasyonu:** Yapay zeka, kullanıcı tercihleri, okuma alışkanlıkları ve diğer faktörleri analiz ederek daha etkili öneri sistemleri oluşturabilir. Bu sayede kullanıcıların ilgisini çeken içeriklere daha kolay erişmelerini sağlar.

**Geri Bildirim Döngüsü:** Yapay zeka, topladığı geri bildirimleri ve uygulanan iyileştirmelerin sonuçlarını değerlendirir. Bu geri bildirim döngüsü sayesinde sürekli olarak öğrenir ve gelişir. Bu süreç, kullanıcı geri bildirimlerini analiz ederek ve bu geri bildirimlere dayanarak içeriği, kullanıcı deneyimini ve sistem performansını geliştirmek üzere yapay zekanın kullanılmasını içerir.

## 2. Kişiselleştirilmiş Haber Akışları

Yapay zeka algoritmaları, kullanıcının geçmiş tercihleri ve davranışları üzerinden kişiselleştirilmiş haber akışları oluşturabilir. Bu, okuyuculara daha özelleştirilmiş ve ilgi çekici içerik sunma potansiyeli taşır. Haber siteleri ve uygulamaları, yapay zeka sayesinde kullanıcı deneyimini iyileştirebilir ve ziyaretçilerin ilgisini çekecek haberleri öncelikli olarak sunabilir. Kişiselleştirilmiş haber akışları, kullanıcının tercihlerine, geçmiş etkileşimlerine ve davranışlarına dayanarak özel olarak önerilen haber içeriği sunan bir uygulamadır. Bu, kullanıcının ilgi alanlarına göre özelleştirilmiş bir haber deneyimi sağlamak üzere tasarlanmış bir yapay zeka ve öneri sistemlerini içerir.

### Kullanıcı Profili Oluşturma

Kullanıcıların ilgi alanları, tercihleri ve davranışları temel alınarak kişisel profiller oluşturulur. Bu profiller, kullanıcının geçmişteki haber tıklamaları, okuma süreleri, paylaşımları ve benzeri etkileşimlerini içerir.

### Öneri Sistemleri

Yapay zeka tabanlı öneri sistemleri, kullanıcı profillerini analiz ederek kişisel önerilerde bulunur. Bu sistemler, metin analizi ve makine öğrenimi algoritmalarını kullanarak, kullanıcının ilgisini çekebilecek haber başlıkları ve içerikleri tahmin eder.

### İlgili İçerik ve Etiketleme

Haber içerikleri, belirli etiketlerle (anahtar kelimelerle) etiketlenir. Kullanıcının ilgi alanlarına göre belirli etiketlere sahip haberler öne çıkarılır. Örneğin, "teknoloji," "spor," "finans" gibi etiketlerle ilişkilendirilmiş içerikler kullanıcıya önerilebilir.

### Davranış Analizi

Kullanıcının haberlere nasıl tepki verdiği sürekli olarak izlenir. Tıklamalar, okuma süreleri, paylaşımlar ve benzeri davranışlar analiz edilir. Bu analiz, kullanıcının ilgi alanlarını güncellemek ve öneri sistemini iyileştirmek için kullanılır.

### Zaman ve Konum Bazlı Öneriler

Kullanıcının bulunduğu coğrafi konum, zaman dilimi ve güncel olaylar gibi faktörler de dikkate alınarak önerilen haberler kişiselleştirilir. Örneğin, yerel haberlere daha fazla vurgu yapmak veya güncel etkinliklere dair haberleri öne çıkarmak gibi.

**Etkileşim ve Geri Bildirim**

Kullanıcının önerilen haberlere nasıl tepki verdiği sürekli olarak değerlendirilir. Kullanıcının tıklamaları, haberleri okuma süreleri ve geri bildirimleri, öneri sistemini iyileştirmek için kullanılır.

**Kişisel Ayarlar ve Kontroller**

Kullanıcılara genellikle kişisel tercihleri, ilgi alanları ve öneri sıklığı gibi konularda kontrol sağlayan kişisel ayarlar sunulur. Bu, kullanıcının kendi tercihlerine göre haber akışını düzenlemesine olanak tanır.

**Güncellik ve Trend Takibi**

Yapay zeka, güncel olayları ve trendleri analiz ederek, kullanıcının güncel ve popüler haberlere daha fazla erişim sağlamasını sağlar. Bu, içeriğin sürekli olarak güncel ve ilgi çekici olmasını sağlar.

**3. Doğruluk ve Güvenilirlik Kontrolü**

Yapay zeka, haberlerin doğruluğunu kontrol etme ve güvenilirlik analizi yapma konusunda da kullanılabilir. Sahte haberleri tespit etme, çelişkili bilgileri ayırt etme ve haber kaynaklarını değerlendirme gibi görevlerde yapay zeka, habercilikte güvenilirlik standartlarını artırabilir.

Doğruluk ve güvenilirlik kontrolü, haber içeriklerinin doğruluğunu değerlendirmek ve güvenilir kaynaklardan elde edilen bilgileri belirlemek amacıyla gerçekleştirilen bir dizi süreç ve yöntemi içerir. Bu kontroller, haber yayınlamadan önce gerçekleştirilir ve haberin izleyicilere doğru ve güvenilir bir şekilde iletilmesini sağlamak için önemlidir. İşte doğruluk ve güvenilirlik kontrolünün detaylı açıklaması:

**Kaynak Doğruluğu**

İlk adım, haberin kaynağının doğruluğunu kontrol etmektir. Güvenilir haber kuruluşları, resmi açıklamalar, bilim insanları veya tanınmış uzmanlardan gelen bilgiler genellikle güvenilir kabul edilir. Yapay zeka, bu kaynakları değerlendirerek haberin temel doğruluğunu belirlemede yardımcı olabilir.

**Çeşitli Kaynaklardan Kontrol**

Yapay zeka, haberin çeşitli kaynaklardan doğrulanmasını gerçekleştirebilir. Birden çok güvenilir kaynaktan benzer bilgiler alındığında, haberin doğruluğu artar. Farklı perspektiflerden gelen bilgilerle çelişkili durumlar tespit edilebilir.

**Faktör Kontrolü**

Yapay zeka, haberdeki temel faktörleri kontrol edebilir. Tarih, yer, kişiler ve olaylar gibi temel unsurların haberle uygunluğunu kontrol etmek, içeriğin doğruluğunu değerlendirmede önemlidir.

**Dilbilgisel ve Yazım Kontrolü**

Dilbilgisel hatalar ve yazım yanlışlıkları, haberin güvenilirliğini olumsuz etkileyebilir. Yapay zeka, dilbilgisel kontrolleri ve yazım hatalarını tespit ederek haberin dil kalitesini artırabilir.

**İlgili Uzmanlarla İletişim**

Yapay zeka, haberin uzmanlık gerektiren konularda doğruluğunu kontrol etmek için ilgili uzmanlarla iletişim kurabilir. Bu, haberin uzmanlık gerektiren alanlarda doğru ve güvenilir bilgiler içermesine yardımcı olabilir.

**Sahte Haber Tespiti**

Yapay zeka, sahte haberleri tespit etme konusunda gelişmiş algoritmalar kullanabilir. Haber metinleri ve görsel içerikler üzerinde yapılan analizlerle, yanıltıcı veya manipülatif bilgileri belirleyebilir.

**Önceki Doğruluk Kayıtlarının İncelenmesi**

Yapay zeka, haber kaynaklarının geçmişteki doğruluk kayıtlarını inceleyebilir. Bir kaynağın geçmişte doğru ve güvenilir haberler sağlamış olması, şu anki haberin güvenilirliği için bir gösterge olabilir.

**Topluluk Katılımı ve Geri Bildirim**

Yapay zeka, haberin yayımlandıktan sonra topluluk geri bildirimlerini değerlendirebilir. İzleyicilerin ve okuyucuların haberle ilgili yorumları ve geri bildirimleri, haberin doğruluğunu değerlendirmede kullanılabilir. Doğruluk ve güvenilirlik kontrolü, haberin sağlıklı bir bilgi kaynağı olup olmadığını belirlemek için temel bir adımdır. Bu kontroller, yapay zeka ve insan editörlerin bir araya gelerek haber içeriğinin doğruluğunu ve güvenilirliğini sağlama sürecini güçlendirebilir.

#### 4. Dil Çevirisi ve Kültürlerarası İletişim

Yapay zeka, farklı dillerdeki haberleri anında çevirebilir, böylece uluslararası haber ajansları arasında hızlı bir iletişim sağlar. Kültürel farklılıkları anlama ve dikkate alma yetenekleriyle yapay zeka, haberlerin doğru bir şekilde çevrilmesini ve hedef kitleye uygun bir biçimde sunulmasını sağlar.

Dil çevirisi ve kültürlerarası iletişim, farklı dilleri konuşan ve farklı kültürleri paylaşan insanlar arasında etkili bir iletişimi sağlamak için önemli bir rol oynar. İş dünyasından medyaya, diplomatik ilişkilere kadar birçok alanda dil çevirisi ve kültürlerarası iletişim, başarılı iletişim için kritik bir faktördür.

#### Kelime Düzeyinde Çeviri

Temel çeviri, kelimeleri bir dilden diğerine aktarmayı içerir. Ancak, dilin kültürel bağlamını dikkate almadan yapılan basit kelime çevirileri, anlam kaybına yol açabilir.

#### Anlamın Korunması

İyi bir çeviri, sadece kelimeleri değil, aynı zamanda orijinal metindeki anlamı da korur. Bu, hedef dilin dilbilgisine ve kültürel bağlamına hakim olmayı gerektirir.

#### İki Yönlü Çeviri

İdeal olarak, iyi bir dil çevirisi hem kaynak dilden hedef dile hem de hedef dilden kaynak dile doğru yapılabilir. Bu, metnin doğru bir şekilde anlaşılmasını sağlar.

#### Teknolojik Çözümler

Yapay zeka ve makine öğrenimi, dil çevirisinde kullanılan teknolojik çözümleri geliştirmiştir. Çeviri hizmetleri, çeviri belleği ve dil modellemesi gibi teknolojik araçlar, çeviri sürecini hızlandırabilir ve kalitesini artırabilir.

#### Kültürün Anlaşılması

İletişim sadece dil değil, aynı zamanda kültürü de içerir. İletişimde başarılı olmak için farklı kültürlerin normlarını, değerlerini, inançlarını ve iletişim tarzlarını anlamak önemlidir.

#### Non-Sözlü İletişim

Jestler, mimikler, vücut dili gibi non-sözlü iletişim unsurları, kültürel farklılıklar nedeniyle farklı şekillerde yorumlanabilir. Bu unsurların farkında olmak ve doğru bir şekilde yorumlamak, etkili iletişimi sağlar.

#### Çatışma Yönetimi

Kültürlerarası iletişimde çatışmalar kaçınılmazdır. Kültürel farklılıkları anlamak, önyargıları azaltmak ve çatışma yönetimi becerileri, etkili iletişimi sürdürmek açısından önemlidir.

#### Kültürel Duyarlılık

İletişimde kültürel duyarlılık, kültürel normlara saygı gösterme ve bu normları anlama anlamına gelir. Bu, başkalarına karşı açık olma, hoşgörü ve kültürlerarası anlayışı içerir.

#### Kültürlerarası Eğitim

İş dünyasında, kültürlerarası eğitim programları, çalışanların farklı kültürlerle etkili bir şekilde iletişim kurmalarına yardımcı olabilir. Bu tür eğitimler, kültürel farkındalığı artırabilir. Dil çevirisi ve kültürlerarası iletişim, küreselleşmiş dünyada başarılı işbirlikleri ve etkileşim için temel unsurlardır. Başarılı bir şekilde uygulandığında, bu süreçler, insanlar arasındaki anlayışı artırabilir ve kültürler arası köprüler kurabilir.

#### 5. Veri Madenciliği ve Trend Analizi

Yapay zeka, büyük veri setlerini analiz ederek trendleri belirleme ve gelecekteki haber konularını tahmin etme konusunda etkili bir araç olabilir. Bu, habercilere önceden belirlenmiş konular üzerinde çalışma ve izleyicilere geleceğe dair önemli bilgiler sunma fırsatı tanır.

Veri madenciliği ve trend analizi, büyük veri setlerinden değerli bilgiler çıkarmak ve gelecekteki eğilimleri tahmin etmek amacıyla kullanılan analitik yöntemlerdir. Bu iki konsept, özellikle iş dünyası, pazarlama, finans, sağlık ve bilim gibi birçok alanda kullanılarak stratejik kararlar alınmasına katkı sağlar.

#### Veri Toplama

İlk aşama, büyük miktarda verinin toplanmasıdır. Bu veri, çeşitli kaynaklardan gelir, örneğin işlem geçmişi, müşteri etkileşimleri, sosyal medya, web trafiği ve daha birçok kaynak.

**Veri Temizleme ve Hazırlama**

Toplanan veri genellikle çeşitli hatalar, eksik değerler ve tutarsızlıklar içerebilir. Bu aşamada, veri temizleme ve düzenleme işlemleri gerçekleştirilir.

**Desen Tanıma ve Analiz**

Veri madenciliği, desenleri ve ilişkileri tanımlamak için çeşitli analitik yöntemleri kullanır. İşte bu aşamada, istatistiksel analiz, makine öğrenimi algoritmaları ve veri madenciliği teknikleri devreye girer.

**Sınıflandırma ve Tahminleme**

Veri madenciliği, veri kümesindeki desenleri kullanarak sınıflandırma ve tahminleme modelleri oluşturur. Bu modeller, gelecekteki olayları tahmin etmek veya belirli bir kategorilere ait verileri sınıflandırmak için kullanılabilir.

**Kümeleme**

Benzer özelliklere sahip olan veri noktalarını gruplamak için kümeleme teknikleri kullanılır. Bu, homojen grupları belirlemek ve veri setindeki yapıları anlamak için kullanılır.

**İlişki Kurma**

İlişki kurma, veri setindeki değişkenler arasındaki ilişkileri belirleme sürecidir. Bu, bir değişkenin diğerini nasıl etkilediğini anlamak için kullanılır.

**Geçmiş Verilerin İncelenmesi**

Trend analizi, genellikle geçmiş verilerin detaylı bir şekilde incelenmesiyle başlar. Bu, önceki dönemlerdeki eğilimleri ve desenleri anlamak için kullanılır.

**Zaman Serisi Analizi**

Zaman içindeki veri değişimlerini incelemek amacıyla zaman serisi analizi kullanılır. Bu, belirli bir zaman dilimindeki eğilimleri ve dalgalanmaları belirlemeye yardımcı olur.

**İstatistiksel Analiz**

Trend analizi genellikle istatistiksel yöntemleri içerir. Regresyon analizi, varyans analizi ve benzeri istatistiksel teknikler, veri setindeki trendleri belirlemek için kullanılır.

**Makine Öğrenimi ve Prediktif Analiz**

Makine öğrenimi modelleri, geçmiş verilere dayanarak gelecekteki trendleri tahmin etmekte kullanılabilir. Bu, gelecekteki olaylara dair öngörülerde bulunma konusunda yardımcı olabilir.

**Grafik ve Görselleştirmeler:** Trend analizi genellikle grafik ve görselleştirmelerle desteklenir. Bu, karmaşık veri setlerini daha anlaşılır hale getirir ve trendleri daha iyi görselleştirir.

**Sosyal Medya ve Pazar Trendleri**

Özellikle pazarlama alanında, sosyal medya ve diğer platformlardaki kullanıcı etkileşimleri incelenerek pazar trendleri belirlenebilir.

Veri madenciliği ve trend analizi, büyük veri setlerindeki karmaşıklığı anlamak ve bu verilerden değerli bilgiler çıkarmak için kullanılır. Bu, işletmelerin stratejik kararlar almasına, pazarlama stratejilerini optimize etmesine ve genel olarak rekabet avantajı elde etmesine yardımcı olabilir.

**YÖNTEM****Araştırmanın Konusu**

Bu çalışma, yapay zekanın habercilikte nasıl kullanıldığını ve bu kullanımın getirdiği ayrıntıları incelemektedir.

**Araştırmanın Amacı ve Önemi**

Bu araştırma, dijital çağın gazetecilik üzerindeki dönüştürücü etkilerini anlamak ve bu değişimlerin hem medya endüstrisi hem de toplum üzerindeki sonuçlarını değerlendirmek açısından büyük bir öneme sahiptir.

Dijitalleşme, medya ekosisteminde köklü değişimlere yol açmış, geleneksel medya kuruluşlarının yerini dijital medya platformları almıştır. Bu değişimin dinamiklerini anlamak, medya endüstrisinin geleceği için kritik öneme sahiptir.

Dijital çağda bilgi hızla yayılmakta, ancak aynı zamanda yanlış bilgi ve dezenformasyon da artmaktadır. Bu durum, haberin doğruluğunu ve güvenilirliğini koruma ihtiyacını daha da önemli hale getirmektedir (Langin, 2018).

Dijital gazetecilikte karşılaşılan etik sorunlar, gazetecilik mesleğinin güvenilirliği ve itibarını tehdit etmektedir. Bu sorunların çözüm yollarını araştırmak, mesleki standartların korunması açısından önemlidir.

Dijital medya platformları, kamuoyunu şekillendirme ve demokratik katılımı artırma potansiyeline sahiptir. Bu potansiyelin nasıl değerlendirileceğini anlamak, demokratik süreçlerin güçlendirilmesi için gereklidir.

Dijital çağ, veri gazeteciliği, mobil gazetecilik ve yapay zeka gibi yeni gazetecilik modellerinin ortaya çıkmasına yol açmıştır. Bu yeniliklerin gazetecilik pratiklerine ve habercilik kalitesine katkılarını değerlendirmek, mesleğin evrimi açısından kritiktir.

Dijitalleşme ile birlikte değişen ekonomik modeller, medya kuruluşlarının sürdürülebilirliği üzerinde önemli bir etkiye sahiptir. Bu modellerin avantajlarını ve dezavantajlarını incelemek, medya kuruluşlarının gelecekteki stratejilerini belirlemelerine yardımcı olabilir.

Bu araştırma, dijital çağın gazetecilik üzerindeki etkilerini kapsamlı bir şekilde analiz ederek, medya endüstrisine, gazetecilere ve akademik camiaya değerli bilgiler sunmayı amaçlamaktadır. Bu sayede, dijital çağda gazeteciliğin karşılaştığı zorluklar ve fırsatlar daha iyi anlaşılacak ve bu alandaki uygulamalar ve politikalar daha bilinçli bir şekilde şekillendirilebilecektir. Bu çalışma, yapay zekanın habercilikte nasıl kullanıldığını ve bu kullanımın getirdiği ayrıntıları incelemektedir.

### **Araştırmanın Yöntemi**

Yapay zekanın habercilikte nasıl kullanıldığını ve bu kullanımın getirdiği ayrıntılarının incelendiği bu araştırmada nitel araştırma yöntemlerinden Literatür Taraması yöntemi kullanılmıştır. Elde edilen veriler doküman analizi yöntemi ile değerlendirilmiştir.

### **Araştırmanın Ana Problem Cümlesi**

Araştırmanın ana problem cümlesi, “Dijital Çağda Değişen Haber Sunumu: Sanal Gerçeklik” şeklinde belirlenmiştir.

### **BULGULAR**

Teknolojide yaşanan değişimler, yeni gazetecilik formlarının ortaya çıkmasına neden olmuş, hem haberin anlatı dili ve sunumunda, hem de izleyiciyle kurduğu ilişkide radikal değişimler yaratmıştır. Multimedya uygulamalar ve interaktif gazetecilik örnekleriyle başlayan bu dönüşüm, bugün sanal gerçeklik teknolojilerinin kullanıldığı habercilik uygulamaları ve immersive gazetecilik ile boyut atlamıştır. Gazetecilik pratiğinde interaktif dijital medyanın kullanımı, illüstrasyon ve infografikten multimedya uygulamalarına kadar geniş bir yelpazeyi kapsamakta; “multimedya gazeteciliği”, “video oyunu gazeteciliği”, “sanal gerçeklik gazeteciliği” ve “immersive gazetecilik” gibi pek çok yeni gazetecilik formu üzerine konuşulmaktadır.

### **SONUÇ**

Yapay zeka, habercilik alanında bir dönüşüm yaratmaktadır. Otomatik haber üretimi, kişiselleştirilmiş içerik, doğruluk kontrolü, dil çevirisi ve trend analizi gibi özelliklerle yapay zeka, haber endüstrisine değerli katkılarda bulunmaktadır.

Bu teknolojinin etik ve güvenilirlik konularında dikkatli bir şekilde yönetilmesi gerekmektedir. Haber üretiminde yapay zeka, gelecekte haber okuma ve takip etme alışkanlıklarımızı şekillendirecek önemli bir faktör olmaya devam edecektir.

Sanal gerçeklik, gazeteciliği daha etkileyici hale getirmenin yanı sıra izleyicilerin habere daha derinlemesine dahil olmalarını sağlayacaktır. Bu teknolojiyi kullanırken doğru içerik, etik kurallara bağlılık ve kullanıcı deneyimine odaklanma gibi konular önemli bir konu olarak karşımıza çıkacaktır.

Günümüzde, Uluslararası mecralarda Yapay Zeka, habercilikte birçok farklı alanda kullanılıyor ve sektörde büyük bir etki yaratmaktadır.

Ancak, yapay zekanın kullanımıyla birlikte etik sorunlar da gündeme gelecektir. Özellikle yapay zeka tarafından oluşturulan içeriğin doğruluğu, manipülasyonu veya önyargılı olması gibi konular, dikkatle ele alınması gerekecektir.

Dijital çağda haber sunumu, teknolojinin ilerlemesiyle birlikte büyük bir dönüşüm geçirmiştir. Sanal gerçeklik (VR), bu dönüşümün en yenilikçi ve etkileyici bileşenlerinden biridir. Araştırma, sanal gerçekliğin haber sunumu üzerindeki etkilerini ve bu teknolojinin gelecekteki potansiyelini derinlemesine incelemiştir.

Sanal gerçeklik, dijital çağda haber sunumunun geleceğini şekillendiren önemli bir yenilik olarak karşımıza çıkmaktadır. Gazeteciler ve medya kuruluşları, bu teknolojiyi etkili bir şekilde kullanarak, izleyicilere daha zengin ve etkileyici haber deneyimleri sunabilecektir. Bununla birlikte, etik sorumlulukların ve teknolojik zorlukların farkında olunması ve bunlara uygun stratejilerin geliştirilmesi gerekmektedir.

Gelecekte, VR'nin daha geniş kitlelere ulaşabilmesi ve haber sunumunda standart bir araç haline gelebilmesi için daha fazla araştırma ve geliştirme yapılması önemlidir. Gazetecilik eğitimi programlarına VR'nin dahil edilmesi ve medya kuruluşlarının bu teknolojiye yatırım yapması, VR'nin potansiyelini tam anlamıyla gerçekleştirmesi için kritik adımlar olacaktır.

Bu araştırma, sanal gerçekliğin dijital çağda değişen haber sunumu üzerindeki etkilerini anlamaya yönelik önemli bir adım olarak değerlendirilmelidir. Gelecekte yapılacak daha geniş kapsamlı araştırmalar ve uygulamalar, VR'nin gazetecilikteki rolünü daha da netleştirecek ve bu alandaki yenilikçi yaklaşımların gelişimine katkıda bulunacaktır.

# DİJİTAL NEKROMANSİ BAĞLAMINDA TÜRKİYE'DEKİ REKLAM FİLMLEİNİN SEKTÖREL ANLAMDA İNCELENMESİ

**Simge ÜNLÜ**

Sakarya Üniversitesi, Sosyal Bilimler Enstitüsü, Halkla İlişkiler ve Reklamcılık Anabilim Dalı,  
Tezli Yüksek Lisans Öğrencisi,  
simge.unlu2@ogr.sakarya.edu.tr

**Ayda SABUNCUOĞLU İNANÇ**

Sakarya Üniversitesi, İletişim Fakültesi, Halkla İlişkiler ve Reklamcılık Bölümü,  
aydainanc@sakarya.edu.tr

## ÖZET

Ölmüş ünlü kişileri yapay zekâ kullanılarak reklamlarda oynatılmasının gün geçtikçe yaygın bir hal aldığı gözlemlenmektedir. Bu durum ölmüş ünlülerin kariyerlerinin, vefatlarının ardından da devam ettiğini gösteren bir unsur olabilir. 'Dijital Nekromansi' olarak adlandırılabilen bu kavram, literatür içerisinde farklı terimlerle de görülebilir. Dijital Nekromansi reklamlarının özellikle son yıllarda Dünya'da ve Türkiye'de görülmeye başladığı düşünülür. Türkiye'de dijital nekromansi reklamların artış göstermesinin yanı sıra, kavram üzerine yapılan literatür çalışmaları sayısının sınırlı olduğu görülür. Bu kapsamda dijital nekromansi kavramını incelemek ve bu içerikle hazırlanan reklamların Türkiye'de hangi sektörlerde yaygın olarak kullandığını saptamak hazırlanan çalışmanın motivasyonunu oluşturmaktadır. Hazırlanan makalenin amacı, Türkiye'de dijital nekromansi reklamlarının, sektörel bazda olan kullanımı tespit etmektir. Bu amaç ışığında Türkiye'deki dijital nekromansi reklamları incelenmeye tabi tutulmuştur. Çalışma içerisinde, içerik analizi ve göstergebilim yöntemlerine başvurulmuş, örnekleme dâhil olan reklamlar irdelenmeye çalışılmıştır. Çalışmanın sonucunda Türkiye'de dijital nekromansi reklamlarının toplam dört adet olduğu ve en fazla bankacılık alanında bu tekniğe başvurulduğu saptanmıştır.

**Anahtar Kelimeler:** Dijital Nekromansi, Yapay Zekâ, Reklam, Ölmüş Ünlü Kişi

## GİRİŞ

Günümüzde hayatın birden fazla alanında yapay zekâ kullanımının ciddi bir artış gösterdiği düşünülür. Alkaddour'a göre, Endüstri 4.0 etkisiyle birlikte yapay zekâ pek bilim dalı etkilemiştir (2022, s. 49). Yazarın ifadesine göre, teknolojinin gelişimiyle beraber üretimden sağlığa, finanstan pazarlamaya birçok bilim dalını dönüştürerek inovasyonu artırdığını söylemek mümkün olabilir.

Jarek ve Mazurek'e göre artan miktarda tüketici verisinin çevrimiçi, büyük veri sistemlerinde ve mobil cihazlarda sürekli olarak toplanması, veri analizinin her alanda kritik hale gelmesini sağlamaktadır. Bu durum, yapay zekânın pazarlama için önemli bir müttefik olmasına yol açmaktadır (2019, s. 47). Benzer bir görüşe göre, yapay zekâ sistemleri, müşterilerin ürün arama bilgilerini ve gerçek satın alma verilerini birleştirerek, onların ihtiyaçlarını yüksek doğrulukla karşılayacak öneriler sunabilir (Tokman Danışman, Dijital Pazarlamada Yapay Zekâ: Kavramsal Bir İnceleme, 2023, s. 151). Aktarılan ifadelerden yola çıkıldığında yapay zekânın pazarlama için kritik bir araç haline geldiği söylenebilir. Aynı zamanda, veri analizi ve yapay zekâ, pazarlamanın etkinliğini artırmak adına kullanılabilen bir etken olabilir.

Pazarlama ve yapay zekâ kavramlarının bir bütün haline gelmesiyle birlikte, iletişim sektöründeki diğer alanların da yapay zekâ ile ortak bir nokta buluşabileceği düşünülür. Kavut'a göre, yapay zekânın özellikle halkla ilişkiler, reklam ve pazarlama alanlarında önemli bir etki yaratabileceği öngörülmektedir (2022, s. 84). Yazara göre, iletişim alanında yapay zekânın öne çıkacağını söylemek mümkün olabilir.

Reklam sektörü ve yapay zekânı teknolojisinin buluşmasıyla, farklı reklam filmlerinin ortaya çıktığı düşünülür. Markalar, reklamlarda mesaj kaynağı olarak sadece yaşayan ünlüleri değil, vefat etmiş ünlü kişileri de kullanmayı tercih edebilirler. Tokmak Danışman'ın ifadesine göre, ölmüş ünlülerin, ölümünden sonra yeniden 'canlanarak' reklamlarda yer almalarını sağlayan yöntemlerden biri dijital nekromansidir (2022, s. 27). Yazarın ifadesine göre, reklam dünyasının yenilikçi ve sıra dışı yöntemlere başvurduğunu ve yapay zekâ teknolojisinin bu sürece entegre edildiği söylenebilir.

Bu çalışmanın amacı, son yıllarda artış gösteren dijital nekromansi içerikli reklamların Türkiye'de kullanımı sektörel bazda tespit etmek olarak belirlenmiştir. Çalışma kapsamında, reklamların hangi sektörlerde kullanıldığını ortaya koymak, örnekleme dâhil olan reklamlarda hangi ölmüş ünlülerin yapay zekâyla canlandırıldığını belirlemek çalışmanın alt amaçlarını oluşturur. Bu amaçlar doğrultusunda, tüm yapay zekâ kullanılan reklamlar araştırmanın evrenin oluştururken, Türkiye'deki dijital nekromansi içerikli reklamlar araştırmanın örneklemini oluşturur.

İlerleyen bölümlerde 'Reklam Alanında Yapay Zekânın Kullanımı' ile 'Dijital Nekromansi' başlıkları ele alınarak, çalışmanın literatür bölümü bilgileri verilecektir. Takip eden bölümde ise araştırmanın özgün değerini

ortaya koyan metodolojik bölüme yer verilecektir. Ardından elde edilen bulgular tablo haline getirilerek aktarılmaya çalışılacaktır. Hazırlanan araştırmanın bir sonraki çalışmalarda kaynak niteliği taşıyabilmesi temenni edilir.

## 1. Reklam Alanında Yapay Zekânın Kullanımı

Gelişen teknoloji ile birlikte yapay zekâ kullanımının artış gösterdiği söylenebilir. Tokmak Danışman'a göre günümüzde yapay zekânın kullanımı, sağlık ve enerji sektörlerinden hukuki hizmetlere, askeri alanlardan otomotiv endüstrisine ve çeviri hizmetlerine kadar birçok alanda yaygınlaşmıştır (2023, s. 148). Yazarın ifadesinden yola çıkıldığında yapay zekâ kullanımının hayatın birçok alanında faaliyette olduğunu söylemek mümkün olabilir.

Yapay zekâ uygulamalarının diğer alanlar gibi iletişim sektörü içerisinde de yaygınlaştığı düşünülür. Günümüzde yapay zekânın iletişim alanında daha fazla geliştiğini destekleyen görüşler literatür içerisinde yer alır. Koç ve Başfıncı'ya göre, yapay zekâ bir iletişim aracı olmanın ötesinde, bizzat iletişim kurulan taraf haline gelmiştir. Bu teknolojiler, günlük yaşamımızda basit ve önemsiz değişiklikler yaratıyor gibi görünse de, aslında çok daha derin ve köklü bir dönüşümün habercisidir (2023, s. 126). Yazarların ifadesine göre, bireylerin iletişim alanı içerisinde direkt olarak yapay zekâyla sağlanan bir iletişimden bahsettiklerini söylemek mümkün olabilir.

Yapay zekâ uygulamaları gelişimleriyle birlikte iletişim alanında ilerlemesinin sonucu olarak reklam ve pazarlama sektörlerinde yükselişe geçtiği düşünülür. Binbir'e göre, yapay zekâ teknolojisinin uygulanabilirliği artık her zamankinden daha erişilebilir hale geldiğinden, bu teknolojinin pazarlamada çeşitli biçimlerde kullanıldığını görmek ve bazı öngörülerde bulunmak mümkündür (2021, s. 318). Yazarın ifadesinden yola çıkıldığında yapay zekâ teknolojisinin erişilebilir hale gelmesi, pazarlama alanında değişimlere yol açarak çeşitli geleceğe dair kritik öngörüler sunmasını mümkün kılabileceği söylenebilir. Benzer bir görüşe sahip olan Şimşek ve diğerleri ise, yapay zekâ algoritmaları sayesinde pazarlama profesyonelleri, artık müşterilerin davranışlarını daha doğru bir şekilde anlayabildiğini ve bunun ötesinde, yapay zekâ, müşterilerin gelecekteki davranışlarını da tahmin etme olanağı sunduğunu ileri sürmüşlerdir (2022, s. 97). Yazarların ifadesine göre, yapay zekâ algoritmaları, pazarlama uzmanlarının müşteri davranışlarını daha derinlemesine analiz etmelerini ve anlamalarını sağladıklarını söylenebilir.

Yapay zekâ algoritmalarının pazarlama sektöründe giderek daha etkin hale gelmesiyle birlikte, iletişim alanındaki teknolojik ilerlemelere paralel olarak reklam sektöründe de önemli bir rol oynamaya başladığı düşünülür. Şahinci 'ye göre, internet üzerindeki reklam içerikleri yaygınlaşmıştır ve zamanla kullanıcıların ilgi alanlarına veya isteklerine uygun olmayacak şekilde yoğunlaşmıştır. Bu durum, kullanıcıları rahatsız ederek çevrim içi deneyimlerini olumsuz etkileyebilir (2021, s. 76). Yazarın ifadesinden yola çıkıldığında yapay zekâ algoritmaları, internet reklamlarını kullanıcıların ilgi alanlarına daha uygun hale getirerek çevrim içi deneyimlerle bir araya getirerek sunabileceği düşünülmektedir. Koç ve Başfıncı'ya göre, günümüzde reklamcılık sektörü, yapay zekâ, müşteri veri yönetimi, hedefleme, kişiselleştirme, tüketici davranışlarının analizi, pazar araştırması, içerik oluşturma, sesli ve görüntülü reklam üretimi, nöroreklamcılık gibi birçok alanda aktif biçimde yapay zekâ teknolojilerinden yararlanır (2023, s. 127-128). Bu ifadeden yola çıkıldığında yapay zekâ, müşteri veri yönetimi ve kişiselleştirme gibi alanlardaki kullanımı, reklam stratejilerinin daha hedef odaklı ve etkili olmasını sağladığını söylenebilir.

Yukarıda yer alan bölüm içerisinde 'Reklam Alanında Yapay Zekânın Kullanımı' başlığı altında günümüzde yapay zekânın yaygınlaşması, iletişim alanında yapay zekânın kullanımı ve reklam alanı içerisinde yapay zekânın kullanılması konularına değinilmiştir. Çalışmanın bir sonraki bölümde 'Dijital Nekromansi' başlığı altında dijital nekromansi kavramı açıklanacak ve dijital nekromansi teknolojileriyle birlikte uygulama alanlarına değinilmeye çalışılacaktır.

## 2. Dijital Nekromansi

Ölmüş ün sahibi kişilerin, teknoloji kullanılarak reklamlarda oynatılmasının günden güne yaygınlaştığı gözlemlenmektedir. Bu teknoloji literatür içerisinde 'dijital nekromansi' olarak adlandırılabilir. Etimolojik köken olarak nekromansi Yunanca: νεκρομαντία, nekromantía, İngilizce: necromancy, kelimelerinden gelir. Bu terim, ölümlerin ruhlarını çağırarak onları doğüstü kötü güçlere karşı bir tür ruhsal koruma olarak kullanmayı ifade eder (Oxford Learner's Dictionaries, 2023). Bu aktarımlardan yola çıkıldığında, geçmişte yalnızca mistik bir anlam taşıyan nekromansi kavramının, teknolojik araçlar sayesinde yeniden düzenlenerek bir ticari alan haline geldiği söylenebilmektedir.

Dijital ilerlemelerin ilerlemesi ve ölümün cazibesinin bir pazarlama unsuru olarak görülmesiyle birlikte dünya genelinde dijital nekromansi içerikli uygulamaların artış gösterdiği ve oluşan ticari alanın genişlediği düşünülmektedir. Gilden'e göre, biyolojik yaşamları sona ermiş ünlü kişiler dijital olarak kariyerlerini sürdürebilir (2022, s. 1583). Yazarın ifadesine göre ölmüş ünlü kişilerin gelişen teknolojiler aracılığıyla sanal varlıklarını devam ettirdiklerini aktardığı düşünülmektedir.

Ölmüş ünlü kişilerin dijital teknolojiler, örneğin deepfake, kullanılarak reklamlarda 'dijital' olarak yeniden canlandırılması literatürde farklı terimlerle anılmaktadır. Davidson (2013) bu durumu dijital nekromansi,

Sherlock (2013) dijital canlanma, Flanagan (2018) ise dijital diriliş olarak adlandırmaktadır (Akt. Tokman Danışman, 2023, s.99). Deepfake ve dijital nekromansi uygulamaları Türkçe literatürde ‘derin sahte’ olarak adlandırılmaktadır. Berk’e göre deepfake, bir bireyin yüz ifadeleri ve sesinin ileri düzey yazılım teknikleriyle değiştirilip manipüle edilmesiyle oluşturulan dijital içerik türü olarak tanımlanabilir (2020, s. 1511). Yazara göre deepfake teknolojisinin ses ve görüntülerin yanıltıcı olarak yeniden üretilme süreci olarak ifade edilebilmektedir. Benzer bir görüşe sahip olan Acar ve Tanyıldızı ise, deepfake’in yapay olarak değiştirilen veya makine öğrenimi üretken modellerinden yararlanılarak oluşturulan tüm multimedya içeriği olduğunu öne sürmektedir (2022, s. 83). Aktarılan görüşler çerçevesinde, dijital nekromansinin ölmüş ünlü kişilerin, görsel ve işitsel temsillerinin teknolojik araçların gelişimiyle yeniden canlandırılması gerçeklik algısında değişimlere sebebiyet verebileceği öne sürülebilmektedir. Değim Flannagan’a göre dijital nekromansi, ölmüş kişilerin gerçek hayattaymış gibi gösterilmesini sağlayan yanıltıcı bir üretim sürecini içerir. Bu aldatma, oyuncu hayatta olmasa bile, bir illüzyon yaratılarak gerçeklik hissi oluşturulmasına dayanır. (2018, s. 28). Yazarın ifadesinden yola çıkıldığında hayatta olan oyuncuların dijital teknolojilerle canlandırıldığını gördüğümüzde, dijital olarak diriltilmiş imgeleri de bu illüzyonun bir parçası olarak değerlendirilmesine sebep olabileceği söylenebilir.

Yukarıda yer alan bölüm içerisinde ‘Dijital Nekromansi’ başlığı altında nekromansi kavramının etimolojik kökenine, nekromansi kavramına, dijital nekromansiye, dijital nekromansi uygulamasının örneklerine değinilmeye çalışılmıştır. Bir sonraki bölümde çalışmanın özgün değerini ortaya koyan metodolojik kısım aktarılacaktır.

### 3. METODOLOJİ

Çalışmanın bu kısmında, araştırmanın özgün değerini ortaya koyan metodolojik bölüm üzerinde durulacaktır. Bu bölümde ilk olarak araştırmanın amacı ve önemi açıklanmaya çalışılacaktır. İlerleyen başlıklarda araştırmanın evren, örneklem ve sınırlılıkları ortaya koyulacaktır. Ardından araştırma yönetimi aktarılacaktır. Metodolojik bölümde son kısım olarak araştırma sorularına yer verilecektir.

#### 3.1 Araştırmanın Amacı ve Önemi

Hazırlanan makalenin amacı, Türkiye’de dijital nekromansi kavramının reklam alanında, sektörel bazda kullanımı tespit etmektir. Bu çalışma, Türkiye’de bankacılık, telekomünikasyon, otomotiv ve diğer alanlarda dijital nekromansi içerikli reklamların hangi sektörde daha fazla kullanıldığını ortaya koymayı amaçlar. Bu kapsamda dijital nekromansi içerikli reklamlarda, hangi vefat eden ünlülerin oynadığını tespit etmek ve bu reklamların hangi yıllarda çekildiğini ortaya koymak araştırmanın alt amaçları arasında yer alır.

Dijital nekromansi teknolojisinin Türkiye’de reklam alanında, hangi sektörlerde kullanıldığını ortaya koyacak olan bu çalışma, literatüre katkı sağlamayı amaçlarken aynı zamanda ve gelecekte yapılacak çalışmalar için bir kaynak niteliği taşımayı hedefler. Gerçekleştirilen literatür taraması kapsamında, Türkiye’de dijital nekromansi içerikli araştırmaların sayısının sınırlı olması hazırlanan çalışmanın farkını ve önemini ortaya koymaktadır. Bu doğrultuda, hazırlanan çalışma, hem akademik hem de sektörel açıdan dijital nekromansi teknolojisinin mevcut durumunu ve gelecekteki potansiyelini anlamak adına önemli bir kaynak niteliği taşımayı hedeflemektedir.

#### 3.2 Araştırmanın Evren, Örneklem ve Sınırlılıkları

Araştırma kapsamında, çalışmanın evreninin yapay zekâ teknolojisi kullanılan bütün reklamlar kapsamaktadır.

Araştırmanın örneklemini Türkiye’deki dijital nekromansi içerikli reklamlar oluşturmaktadır.

Araştırmanın sınırlılıklarını dijital nekromansi kapsamında Türkiye’de ulaşılabilen reklam filmleri oluşturmaktadır.

#### 3.3 Araştırmanın Yöntemi

Çalışma içerisinde dijital nekromansi kapsamında çekilen ve yayınlanan reklam filmleri, içerik analizi yöntemi kullanılarak incelenmeye çalışılacaktır. Örnekleme dahil edilen reklamlar, göstergebilim tekniği kullanılarak analiz edilmeye çalışılacaktır.

İçerik analizi yönteminin, sosyal bilimler alanında sıkça tercih edilen bir araştırma tekniği olduğu bilinir. İçerik analizi için sosyal bilimler alanı literatürü içerisinde birbirinden farklı tanımlar ortaya atılmıştır. Berelson’a göre içerik analizi, sunulan iletişimin içeriğinin tarafsız, sistematik ve sayısal olarak tanımlanmasıdır (1952, s. 17). Yazarın perspektifinden bakıldığında, içerik analizi kullanılan çalışmalarda iletişimin arka planını görmeyi mümkün olabileceği söylenebilir. Benzer bir görüşe sahip olan Stone ve arkadaşları ise, içerik analizinin metin içerisinde tanımlanan belirli karakterlerden sistematik ve tarafsız sonuçlar elde etmek amacıyla kullanılan bir araştırma tekniği olduğunu ileri sürmüştür (1966, s. 213). Aktarılan tanımlardan yola çıkıldığında içerik analizi yönteminin ‘sistemli’ ve ‘tarafsız’ olmak üzere iki temel üzerine dikkat çektiği söylenebilir. Bu doğrultuda hazırlanan çalışma içerisinde, reklam filmlerinin sektörel bazda tespitinin ortaya koyulabilmesi için, içerik analizi yöntemi kullanılmasının uygun olabileceği düşünülmektedir.

Göstergebilime dair geçmişten bugüne dek birbirinden farklı birçok tanım ve görüş ortaya atıldığı görülmektedir. Göstergebilimin araştırmacılar tarafından alanyazın içerisinde, dilbilime bağlı ve bağımsız olmak üzere farklı

şekillerde kabul ettikleri ortaya koyulmuştur. Saussure'e (1916/1998) göre, 'dil göstergesi bir nesne ile bir adı birleştirmez; bir kavram ile bir işitme imgesini birleştirir. İşitme imgesi yalnızca fiziksel özellikteki maddi bir ses değildir; sesin zihinsel izidir, duyularımızın tanıklığı yoluyla zihnimizde oluşan tasarımdır' (Akt. Köktürk & Eyri, 2013 s.128). Göstergebilimin en önemli alanı, 'anlamlama' başlığı altında toplanan 'düzanlam' ve 'yan anlam' konularını içerir. Bu kavramlar, Roland Barthes'in kuramına dayanmaktadır. Düz anlam, göstergenin neyi temsil ettiği, yan anlam ise göstergenin nasıl temsil edildiğidir (Barthes, 1976, s. 89). Aktarılan bilgiler ışığında, çalışma içerisinde elde edilen reklam filmlerinin analizlerinin yapılabilmesi için göstergebilimsel analiz tekniğine başvurulmasının doğru olabileceği düşünülür.

### 3.4 Araştırmanın Soruları

- S1) Türkiye'de dijital nekromansi kapsamında toplam kaç reklam filmi bulunmaktadır?  
 S2) Dijital nekromansi içerikli reklam filmlerine hangi sektörlerde yer verilmiştir?  
 S3) En fazla dijital nekromansi reklam filmine yer veren sektör hangisidir?  
 S4) En az dijital nekromansi reklam filmine yer veren sektör hangisidir?  
 S5) Örnekleme dahil edilen reklamlarda hangi ölmüş ünlülere yer verilmiştir?  
 S6) Dijital nekromansi kullanılan reklam filmleri hangi yıllarda yayınlanmıştır?  
 S7) Türkiye'de dijital nekromansi içeren reklam filmlerinin yayın başlığı nelerdir?

## 4. BULGULAR

**Tablo 1:** Türkiye'de dijital nekromansi içerikli reklamlar ve erişim linkleri

| Sıra | Başlık                                 | Erişim Linki   |
|------|--|--|
| 1    | "Yeşilçam" Reklam Filmimiz             | <a href="http://www.youtube.com/watch?v=bm63JYzIGfA&amp;t=30s">www.youtube.com/watch?v=bm63JYzIGfA&amp;t=30s</a> |
| 2    | #YoldaykenBırakınOTelefonu             | <a href="http://www.youtube.com/watch?v=n_p9pfu9LWc">www.youtube.com/watch?v=n_p9pfu9LWc</a>                     |
| 3    | Sen Hep Gülümse                        | <a href="http://www.youtube.com/watch?v=fPiwmoxa0QE">www.youtube.com/watch?v=fPiwmoxa0QE</a>                     |

Tablo 8: Aksigorta Reklam Analizi

**SONUÇ**

Dijital nekromansi içerikli reklamların dijital teknoloji gelişiminin bir sonucu olduğu ileri sürülür. Gelişen teknolojiler sayesinde, nostaljiye duyulan özlemin nekromansi içerikli reklamlarla tüketiciler ile ölmüş ünlü kişilerin buluşturulabileceği ortaya çıkmıştır.

Bu çalışmanın temel amacı Türkiye'deki dijital nekromansi içerikli reklam filmlerinin sektörel bazda tespitini sağlamak olarak belirlenmiştir. Çalışma içerisinde hangi nekromansi içerikli reklamların sektörlerde yoğunlaştığı, hangi ölmüş ünlü kişilerin reklamlarda kullanıldığı ve hangi dönemlerde seyirciye sunulduğu tespit edilmeye çalışılmıştır.

Gerçekleştirilen çalışma kapsamında, belirlenen araştırma sorularının yanıtları aşağıda yer aldığı gibidir:

- Türkiye'de dijital nekromansi kapsamında toplam kaç dört adet reklam filmi bulunmaktadır.
- Dijital nekromansi içerikli reklam filmlerine; bankacılık, telekomünikasyon ve sigorta sektörleri yer vermiştir.
- En fazla dijital nekromansi reklam filmine yer veren sektör iki adet reklam filmi ile bankacılık sektörü içerisinde Ziraat Bankası olduğuna saptanmıştır.
- En az dijital nekromansi reklam filmine yer veren sektör birer reklam filmi ile telekomünikasyon ve sigorta sektörleri olduğuna saptanmıştır.
- Örnekleme dahil edilen reklamlarda Kemal Sunal, Barış Manço, Metin Oktay, Hulusi Kentmen, Adile Naşit, Halit Akçatepe, Münir Özkul, Feridun Şavlı isimlerine yapay zeka tekniğiyle yer verilmiştir.
- Dijital nekromansi kullanılan reklam filmlerinin 2018, 2019, 2020 ve 2022 yıllarında çekildiği bilgisine erişilmiştir.
- Türkiye'de dijital nekromansi içeren reklam filmlerinin yayın başlıkları; 'Yeşilçam Reklam Filmimiz', '#YoldaykenBırakınOTelefonu', 'Sen Hep Gülümse', 'Barış Abimizin Bizlere Bir Mesajı Var!' olduğuna saptanmıştır.

Çalışmada elde edilen bulgular ışığında, dijital nekromansi içerikli reklamların sayısının oldukça kısıtlı olduğu ancak belli sektörler içerisinde daha fazla öne çıktığı söylenebilir. Çalışma kapsamında örnekleme dahil edilen reklam filmlerinin sektörel dağılımında bankacılık sektörünün öne çıktığına saptanmıştır. Ziraat Bankası'nın iki adet dijital nekromansi içeriğine sahip reklam filminin bulunması, Türkiye'deki dijital nekromansi reklamlarının lider sektörü olduğunu göstermektedir. Diğer sektörler içerisinde telekomünikasyon (Turkcell) ve sigorta (Aksigorta) bulunmaktadır. Bu bulgu ışığında, dijital nekromansi içerikli reklamların büyük oranda hizmet sektörleri içerisinde kullanıldığı söylenebilmektedir. Çalışmanın diğer bulguları içerisinde, reklam filmlerinde yapay zeka teknolojisi kullanarak canlandırılan ölmüş ünlü kişilerin, geniş kitleler tarafından tanınan ünlüler olduğudur. Bu bağlamda Kemal Sunal, Barış Manço, Metin Oktay, Hulusi Kentmen, Adile Naşit, Halit Akçatepe ve Münir Özkul gibi ünlülerin kullanılması, bu reklamların nostalji duygusunu taşıdığını gösterebilmektedir. Dijital nekromansi içerikli reklam filmleri, seyirciye sunulduğu dönem içerisinde değerlendirildiğin 2018-2022 yılları arasında olduğu gözlemlenmektedir. Bu yıllar teknolojinin ve dijital pazarlamanın etkisinin arttığı dönemler olarak bilinmektedir.

Hazırlanan çalışmanın sonucu doğrultusunda, dijital nekromansi içerikli yapay zeka reklamlarının, Türkiye'de dijital pazarlama stratejisi olarak değerlendirilebileceği söylenebilmektedir. Bankacılık, telekomünikasyon ve sigorta sektörlerinin, bu stratejiyi benimseyerek tüketicilere ulaşma yollarını çeşitlendirdiği söylenebilmektedir. Çalışmanın örnekleminin kısıtlı olmasına rağmen, reklam filmlerinde yer alan ölmüş ünlü kişilerin toplumda iz bırakan bireyler olmasından dolayı, markaların bu stratejiyi etkili bir şekilde kullanabilmesinin mümkün hale geldiği düşünülmektedir.

Bu çalışma belirtilen örneklem ve sınırlılıklar dahilinde gerçekleştirilmiş olup, bu kapsam dışındaki durumlar için genelleme yapılamaz. Çalışmanın literatüre katkı sağması ve gelecekte yapılabilecek dijital nekromansi içerikli çalışmalar için bir referans niteliği taşıması temenni edilmektedir.

### Extended Abstract

It is argued that digital necromancy ads are a result of the development of digital technology. Thanks to the developing technologies, it has emerged that the longing for nostalgia can be brought together with consumers and deceased celebrities through ads with necromancy content.

The main purpose of this study is to identify the digital necromancy commercials in Turkey on a sectoral basis. Within the study, it was tried to determine which advertisements with necromancy content are concentrated in which sectors, which deceased celebrities are used in advertisements and in which periods they are presented to the audience.

Within the scope of the study, the answers to the research questions are as follows:

- In Turkey, there are a total of four commercials within the scope of digital necromancy.
- The banking, telecommunication and insurance sectors have included digital necromancy commercials.
- It was determined that Ziraat Bank was the sector that included the most digital necromancy commercials in the banking sector with two commercials.
- The sectors with the least number of digital necromancy commercials are telecommunication and insurance sectors with one commercial each.
- The names of Kemal Sunal, Barış Manço, Metin Oktay, Hulusi Kentmen, Adile Naşit, Halit Akçatepe, Münir Özkul, Feridun Şavlı were included in the advertisements included in the sample with artificial intelligence technique.
- It was found that the commercials using digital necromancy were shot in 2018, 2019, 2020 and 2022.
- The broadcast titles of the commercials containing digital necromancy in Turkey were found to be 'Our Yeşilçam Commercial Film', '#YoldaykenBırakınOTelefonu', 'You Always Smile', 'Barış Abimizin Bizlere Bir Mesaj Var!

In the light of the findings obtained in the study, it can be said that the number of advertisements with digital necromancy content is quite limited, but they stand out more in certain sectors. In the sectoral distribution of the commercials included in the sample within the scope of the study, it was determined that the banking sector stands out. The fact that Ziraat Bank has two commercials with digital necromancy content shows that it is the leading sector of digital necromancy commercials in Turkey. Other sectors include telecommunications (Turkcell) and insurance (Aksigorta). In the light of this finding, it can be said that digital necromancy ads are mostly used in service sectors. Among the other findings of the study, it is seen that the deceased celebrities portrayed in commercials using artificial intelligence technology are celebrities known by large masses. In this context, the use of celebrities such as Kemal Sunal, Barış Manço, Metin Oktay, Hulusi Kentmen, Adile Naşit, Halit Akçatepe and Münir Özkul can show that these commercials carry a sense of nostalgia.

When the commercials with digital necromancy content are evaluated within the period in which they were presented to the audience, it is observed that they are between 2018-2022. These years are known as the periods when the impact of technology and digital marketing increased.

In line with the results of the study, it can be said that artificial intelligence advertisements with digital necromancy content can be considered as a digital marketing strategy in Turkey. It can be said that the banking, telecommunications and insurance sectors diversify the ways of reaching consumers by adopting this strategy. Although the sample of the study is limited, it is thought that it is possible for brands to use this strategy effectively because the deceased celebrities in the commercials are individuals who leave a mark on the society.

This study was conducted within the specified sample and limitations, and generalizations cannot be made for situations outside this scope. It is hoped that the study will contribute to the literature and serve as a reference for future studies on digital necromancy.

## ÖZET

21. yüzyıl insan profili üzerinden üzerinden görmenin diğer duyu organlarına baskınlığının veya çekinikliğinin tartışmaya açıldığı, karşılaştırılma ve kıyaslamasının yapıldığı tüm bu kriterlere dayanarak geçmişten günümüze aktarılan bilgi üzerinden sağlaması sorgulaması da yapılarak ALGÜL Yetişkin Çocuk Teorisi üzerinde durularak irdelenecektir.

Anlaşıldığı üzere veya henüz tam olarak anlaşılmadığı üzere, bu makale görsel göstergelerin hedefi ( birey, topluluk, toplum, tüm küre) vurmadaki başarısının dilsel göstergelerden çok daha fazla olduğu tezi üzerine kuruludur. Öyle ki, dilsel göstergelerin inşa ve inşa sökümündeki başarısının bile dilsel göstergelere ait imgesel iz düşümlerin; görsel gösterge ön görünümünün hedefi vurmadaki yetkin, etkin, dilsel gösterge seçimlerinden kaynaklanabileceği gerçeği için uzmanına göz kırpmaktadır.

Dilsel göstergelerin tasarımındaki başarıda zihne düşürülecek olan görsel imajların, imgelerin hedefi istendik biçimde vurmada öngörü, içgörüyü kullanma çok önemlidir; hatta bu alan zihne ilk düşmesi gereken imge, imaj ve sonrasının, bir başka söylemle, alt ve üst çağrışım anlamlarının daha başlangıçta görülmesi gereken alandır. Zaten daha başlangıçta var olan tüm öngörü, içgörüler dil kullanımındaki yeti ve yetenekleri, dil birikimi ve dil kullanımı zekâsı olan uzmanlarca inşa ve inşa aşamaları aynı anda, daha başlangıçta görülebiliyorsa tasarımlar etkili bir şekilde hedefi vurulabileceklerdir.

Genel çoğunluğa yönelik, tüketim, siyaset, politika ve her alandaki istendik güdüleme, manipülasyon, satış etkisi ancak ALGÜL Çocuk Yetişkin Teorisi üzerinden kolayca yaratılabilir ve bu teorinin görsel gösterge kullanımıyla da yakından ilgisi vardır.

**Anahtar Sözcükler:** Yetişkin Çocuk Teorisi, Gösterge, Tasarım.

## GİRİŞ

*Algül Yetişkin Çocuk Teorisi, hiç büyütme ki, manipüle edebilesin, korkutup sindirebilesin. 21. yüzyılda artık hiçbir şey görüldüğü, gösterildiği gibi olmayabilir çünkü bu alan nice tasarım alanına hiç olmadığı kadar dahildir. Bizzat dezenformasyona karşı uyarıların varlıkları birer dezenformasyon kaynağı olabilir.*

“Ya görüldüğün gibi ol ya olduğun gibi görün.”

Mevlâna

Bu makale görüldüğü gibi olmayan her sözlü, sözsüz, sesli sessiz, semantik semiyolojik gösterge çözümlemesi, neyin neyi nasıl temsil ettiğini bulma, bilme, erme dolayısıyla neyin yerine geçebilecek nitelikte olduğunu anlama bilgisine ulaşma ve bu bilgiyi aktarma üzerine kurulu, tanımladığım bilimsel alan olan Psiko-Semiyotik İletişim üst başlığı altında topladığım, Dijital Reel Psiko-Semiyotik Dil Kullanımları ve buluşum olan ALGÜL Dijital Reel Manuel Psiko-Semiyotik Dil Kullanımları Ayrıştırıcıları alanlarımla ilgili çalışmalar bütününe destekleyen ve ileri götüren, buluş ve tanımlamalarımla ilgili araştırma incelemelerimi kapsayan aynı alanla bağlantılı değişik, çeşitli konuları içeren, çalışan, seri olarak nitelenebilecek çalışmalardan biridir. Buluşmalarımla ilgili diğer makalelerim okunduğunda bu bağıntı açıkça görülebilir, her çağda ama özellikle dijital çağda önemle üzerinde aydınlanma için durulması elzem olan bu konulardan çok daha fazla verim alınabilir.

“Başlangıçta söz vardı” İncil, Faust: “Başlangıçta eylem vardı” Goethe, (Özerkan, 2001s.35), düşünme de bir eylem midir? Bir şeyin eylem olması için bir tutum ve tavır, hareket şart mıdır? ‘Eylem’ sözcüğüne kaç anlam yüklenebilir, kaç anlamla sınırları çizilebilir? Tabii “söz vardı” derken neyin kastedildiği de iyice araştırılmalı, “eylem vardı” derken de, tüm bu sorgular makalenin konusu dışında olmakla beraber, merak duygusunu harekete geçirmek ilave katkısıyla konuyu önce ses mi, görüntü mü vardı sorgularına çekmek üzere uygun girizgâh ikilisi olarak seçildiler.

İnsan henüz cenin halindeyken duyu organlarının işlevsellik kazanması hangi sırayla gerçekleşti? Öncelik sonralık ilişkisinin erken kalkan yol alır misâli sonra gelişene bir üstünlüğü söz konusu olabilir mi? Görmek, işitme, tatma, koklama, dokunma,

### **Psiko -Semiyotik Dil Kullanımları Ne demektir? Nasıl Üretilir?**

Psiko sözcüğü hedefe konulan birey veya toplumun psikolojisini etkileyip, istedik doğrultuda manipüle etmek için özellikle psikolojik etki için seçilene dilsel ya da görsel göstergeler alanını ifade eden bir sözcüktür.

Semiyotik sözcüğü bünyesinde hem dilsel hem görsel göstergeleri barındırır. Karşılıklı İlkesinin çalışabilmesi için masal etkisine ihtiyaç vardır. Çoklu ortamlarda dijital reel, bir başka söylemle hedefi saran anlamlar evrenini dijital ve reel psiko-semiyotik dil kullanımlarıyla kuşatmak ve bunu sürekli tekrarlamak istedik doğrultuda hedefi yönlendirmeyi başarabilir ve bunu çok uzun yıllarca sürdürülebilir kılabilir ki, Potansiyel Emsâl Dijital Kölelik Vakası (Algül, 2023) ve yayım aşamasında olan (Algül, 2024) böyle bir gerçeğin ispatı olacaktır. Bu vakada yıllarca Dijital Reel Psiko-Semiyotik Dil Kullanımlarıyla çepeçevre sarılan ve bu şekilde çok başarılı ticari

Meta kaynağı, çok para kazandıran bir kaynak olarak sömürülür. Bu başarısına içinde doğduğu topluma ve hatta küre, evrene dair fikir ve gözlemleri de katılır ve hem ulusal hem küresel olarak talan edilerek, bu talan üzerinden pek çok siyasi parti dahil yaratılır ve yaratılan her şey ki, her biri birer istihdam alanıdır eklemlieleri için hedefe yönelik baskı araçları olarak da kullanılır aynı zamanda. Koruması gerekenler talanın baskı uyarıları dijital reel psiko semiyotik dil kullanımlarıyla dijital köleliği sürdürülebilir kılanları olabilir (Algül, 2020-2023) potansiyel emsal dijital kölelik vakasında olduğu gibi.

### **İdeal bir Dijital Reel Psiko-Semiyotik Dil Kullanımı Tasarımı Nasıl Gerçekleştirilir?**

Bu tanımlamayı yapmak için kompozisyon kelimesinden yola çıkılırsa (composition) sözlük anlamlarıyla, bulma, buluşları birleştirip sıraya ve düzene koyarak uzlaştırarak, yazma veya konuşma yoluyla bir duygu, bir düşünce ürünü ortaya koyma diye tanımlanabilir. (Aptekin,1982). Tüm bu kompozisyon bilgisi alınarak Psiko-semiyotik dil tasarımlarının giriş bölümüne konulabilir ama sadece giriş ki, Alptekin'de bu tanımlamayı kompozisyon için dahi başlangıç olarak görmektedir çünkü kompoze etmek, sözlük tanımlamasından çok daha ileride, çok daha karmaşık, çoklu etkileşim ve yapıları bünyesinde barındırır. Kompozisyon için geçerli olan tüm çok yönlü etkileşim Psiko-Semiyotik İletişim, Etkileşim üst başlığı altında topladığım Psiko-Semiyotik Dil Kullanımları ve onun türleri olan Dijital Reel Psiko-Semiyotik Dil Kullanımları için tüm bu kompoze etme alanının içiçe geçmiş halinin çok daha ileri düzeyleri düşünülmelidir. Tüm bunlara ayrıca dijital reel teknolojinin üretilmiş gerçeğe, yani aslında gerçek olmayanlara yönelik ikna araçlarının kullanımı eklenmektedir. Yazılı görsel basın, dijital yayım, reel yaşamda hedefin( toplum veya birey) maruz kalacağı dilsel ve görsel göstergeler alanındaki her şey, reklam panoları dahildir.

### **Bir İnsana Kırk Gün Deli Dersen Deli Olur Mu? Anonim/ Türk Halk Edebiyatı**

Masal etkisi dediğim tekrarın önemi: Masal etkisi çünkü gece uyumadan önce masal okunan çocuklar, uyku anları geldiği zaman, ille de masal isterler. Bu insanlarda doğal bir eğilimdir diye açıklanabilir.

Hedefi çepeçevre 7/24 sarıp sarmalayan, bir başka söylemle halkın çevreleyen anlamlar evreni sürekli tekrarlarla bir süre sonra halkın, hedefin gerçeği olmaya başlar mı?

Halk buna uygun bir süreçten ustaca geçirilirse evet. 21. Yüzyıl insanı ALGÜL, Çocuk Yetişkin Teorisi, düşünmekten uzaklaştırılan, tüketici insan profili için gerekli olan, dürtüleriyle hareket eden yetişkin insan demek. Yetişkin ama bir çocuk gibi hareket edip, dürtülerine engel olamamaktadır. Çocukların acıktıklarında yeme dürtülerini öteleyemememe, şartlar uygun olsun olmasın yemek, oyuncak vb. gibi dürtüleriyle hareket edip, tutturmalarıyla örneklenebilir. Para olsun olmasın çağın tüketici insanının hali ahvali budur ve (Algül, 2015)Algül Yetişkin Çocuk Teorisine göre 21. Yüzyıl insanı özellikle düşünmeyen, dürtüleriyle hareket eden yetişkin çocuk olarak tasarlandı çünkü düşünen insan bu şekilde tüketemez, köle olamaz, manipüle edilemez, değersiz kalabalık kitleler olarak görülemezdi. Bir de Türkiye gibi yanlış olabilen öğretim metotlarından geçtiyse, sağlıklı düşünce oluşumu süreci de sekteye uğrayabilir ve eleştirel, sorgulayıcı düşünce kaybı yaşanabilir (Algül, 2018), Algül Türkçe ve Matematik Derslerinin Öğretim Metodolojilerinin Sağlıklı Düşünce Gelişimi Sürecine Etkileri: Beynin dil öğrenme merkezinin işleyişine ters bir metodolojiyle aktarılan anadilin okur-yazarlığının kazandırılmasındaki seçilecek kazandırma yönteminin sağlıklı düşünce gelişimi sürecini olumsuz anlamda etkileyeceği doğrultusunda olan bu teoriler aynı zamanda matematik bilgisinin yanlış metodolojiyle aktarılmasından kaynaklanan nedenlerle dilbilgisini de sekteye uğratar, çift yönlü gelişimi etkileyen bu yanlış aktarım yöntemleri ki tümünden teke giden bir metodoloji beynin dil öğrenme merkezinin çalışma prensiplerine uygundur, *bu Algül teorisine göre beynin dil öğrenme merkezinin çalışma prensiplerine ters olan metodolojilerin kullanılması düşüncenin sağlıklı gelişimi sürecini sekteye uğratar ve olumsuz anlamda etkiler.* Bu olumsuz sonuçlara tek tek olayları görüp, büyük resmi görmemeyi, kuşbakışı olaylara bakmamayı, analitik düşünce de kaybı, sorgulayıcı, eleştirel bakışta kayıp sadece genetik kültürel kodda olduğu varsayılan

reaya kültüründen kaynaklanabileceği varsayımı üzerinden açıklanamaz, bilinçli veya bilinçsiz seçilebilecek öğretim metodolojileriyle bilerek, kasıtlı veya bilmeyerek, kasıtsız desteklenebilir. Böylece bir alanda zayıflıkla başlanılan eğitim hayatı, sağlıklı düşünce gelişimi ortamına neden olacak, olabilecek ki, bilimsel bir gerçeklik üzerinden üretilen teorilerdir bunlar; öğretim metodolojilerinden geçerek daha da zayıflatılmış olur. Böyle toplumlar potansiyel manipülatif toplumlar olacaklardır. Her anlamda her alanda çok daha kolay manipüle edilebileceklerdir ki, unutulmamalıdır; içinde bulunulan yüzyıl herkesin manipüle edilebileceği psiko-semiyotik dil kullanımlarını legal görünümü, illegal alanların talanından bulma, çözme, konma, yoksa yaratma üzerine kurulu, para için her şey mübah denilen bir yüzyıldır.

Bu tür toplumlarda dijital reel psiko-semiyotik dil kullanımları tasarlanırken düşünmekten uzaklaştırıldıkları için bir yandan, bir yandan da görmenin insan doğasındaki önemine ithafen Da Vinci'nin Şairi, Ressamdan sonraya koyması ve görmenin etkisi üzerine yazdığı içerikte, doğadaki haliyle resmin evrensel kolay okunabilir diline yaptığı göndermenin kolaylığı, 21. yüzyıl insanı açısından, düşünmeyi gerektiren nitelikli kitaplar yerine görsele eğilim olarak kabul edilebilir. "Resim, şiirden üstündür, resim kendisine ait ince düşüncelerle, tüm insan eserlerini geçer. Ruhun penceresi olarak adlandırılan göz merkezi duyunun, doğanın sonsuz eserlerinin en eksiksiz ve bolca taklit edilebileceği başlıca araçtır; kulak ise gözün gördüğü şeyleri duyarak, onur kazanan ikincisidir. Eğer siz, tarihçiler, şairler veya matematikçiler, şeyleri gözlemlenizle görmemiş olsaydınız, bunları yazılı olarak anlatamazdınız ve eğer siz, ey şair, bir hikâyeyi kaleminizle anlatırsanız, ressam fırçasıyla bunu daha kolay, daha basit bir bütünlükle ve anlaşılması daha az sıkıcı bir şekilde anlatabilir ve eğer resme aptal şiir dersenez; ressam da şiire kör resim diyebilir. Peki, şimdi hangisi daha kötü kusurdur? Kör olmak mı, yoksa aptal olmak mı? Şair kurgularını icat etmede ressam kadar özgür olsa da, bunlar insanlar için resimler kadar tatmin edici değildir çünkü şiir biçimleri, biçimleri, eylemleri ve yerleri kelimelerle betimleyebilse de, ressam bunları temsil etmek için biçimlerin gerçek benzerliğiyle ilgilenir. Şimdi bana gerçek insana hangisinin daha yakın olduğunu söyleyin; insanın adı mı yoksa, insanın imgesi mi? İnsanın adı farklı ülkelerde farklılık gösterir, ancak biçimi yalnızca ölümle değişir ve eğer şair duyuyu kulak aracılığıyla tatmin ediyorsa, ressam bunu daha değerli duyu olan gözle yapar, ancak bundan daha fazlasını söyleyemeyeceğim eğer iyi bir ressam bir savaşın öfkesini tasvir ediyorsa ve ikisi birlikte halkın önüne çıkarsa, seyircilerin çoğunun nerede duracağını, en çok neye dikkat edeceklerini, en çok övgüde bulunacaklarını ve hangisinin onları en çok tatmin edeceğini göreceksiniz. Şüphesiz resim çok daha anlaşılır ve güzel olduğundan çoğu kişiyi memnun edecektir. Tanrı'nın (Mesih) adını bir yere yazın ve karşısına onun resmini koyun hangisinin daha çok saygı göreceğini göreceksiniz. Resim doğanın tüm biçimlerini kendi içinde kapsarken, sizin elinizde biçim kadar evrensel olmayan sözcüklerden başka bir şey yoktur ve eğer temsilin etkileri varsa, biz de etkilerin temsiline sahibiz. Sevgilisine bir hanımın güzelliğini anlatan bir şair ve onu temsil eden bir ressamı alın ve aşık eleştirmeni hangi doğanın yönlendirdiğini göreceksiniz. Elbette kanıtın deneyimin hükmüne dayanmasına izin verilmelidir( arthistoryproject). Bir fetusun gelişim evrelerinde, duyu organlarının gelişim süreci öncelik sonralık ilişkilerine göre şöyledir: Dokunma, Tat, Koklama, İşitme Görme( exploringyourmind ). İşitme görme duyusundan önce gelmektedir. Geniş halk kitleleri için sözlü kültürün yazıya üstünlüğü olabileceği gibi, nitelikli uzun yazıları okuyup anlayabilmek, nitelikli insan yapısını da kapsar. Oysa düşünmekten uzaklaştırılan, uzun nitelikli okumalara katlanamayan 21. yy. insanı, günümüzde dijital alanlarından legal görünümle veya illegal yollarla elde edilen eğilimlerinin yaratılan tümüyle ticari kitapları eser olarak tüketmektedir. Özellikle roman türü olsa da bu akademik alana da içinde bulunulan yüzyıl üzerinden düşünülerek yayılabilecek bir duruştur. Ticari ürün olmalarının kökenleri eski de olsa telif hakları vb. gibi; içinde bulunulan yüzyılın dijital alanda sağladığı olanakların kötücül kullanılmasıyla legal görünümü, illegal veri trafiğinin kapital kazanımında getirdiği üstünlükler ve kolaylıklar, eliptik kürenin içinde bulunduğu andaki şartlar, alan üzerinde düşünürken, düşüncenin niteliğinde belirleyici olmak zorundadır. Klasik dönem okurlarının düşünceyle bağıni koparmamış bireyler olma ihtimalleri çoktur çünkü bu klasiklerin içeriği anda olduğu gibi, hesaplı, veri alanından beslenen, eyyamcı para kazanmayı bu şekilde erek etmeyen içeriklerden hareket etmemişlerdir. Tüm bunların hatırlatılma nedeni uzun, nitelikli okumalardan gelen insanlar 'düşünen insanlardır' ve bu insanları manipüle etmek, ve eyyamcı dijital reel psiko-semiyotik dil kullanımlarıyla avlamak çok daha zordur. Tüketici insan profili için hiç de istendik olmayan insan profillerini oluştururlar ve eleştirel, sorgulayıcı bakış açılarına sahip olmaları yüksek oranda olasıdır. Duyu organlarının gelişim ve olgunlaşma evrelerinin öncelik sonralık ilişkisi geleceğin araştırma konularından olabilir ama halk arasındaki sıkça kullanılan deyimlerden biri "görmeden inanmam,", "görsem de inanmam", "gözlerime inanmadım" gibi söylemlerin çokluğu konu gerçek ve görme eylemi olduğunda işitsel kaynaklara olan güven inancından daha çok olduğu gözlemlenebilir bir özellik olarak, sosyolojik bazda ortaya çıkmaktadır. Da Vinci'nin çok güzel ifadelerle ortaya koyduğu gibi insanlar için görmenin yazıya kıyasla etkileyicilik üzerinden evrensel, anında anlam bulma, anlam kazanma gibi bir üstünlüğü vardır ve bu işitsel, dokunsal ve belki tatsal alanlarda da geçerliliğini koruyabilecektir. Emojilerle küresel boyutta uzlaşmanın sağladığı andaki küremizde yakın bir gelecekte sadece görsellere dayalı göstergeler üzerinden uzlaşılan bir dil tasarımının doğuşunun başlangıç aşamaları olarak nitelendirilebilir. Görsel göstergelerin artık tüm doğal dillere girebileceği bir dünya çok ilginç olabilecektir doğrusu. Bir yandan görseller bir imgeyi hazır sunar, düşünmeyi gerektirmez ve kitleleri aynı imge üzerinden avlar, dolayısıyla düşündürür, bir başka söylemle manipüle eder. Görsel göstergeler hedefi

vurmada evrensel bir kolaylık sağlamaları yanı sıra aynı zamanda, fazla düşünmeyi de gerektirmezler, hızlı manipülasyonun, motivasyon yaratmanın kaynaklarıdır. Görsel göstergelerin evrenselliği konusundaki eğilim, mağara resimleriyle bağdaştırılabilir, matbaa yokken resim, görsel, görsel göstergeler vardı. Resim, matbaa yokken insanları motive, manipüle etme, güdüleme, cemaat toplama, etkileme, istedik bilgiyi yayma araçları olarak da kullanıldılar bir başka deyişle insanlığın genetik kültürel kodlarında olan bir birikimden de kaynaklanabilir bu eğilim. Klasik resimler yani doğadaki gibi resmedilen her şey ya da doğadaki benzerleriyle özdeşik resmedilen her şey insan, nesne, biçim, gözle görülür görülmez çözülebilen göstergeler arasında yerlerini aldılar ve bu yönleriyle evrenseldiler.

Unutulmamalıdır ki, insanın hikâye anlatıcılığı önce resimle başladı çünkü önce matbaa yoktu.

Dil kullanımlarındaki şu genel bilgi belki insanın doğası gereği bu duruma da uyarlanabilir: Genel yaygın dil kullanımına önce giren sözcüğün, kelimenin sonra girene oranla bir üstünlüğü söz konusudur. Bir başka deyişle, önce giren sözcük geniş kitleler tarafından daha çok benimsenir, akla gelir ve kullanılır. Tüm bunlar hiç düşünmeden, öncekinin sonrakine üstünlüğü üzerinden gerçekleşir. Ancak bilinçli olanlar, düşünce gelişimi üzerinde düşünenler, dille ilgili olanlar kullanımda tercih yapabilirler, toplumda buldukları sosyal yapılar da kullanım tercihlerini etkileyebilir.

Tüm bu bilgilerin ışığı altında kısaca özetlenirse,

21. yüzyıl insanın (Algül, 2018-Paris), düşünemeyen, dürtüleriyle hareket eden, yetişkin bir çocuk olarak tasarlandı ki, Algül Yetişkin Çocuk Teorisi olarak kullanıyorum, düşünen insan, kolayca her anlamda her alanda kolayca manipüle edilemeyen insan anlamına gelir. Hızla tüketmez, kolayca güdümlenip yönlendirilemez, haklarını bilir, özüne saygı duyar, karakterlidir. Oysa yeni dünya düzeni ve 21. yüzyıl hızla tüketen, kapital sonuçlu güdümlenmeler, demografik alanda mobile hâle getirebileceği, istediği dünya düzenini kurabileceği insan profilini tasarladı. Yetişkin çocuk insan, bu teori üzerinden görsel göstergelerin dilsel göstergelere olan üstünlükleri de tartışmaya açılabilir. Çocuklar için görsel göstergeler dilsel göstergelerden önce gelirler. Çocuklar üzerinde duyu organları üzerinden etkin olanlar sıralaması yapılırsa, önce müzik gelir, sonra görsel göstergeler, özellikle müzikle beraber devinim hâlindeki görsel göstergeler. Müziğin etkisi o kadar çoktur ki, çocuk, okumayı bilmese bir, etkilendiği müzik sırasında ekranda gördüğü tekrarlanan dilsel gösterge sözcüğünü, dışarıda görüp tanyabilir ve müzikle çekip aldığı şekliyle, harflere dökülebilir. Oysa bir yetişkin için müzik, reklamlar söz konusu ise, veya pek çok sunumda, bu bir enstrümental müzik konser değilse, müziğin etkisi arkada fon olarak kalacaktır. 21. Yüzyıl insanında Algül Yetişkin Çocuk Teorisine göre bu durumun değiştiği söylenmektedir. Müzik artık, hiçbir sunumda arkada fon değildir. 20. yüzyılda anımsanırsa sırf müziğinden dolayı satış yapan pop kültür şarkıcıları vardı ve Dijital Kölelik mağduru (Algül, 2020-2023) içinde yaşadığı toplumda maruz kaldığı bu duruma şiirlerinden bazılarını kanalize ettiği zaman deşifre olup, mahrem dijital alanların illegal talanını yapan bir yapılanmaya yakalandı. Yetişkin insan, düşünür ve anlam arayışında olur. Tüm Bunlardan çıkacak sonuç şu olabilir: 21. yüzyıl insanı artık hiç olmadığı kadar görseldir. Dilsel göstergelerden ziyade görsel göstergeler üzerinden daha kolay bir şekilde manipüle edilip, yönlendirilebilir. Gösterge sözcüğü, kendi dışında bir şeyi temsil eden, dolayısıyla temsil ettiği şeyin yerine geçebilecek olan her türlü nesne, biçim, olgu (Rıfat, 2019), ses, koku, doku, renk, içgörü, öngörü, altıncı his (Algül, 2020-2023) ezoterik yaklaşımlar ve teknoloji, tüm diğer bilim dallarının gelişimlerine katkı sunan, gelişimlerinden katkı alan bir biçimde grift ilişkiler halindedir. Dilsel ve görsel göstergeler bu makalenin konusu edilme nedenleri somur olmalarından kaynaklanmaktadır. Bir başka söylemle yazılı, görsel, dijital, reel yaşamda görme eylemi üzerinden yer alacaklardır. Ses göstergeleri darbelerin çok yapıldığı, üçüncü dünya ülkeleri veya gelişmekte olan ülkelerde görsel göstergelerden daha etkin olabilirler, bazıları kasıtlı olarak, toplumun genetik kodlarında yer alan korkulardan beslenenler olabileceği gibi, yeniden yapılandırılıp yaratılabilirler. Yeni korku manipülasyon alanları oluşturup sindirebilecek sese ait, işitsel göstergeler. Gülen örgütünü anımsayınız. Hepsi gitmiş olamaz herhalde, o ve benzeri kötücül yapılanmalar için kaynaklardır. Tabii onların saklı yaratıcılarının var olduğu ya da var olabileceği düşünülmelidir. Bakınız Potansiyel emsâl dijital kölelik vakası (Algül, 2023). Maddi, manevi, bu kadar karmaşık ilişkiler, sofistike ve hatta komplike ilişkiler silsilesine nereden vakıf olsun adı geçen kişiler. Pek çok projesi talan edilen günlükten, hatta bir siyasi parti gibi var oluşunun çoğu, Gülen'in dönüştüğü ve ününün her yere yayıldığı PR alanına malzeme edilen içerik, mahrem dijital alanları talanından gelmektedir. Böyle bir yapılanmanın dijital mahrem alanların talan olması ve hâlâ bu talanın devam etmesinin, devam etmesi isteğinin ne anlama geldiği gelecek zamanlarda anlaşılacaktır. İnsan faktörünün de birer görsel gösterge gibi (amiyâne tabirle gövde gösterisi yapmak, yaptırmak) olarak kullanılabilirdiği bu canlı, cansız görsel ve işitsel gösterge tasarımlarının anlam ve önemi anlaşılmalıdır.

## **Görsel Göstergelerin Dilsel Göstergelere Üstün Olduğu Tasarımın Öğeleri ve Bu Tasarımda Sözlü Kültürün Yeri**

Düşünmekten koparılan birey, Algül Yetişkin Çocuk Teorisi: Dürtüleriyle hareket eden, hiç olmadığı kadar görsel göstergelerden etkilenen, ritmik, devinimsel müzikle sergilenen görselleri bir çocuk gibi kapan, işitsel ve görsele eğilimli, iyi birer tüketici olarak kurgulanan insanın giderek geldiği son nokta, hem iyi bir tüketici hem her an mobiliteye tabii tutulabilecek biri, özlük haklarından iyice uzaklaşmış, eleştiri ve sorgu yeteneğini

kaybetmiş artık bu insan olmanın şartları ona bir lüks gibi görünmekte olan, günü sağ çıkarmaya çabalarken, tüketmekten de geri kalamayan birey profilini oluşturmaktadır. Bu profildeki bireyi veyâ geniş kitleleri her alanda her anlamda manipüle etmek, güdülemek çok kolaydır.

Bireyi ve geniş kitleleri görmenin yukarıdaki paragraflarda sıralanan üstünlerinin yanı sıra, bir de düşünmekten koparılmış, tüketici insan profiline uygun bir kurgunun ürünü olarak bakıldığında çünkü manipüle edilmesi çok daha kolaylaştırılmıştır; görsel göstergeler üzerinden manipüle edilmesi, istedik doğrultuda tutum ve tavır kazandırılması çok daha kolay gözükmektedir çünkü dilsel göstergeler bir şekilde düşünme eylemini bünyelerinde taşırlar ve görme eyleminin sonuçları gibi geneli kapsayacak ölçüde hesaplanabilir olmayabilir; oysa görmek hem inandırıcı olma niteliğini aktarılan kültürel toplumsal genetik koda barındırır hem dilsel göstergelerin hesaplanamayan çözümleyici bilgisine görür görmez çözümlenebilen özellikleriyle üstün gelirler.

Bu profildeki insana dilsel göstergelerin inşası ve dilsel göstergelerin inşasının sökümlündeki başarısının bile imgesel iz düşümlerinin görsel gösterge öngörüm ve ön görünümünün hedefi vurmadaki yetkin seçimlerinden kaynaklanabileceği gerçeği anlayabilene göz kırpmaktadır. Genel çoğunluğa yönelik tüketim üzerine ve her alanda istedik güdüleme ve manipülasyon etkisi ancak bu şekilde çok kolay yaratılabilir.

Tüm doğal dillerde, genel yaygın kullanıma önce giren sözcüğün, sonra giren sözcüğe üstünlüğü vardır. Bir başka söylemle önce giren sözcük, geniş kitlelerce kanıksanır ve genel yaygın kullanıma ondan sonra giren anlamdaş sözcükler üzerinde baskın bir karakter gösterir. Dillere ait bu özellik sözlü kültüre yansıtılabilir. Geniş kitleleri görür görmez avucuna alan Dijital-Reel Psiko-Semiyotik Dil Kullanımlarının özelliklerine bakıldığında, bilim alanının yaratıcısı olarak bunu rahatlıkla söyleyebiliyorum artık, sözlü kültürde var olanlardan üretilenlerin etkisi büyüktür. Dolayısıyla hedefin niteliğine göre Dijital-Reel Psiko-Semiyotik Dil kaynakları da farklılık gösterecek, çağrışım anlamlarının öncelik ve sonralık ilişkisiyle beraber, imgesel düşümleri bu kaynağa göre tasarım malzemesi edilirse, istedik başarıya ulaşmak kolaylaşacaktır.

## SONUÇ

Ses göstergelerini, dilsel ve görsel göstergeleri kullanarak bir toplum veya hedefteki birey ya da topluluklar, kısaca alınabilir ve 7/ 24 onlar fark etmeseler bile baskı manipülasyonu altında tutulabilirler. Bu yüzden geniş kitlelerin siyasi alanda kime oy verecekleri de önemlidir çünkü bu sefer halkın vergileriyle yapılan hazineyi halkı baskılamak üzere kullanacaklardır.

Eğer hedef çok önemliyse, bu toplum veya ticari değeri deşifre olmuş bir kaynak, altın yumurtlayan kazsa, bir başka deyişle hayatlar yücelten, yeni dünya düzenine katkı sunan bir memba olabilir, eğer öyle ise dilsel, görsel, işitsel göstergelerin tasarımında hiçbir donanım unsurundan taviz verilemeyeceği, insan faktörü dahil. Bakınız: (Algül, 2020-2023 deneyimlenebilir. Dijital Kölelik kapanı, hedefe ait mahrem, bir başka söylemle bireye özel, dijital alanların tam hâkimiyetine sahip olunduğunu yaşatan bir insanlık suçudur. Hem talan eden hem baskılayan; sürdürülebilir kılmak ve sindirmek için reel yaşam alanlarını da tüm bu göstergelerin tasarımı üzerinden kontrol altında tutabilir. Kaynak, kaz olarak ömürlük tutulsun ve talan devam etsin. Tüm bunların göstergelerin tasarımı üzerinden yapılabileceğini bilmek önemlidir.

Böyle bir durumda yapılacak şey, baskı unsuru olarak yaratılmış görsel göstergeler dahil, örneğin yaratılmış uyduruk hukuk davası üzerinden, yaratan kişinin, dijital köle meselâ her hak dediğinde, ya da dijital kölelik vakasında olduğu gibi daha makalesini yazma aşamasında hareket geçer ve aracını gelir tam önüne gelecek şekilde çeker. Kötücül yapılanmaya bağlı insanlar 7/24 bu şekilde mobil halde çalışarak, hepsi birer gösterge olan dijital reel psiko-semiyotik dil kullanımlarıyla son ana kadar baskılamaya devam edebilirler ki, böyle bir yapılanmada edeceklerdir: İnsan faktörünü, araçları, plakaları bu şekilde kullanabilirler. Ters köşe hallerle KHK( ya tutarsa deyip) plakalarıyla sarabilirler meselâ. 7/24 işitsel göstergelerle hedefi çevreleyip, bir de devletin imkânlarını kullanıp hattı genişletebilirler, bu bilim dalı, buluş ve tanımlamalar, bu tür yapılanmalara karşı geniş halk kitlelerini uyarmak üzere, yapılanlar çözümlenerek var edilmiştir.

Toplum, topluluk ya da hedefteki birey aldırma yapması gerekeni yapmalıdır. Aksi takdirde bu türdeki kötücül bir yapılanmadan kurtulmanın bir yolu yoktur. Tüm bunlar size işitsel, görsel göstergelerin kötücül tasarımının nasıl hayat alıcı olabileceğini göstermelidir. Özel bireye ait dijital alanların illegal talanından elde edilen psikolojik çözümler, kumpas düzeneğinin parçası olarak yaratılan baskı unsuru göstergeler, toplumun genetik kültüründe yer alan baskı unsuru olabilecek korkular, psikolojik çözümler, bu türdeki kötücül yapılanmaların kaynaklardır. Maalesef bu bilim dalı yaratımı, buluşlar ve makaleler bir yandan bu türdeki kötücül yapılanmaların yaptıklarını çözümlerken aynı zamanda onlara katkı da sunabilmektedir ve bu unutulmamalıdır. Bir başka deyişle oynadıkları alanı bu bilgilerle genişletebilecekleri görüşü önemlidir. Örneğin: İşitsel göstergelere yüklenmeleri, plaka üzerine eğilmeleri ve daha fazlası bu çalışmaların ve hâlâ talan etmekten çekinmedikleri, ekranının önümüzde baskısını, düşünün, kamuya açık veyâ mahrem alanlarınızda, yazılan her şeyi çalıp kullanmaya devam ettiklerini veya edebilecekleri de anlaşılmalıdır. Göstergelerin kötücül kullanımlara örneklerdir ve her birinin yakın gelecekte ispat edilebilme durumları söz konusudur. Maalesef iyicil örnekler bu yüzyıl için lüks olduğundan içinde yaşanan yüzyıla uyarı ve bilgi kaynağı olma ereği güdülen bu makaleler, bu bağlamda dikkate alınmalıdırlar.

İşitme duyu organının da görme duyu organından önce olgunlaşması bu bağlamda devreye girebilir ama unutulmamalıdır ki, gerçek, eğitime dönüşmüş öğretim bilgisine, kendi yapısına hakim olan bireyler tüm bu baskı, manipüle araçlarını daha görür görmez çezecekleridir.

Buluşum, bilim alanı tanımlamalarım, Psiko-Semiyotik İletişim, Dijital Reel Psiko-Semiyotik Dil Kullanımları, Algül Dijital Reel Manuel Psiko-Semiyotik Dil Kullanımı Ayırıştırıcıları bu bilincin geniş kitlelere anlaşılmasına ve içselleştirilmesine yönelik bilgi aktarmaya çalışmaktadır.

Tüm bu görsel ve işitsel göstergelerin tasarımında kaynak olarak bilinçdışımız(Mlodinov, 2013), bir başka söylemle yaşantılar sonucunda, elde edilen bir şekilde legal görünümü( dijital izin takibiyle ve daha fazlasıyla elde edilmiş veriler) ya da potansiyel emsâl dijital kölelik mahrem dijital alanlarının talanından elde edilmiş veriler üzerinden veyâ tezgâh, kumpas sonucu yaratılmış, işitsel ve görsel baskı göstergeleri olabilirler.

# DİJİTAL REEL PSİKO-SEMIYOTİK DİL KULLANIMLARI YAPILANDIRILIRKEN VE YAPIM SÖKÜLÜRKEN KULLANILACAK OLAN TEKNİK VE YÖNTEMLER NELERDİR? TASARIMDA BAŞARIYI SAĞLAYAN TEMEL UNSUR NEDİR?

Doç. Dr. Nevin ALGÜL

Marmara Üniversitesi, Radyo, Televizyon ve Sinema Bölümü, Türkiye  
algulnevin@gmail.com

## ÖZET

Dilsel ve görsel göstergelerin Dijital-Reel Psiko-Semiyotik Dil Kullanımları olarak yapılandırırken bir başka söylemle henüz dilsel ve görsel göstergeler tasarım aşamasındayken hangi teknik ve yöntemler kullanılarak yapılandırılırlar?

Göstergebilim içinde yer alan metodolojilerden hangilerinden faydalanır, yeni yöntem ve teknikleri nelerdir? Elbette bilim alanının yaratıcısı olarak tüm makalemin içeriği bilimsel tartışmalara açık savlarımıza dayandırılacaktır.

**Anahtar Sözcükler:** Dijital, Reel, Psiko-Semiyotik, Metodolojik, Deduktif, Katman

## GİRİŞ

Çalışmalarında, yarattığım bilim dalı olan Dijital- Reel Psiko-Semiyotik Dil Kullanımlarını bir yandan geliştirmeye çalışırken ve gündelik yaşamlarında maruz kaldıkları enerji alanlarını değiştirip, onları manipüle eden nedenlerin kaynaklarını aktarmaya çalışırken bir yandan da derinden etkileyen, çok vurucu örneklerin Dijital-Reel Psiko-Semiyotik Dil Kullanımı tasarımı üzerinde duruyorum çünkü Psiko-Semiyotik üst başlıkla tanımladığım, Dijital-Reel Psiko-Semiyotik Dil Kullanımları ve ALGÜL Dijital-Reel Manuel Psiko-Semiyotik Dil Kullanımı Ayrıştırıcılarını altında topladığım yaratımlarımla nasıl yapılabileceklerini çalışmalarında göstermeye çabalıyorum.

Genel çoğunluk içinde ne kadar çok kişiye ulaşırsa bu alanda, istedik anlamda bir başka söylemle kendisi için tasarlanan manipülatif Psiko-Semiyotik Dil Kullanımlarını görebilir ve tutum ve tavırlarını manipülasyona uğramadan kendi bilinci etrafında tutabilir. Başka bir deyişle düşünce oluşumu takibini yapabilmelerini, dolayısıyla kendilerini harekete geçiren, manipüle eden, güdümlenen, sürece yönelik bilgi sahibi olmalarını sağlamak ve aynı zamanda tutum ve tavırlarını buna göre ayarlamak üzere düşünmeye sevk etmek üzerine kuruludur. Bu paragrafın bir bölümü aynı konunun başka bir örnek çalışmasını içeren makalemde alınmıştır(Algül, 2023).

Göstergebilimin doğduğu ve yeşerdiği topraklarda çünkü bu kültürü topluma kazandırmaya yönelik akademik geleneğe dönüşen etkinlikler var; bir hafta süreyle senelerce tekrarlanan Bknz. ( Rıfat, 2009), semiyotik kültür olduğu düşünülebilir. Göstergebilimin doğmadığı, bu bilime geç uyanan, bilimle tanışsa da tam anlamını koyamayan toplumlar daha başlangıçta semiyotik kültür açısından zayıf ya da anlamından uzak görülebilirler. Bilim herhalde eliptik küreye de olmak üzere önce doğduğunuz ortama, topluma karşı sorumluluk almakla başlar ve adı var kendi yok, halk deyimiyle ismi var cismi yok, etkisi yok durumunda değerlendirilebilir. Üçüncü dünya ülkeleri böyle bir bilim dalından hiç haberdar olmayabilir ve dolayısıyla çok kolay av, hedef hâline gelebilirler.

Gelişmekte olan ülkelerde bile Göstergebilimin içeriğine ait tanımlamalar akademisyenler arasında bile içselleştirilememiş olunabilir. ‘Gösterge’ dendiğinde sadece görsel göstergelerin anlaşıldığı deneyimlenebilir. Oya tüm doğal diller de birer göstergedirler. Bunun nedenlerinden biri bilim dalı kurulurken topluma hazırlama çalışması yapılmaması, bir diğeri en azından ad seçimi aşamasında çağrışım anlamları alanı üzerinden hareket edilmemesi. Sözcük Fransız’dan alınmıştır ve Fransızca’sında (Rıfat, 2009)semiyolojiyle beraber semantik anlam da bulunur. Zaten ben de buluş ve bilim dalımda bu sözcüğü Semiyotik’i kullanıyorum ama kendi yaratımım olan; ön çalışmaya ihtiyaç duyan sözcüklerim de var(Algül, 2023).

Toplumsal belleklerinde genel yaygın bir biçimde göstergebilim kültürü olmayan toplumlarda bu tür çalışmaların önemi ve zorluğu ortaya çıkmaktadır ve bu özellikleri taşıyan toplumlar, semiyoloji, semiyotik kültür açısından geçmiş, köklü bir tarihe sahip olan kültürel toplulukların avı haline kolayca gelebilmektedirler. Hele bir de o topluma dair gözlemleri on ikiden vuran bir kaynağa denk gelmişlerse ki, dijital çağda artık bu nicedir çok kolay, bu gözlemleri sahibinin istemi dışında kullanıp; bakınız ‘Dijital Kölelik’ vakası(Algül, 2020-2023), istediği kazancı, hareketi, manipülatif etkiyi sağlayabilirler. Tüm bunları Dijital-Reel Psiko-Semiyotik Dil Kullanımlarıyla yapmaktadırlar. Anımsayınız, ben bana yapılanı çözümlenerek alanı tanımladım. Kullanılan bu dille enerji alanını etkiliyor, istedik doğrultuda değiştirip dönüştürmeyi hedefliyor. Bundan dolayı sürekli tekrarlayan Dijital-Reel Psiko-Semiyotik Dil Kullanımları gelecekte o çevreyi yöneten siyasi iktidarın sorumluluğu altında tutulması gereken alanlar olacaklardır. Bu bilinç geliştikçe, Dijital-Reel Psiko-Semiyotik Dil Kullanımlarının kötücül bilgisine sahip olan, ve yönetimi altındakileri bu dille baskı altında tutan erkler sorumlu tutulacaklardır. Böylelikle bu şekilde çalışan kötücül yapılanmaların; bu yapılanmalarla ilgisi olan, ilgisi olabilecek siyasilerin de önüne geçilecektir. Özellikle bizim gibi ülkelerde artık meydanı çok boş bulup değneksiz gezme dönemleri sona erecektir.

Bu makalede çok etkin ve yetkin, çok başarılı Dijital-Reel Psiko-Semiyotik Dil Kullanımlarının tasarım aşamasını konu edindim çünkü tasarımın basamaklarını görmek, semiyoloji ve semantik bilginin içselleşmesini sağlayabilir; böylelikle yapım, yaratım aşaması bilgileri, maruz kalındığında çözüm üretme bilgilerini beraberinde taşıyabilir görüşünü taşıyarak; konu ediniyorum. Tüm yapım ve yapı bozucu eylemlerin hareket noktası, hedefin belleğidir, kültürel kodudur, çözümlenen halet-i ruhiyesi, bir başka söylemle psikolojisidir. Eğer hedef toplumsa toplumsal belleğidir. Dijital ortamlarda bir şekilde ticari değer çok fazla olan bireyler deşifre olduğunda da aynı unsurlar kullanılarak hedef haline ömürlük sömürü kaynakları olarak getirilebilirler, içinde bulunulan dijital imkânlar ve semantik, semiyolojik, enerji alanını yönetim kültürünü içselleştirmiş, bu alanda kendine ekip kurmuş, kötücül yapılanmalar için Dijital-Reel Psiko-Semiyotik Dil Kullanımlarıyla tüm bunları organize etmek ve yapmak hiç de zor değildir. Hedefin fiziksel çevresini kontrol altına almakla ilgilidir ve Dijital-Reel Psiko-Semiyotik Dil Kullanımlarıyla tüm hayatını istedik doğrultuda, sömürü kaynağı olarak tüketmesine kolayca neden olabilir, bu alan o kadar önemlidir. Bakınız ‘Dijital Kölelik’ vakası(Algül, 2020-2023).

Bu durumda akla ilk gelen sorular, hangi toplumlar yoğun bir şekilde semiyoloji ve semantik kültürün manipülatif etkisinden haberdardır. Bir başka söylemle hangi toplumların, toplumsal belleklerinde bu bilgi vardır. Tabii manipülasyon sözcüğü bünyesinde ne taşır? Eylem, değil mi? Bu eylem enerjiyi değiştirerek, kontrol altına alarak yapılır. Enerji değişimi de Dijital-Reel Psiko-Semiyotik Dil Kullanımlarıyla gerçekleştirilir. Bu yüzden hedefin fiziksel çevresinin, anlamlı ötekilerinin ve ötekilerinin kötücül yapılanmaya bağlı kişiler olması veya bu kötücül yapılanmaya bağlı kişilerce hedefi etkileyecek şekilde manipüle edilmesi gerekir. İlk soruya geri dönersek eğer, bu bilgiye sahip olan toplumlar kimlerdir? Bunun cevabı size çok şey öğretir ve beraberinde Ezoterik bilgiyi de getirir ve tüm bunları yapabilmek için bir insani hale sahip olmak gerekliliği de ortaya çıkar çünkü yaptığı kötülüklerden zerre kadar çekinmeyen bir duygu durumları var. “Para kazanmak istiyorsan duygularla para yönetemezsin” le açıklanamayacak bir ruh hali.

### **Psiko-Semiyotik Dil Kullanımı Ne Demektir? Kaça Ayrılır?**

“Psiko- Semiyotik Dil Kullanımı: Bireyin, bir kitlenin ya da toplumun tümünün duygu durum biçimlerini manipüle etmek üzere dilsel ya da görsel göstergelerin kasıtlı olarak birer kurmaca tasarım ürünü dizgesinde bilinçle yerleştirilme sürecini tanımlar. Tüm doğal diller birer göstergedirler ama 21. (Algül, 2015)Yüzyıl insanının hiç olmadığı kadar görsel olarak tasarlandığı teorime dayanarak, görsel göstergeler alanında yapılacak tasarımların daha başarılı olacağı söylenebilir. Öyle ki, sürekli yazıp söylediğim bir olgu: Dilsel göstergeler tasarlanırken bile, dilsel göstergelerin görsel çağrışım alanlarının tasarlanması beraberinde etki gücünün yüksekliğini getireceğinden göz ardı edilmemelidir çünkü teorime göre kaliteli, nitelikli okumalar düşünen insan anlamını taşımaktadır ve düşünen insan içinde bulunduğumuz yüzyıl ve gelecek yüzyıllar için istedik insan profili değildir. Düşünen insanlarla hop diye yeni bir dünya düzeni kurulamaz, istedik şekilde manipüle edilemez, güdümlenemez ve bu insanlar kolayca istedik doğrultuda yönetilemezler.

Başlangıçta Psiko-Semiyotik Dil Kullanımı var mıydı?

Sorusunun cevabını 2023’te kaleme aldığım diğer makalelerimden birinde detaylı olarak yer almaktadır. İnsanlıkla beraber var olduğunu düşünüyorum. Bir aileye baktığımızda dahi görebiliriz: Psiko-Semiyotik dilin istedik doğrultuda, genelde çıkarlar söz konusu olduğunda nasıl kullanılageldiğinin pek çok örnekleri görülebilir. Adını buluşlarımla ve yaratımın olan bilim dalıyla ben koymuş oldum.

Psiko-Semiyotik Dil Kullanımı dendiğinde Dijital Reel Psiko-Semiyotik Dil Kullanımları anlaşılmalıdır. Bir başka söylemle Psiko-Semiyotik Dil Kullanımı ikiye ayrılır.

1. Dijital Psiko-Semiyotik Dil Kullanımı(Algül, 2020-2023)
2. Reel Psiko-Semiyotik Dil Kullanımı.

Psiko-Semiyotik Dil Kullanımları teorik yöntemlerle göstergeçözüm( Göstergibilim Dalının kullandığı bir tanımlamadır) aşamalarına tabi tutulabileceği gibi, bana ait bir buluş olan ALGÜL Dijital Reel Psiko-Semiyotik Dil Kullanımları Ayrıştırıcıları (Algül, 2020) dijital aygıtlarıyla da yapılabilir.

Göstergeçözüm aşamalarının başlangıç noktası, ‘Gösterge’ sözcüğünün kendi dışında bir şeyi temsil eden dolayısıyla temsil ettiği şeyin yerine geçebilecek nitelikte olan her türlü biçim, nesne, olgu(Rıfat, 1998) hatırlayarak ve tüm bunlara ses, koku, doku, 6. his, görü, öngörü, içgörü ve çok daha fazlası, olduğunu bilerek, toplumsal bellekte var olan psiko-semiyotik dil kullanımlarının hedeflediği duygu alanlarını saptamak. Göstergeçözüm konusu olan Psiko-Semiyotik Dil Kullanımının hedeflediği duygu alanları hangileridir ki, şimdilik bu alanı genel olarak ikiye ayırmaktayım:

1. Bilinçaltı duygu alanları: İnsan türünden olma hasebiyle doğuşsal kazanımlar olarak herkeste ortak olan duygu durum biçimleri(ölüm, bağıntılı anlamlar, yok oluş, savaş, açlık, kıtlık, salgın, küresel salgın vb. gibi)
2. Bilinçdışı duygu alanları: Birey ve/veya toplum hatırlamasa bile yaşam süreçleri boyunca yaşantılarından edindikleri deneyimler sonucu oluşan duygu durum biçimleri. Bilinçaltı ve bilinçdışı tanımlamaları karışıklık içermekteydi ve bu karışıklık 2000’li yılların başlangıcında işin uzmanları tarafından giderildi. (Mlodinow; 2013).

Psiko-Semiyotik Dil Kullanımı üzerinden iletişim tasarımları yapıldığında etkileşim sonuçlarının bilinçaltına yönelik olanlarının başarısının örneklerini insanlık tarihine bakarak görülebilir. Bilinçdışına yönelik Psiko-

Semiyotik Dil Kullanımı tasarımı yaparken çok katmanlı anlamları oluşturmak için iğne oyası gibi işlemek, çoklu yöntem kullanmak gerekebilir. Bilinçaltına yönelik psiko-semiyotik dil kullanımları alında iletişim tasarımı yapmak hem daha kolay hem de etkileşim sonucu önceden kestirilebilir ve daha başarılı olabilecektir.

Toplumsal bellekte var olan psiko-semiyotik dil kullanımlarının göstergeçözüm aşamalarında Göstergebilim araçlarından faydalanılsa da onların çok üzerine çıkma zorunluluğunu bünyesinde taşır. Göstergebilimin etmenleri olan yapıbozucu eleştiri kuramını ve diyalojiyi(Rıfat, 2009) kendi bünyesine uygular ve üzerine çıkar; daha önce yazdığım gibi psiko-semiyotik dil kullanımı Göstergebilimden çok faydalanır ve bence onun da üzerine çıkıp bağımsızlığını ilan eder çünkü tam da yapılanı hedefine alıp onu çözmekte, ona ışık tutmaktadır.

Bilinçaltı ve bilinçdışı duyu alanlarının çözümlenmelerinde ALGÜL Psiko-Semiyotik Dil Kullanımı Ayrıştırıcısı (Algül, 2020) kullanılabilir.

Toplumda meydana gelen değişiklikler sonucunda, yazılı, görsel ve dijital mecrada yer alan haberlerin değiştirici dönüştürücü ve yok edici etkileri Psiko-Semiyotik Dil Kullanımları üzerinden tek tek çözümlenebilir ve geleceğin tasarımına yol gösterebilir.

Dijital Reel Psiko-Semiyotik Dil Kullanımları yoktan var edilebilecekleri gibi, var olanlar üzerinden de hareket edilebilir ve manipülasyon aracı haline dönüştürülebilirler. Kültürel kodlarda var olan uygun psiko-semiyotik motifler çekinik ya da baskın kılınabilir. Sahip olunan yazılı, görsel, dijital mecra alanlarında yapılacak yayın ve yayımlarla güçleri artırılabilir, değiştirilip dönüştürülebilir, öne alınıp, sona bırakılabilir ve hatta unutturulabilir. Toplumsal boyutta yapılabileceği gibi yeni dünya düzeni kapsamında küresel boyutta da yapılabilir(Algül,2023).

### Göstergeler üçe ayrılır:

1. **Dilsel Göstergeler:** Tüm doğal diller ve bu dillerden türetilecek, yaratıcı zekânın kapsama alanına girebilecek yeni yaklaşım ve kullanım biçimleri de dahil olmak üzere **dilsel göstergelerdir**; zamana ve yaratıcı zekâyâ endeksli olarak esneklik özelliğine sahip olabildikleri unutulmamalıdır; bu anlamda teknolojinin sunduğu ya da alanın teknolojiyi zorlayarak, teknoloji üzerinden elde ettiği veya edebileceği her türde, her türlü yenilik, dilsel göstergelere dahildir.

2. **Görsel Göstergeler:** Resim, fotoğraf, karikatür, renk, biçim, nesne

3. **İşitsel(Duyuşsal), Dokunsal, Tat Almayla İlgili ve Metaforik Göstergeler:** (Bu tanımlama da bana ait ve zamanla tüm bu söz öbeklerinin yerine, hepsini kapsayacak, genel çoğunluğa hiçbir anlam karmaşası yaratmadan ulaşabilecek başka bir söz ya da söz öbeği bulabilir veya üretebilirim ama şimdilik bu şekilde kullanmayı tercih ediyorum). Koku, Doku, Ses, Acı, Ekşi, Tatlı, Ezoterizm alanı, 6. his, içgörü, öngörü, vb. gibi

### Dijital Reel Psiko-Semiyotik Dil Kullanımları Yapılandırılırken. Ve Yapım Sökülürken Kullanılacak Olan Teknik ve Yöntemler Nelerdir? Tasarımda Başarıyı Sağlayan Temel Unsurlar Nelerdir?

Dijital-Reel Psiko-Semiyotik Dil Kullanımları örneklerinde yapı bozucu tavır öncelikle 'tümünden teke' gidim yöntemi gütmektir. Başlangıçta 'tüm' görülecek ve bu yönüyle, yani, tümünden teke gidim yönüyle aynı zamanda beynin dil öğrenme merkezinin çalışma prensibiyle( bu sebeple düşünce oluşumu süreciyle) Bakınız Noam Chomsky, le de ilgili olduğu gözden kaçırılmamalıdır. Pek çok Dijital-Reel Psiko-Semiyotik Dil Kullanımları dinamiğinin sağlamlasının da anadil de dahil diğer tüm doğal dillerin kazanımları süresince de 'doğru bir teknik' olarak, bir başka söylemle beynin dil öğrenme merkezinin çalışma prensibiyle uyumlu olduğu gerçeğini bilerek yapılacak işlemleri kolaylaştırır. Bu bilgi şu açıdan önemlidir, Dijital-Reel psiko-Semiyotik Dil Kullanımlarını soyma, yani gerçek anlamlarına erme, bir başka söylemle neyi temsil ettiklerini bulma eylemidir. Dolayısıyla Temsil ettikleri, yerine geçtikleri 'şeyin' niteliklerinin bir bir soyulması ve anlamlandırılması gerekmektedir. Başlangıçta bir bütün olarak bakılmazsa bu görülemez ki, bu da beynin dil öğrenme merkezinin çalışma prensipleriyle uyum halindedir. Burada bizim gibi toplumlarda başka bir sorun ortaya çıkar: Anadilin okur-yazarlığının öğretilme metodolojisinin önemi. Eğer bu metodolojisi beynin dil öğrenme merkezinin çalışma prensiplerine ters bir metodolojisiyle, Dijital-Reel Psiko-Semiyotik Dil Kullanımlarının yapı bozucu, ve yapım aşamaları da etkilenir. Bu çalışma prensibi şudur: Beynin dil öğrenme merkezi, tümünden gelimlidir, bir başka söylemle tümü tekten daha kolay algılar ve öğrenir. Daha da açıklarsak, konuşmayı öğrenmek gibidir; önce tüme maruz kalınmalıdır. Konuşma böyle öğrenilir, bir bebek anlamlı ötekilerinden sürekli tüm cümleler duyarak konuşmaya başlar. Arada bir söylenen aguuuu, guuuu ların bir önemi yoktur. Tekten tüme giden bir metodolojiyle aktarılan bir anadil okur-yazarlığı bilgisi tüm Psiko-Semiyotik İletişim alanındaki görüleri kökünden etkileyecektir. Bir başka söylemle böyle toplumlar, bu bilgiye sahip akılların kurduğu kötücül yapılanmalar için paha biçilmez kaftandır, istedikleri gibi at koşturulacak, boş bulunmuş, hazır meydanlardır.

'Tüm' görüldükten sonra tek, tek katmanlarına soyma işlemi başlamalıdır. Bu yöntem göstergebilim de göstergeler için de yapılan bir yöntemdir aynı zamanda. Böyle toplumlarda aslında çoğu gösterge göstergebilimin bildirişim gösterge bilimi alanına soktuğu gibidir aslında, benim için öyle örneğin, dilsel, görsel, işitsel, tat almayla ilgili, metaforik göstergeler, tümü görüp, temsil ettiği şeyin tüm niteliklerine indirgeyebiliyorum; başka bir söylemle

kendi dışlarında temsil ettikleri şeyin (Rıfat, 2009) tüm niteliklerine anında indirgeyebilmekteyim, katmanlarına soyabilmekteyim. Dolayısıyla toplumun geneli için katmanlarına soyulması gereken Dijital-Reel Psiko-Semiyotik Dil Kullanımları uzmanı için aynı özellikleri taşımaz. Özel bir eylem, araştırma gerektirmez. Beni zorlayan ve benim için görür görmez çözülmez olabilenler, topluma yönelik yapılmayanlar, yani, tüm bu kötücül yapılanmanın kurucularının üretimleri, hâlâ kafa karışıklığı ki, bu, Dijital-Reel Psiko-Semiyotik Dil Kullanımlarına maruz kalanların, maruz bırakıldıkları alanlarda kafa karışıklığı yaparak( yine manipülatif etkili Dijital-Reel Psiko-Semiyotik Dil Kullanımlarıyla yapılır bu) düşünmeyi bırakmalarındır; yapabilmektedir. Üzerinde çalışarak aşılabilir noktalar oldukları gözden kaçırılmamalıdır. Göstergebilimin, bildirişim gösterge bilimi olarak tanımladığı, görür görmez çözümlenen göstergeleri Dijital-Reel Psiko-Semiyotik Dil Kullanımları alanında **Belirgin Göstergeler** olarak tanımlıyorum. **Belirgin Göstergeler** bireysel ya da toplumsal olabilirler ama çözümleri kolay göstergelerdir ve uzmanı için daha başlangıçta çözümlenebilirler. Psiko-Semiyotik İletişim alanında göstergebilim dalında olduğu gibi bildirişim göstergebilimi tanımlaması yapılamaz çünkü her biri Psiko-Semiyotik İletişim alanına giren ve ancak uzmanı tarafından belirgin olabilen göstergelerdir bunlar.

Ne zaman olabilir?

Ancak Dijital-Reel Psiko-Semiyotik Dil Kullanımlarıyla, enerji alanlarının güdümlendiği bilgisi genele yayılıp, bu bilinç oluşturulursa, buna benzer bir tanımlama ve daha zorlu yapı bozuma giren örneklerden basitleri ayırmak için kullanılabilir ama **Bildirişim** tanımlaması kullanılamaz hem bu iki alanı ayırmak hem de aynı özellikleri taşımadıkları için, her birinin hedeflerinin farklı olmasından kaynaklanan nedenlerle kullanılamaz. Zaten toplumlar için bir gösterge **Belirgin** olduğu an Psiko etkisini yitirecektir ve bu yönleriyle de 'Bildirişim göstergebilimi' alanından ayrılırlar. Bu bilinmeli ve anlaşılmalıdır. Yaratımın olan Dijital-Reel Psiko-Semiyotik Dil Kullanımları , ALGÜL Dijital-Reel-Manuel Psiko-Semiyotik Dil Kullanımları Ayırıştırıcıları ve tüm bunları topladığım üst başlık olan Psiko-Semiyotik İletişim gelişmeye devam eden, üzerinde çalıştığım yaratımlarımdır, dolayısıyla bu makalemde ilk kez kullandığım **'Belirgin Psiko-Semiyotik İletişim'** tanımlamamı akademik tartışmaya da açmış bulunmaktayım.

Dijital-Reel Psiko-Semiyotik Dil Kullanımlarında yapı bozucu çözümlenmeleri aynen göstergebilim dalında anlamlama gösterge bilimi için gerekli olan (Rıfat, 2009) Varsayımsal- tümdengelimli(potetiko - dedüktif) yöntemleri kapsar ve aşmak üzere çalışır. Bu yöntemlerden varsayımsalların tek tek araştırılması gerekliliği ortadadır. **'Belirgin Psiko-Semiyotik İletişim'** bileşenlerinin birinde dahi oluşacak bir şüphe araştırmayı gerektirecektir; Psiko-Semiyotik İletişimin bu özelliği unutulmamalıdır. Dilsel, görsel, işitsel, metaforik( doku, ezoteri, 6. His vb. gibi) göstergelerin tek katmanla, kendi dışında temsil ettiği şeyin niteliğine indirgenememesi durumunda **Belirgin Olmayan Psiko-Semiyotik İletişim** söz konusudur ve katmanlarına tek tek ayırıştırılıp, anlamlandırılması gerekliliği ortaya çıkar. Burada her bir katmanın önce tüm olarak görülüp, tüm katmanlarına tek tek indirgenecek olması durumu söz konusudur. Daha başlangıçta tüm katmanları görülmelidir ki, tek bir katmanın olmaması demek çözümlerken başarısız olmak anlamına gelecektir. Başarı tüm katmanları görebilmekten geçer. Bu tanımlamalar henüz genel çoğunluk için uzak erişimli tanımlamalardır. Yaratığım bilim alanıyla, bu bilinç çoğalır, bir eğlence hâlini bile alabilecektir. Buradan bir TV yarışma programı çıkar mı? Çıkar, bakınız 'Potansiyel Emsâl Dijital Kölelik Vakası' (Algül, 2020-2023), buna mahrem dijital alanlarının talanında içerikten çalma denilmektedir.

Hedefin (toplum veya birey) niteliklerinin üstünlüğü yapım ve çözüm aşamalarıyla direkt ilişkilidir: Üstün niteliklere sahip toplumlarda: Sağlıklı düşünce oluşumu şartları gerçekleşmiş, semiyoloji, semantik: semiyotik, bilgisi içselleşmiş, göstergelerin her halini dilsel, görsel, işitsel, metaforik, toplumsal belleğinde taşıyan toplumlara veya bireylere yönelik Dijital-Reel Psiko-Semiyotik Dil Kullanımlarındaki tasarımların da niteliği, hedefin niteliğine endekslilik olarak yükselmek zorunda kalacaktır. Dijital-Reel Psiko-Semiyotik Dil Kullanımlarının yapım ve hatta sökülme aşamasında belirleyici olan hedefin sahip olduğu niteliklerdir.

Hedefin sahip olduğu niteliklerden biri de içinde bulunulan 21. yüzyıl için tasarlanan tüketici insan profilinin hiç olmadığı kadar görsel olmasıyla da bağlı olduğu söylenebilir. Zaten görsele eğilimli olduğu söylenebilecek insanevladı, tüketici insan prototipi için gerekli olan, düşünmeyi bıraktırmak, üzerine kurulu, nitelikli semantik alandan bilinçli olarak uzaklaştırılması eylemleriyle ki, bu eylemlerin bir kolu Dijital-Reel Psiko-Semiyotik Dil Kullanımlarıyla sağlanan, diğeri fazla zorlanmasınlar, yani niteliksiz Dijital-Reel Psiko-Semiyotik Dil Kullanımlarıyla güdümlenebilirler diye içi boşaltılan öğretim-egitim alanıyla desteklenilmektedir, bu unutulmamalıdır; görsel göstergelerin görülür görülmez sağladığı manipülatif etki, dilsel göstergelerin görülür görülmez sağladığı manipülatif etkiden çok daha fazladır ve bu etki aralığı dijitalleşmenin yaygınlaşması nedeniyle her geçen gün görsel göstergeler lehine artmaktadır. Bir başka ifadeyle, Psiko-Semiyotik İletişimde herhangi bir Dijital-Reel Psiko-Semiyotik Dil tasarımı için görsel göstergeler öncelikli olarak dikkate alınmak zorundadırlar. Öyle ki, dilsel göstergelerin inşasında ve sökülmesindeki başarı bile, alt-üst çağrışım anlamlarına ait imgelerin, zihindeki iz düşümlerinin birer görsel gösterge olarak hedeflenen psiko etkisini sağlamak üzere öncelik sonralık ilişkisine göre düzenlenmesi gerekliliği ortadadır. Daha tasarım aşamasının başlangıcında, dilsel göstergelerin ve onlara ait imgelerin ön görümlerinin önem dereceleri üzerinden öncelik sonralık ilişkisine göre,

çağrışım anlamları üzerinden hesaplanması, dilsel göstergelerin hedefi vurmadaki yetkin seçimlerinden kaynaklanabileceği gerçeği artık gözden kaçırılmayacak bir noktadadır.

## SONUÇ

Genel çoğunluk içinde ne kadar çok kişiye ulaşırsa bu alanda, istendik anlamda bir başka söylemle kendisi için tasarlanan manipülatif Psiko-Semiyotik Dil Kullanımlarını görebilir ve tutum ve tavırlarını manipülasyona uğramadan kendi bilinci etrafında tutabilir. Başka bir deyişle düşünce oluşumu takibini yapabilmelerini, dolayısıyla kendilerini aslında istemleri dışında harekete geçiren, manipüle eden, güdümleyen, sürece yönelik bilgi sahibi olmalarını sağlamak ve aynı zamanda tutum ve tavırlarını buna göre ayarlamak üzere düşünmeye sevk etmek konusuna odaklanmıştır.

Göstergebilimin doğduğu ve yeşerdiği topraklarda çünkü bu kültürü topluma kazandırmaya yönelik akademik geleneğe dönüşen etkinlikler var; bir hafta süreyle senelerce tekrarlanan ( Rıfat, 2009), tekrarlar yeni bilginin pekişmesini ve içselleştirilmesini sağlar, bu içselleştirme de genetik kültürel koda aktarılacak bir kültür oluşumuna neden olur, olabilir. Bunu semiyotik kültür olarak tanımlayabiliriz. Semiyotik kültürün olduğu toplumlara Psiko-Semiyotik İletişim bilgisini vermek ve aşlamak, içselleştirmelerini sağlamak, bu kültürün olmadığı toplumlara oranla çok ama çok daha kolaydır, aradaki binlerce yılı kapamak, her geçen senenin bu kültürel koda kazanımlarını bu kültürün genetik kodlarında hiç yer almadığı toplumlara kazandırmak asla kolay değildir. Birileri daha başlangıçta adetâ bayrak yarısını kazanmış gibidir çünkü bir de teknolojik gelişmelerle gelinen noktada ara iyice açılmıştır. Nerenin ucu toplanıp düzeltilebilir, çok bölünmüş, çok parçalanmış bir dünya halkından bahsediyoruz ve her parçalanmanın kökleri toplumsal bellekte yer almaktadır. Din, dil, ırk, küçük ölçekte etnisite, küçük dil grupları, bir toplumu ne kadar bölerse yönetme araçları için Dijital-Reel Psiko-Semiyotik Dil Kullanımlarına kaynak o denli çeşitlenecektir; o kadar çoğalacaktır ve bu bölünmenin etkisi binlerce yıllık bir toplumsal bellek havuzu oluşturmaktadır. İşte bu bölünmüş toplumsal bellekler havuzu tam da Psiko-Semiyotik İletişimin içselleştirildiği, adeta hemhal oldukları, ayrılamaz ikili, tek vücut halini buldukları kültürel yapılar için çoklu Psiko-Semiyotik Dil Kullanımı, istendik doğrultuda manipüle edebileceği bedavadan kaynak ve gerekirse kullanabileceği orduları anlamını taşır. Tüm insanlık hallerinin her birinin Psiko-Semiyotik İletişim için araçsallaştırılabileceği ve Dijital-Reel Psiko-Semiyotik Dil Kullanımı havuzuna dahil edilebilecekleri asla unutulmamalıdır. Unutulmaması gereken bir diğer husus da hepsinin üzerinden inanılmaz ölçüde para kazandıklarıdır; en azından bu anlamda kullanılabilmesi gerçeğine genel çoğunluk aymalıdır: Birdenbire “vayy sizi ‘köle’ etmişler diyenlerin, neden şimdi dedikleri araştırılmalıdır çünkü aynı kişilerin şimdi’ Dijital Köleleri’ var. Parayı çevirme ve döndürme yollarının kaynakları nice dir dijital alan üzerinden, talanla hatta ‘makalelerin yazarı’ gibi ‘Dijital Köle’ leri üzerinden dönmektedir. Öyle kazançlı ki, uyuşturucu sektöründen daha kazançlı olmasından ve henüz yasa dışılığı tanımlanmamış ş olmasından dolayı tercih konusu olacaklarını öngörüyorum. Özellikle bazı sektörlerden eğlence sektörüne geçiş olacağını öngörüyorum ki, bu sektörler de illegal dijital talandan faydalanan sektörler olmalarına rağmen bunu yapıyorlar ve yapacaklar ve diyorum ki, hiç heveslenmeyin çünkü ‘Dijital Kölelik’ tarihe geçecek ve hukukta emsal olarak yerini alacak, tüm bunların hesabını soracak yönetimler de var olacaklar.

Göstergebilimin doğmadığı, bu bilime geç uyanan, bilimle tanışsa da tam anlamını koyamayan toplumlar daha başlangıçta semiyotik kültür açısından zayıf ya da anlamından uzak görülebilirler. Bilim herhalde eliptik küreye de olmak üzere önce doğduğunuz ortama, topluma karşı sorumluluk almakla başlar ve adı var kendi yok, halk deyimiyle ismi var cismi yok, etkisi yok durumunda değerlendirilebilir. Üçüncü dünya ülkeleri böyle bir bilim dalından hiç haberdar olmayabilir ve dolayısıyla çok kolay av, hedef hâline gelebilirler.

Toplumsal belleklerinde genel yaygın bir biçimde göstergebilim kültürü olmayan toplumlarda bu tür çalışmaların önemi ve zorluğu ortaya çıkmaktadır ve bu özellikleri taşıyan toplumlar, semiyoloji, semiyotik kültür açısından geçmiş, köklü bir tarihe sahip olan kültürel toplulukların avı haline kolayca gelebilmektedirler. Hele bir de o topluma dair gözlemleri on ikiden vuran bir kaynağa denk gelmişlerse ki, dijital çağda artık bu nice dir çok kolay, bu gözlemleri sahibinin istemi dışında kullanıp; bakınız ‘Dijital Kölelik’ vakası (Algül, 2020-2023), istediği kazancı, hareketi, manipülatif etkiyi sağlayabilirler. Tüm bunları Dijital-Reel Psiko-Semiyotik Dil Kullanımlarıyla yapmaktadırlar. Anımsayınız, ben bana yapılanı çözerek alanı tanımladım. Kullanılan bu dille enerji alanını etkiliyor, istendik doğrultuda değiştirip dönüştürmeyi hedefliyor. Bundan dolayı sürekli tekrarlayan Dijital-Reel Psiko-Semiyotik Dil Kullanımları gelecekte o çevreyi yöneten siyasi iktidarın sorumluluğu altında tutulması gereken alanlar olacaklardır. Bu bilinç geliştikçe, Dijital-Reel Psiko-Semiyotik Dil Kullanımlarının kötücül bilgisine sahip olan, ve yönetimi altındakileri bu dille baskı altında tutan erkler sorumlu tutulacaklardır. Böylelikle bu şekilde çalışan kötücül yapılanmaların; bu yapılanmalarla ilgisi olan, ilgisi olabilecek siyasilerin de önüne geçilecektir. Özellikle bizim gibi ülkelerde artık meydanı çok boş bulup değneksiz gezme dönemleri sona erecektir.

Sağlıklı bir toplum için anında Dijital-Reel Psiko-Semiyotik Dil Kullanımlarının görülmesi gerekir. Siyasi partilerin bu alanda ip oynatan kötücül yapılanmalarla ilgili olabilecekleri içgörüsü toplumda yaratılmalıdır. Zaten semiyotik kültür oluşturulursa bu ayırma kendileri de girebilirler ve bu durumda Psiko-Semiyotik İletişim Dilini

ısrarla, sürekli kullanan siyasi partilerin bir geleceği olmaz ama görünen köy, gelişmekte olan veya üçüncü dünya ülkeleri denilen ülkelerin siyasi ortamlarının bu tür bağlantılardan uzakta durmadıkları noktasıdır ki, ayrıca kolaylıkla Psiko-Semiyotik İletişim dilini ayırmak binlerce yıllık bir kültürel genetik koda da ihtiyaç duyar ve küresel boyutta gelişmiş ülkeler de dahil, bu alan o kadar karmaşık hâle getirildi ki, özellikle sağlık ve savaş alanındaki korkuları manipüle ederek, çoğu noktada küresel olarak Psiko-Semiyotik İletişim tasarımlarına avlanabilmektedirler. Oyun kurucuların bu işlerin ileri düzey uzmanları oldukları gerçeği göz ardı edilmemelidir.

# DİJİTAL REEL PSİKO-SEMİYOTİK DİL KULLANIMLARINI CANLI TUTMANIN YOLLARI NELERDİR? SÖZLÜ KÜLTÜRLE İLİŞKİSİ VE TEHLİKELERİ

**Doç. Dr. Nevin ALGÜL**

Marmara Üniversitesi, Radyo, Televizyon ve Sinema Bölümü, Türkiye  
algulnevin@gmail.com

## ÖZET

Dijital- Reel Psiko-Semiyotik Dil Kullanımları tüm doğal dillerin özelliklerini bünyelerinde taşırlar. Zaten onlardan doğmuşlardır. Dolayısıyla, zamanla anlam kaymaları, kaybolmaları, aşınmaları, anlamın yalama olması gibi ve daha fazlasını yaşayabilirler. Tüm doğal diller için var olan devingen yaşam döngüsü Dijital -Reel Psiko-Semiyotik Dil Kullanımlarına ait her küçük birim için de vardır, geçerlidir. Hedef bir toplumun tümü olduğunda Dijital-Reel Psiko-Semiyotik Dil kullanımlarının başarısının artık 'sözlü kültürden' geldiğine inanmaktayım. Bu durumlarda var olan Dijital-Reel Psiko-Semiyotik Dil Kullanımlarını canlandırmanın yolları kendi deneyimlerime de endeksli olarak gelişirken, 'Yazılı Kültür' üzerindeki dominantlığı ve kaynakları üzerinde durulmuştur. Bazen Dijital -Reel Psiko-Semiyotik Dil Kullanımlarına ait en küçük birimi, sözcük ya da sözcük öbeklerini, hatta basit ya da komplike bir cümleyi devingen yaşam döngüsünden çıkarmak da gerekebilir ve bu da bir yöntemdir. Çıkarılanların yerine var olan başka dil yapılarının sokulabilmesi veya andaki hedefin ruhunu istedik doğrultuda kuşatmaya yönelik yeni sözcükler yaratmak vb. gibi,....

**Anahtar Sözcükler:** Psiko-Semiyotik, Dijital, Reel, Sözlü Kültür

## GİRİŞ

Psiko-Semiyotik İletişim Dili tüm doğal dillerin bünyelerinde barındırdığı özelliklere, tüm doğal dillerden türemiş olan düşün ve yazın dünyasına ait saptanmış, formüle dökülmüş olgulara sahiptirler. Yaşayan ya da ölü dillerin tüm kaynaklarını kullanır, istediğini yeniden genel yaygın kullanıma sokabilir, istediğini genel yaygın dil kullanımlarından kaldıracaktır, bir başka söylemle tüm doğal dillerin, hatta ölü dilleri kaynak olarak kullanabilir. Doğal dilleri kullanarak üretilmiş her ürün onun kaynağı olabilir: Dolayısıyla Psiko-Semiyotik İletişimi canlı tutmanın yollarına, bu iletişim için özel olarak üretilecek yollar dışında tüm yukarıda bahsi geçen alana dahil roman türünde edebi akımlara ait olan özellikler, iç konuşmanın özellikleri vb. gibi dil, düşünce, yazın, düşün, görsel, dilsel göstergeleri, dilsel göstergelerle yapılacak her tür görselleştirme oyununa açıktır ve tüm bu alanı Dijital-Reel Psiko-Semiyotik Dil Kullanımını canlandırma sahası olarak kullanabilir.

Psiko-Semiyotik İletişimin kullandığı kaynaklara, insan doğasına ait her şey dahildir, sadece insan türünde doğmakla sahip olunan, her insanda aynı olan özellikler, bilinçaltı olarak tanımlandı; farkında olunsun ya da olunmasın yaşantılarla, bir başka söylemle deneyimlerle elde edilen unsurlar ki, bu alan 2000'li yılların başında birbirinden iyice ayrıldı, bilinçaltı ve bilinçdışı tanımlaması netleştirildi; tutum tavır kastedilmektedir veya alanından gelir (Mlodinow, 2013)). Birey, bir olay karşısında neden öyle davrandığını bilemeyebilir ama geçmişte yaşadığı unuttuğu veya unutmadığı deneyimler, onun bu tutum ve tavrına neden olabilirler ve tutum- tavra neden olan bilinçaltı değil, yaşantılar sonucunda elde edilen deneyimdir. Psiko-Semiyotik İletişim bu alanı da öngörü, içgörü, olasılıklar, istatistikî bilgiler vb. gibi. hesaplanabilirliğe açar. Psiko-Semiyotik İletişim Dili, diller zaten matematikle ilgili olsa da en çok her tür hesaplamanın yapıldığı, buna 6. his dahildir, her tür matematiğin kullanılması gereken bir alandır. Psiko-Semiyotik İletişim Dili: Yaratımın olan Dijital-Reel Psiko-Semiyotik Dil Kullanımlarını topladığım üst başlığımdır (Algül, 2020-2023) ve bu bağlamda ALGÜL Dijital-Reel-Manuel Psiko-Semiyotik Dil Kullanımları Ayrıştırıcılarına (Algül, 2020-2023) bakılabilir. Dijital-Reel Psiko-Semiyotik bir dil kullanımı örneğini bileşenlerine başarıyla ayırabilmek demek, yaratırken de başarıyı yakalamada yardımcı olabilecek bir katkı olarak görülmelidir.

O halde hiçbir dilsel ya da görsel göstergenin hesapsız kurgulanmadığı Dijital-Reel Psiko-Semiyotik Dil yapılanmalarının; bir başka söylemle tesadüfün, 'tesadüf tesadüftür' olarak yer aldığı Dijital-Reel Psiko-Semiyotik Dil Kullanımı tasarımlarımda roman türü alanından nasıl yararlanabildiğine bir örnek verilecek olursa, Jameson'un söyleminden faydalanabiliriz: Jameson roman türlerini ideolojilerin biçimlendirdiği, sosyo-sembolik mesajlar olarak görülmesini önerir ve bu biçimler(tür biçimleri) yazardan yazara ve dönemden döneme devrolurken içerikleri de toplumsal ve kültürel bağlamlara göre değişir (Parla, 2009). Dijital-Reel Psiko-Semiyotik Dil Kullanımların ait en küçük bir birimi tasarlarlarken, roman türleri de dahil olmak üzere yazın, düşün, sözlü kültür dünyasına, halk kültürü, bir topluma, hatta küremize, evrene ait her türlü yazılı sözlü, sözsüz( sonsuz görseller alanı) her tür bilgi, henüz çoğunluk tarafından bilinmeyen her şey birer kaynak olarak kullanılır ve tüm bu kaynakların üzerine hedefin nitelikleri katılarak, hesaplı hareket edilir; küresel boyutta andaki zamana göre yeterli birikime sahip, gözlem yeteneği güçlü, içgörü ve öngörülerini daha başlangıçta hedefi bulan kişiler için bu kaynakların her biri, dilsel veya görsel göstergeler alanında yapılacak tasarımların sağlamlasının yapılacağı görevi üstlenebilir ki, bu daha tasarımın başlangıcında adetâ otomatik olarak gerçekleştirilebilir.

## Dijital-Reel Psiko-Semiyotik Dil Kullanımlarını Canlı Tutmanın Yolları ve Sözlü Kültür

“Görme alanı bana, her zaman arkeolojik bir kazı sahasıyla karşılaştırılabilir bir şey gibi gelmiştir.” Paul Virilio ( Crary, 2010)

Doğa denince, nesnelerin görülebilir yüzeyi anlaşılırsa, sanat yapıtı, bağımsız bir organizma olarak doğanın yanındadır(Tunalı, 1993). Dijital-Reel Psiko-Semiyotik Dil Kullanımlarına yukarıdaki paragrafta yer alan tüm bu kaynakları kullanır ama ona kaynak olan her şey , kendi doğasından, doğal tanımlamasından: Açıklayıcı bilgi veyâ sözlük bilgisinden çıkar, genel yaygın kullanımdaki alt-üst çağrışım anlamlarına yabancılaşır, onlardan tümüyle bağımsızlaşır ve başlı başına yepyeni anlamlar yüklenirler, bir başka söylemle kendi dışında, bunu açarsak - görüldüğü şey, açıklayıcı bilgisi, sözlük bilgisi-bir şeyin yerine geçer, dolayısıyla yerine geçtiği şeyi, temsil edebilecek nitelikte olan her çeşit biçim, nesne, olgu(Rıfat, 2009), bu alanın, bir başka ifadeyle, dilsel ve görsel göstergelerin kendileri dışında nelerin yerine geçebilecekleri, onları temsil edebilecek nitelikte olabilecekleri alanların netleşmesi, genel çoğunluğun Dijital-Reel Psiko-Semiyotik Dil Kullanımlarını ayırt edebilmeleri için bir gereklilik olarak görüyorum ve kitlelerin maruz kaldıkları Psiko-Semiyotik İletişim: Dijital-Reel Psiko-Semiyotik Dil Kullanımları tasarımlarını anlayabilmeleri ve anlamlandırabilmelerinde kolaylık sağlayabileceğine karar verdiğim için bu alanın netleşmesini gerektiğini düşünüyorum. Bu yüzden,

**Göstergeler (şimdilik, bu alan değişken ve bu değişkenlik öngörü oluşumu için vurgulanmalı) üçe ayrılır:**

1. **Dilsel Göstergeler:** Tüm doğal diller ve bu dillerden türetilen, yaratıcı zekânın kapsama alanına girebilecek yeni yaklaşım ve kullanım biçimleri de dahil olmak üzere *dilsel göstergelerdir*; zamana ve yaratıcı zekâyâ endeksli olarak esneklik özelliğine sahip olabildikleri unutulmamalıdır; bu anlamda teknolojinin sunduğu ya da alanın teknolojiyi zorlayarak, teknoloji üzerinden elde ettiği veya edebileceği her türde, her türlü yenilik, dilsel göstergelere dahildir.

2. **Görsel Göstergeler:** Resim, fotoğraf, karikatür, renk, biçim, nesne

3. **İşitsel(Duyuşsal), Dokunsal, Tat Almayla İlgili ve Metaforik Göstergeler:** (Bu tanımlama da bana ait ve zamanla tüm bu söz öbeklerinin yerine, hepsini kapsayacak, genel çoğunluğa hiçbir anlam karmaşası yaratmadan ulaşabilecek başka bir söz ya da söz öbeği bulabilir veya üretebilirim ama şimdilik bu şekilde kullanmayı tercih ediyorum). Koku, Doku, Ses, Acı, Ekşi, Tatlı, Ezoterizm alanı, 6. his, içgörü, öngörü, vb. gibi. Demek ki, göstergeler alanı, hedefini avuca alacak, onu etkileyip manipüle edip, güdümlenecek, yönlendirecek, içinde bulunduğu duygu durum biçimini hedeflenen, istedik doğrultuda değiştirecek eşsiz ve biricik, hedefe endekslenmiş öznel, nacak hedef için anlamlı olan, olabilecek öznel anlamlar taşırlar. Dijital-Reel psiko-Semiyotik Dil Kullanımlarının yüklendiği görev hedefin psikolojisini etkilemektir, bir başka söylemle içinde bulunduğu enerji hedef alınır ve kullanılan dilsel-görsel göstergelerle bu enerji istedik doğrultuda değiştirilir. Bir örnekle: Dijital kölelikten kurtulmaya çalışan biri, ona yapılan her şeyle kamu önüne çıkacak bir akademik çalışma hazırlığındayken, ona, egemen veya değil siyasi erkten gelen ve içerik olarak bir kamu çalışması olduğunu hatırlatan e-posta, üstelik aynı zamanda anda üzerinde çalıştığı içerikle benzeş bir kısaltmayı da içeriyorsa ve bu tesadüflerin sayısı: Tesadüf tesadüftür olmuştur; sözün nüvesi, siyasi erkler de kullanılarak hedef alındığını tespit eden ve neye uğradığını bilimle çözüp, bilimsel veriye döken ‘Dijital Köle’nin içinde olduğu enerjiyi kötücül anlamda etkileyip, dönüştürecek bir gösterge halini alır ki, zaten bu şekilde hedefe alınan bir ‘Dijital Köle’nin çembere alındığı yani Dijital-Reel Psiko-Semiyotik Dil Kullanımlarının araçlarıyla kontrol altında tutulabileceği, kutulandığı fiziksel çevreden çıkamaması için maddi manevi şartlarla örülmüş olduğu düşünülmesi gereken ‘Dijital Köle’nin tüm çalışmalarını enerjisini dağıtacak ‘Dikkat Dağıtıcılar’ altında yapması, sıkıysa yapabilsin noktasında tutulması, vb. gibi konular, karanlık güçlerin, yapılanmaların Dijital-Reel Psiko-Semiyotik Dil Kullanımlarıyla hedefi kontrol altında tutma yollarındandır.

Buradaki asıl mesele, halkın Psiko-Semiyotik İletişime bir başka söylemle Dijital-Reel Psiko-Semiyotik *Dil Kullanımlarıyla sürekli istedik doğrultuda manipüle edildiği bilgisine, görüşüne, gerçekliğine uzak kalması ve onu( hedefi) Dijital-Reel Psiko-Semiyotik Dil Kullanımlarıyla vuracak en önemli veri kaynağını oluşturduğu bilincinden uzak olmasıdır* ve bilinçdışı alanlarının vurucu etkisini sözlü kültürden alabilecek Dijital-Reel Psiko-Semiyotik Dil tasarımları nedeniyle etkilendiğini ve bu itkiyle tutum ve tavırlarının oluştuğu, oluşabileceği gerçeğinden uzak olmasıdır, ayrıca Psiko-Semiyotik İletişim ve Dijital-Reel Psiko-Semiyotik Dil Kullanımları için (Algül, 2020-2023) bakılması gerekmektedir. Bir sıralama yapılırsa yeterince tekrar yaptığımı düşündüğüm yaratımın olan bilim dalı için makale çalışmalarımın okunmasını şiddetle öneriyorum. Uzun tekrarlar her makalede vermek istediğim asıl özden uzaklaşılmasına neden olabilir.

**Dijital-Reel Psiko-Semiyotik Dil Kullanımlarını Canlı ve Hedefi Vurucu Tutmanın Yolları  
Sesli Sözüncü ve Halk Kültürü**

Ne gördüğün değil, ne hissettirdiği, tutum ve tavırlarında belirleyicidir. Nevin Algül

Yazıdan, yazı yazma olanağından bihaber bir kültürün nasıl olabileceğini okuyazarlar ancak büyük bir zahmetle hayâl edebilirler. Kimsenin kelimeleri açıp bakmadığı bir kültür düşünün. Sözlü kültürde zaten açıp bakmak, hiçbir şey ifade etmeyen bomboş bir deyimdir. Kelimeler göze görünen nesnelere temsil etse de yazı olmadığı sürece kelimelerin görsel bir varlığı olamaz, kelimeler SESten ibarettir. Sözlere hatırlamaya çalışabilirsiniz ama sözleri arayıp bulacağınız somut bir kaynak yoktur(Ong, 2018). Üstelik söz geri döndürülemez, bu onun yazgısıdır(Barthes, 2013). Geri döndürülemeyen söz, yazılı kültüre oranla gerçek duygu durum biçimlerinin kaynak havzaları olarak da görülmelidir. ‘Sözlü Kültür’de ‘Yazılı Kültür’e oranla, insanlık hallerinin duygu durum biçimlerini yaşadığı şekliyle hissettiren, dil kullanımları bulmak mümkündür. Bu kaynaklar geçmişten gelebilir: Atasözleri, deyimler, geniş kitleleri doğru anlatan yazın ürünleri veya andaki zamanda illegal veya legal görünüm altında Dijital-Reel Psiko-Semiyotik Dil Kullanımları havzası olarak saptanıp, Psiko-Semiyotik İletişim aracı sahaları olarak kullanılabilir, bu sahaya her tür ortam dinleme kaynakları da dahildir.

Yazı icat edilmeden önce ‘Söz’ vardı. Önce ‘eylem(hareket)’ mi, ‘Söz’ mü? Tartışması bir yana dursun, yazıdan önce her ikisinin birden varlığı düşünülebilir. İnsanın fetustaki gelişim sırasında da görme eyleminden önce işitme organı ve eylemi gerçekleşir. Tüm doğal dillerin bir özelliği de, bilinçli, hedef alınarak özel bir çalışma yapılmadığı takdirde, genel yaygın kullanıma giren her sözcük, sonra girene oranla bir üstünlük taşır, bir başka söylemle, genel yaygın kullanıma giren aynı anlamdaki iki sözcükten, önce girenin sonra girene karşı ilk akla gelmesi sebebiyle kullanım üstünlüğünün olmasıdır. Geniş kitleler için ‘Sözlü Kültür’ün ‘Yazılı Kültür’le karşılaştırılma ve kıyaslamasında, insanın fiziksel gelişimi basamaklarının da dikkate alınarak durulması gerekebilir çünkü bu doğal yatkınlık kapsamına giren bir alandır. ‘Yazılı Kültür’ söz konusu olduğunda, düşüncenin gelişiminin eğitimi de devreye girmektedir diye düşünülebilir.

‘Yazılı Kültür’ ve ‘Sözlü Kültür’ üzerinden, Psiko-Semiyotik İletişimin alt başlığı olan Dijital-Reel Psiko-Semiyotik Dil Kullanımlarını canlandırmanın kaynaklarının değiştiği saptanabilir. *Genel çoğunluğu* vuran Dijital-Reel Psiko-Semiyotik Dil Kullanımlarıyla, *eğitilmiş hedefi* vuran Dijital-Reel Psiko-Semiyotik Dil Kullanımlarının kaynakları aynı olmayacaktır. Bu dil kullanımlarındaki başarı ve andaki zamanın ruhunda yalama olan ve gündemden düşen her anlam kayması için canlandırma kaynak havzaları da farklı olacaktır. Bazen Dijital-Reel Psiko-Semiyotik Dil Kullanımlarına ait en küçük birimi, sözcük ya da sözcük öbeklerini, hatta basit ya da komplike bir cümleyi devingen yaşam döngüsünden çıkarmak da gerekebilir ve bu da bir yöntemdir. Çıkarılanların yerine var olan başka dil yapılarının sokulabilmesi veya andaki hedefin ruhunu istedik doğrultuda kuşatmaya yönelik, hedefle ilgili kaynak havzadan sözcük seçimi veya iyi hesaplanmış sözcük, laf üretimi de başarıyı yakalayabilecektir.

## SONUÇ

Reaya kültürünün genetik kültürel kodlarında yer aldığı toplumlarda, ataerkillik de önem kazanır, dışarıda krallık, sultan, devletin sosyal olma yapısı zamanla değişse de ‘devlet’, evde erkek ‘Reis’ etkisini kaybetmeyebilir ve bu yaygın bakış da köklerini ‘sözlü kültür’den alır gibidir çünkü okuyazarlık oranı her zaman halkın aleyhine olan bir toplumda zaman zaman kampanya halinde yürütülen okuyazarlık seferberliğinin ne kadar başarılı olabileceği, olsa da metodoloji kaybına uğrayıp uğramayabileceği (Algül, 2018), tartışma konusudur çünkü Algül teorilerine göre anadilin okuyazarlığının öğretilme metodolojisi düşünce gelişimi sürecini olumsuz anlamda etkiler(Algül, 2018).

Bu tür toplumlar duygu durum biçimleri rahatlıkla yönetilebilecek kaynaklar olabilmekteler. ‘Sözlü Kültür’ün temsilcileri olarak büyük bir Dijital-Reel Psiko-Semiyotik Dil Kullanımlarına kaynak oluşturduklarından, üst başlığını kullanarak Psiko-Semiyotik İletişim kaynağının havzasını oluşturabilirler ki, aynı kaynak havza başarılı Dijital-Reel Psiko-Semiyotik Dil Kullanımları tasarımı ve var olan Dijital-Reel Psiko-Semiyotik Dil Kullanımlarını taşıdıkları önemden dolayı canlandırmanın da kaynağıdır. Bu bağlamda ‘sözlü kültür’e dahil veri, data elde etmek karanlık güçlerin önceliği olacaktır ve telefon konuşmaları, ortam dinlemelerinin gücü de anlaşılacaktır. Eve giren her akıllı teknolojik ağıta, özellikle TV’lere genel çoğunluğun faydası açısından bakmak gelecek zamanların konusu edilmelidir.

Kendilerine güç devşirme, gücü ele geçirmek üzere kullanma eylemindeki herkes teknolojinin geldiği bu noktayı kendi çıkarları doğrultusunda kullanacaklardır.

Bunun haricinde yapılabilecek olanlar, bu ortamda bitirmeye çabaladığım alanında bir ilk olacak olan dilsel ve görsel göstergeler sözlüğüdür ki, Dijital-Reel Psiko-Semiyotik bir dünyada yaşadığımızı, sanal gerçekliğin bu olduğunu, nasıl avlandıklarını çözenin yolunu yaratmış olduğum Psiko-Semiyotik İletişim üst başlığında topladığım, Dijital-Reel Psiko-Semiyotik Dil Kullanımlarına kaynak olan ve onların duygu durum biçimlerini derinden etkileyerek değiştirip dönüştüren dilsel ve görsel göstergelerin varlığını somutlaştırarak gösterebilecek ve bilinçlenmelerini sağlamaya yönelik çalışma alanlarının kapsama alanını genişletmiş olacaktır.

Dijital-Reel Psiko-Semiyotik Dil Kullanımlarının etkili olabilmesi, bir başka söylemle kolayca hedefin enerjisini istedik doğrultuda değiştirebilmesi için gerekli olan şartlardan biri doğru eğitim hizmetlerinden uzak bırakılmak, doğru eğitim, beraberinde eleştirel, sorgulayıcı düşüncüyü barındırır ve duygu durum biçimleri, bir başka söylemle Dijital-Reel Psiko-Semiyotik Dil Kullanımlarıyla yerinden oynatılmaz, zaten tüketici toplumu için gerekli olan

dürtüsel tavır, doğru eğitim araçlarından yoksun bırakılarak sağlanabilir çünkü adı üzerinde Dijital-Reel Psiko-Semiyotik Dil Kullanımı tasarımları, Psiko-Semiyotik İletişim, hedefin psikolojisini ele geçirecek içinde bulunduğu duygu durum biçimini, bir başka söylemle enerjisini istedik doğrultuda değiştirip dönüştürmeyi kendine erek edinir. Duygu yönetiminden yukarıdaki içerikte yer alan nedenlerle uzaklaştırılan geniş kitleler kolay av olacaktırlar.

^Dijital Kölelik' vakalarında durum daha karışıktır. 'Dijital Köle'nin çözümlenen duygu durum dünyasına göre hareket edileceği gereğiyle karşılaşılır. Dikkat dağıtıcılar da bu alanlardan seçilir, istemediği her şeyin tekrarlanması gibi, kutulandığı fiziksel çevreyi, bu tekrarlayan dinamiklerle sararlar ki, bunları da 'Sözlü Kültür'e dahil edebiliriz çünkü gelecek zamanların Dijital-Reel Psiko-Semiyotik sözlü kültür havzası da böylelikle oluşur. Bu açıdan gelecek zamanlarda özellikle siyasi erklerin Dijital-Reel Psiko-Semiyotik Dil Kullanımlarının mercek altına alınacağı geniş kitlelerin faydası açısından kaçınılmaz bir gerçeklik olarak görülmelidir çünkü her türlü illegal ülkesel ve küresel data, veri kullanımı, ileri düzeyde 'Dijital Kölelik' için en çok kullanılacak arena siyasi arenadır. Bu amaçla desteklenen siyasilerin yönetiminde olan her yer 'Dijital Köle' ve Dijital-Reel Psiko-Semiyotik Dil Kullanımlarıyla baskılamak için tüm diğer birimlerin, belediyelerin, site yönetimlerinin araçsallaştırıldığı yerle hâline gelecektir. Bu da şu demektir: Özgürlüğün sona ermesi anlamına gelir ve 'Dijital Kölelik' için paha biçilmez bir kutulanma yöntemidir.

## ABSTRACT

The Covid-19 epidemic draws attention not only with the problems it has caused in the health sector, but also with its economic and financial effects. In this study, how the problems experienced during the pandemic by public, private and foreign capital deposit banks, which plays an active role in the economic and financial fields of the Turkish banking sector, were reflected in their financial statements are examined. During the pandemic period, the profitability, net interest margin, loan/deposit, liquidity ratios and operating income with using cash flow statements were analyzed in this sector. Compared to pre-pandemic period; the decreasing of profitability, decline in banking main activities and liquidity holding tendencies were determined. On the other hand, the legal regulations made for the banking sector to play an active role and in order to improve the negative economic conditions experienced and expected to be experienced in the markets and how these regulations are reflected in the financial statements were analyzed. According to this; it can be summarized as deposit banks provided loans to households and real sector against the negative effects of the pandemic, extended maturity of loan tracking, turned to government debt securities in order to reduce the impact of foreign currency on the markets and performed swap transactions. Although this is the three-quarter situation table of the pandemic, considering the fact that the epidemic still continues, we see the assessment of the measures taken in the financial statements so far. When the financial statements in the following periods are considered, it can be observed whether these measures fulfilled the requirements and how much the banking sector was affected despite all these measures.

**Keywords :** Covid-19, Pandemi Effects, Banking Sector, Financial Statements,

## INTRODUCTION

Unfavorable market environments manifest themselves with the economic and financial crises experienced from time to time in the world and cause different and difficult decision-making approaches in the markets. COVID-19, which is considered one of the crises that cause economic uncertainty and which we are still experiencing.

The epidemic is one of them. The epidemic, which emerged in China in January 2020 and spread rapidly all over the world, infected more than one million people worldwide, causing deaths and still continues to cause. The rapid spread of this virus globally all over the world has led the World Health Organization to consider this disease contagious and qualify it as a pandemic on March 11, 2020. In addition to the tragedies and human losses in the health sector caused by the disease, the economic and financial risks of the pandemic also attract significant attention.

Previous economic crises (1997 Asian Economic Crisis, 1998 Russian Economic Crisis, 1999 Argentine Economic Crisis, etc.); While it originated from economic fundamentals and spread around the world through financial and economic connections, COVID-19 emerged from a pandemic and an event in nature and travel.

It has turned into an epidemic and affected the financial and economic structure. COVID-19 will lead to a global collapse in economic and financial activity, and possibly job losses in the markets due to an unprecedented increase in scale and pace.

In the previous crises in the world, the financial system and especially the banks were both the main cause and the main catalyst of the crises, but this time it creates a pandemic crisis and the banking sector has to be a part of the solution, not the problem. It is an undeniable fact that banks are of vital importance in ensuring the functioning of the financial system in the economies of the countries and channeling the resources to the right areas.

In this article, the stance of public and private deposit banks in our country in the economic and financial field during the COVID-19 crisis is examined. In this context, in the first part of the article, the financial status statements, profit or loss and other comprehensive income statements, cash flow statements and footnotes of public and private deposit banks serving in the banking sector in our country were analyzed by using the information on the public disclosure platform, including the years 2018-2019 and 2020 and their

interim periods. The results of these analyzes are also compared with each other. Secondly, by using the ratios published by the Banking Regulation and Supervision Agency for use in banks, banks' cash status, deposit and loan coverage ratios, return on assets and net interest margin were tested.

Finally, with the regulation on the asset ratio (ratio) published in April by the Banking Regulation and Supervision Agency, which asks public and private banks to increase their credit limits in order to improve the risk of cash shortage due to COVID-19 in our country and to prevent the bankruptcy of companies and to reduce the effects of the crisis, the classification of loans and their allocation will be reserved for them due to the disruptions in economic and commercial activities as a result of the COVID-19 outbreak. The effects of the regulation on provisions on the financial statements of public and private banks were evaluated.

## **LITERATURE REVIEW**

**Epidemics and Pandemics and Bank Crises in the World**

The world population of the 21st century has faced five major pandemics (epidemics) to date. These are H1N1 in 2009, MERS in 2012, Ebola in 2014, Zika in 2016 and finally COVID-19 recorded by the World Health Organization (WHO) on January 30, 2020.

The novel coronavirus disease (COVID-19), in addition to its sad effects on human life, has the potential to significantly slow down the economies of the entire world, not just in China, the USA or India (Yoo, 2020). The pandemic has produced a process of "negative globalization" by forcing countries to close their borders, causing the normal flows of goods, capital and people to stop, as well as work and production activities, albeit temporarily (Barua, 2020).

In a study conducted by the IMF, the effects of recent epidemics such as SARS (2003), H1N1 (2009), MERS (2012), Ebola (2014) and Zika (2016) were examined.

Despite the economic-based support packages provided to heal the wounds caused by diseases, it has been observed that serious economic losses could not be prevented. For the COVID-19 pandemic, which is thought to be effective enough to cause countries to revise their economic forecasts, international organizations have stated that they consider it the most serious crisis after the 1929 Depression (Deloitte, 2020).

Differences will be seen when epidemics and economic crises caused by banks as the main actor are compared. In crises caused by banks; It is seen that banks or large financial institutions have reached the point of not being able to repay their debts for a long time and need interventions such as government support or expropriation. With the decrease in confidence in the banking sector, such crises are usually observed as depositors rushing to banks, bankruptcies, squeezing of loans and melting of bank assets. Banking crises can lead to extreme fluctuations in exchange rates and interest rates, non-collection of receivables, and economic recession. (Brunkdorst, 2006) For these reasons, for example, in the 2008 financial crisis, only the banking sector was affected, while other sectors were affected in a direct way. However, with the corona virus epidemic, most sectors have been directly affected and this has spread to the entire market, and even from a global point of view, the sectors all over the world have been greatly affected by this situation with the closure of the country's doors due to the epidemic. Legoarde-Segot and Leoni (2013) theorize that as the impact of a major pandemic in the world increases, the probability of collapse in an emerging banking sector increases. Beck (2020) emphasizes that the confidence of depositors or markets in banks will be damaged in the crisis environment caused by the pandemic. By its very nature, the banking sector is vulnerable due to non-performing loans and excessive transaction volume during periods of economic downturn. As in previous HIV outbreaks, large-scale deposit withdrawals for individual treatments pose a problem for this sector (Goodel, 2020). In this case, these problems caused by the pandemic will definitely be reflected in the financial statements of the banks.

### **Financial Analysis Rates In Banks**

Although it may seem too early to evaluate the negative effects of the COVID-19 outbreak on the economy, it is important to investigate the direct and indirect economic effects of the COVID-19 pandemic for countries due to the destruction and panic atmosphere it creates. Financial ratios are one of the main tools used to measure the financial soundness and management quality of banks (Wirnkar and Tanko, 2008). For this reason, the following ratios will be used to analyze the financial statements of deposit banks in Turkey during the pandemic period in order to see the effects experienced in the banking sector.

### **Return On Assets Ratio**

Return on assets is an important indicator that shows how much profit the bank management can generate

with the available assets and how effectively the assets are used. For this reason, it has become the most common measure of bank profitability in the literature (Dietrich and Wanzenried, 2014; Curak et al., 2012). Profitability is very important for banks to continue their activities and maintain their level (Gündoğdu and Aksu, 2011). In developed economies, the threshold value of this coefficient, which is generally calculated by dividing the net profit of the bank by the total assets, is accepted as one percent. However, as can be seen in Figure 1, this rate is higher in banks that can earn a lot of interest income in developing country economies such as Turkey. According to the data in Figure 1 below, between 2003 and 2019. It is seen that the profitability ratios of the Turkish banking sector were the highest 2.78 and the lowest 1.16, started to decline since 2012, and started to decline again from 2017 despite the upward trend in 2015 and 2016. According to the data in Figure 2 below, it is seen that the profitability ratios of deposit banks between 2003 and 2019 were 2.69 at the highest and 1.11 at the lowest.

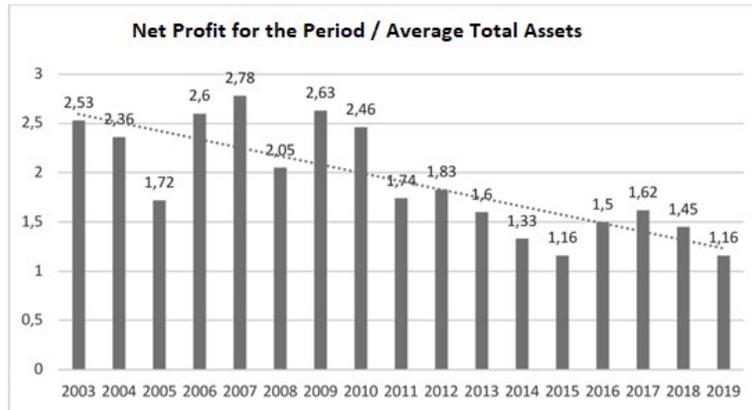

Figure 1. Return on Assets of the Turkish Banking Sector

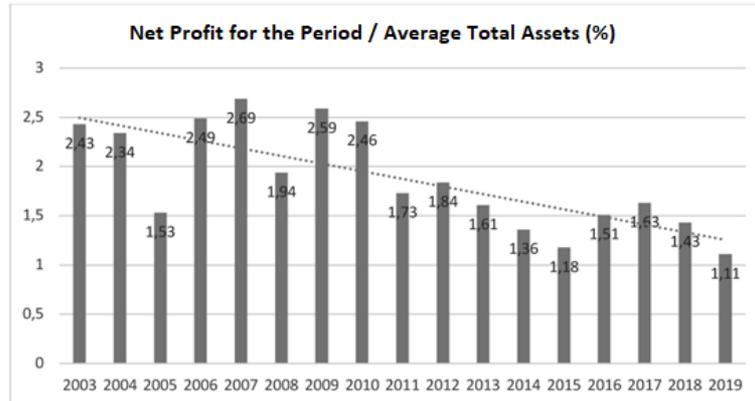

Figure 2. Return on Assets of Deposit Money Banks

### Loan-to-Deposit Ratio:

The Total Loans / Total Deposits ratio reflects the ability of banks to convert the deposits they collect into loans, thus fulfilling their intermediary functions. (Sahin, 2011) It is said in the literature that this ratio, which reveals whether banks show their commercial activities in a commercially successful line, is a very important and valuable indicator in terms of showing whether banks are financially strong or not. (Coachman, 2007)

According to the table showing the loan/deposit ratios of banks in Turkey over the years, we see an increase since 2012 and a decrease in the period from 2018 to September 2020.

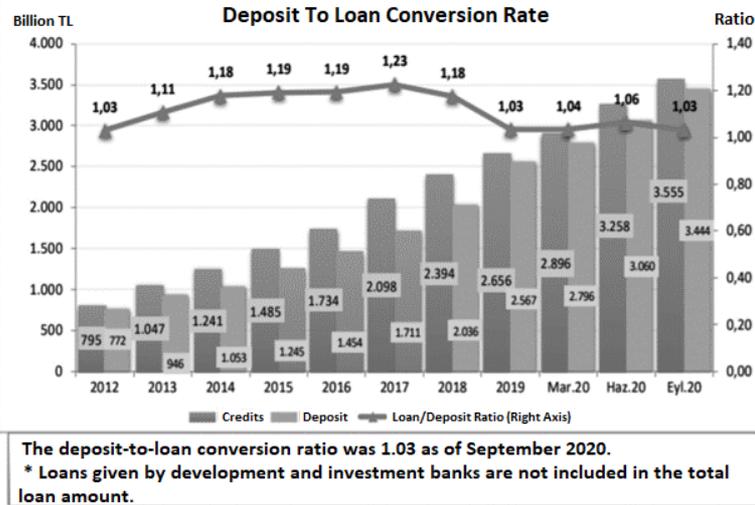

Figure 3. Loan-to-Deposit Ratio

### Cash Flow Statement

IAS 7 Cash Flow Statement Standard, 4. In its clause, "When the cash flow statement is used in conjunction with other financial statements, financial statement users; It provides the information necessary to assess changes in the entity's net assets, the financial structure of the entity (including liquidity and solvency), and its ability to influence the amount and timing of cash flows to adapt to changing conditions and opportunities. Cash flow information is useful in assessing the entity's ability to generate cash and cash equivalents." The cash flow generated during the period, in other words, the sources and places of use of cash inflows and outflows can be controlled through this table (Keleş, 2000). Cash flow movements; Since they are reported in terms of business activities, investment activities and financing activities, these tables provide very important information to information users in the evaluation of cash policies (Akdoğan, Tenker; 2008).

Due to the importance of liquidity, especially in environments where markets are uncertain, the cash flow statements of the banks will be taken into account while examining the effects of the pandemic and how the banks exhibit in this situation will be observed.

### Cash and Cash Equivalents

In short, liquidity means holding sufficient funds to repay depositors' deposits and other lenders' receivables (Durer, 1988). Since not all assets can be converted into money quickly, it is important for each bank to determine the degree of liquidity by taking into account the maturities of its debts and commitments according to its own structure characteristics (Durer, 1988). The sufficient and strong liquidity of banks is one of the most important factors that enable them to survive in times of crisis. For this reason, the change status of the cash and cash equivalents account in the statement of financial position will be determined.

### Net Interest Margin

Net interest margin (NIM) indicates the cost of intermediation transactions in the banking system and the efficiency of the banking system (Demirgüç-Kunt and Huizinga, 1999). A high net interest margin results in increased bank profit margins and a more stable banking system. Therefore, this measure is a criterion that can be used especially in uncertain and risky environments.

## BRSA PANDEMIC MEASURES

### Asset Ratio (Ratio)

With the Board Decision dated 18.04.2020 and numbered 9000 of the Banking Regulation and Supervision Agency; In order to minimize the negative impact of the CO-VID-19 pandemic on the economy, market, production and employment and to ensure that the resources held by banks are used in the most effective way, in accordance with paragraph 2 of Articles 93 and 43 of the Banking Law No. 5411, banks are required to calculate the Asset Ratio (AR) (Asset Ratio -AO) on a weekly basis, starting from 01.05.2020,

$$\text{Aktif Rasyosu (AR)} = \frac{\text{Krediler} + (\text{Menkul Kıymetler} \times 0,75) + (\text{TCMB Swap} \times 0,5)}{\text{TL Mevduat} + (\text{YP Mevduat} \times 1,25)}$$

has decided. Then, in the regulation made with the board decision dated 24.11.2020 and numbered 9271, it was announced that the application in question would be repealed as of 31.12.2020. However, since the practice continues in the periods we examine, it will be observed what kind of effect AR (AO) has on the financial statements.

With this regulation, banks, especially private banks, were encouraged to increase their loans, buy securities (purchase of private sector and treasury bonds) and make swaps, and a study was requested on the area in which they would use the deposits they collected. Thus, banks have to establish a balance between the deposits they collect and the loans, securities and swap transactions they use this resource according to this formula.

In fact, the name of this ratio is given by the BRSA as "deposits; It is thought that the use of the name "utilization rate in loans, securities and CBRT Swap transactions" would be more accurate in terms of reflecting its content.

### **Changing the Stipulated Periods for Classifying Loans as Non-Performing Receivables**

With the Board Decision No. 8948 on 17.03.2020 of the Banking Regulation and Supervision Agency; Due to the disruptions in economic and commercial activities as a result of the COVID-19 epidemic that has spread to many countries, including our country, the 30-day delay period within the scope of Article 5 of the 4.ve of the Regulation on the Procedures and Principles Regarding the Classification of Loans and the Provisions to be Reserved for Them is applied as 90 days until 31 December 2020 for the loans monitored in the first group, and the 90-day delay period foreseen for the classification of loans as non-performing receivables It was decided to apply the provisions to be set aside for loans in the first and second groups for 180 days until 31 December 2020, and to continue to allocate the provisions for loans according to the banks' own risk models used in calculating the expected loan loss within the scope of IFRS 9, and then announced that the said implementation will continue until 30.06.2021 with the Board Decision dated 08.12.2020 and numbered 9312.

### **COVID-19 EFFECTS ON BANKS**

The effects of the disease on the banking sector were investigated through the differences between the financial statements of the periods before and after the emergence of the disease. In this context, in order to observe the situation created by the pandemic in the financial statements of state-owned, foreign-capitalized, and domestic private-capital deposit banks in the Turkish banking system, the ratios listed above and some financial statement information were used. Comparison; Data for 31.12.2018, 31.12.2019, 30.09.2019 and 30.09.2020 were used. Since the data of 31.12.2020 were not yet published when this study was conducted, the data dated 30.09.2020 were used.

### **Return on Assets**

The financial statements of 27 private, public and foreign banks operating in the class of deposit banks in our country obtained from KAP (Public Disclosure Platform) were evaluated regarding their asset profitability and it was observed whether there were effects of the pandemic. As can be seen in the table below, the ratio of 27 banks to Return on Assets averaged 0.14 in 2018 and 2019. However, when the September 2019 period and September 2020 periods are compared, the percentage of return on assets clearly reflected the effects of the pandemic in September 2020 and decreased from 0.14 to 0.07. Looking at the periods of September 2019 and September 2020; It is observed that the return on assets of deposit banks other than Denizbank, Halkbank, ICBC Turkey Bank, Odeo Bank, Şekerbank, Turkland, TEB, Vakıfbank, YKB and Ziraat Bank has decreased.

**Loan-to-Deposit Ratio**

While loan-to-deposit ratios were 105 percent on average in 2018, they decreased to 97 percent in 2019. Compared to September 2019 and September 2020, while it was 98.4 percent in September 2019, the average rate was 100 percent in September 2020 due to the measures taken by the BRSA to prevent the effects of the pandemic.

**Cash Flow Statement**

September 2019 is the period before the pandemic and September 2020 is the 3rd year of the pandemic. When we look at the cash flow statements of quarter deposit banks; It can be seen in Tables 5 and 6 that the Net Cash Flow Originating from Banking Activities in the Cash Flow Statement (excluding Anadolu Bank, Burgan Bank, Citibank, Fibabank, Halkbank, HSBC, ICBC Turkey Bank, İşbank, JP Morgan Bank, MUFG Bank, Societe General Bank, Turkish Bank, Türk Ekonomi Bank, Vakıfbank, Ziraat Bank) has increased due to the effect of the pandemic. When we look at the financial statement details of banks with high Net Cash Flow Arising from Banking Activities; It was found that the increase came from the net increase in other deposits. In the footnotes of the financial statements of these banks, it was seen that the increase in

question was due to the increase in foreign exchange and interest rates.

According to the table below, which evaluates the loan/deposit ratios in terms of public banks; Among the total number of deposit banks in the banking sector, it is seen that public banks carry the weight of the loans extended to the real sector and households. In September 2020, while the average loans were 136,926,161,000 TL in the sector, this figure was realized as 290,270,736,000 TL in public banks, while the credit/deposit ratio was 1,002 in the sector and 1,017 in public banks, proving that a large proportion of the loans extended to the real sector and households belong to public banks.

According to the table below, which evaluates the loan-to-deposit ratios in terms of private and domestic capital deposit banks in the sector, it was observed that while the total of deposit banks was 1.002 in September 2020, it was 0.964 in September 2020 in private and domestic capital deposit banks. As mentioned above, considering the ratio of private and domestic capital equity banks in loans extended to the real sector and households, it has been confirmed that more loans are provided by public banks.

Table 5. Deposit Money Banks Cash Flow Statements

### Liquidity Statuses

In order to meet their liquidity needs against the negative effects experienced in the markets during the pandemic period, it was observed that 27 deposit banks tried to maintain or increase their cash and cash equivalents, as can be seen from the financial position statements.

As can be seen in the table below, when June 2019 and June 2020 are compared, cash and cash equivalents have increased by 100 percent, and when compared to September 2019 and September 2020, cash and cash equivalents have been increased by 90 percent, which shows that deposit banks tend to hold cash against the negativities that may occur in the markets during the pandemic period. Eight foreign-owned banks, namely Alternatif Bank, Deutsche Bank, Garanti Bank, HSBC, ING bank, MUFG bank, Odeo Bank, and Societe General Bank, did not have the same tendencies in terms of holding liquidity and holding cash.

## PANDEMIC MEASURES

### Asset Ratio (Ratio)

It has been observed that the Asset Ratio (ratio), which is one of the regulations made by the BRSA in order to reduce the negative effects of COVID-19 on the markets, is effective on banks. The average increase between September 2019 and September 2020 was 80 percent, and in money and swap transactions in off-balance sheet accounts; The average increase between September 2019 and September 2020 was 91 percent, in the account of government debt securities in the financial position statement assets; It was determined that the increase between September 2019 and September 2020 was 132 percent on average. When the deposit banks in the Turkish banking sector are monitored, it is seen that some of the banks prefer to increase loans, some of them prefer to use government debt securities and some of them turn to swap transactions in order to ensure their asset ratio.

### Changing the Stipulated Periods for Classifying Loans as Non-Performing Receivables

Due to the amendment in the Regulation on the Procedures and Principles Regarding the Classification of Loans and the Provisions to be Reserved for Them, which was made by the Banking Regulation and Supervision Agency due to the COVID-19 pandemic, it was observed that there was no significant difference in the averages of the March, June and September periods according to the calculation in the balance sheet for the allocation of expected loss provisions for the loans disbursed.

On the other hand, when the non-performing loans are examined in line with the data obtained from the monthly bulletins published by the BRSA, it is seen that there is no change in the course of non-performing loans in March, June and September periods, and the conversion rates to non-performing loans have been at the same levels in the last three quarters.

**Table 12. Deposit Money Banks' Expected Loss Provisions**

**AUDIT REPORTS RESULTS**

Considering that it is important within the scope of this research to determine which audit companies audited the deposit banks in the Turkish banking sector during the pandemic period and how the audit opinions were formed, an examination was also made on this issue. In the examination, the results of the audit reports were determined as follows.

**Table 13. Independent Audit Report Results**

| Name of the Bank | AUDIT FIRM | TYPE OF OPINI | VISION REST |
|------------------|------------|---------------|-------------|
|                  |            |               |             |

|                 |  |                 |  |
|-----------------|--|-----------------|--|
|                 |  | ON              |  |
| AKBANK          | PwC Independent Auditing and Independent Accountant Financial Consultancy Inc.   | CONDIT<br>IONAL | Explanation and Footnotes to Unconsolidated Financial Statements As stated in h.4 (i) of Part II of Chapter Five, in the accompanying unconsolidated financial statements prepared as of September 30, 2020, a total of TL 1,150,000 thousand was allocated by the Bank's management, of which TL 650,000 thousand was allocated in previous years and TL 500,000 thousand in the current period, except for the requirements of the BRSA Accounting and Financial Reporting Legislation. There is a free reserve in the amount.   |
| ALTERNATİF BANK | GÜNEY INDEPENDENT AUDITING AND INDEPENDENT ACCOUNTANT FINANCIAL CONSULTANCY INC. | POSITIV<br>E    |  |
| ANADOLU BANK    | DRT INDEPENDENT AUDITING AND INDEPENDENT ACCOUNTANT FINANCIAL CONSULTANCY INC.   | CONDIT<br>IONAL | The accompanying interim unconsolidated financial information prepared as of September 30, 2020 includes the remaining TL 25,000 free provision after TL 25,000 was canceled in the current period due to the possible effects of adverse developments that may occur in the economy and markets, outside the scope of the BRSA Accounting and Financial Reporting Legislation. If the provision in question had not been set aside, other provisions would have been as much as TL 25,000 less in the current period, profit for the period would have been TL 25,000 less and extraordinary reserves would have been TL 50,000 more.                               |
| BURGAN BANK     | GÜNEY INDEPENDENT AUDITING AND INDEPENDENT ACCOUNTANT FINANCIAL CONSULTANCY INC. | POSITIV<br>E    |  |

| TURKISH BANK         | GÜNEY INDEPENDENT AUDITING AND INDEPENDENT ACCOUNTANT FINANCIAL CONSULTANCY INC. | POSITIVE    |  |
| TURKLAND             | DRT INDEPENDENT AUDITING AND INDEPENDENT ACCOUNTANT FINANCIAL CONSULTANCY INC.   | POSITIVE    |  |
| TURKISH ECONOMY BANK | DRT INDEPENDENT AUDITING AND INDEPENDENT ACCOUNTANT FINANCIAL CONSULTANCY INC.   | POSITIVE    |  |
| VAKIFBANK            | PwC Independent Auditing and Independent Accountant Financial Consultancy Inc.   | CONDITIONAL | Explanation and Footnotes to Unconsolidated Financial Statements As stated in Article 7 of Part II of Chapter Five, the accompanying unconsolidated financial statements prepared as of September 30, 2020 contain free reserves amounting to TL 852,000 thousand, all of which have been set aside by the Bank's management in previous periods, except for the requirements of the BRSA Accounting and Financial Reporting Legislation . |

|                |  |             |  |
|----------------|--|-------------|--|
| YKB            | PwC Independent Auditing and Independent Accountant Financial Consultancy Inc. | POSITIVE    |  |
| ZİRAAT BANKASI | PwC Independent Auditing and Independent Accountant Financial Consultancy Inc. | CONDITIONAL | Explanation and Footnotes to Unconsolidated Financial Statements As stated in section 9.3 of Chapter II of the fifth section, in the accompanying unconsolidated financial statements prepared as of September 30, 2020, the Bank's management has allocated TL 830,000 thousand in the past periods, except for the requirements of the BRSA Accounting and Financial Reporting Legislation, 2,010,000 thousand TL is the total allocated in the current period There is a free reserve of 2,840,000 thousand TL. |

September 2020 From the independent audit reports of 27 deposit banks obtained from KAP (Public Disclosure Platform), it was determined that 18 banks were given a positive opinion and 9 banks were given a conditional opinion. Of the audit firms that gave positive opinions for 18 banks, 7 are Güney Independent Audit and Free Accountant Mali Müşavirlik A.Ş., 3 are DRT Independent Audit and Free Accountant Mali Müşavirlik A.Ş., 4 are KPMG Independent Audit and Free Accountant Mali Müşavirlik A.Ş., 3 are PWC Independent Audit and Free Accountant Mali Müşavirlik A.Ş., and 1 is GÜRELİ Yeminli Mali Müşavirlik ve Independent Audit Services A.Ş. In addition, it is seen that 2 of the companies auditing the banks with 9 conditional opinions are DRT Independent Audit and Free Accountant Financial Consultancy Inc., 1 is Güney Independent Audit and Free Accountant Mali Müşavirlik A.Ş., 3 is KPMG Independent Audit and Free Accountant Mali Müşavirlik A.Ş., 3 of them are PWC Independent Audit and Free Accounting Mali Müşavirlik A.Ş.

On the other hand, when we look at the conditional opinion issues;

- 1) Free reserves are set aside by the bank management in accordance with the requirements of the BRSA Accounting and Financial Reporting Legislation,
- 2) Due to the possible effects of negative developments that may occur in the economy and markets by the bank management, IAS 37 "Provisions, Contingent Liabilities and Contingent Assets" includes free provisions that do not meet the accounting criteria,
- 3) In line with the business model prepared in accordance with IFRS 9 of the Turkish Financial Reporting Standard, the Bank has classified financial assets whose fair value difference was previously reflected in other comprehensive income.

It has been found that government debt securities have been reclassified under financial assets as measured by their amortized cost and the securities depreciation fund under other accumulated comprehensive income or expenses to be reclassified in profit or loss has been cancelled, which is in violation of the provisions of IFRS 9.

## RESULT

The COVID-19 virus outbreak has not only caused problems in the field of health, but has also affected all sectors. In order to observe the effects on the economic and financial field, the effects of public, private and foreign-capital deposit banks operating in the selected banking sector reflected in the financial statements of the pandemic period were analyzed.

According to the examination made in the financial statements of the banks in order to determine the effect of the pandemic;

1. Return on assets decreased by 50 percent compared to the pre-pandemic period, especially in deposit banks other than ten banks, including public banks (excluding Denizbank, Halkbank, ICBC Turkey Bank, Odeo Bank, Şekerbank, Turkland, TEB, Vakıf-bank, YKB and Ziraat Bank).
2. Although it is seen that there is an increase in the loan/deposit ratio when compared before and after the pandemic, when we look at the distinction between public and private banks, it is observed that the increase is made by public banks and the loans extended to the real sector and households are made by public banks.
3. According to the cash flow statement items, cash flows arising from banking activities; It has been observed that there has been a major decline except for fifteen banks, including public banks.

4. In order to cope with the impact of uncertainties in the markets against all these negativities, it was determined that banks tried to keep their cash and cash equivalents strong against possible risks, and no trend in the same direction was observed in eight foreign-owned banks.
5. It was observed that the net interest margin decreased.

According to the data reflected in the financial statements of the banks of the arrangements made to eliminate the problems that the epidemic will cause in the country's economy and to prevent possible changes in the markets, credit deposit ratios are increased with the effect of the asset ratio, loans extended to the real sector and households increase, swap transactions are carried out to reduce the foreign exchange effect, credit deposit risk is reduced by purchasing government debt securities, loans are followed up. It is understood that they have contributed to the way in which their duration has been extended.

As a result, this study will enable Turkish deposit banks to better analyze the uncertain environments they may encounter in the future, while revealing the effects they have experienced due to the pandemic. It also shows how effective the banks are in managing the economic crisis caused by the pandemic.

# ENHANCING THE SAFETY AND RELIABILITY OF OVERHEAD CRANES THROUGH COMPARATIVE ANALYSIS AND PREDICTIVE MAINTENANCE

Ali SAFARLI

Azerbaijan Technical University, Department of Science, Baku/Azerbaijan  
ali.safarli.n@student.aztu.edu.az

## ABSTRACT

This research aims to introduce a modern diagnostic method for assessing overhead cranes, surpassing traditional practices outlined in international standards. By leveraging sensor-based monitoring and real-time data analysis, this study proposes a more precise evaluation of crane condition, allowing for preemptive maintenance interventions. The approach aligns with existing standards but also extends beyond them, offering an advanced framework for enhancing crane safety and reliability.

**Keywords:** Overhead cranes, gearbox, predictive maintenance, digital twin, diagnostic methods.

## INTRODUCTION

Overhead cranes play a crucial role across various industrial sectors, where their ability to handle heavy materials efficiently is essential. However, with this critical function comes significant operational risk, necessitating stringent safety protocols and reliable maintenance regimes. The failure of an overhead crane can lead to substantial economic losses, equipment damage, and endanger human lives [1]. Thus, ensuring the safety and longevity of these systems is of utmost importance. This research is structured around two main phases: a comparative analysis of current diagnostic standards and the development of a predictive maintenance framework utilizing digital twin technology.

### Relevance of the Research Topic

A considerable number of cranes currently in use in Azerbaijan were produced during the Soviet era, and many are still operational [2]. The capability to accurately assess the lifespan and operational health of these cranes is vital for safe and efficient operation. Historically, diagnostic approaches have largely been limited to static inspections based on established standards [3]. However, given the dynamic loads and environmental factors these cranes face, a more robust diagnostic method that includes dynamic analysis is necessary. This research addresses that gap by exploring advanced diagnostic strategies that move beyond the limitations of static checks.

### Comparative Analysis of Diagnostic Methods

The first phase of the research involves a thorough comparative analysis of the diagnostic standards set by leading international bodies. These include ISO 9927-1:2013 (Cranes — Inspections — Part 1: General) [4], DIN EN 13001-3-1:2012 (Cranes — General Design — Part 3-1: Limit States and Proof of Competence of Steel Structures) [5], and ГОСТ 34589-2019 (Overhead and Gantry Cranes — General Technical Requirements) [6]. Each standard provides a unique framework for ensuring the safety and maintenance of overhead cranes.

- **ISO 9927-1** emphasizes routine inspections, categorizing them into daily, frequent, periodic, and major types. This standard highlights the importance of regular non-destructive testing (NDT), such as visual inspections, ultrasonic testing, and radiography, to ensure structural integrity is maintained [4].
- **DIN EN 13001-3-1** focuses on design principles, particularly concerning the steel structures of cranes. It ensures that cranes are designed to withstand expected loads and stresses, emphasizing the importance of sound engineering practices to minimize the risk of failure [5].
- **ГОСТ 34589-2019** outlines general technical requirements, including materials, load management, and safety systems. This standard provides a more flexible framework but must often be adapted to specific operational environments and conditions [6].

### Comparative Analysis

The comparative analysis reveals that while all three standards aim to ensure the safety and reliability of overhead cranes, they differ in their approach. ISO 9927-1 provides a detailed inspection regime that is essential for ongoing maintenance, while DIN EN 13001-3-1 focuses on the structural design and safety margins during the crane's construction phase. ГОСТ 34589-2019, on the other hand, offers a more generalized approach, requiring adaptations for specific operational environments. The insights gained from this analysis form the foundation for the next phase of the research, where predictive maintenance techniques are explored.

### Predictive Maintenance Using Digital Twin Technology

The second phase of this research introduces predictive maintenance using digital twin technology. Unlike traditional reactive maintenance approaches, which address failures after they occur, predictive maintenance aims

to anticipate and prevent such failures [7].

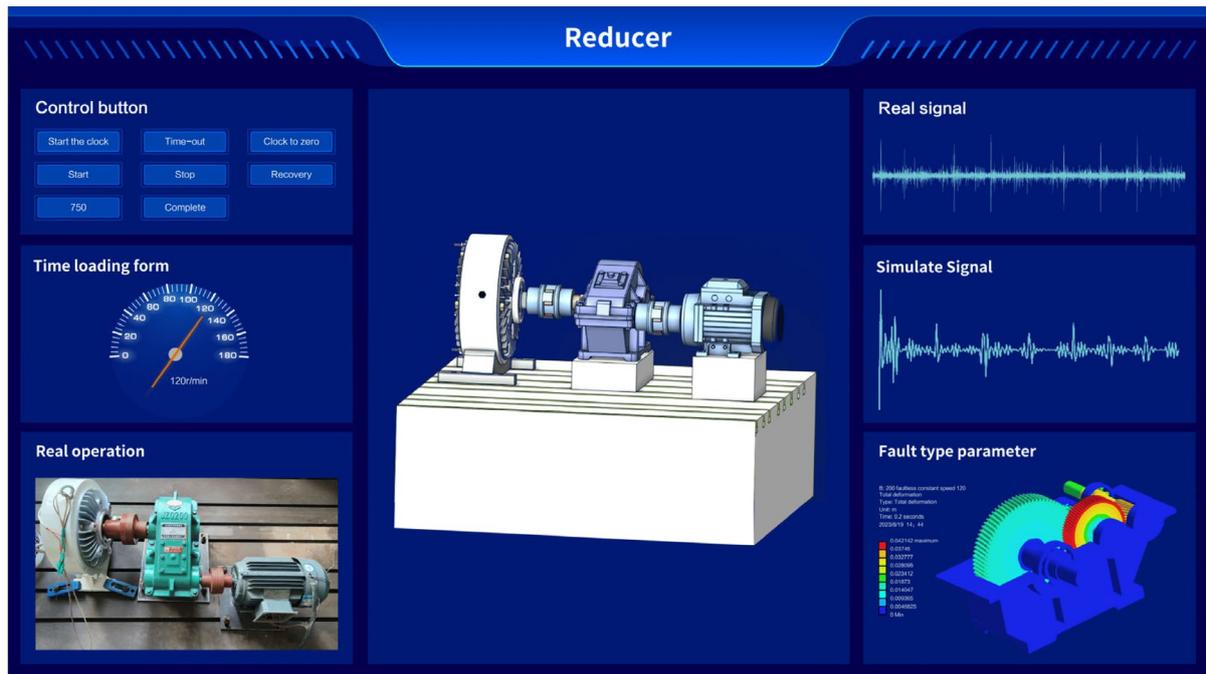

Figure 1. Digital twin system diagram

### Development of a Digital Twin

A digital twin replicates the physical system's behavior in a virtual environment, allowing for real-time simulation of the crane's components under varying conditions. In this research, the focus is on developing a digital twin of the overhead crane's gearbox using ANSYS simulation software [8]. The virtual model replicates the reducer's operations under different temperature, humidity, and load conditions.

Simulations help predict potential points of failure, which allows for maintenance to be scheduled before failures occur. This forward-looking approach ensures operational continuity, reducing the risk of unexpected downtime and improving the overall reliability of the crane [8].

### Integration of Sensors and Real-Time Monitoring

To complement the digital twin, real-time data from sensors installed on the gearbox is fed into the system. Sensors monitor critical parameters such as vibration, temperature, and load distribution [9]. This real-time data is continuously analyzed to provide ongoing insights into the reducer's health, allowing for more precise maintenance scheduling.

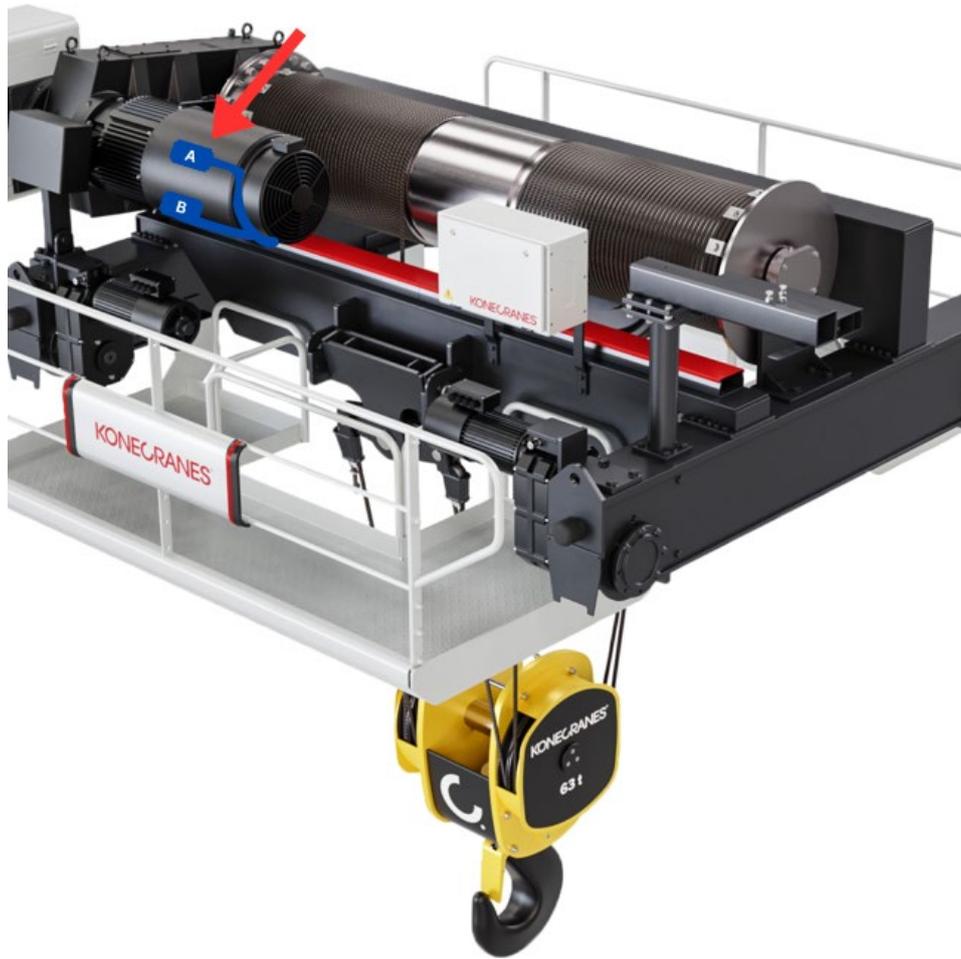

Figure 2. Example of monitoring system installed on a gearbox for predictive maintenance.

Figure 3. A vibration monitoring system composed of 4 sensors for simultaneously measuring 4 points in the same rotating machine

## DISCUSSION OF RESULTS

The comparative analysis reveals that each standard offers valuable contributions to crane safety and reliability, but they differ significantly in scope. ISO 9927-1 excels in providing a comprehensive inspection regime, while DIN EN 13001-3-1 places emphasis on the structural integrity of crane components at the design stage [4]. GOCT 34589-2019 offers a generalized framework but is adaptable to specific operational contexts [6]. However, none of these standards fully account for the dynamic operational conditions of cranes or offer real-time monitoring, which are critical for modern safety and maintenance strategies [7].

## SUMMARY AND CONCLUSION

Traditional diagnostic methods, while effective in certain respects, often fail to account for the dynamic and real-world conditions under which overhead cranes operate. By integrating real-time sensor data with digital twin technology, this research proposes a more advanced diagnostic method that enhances the accuracy of crane maintenance planning [8]. This approach allows for a more proactive and precise assessment of component lifespan, reducing unplanned downtime and improving overall operational efficiency.

Additionally, predictive maintenance strategies, when implemented through modern techniques such as digital twin technology, are essential for improving the operational lifespan and safety of heavy machinery, including cranes [9]. The introduction of real-time monitoring and predictive capabilities represents a vital step forward in ensuring the safety and reliability of overhead cranes.

### ÖZET

Dijital okuryazarlık bilgi çağında dijital ortamda sunulan bilgiyi farklı şekillerde anlayıp kullanabilme becerisi olarak ifade edilmektedir. Bu okuryazarlık dijital teknolojileri kullanarak mevcut bilgiye ulaşma ve bu bilgileri etkili bir şekilde kullanarak bilgi üretme becerisi olarak da ifade edilebilir. Dijitalleşmenin bu denli etkin olduğu bir yüzyılda bu becerinin doğru ve etkin şekilde kullanılması da önem taşımaktadır. Dijital okuryazarlık becerisinin her meslek grubunda ve her statüde bireyler için gerekliliği kaçınılmazdır. Bu gereklilikten yola çıkılarak bu çalışmada öncelikle dijital okuryazarlık ve ev hanımları üzerine öncelikle bir literatür taraması gerçekleştirilmiştir. Ancak, ev hanımlarının dijital okuryazarlığına dair mevcut literatürde henüz bir makaleye rastlanmamıştır. Bu ihtiyaçtan hareketle bu çalışmada, ev hanımlarının dijital okuryazarlık yeterliliklerini ölçmek amacıyla nitel araştırma yöntemi kullanılmıştır. Yarı yapılandırılmış soru formu üzerinden ev hanımlarına yapılan mülakatlar Bursa şehri Nilüfer ilçesinde rastgele örnekleme yöntemi uygulanarak gerçekleştirilmiştir. Bu çalışmadan elde edilen sonuçlar, ev hanımlarının dijital okuryazarlık konusunda kendilerini eksik hissettikleri sonucunu göstermektedir. Bu eksikliklerin giderilmesi ve ev hanımlarının dijital dünya ile daha etkin bir şekilde etkileşimde bulunmaları için çeşitli önlemler alınması gerekmektedir. Eğitim kurumları, yerel yönetimler ve sivil toplum kuruluşlarının ev hanımlarına yönelik dijital okuryazarlık programları düzenleyerek bilinçlendirme çalışmalarının yapılması önerilebilir.

**Anahtar Kelimeler:** Ev hanımları, dijital okuryazarlık, dijital yeterlilik, Bursa

### ABSTRACT

Digital literacy is defined as the ability to understand and use the information presented in the digital environment in different ways in the information age. This literacy can also be expressed as the ability to access existing information using digital technologies and to produce information by using this information effectively. In a century where digitalization is so effective, it is also important to use this skill correctly and effectively. It is inevitable that digital literacy skills are required for individuals in every occupational group and in every status. Based on this necessity, a literature review on digital literacy and housewives was conducted in this study. However, no article on the digital literacy of housewives has yet been found in the existing literature. Based on this need, this study will use qualitative research method to measure the digital literacy competencies of housewives. Interviews with 20 women using a semi-structured questionnaire were conducted on housewives selected by random sampling method in Nilüfer district of Bursa city. The results obtained from this research show that housewives feel deficient in digital literacy. Various measures need to be taken to overcome these deficiencies and for housewives to interact more effectively with the digital world. It can be suggested that educational institutions, local governments and non-governmental organizations should organize digital literacy programs for housewives to raise awareness.

**Key words:** Housewives, digital literacy, digital competence, Bursa

### GİRİŞ

20. yüzyılda gerçekleşen sanayi toplumundan bilgi toplumuna geçişle birlikte gelen ve günlük hayatımızın vazgeçilmez olmayı başaran bilgi ve iletişim teknolojileri, genel olarak dijital teknolojilerden oluşmaktadır. Gün geçtikçe artan dijital teknolojilerin kullanımı artık eğitim, sağlık, kurumsal hizmetler ve iş alanları gibi günlük yaşamımızın her alanına kullanılmaktadır. Geleneksel medyaya ait olan medya okuryazarlığı da gelişen teknolojiler ile birlikte yerini dijital medya okuryazarlığına bırakmıştır. Bu kullanım alışkanlıklarının değişmesi durumunda da bireylerin dijital medya okuryazarlığı konusunda becerisinin olması ve buna uyum sağlaması beklenilmektedir.

Çağımızda dikkatleri üzerine çeken dijital okuryazarlık kavramı, günlük hayat akışımızı başarılı bir şekilde yönetebilmemiz için gerekli bir yeterlilik haline gelmiştir (Akman, 2021). Dijital okuryazarlık, bireylerin dijital

kaynaklara erişebilmesini, bilgi almasını, alınan bilgiyi analiz edip değerlendirmesini, paylaşma ve başkaları ile iletişim kurma becerilerini kapsar. Dijital okuryazarlık (sayısal yetkinlik), bireylerin dijital ve teknolojik kaynaklardan bilgi alma, kullanımda yetkinlik sağlama, bilgiyi işleyip sentezleyerek yeni bir bilgi üretme ve anlamlandırma süreci olarak ifade edilebilmektedir (Demircan ve Katsöz, 2022).

Artan dijital teknoloji ve bu teknolojilerin yaygınlaşması ile birlikte toplum, özellikle yaşı ileri düzeyde olan vatandaşlar için dijital ortama adapte olma sorunu görülmektedir. Dijitalleşme her yaşta bireyi etkilediği gibi ev hanımlarını da etkilemektedir. Dijital okuryazarlık teknolojinin hızla ilerlemesi noktasında kimi zaman belli sorunlara da yol açabilmekte ve bu sorunlar dijitalleşmenin aile ve sosyal ilişkilere etkileri kapsamında halen araştırılmaktadır. Ortalama yaşı ileri düzey olan ev hanımlarının büyük bir çoğunluğunun medya okuryazarlığı hakkında yeterli bilgi birikimine sahip olmaması araştırmanın problemi oluşturmaktadır. Bu problem doğrultusunda bu çalışmada ev hanımlarının dijital medya okuryazarlık düzeyinin ne olduğu, sosyal medya okuryazarlığına ve kullanımına dair algıları incelenmiştir. Dijital teknolojileri daha iyi kullanabilmeleri için dijital okuryazarlık konusunda bir beceri elde etmeleri gerekmektedir.

## **DİJİTAL MEDYA ve OKURYAZARLIK**

Hayatımızda önemli bir yere sahip olan dijital medya, yeni medya, bilgi iletişim teknolojileri veya elektronik medya olarak adlandırılmaktadır. Elektronik ortamda iletişim için kullanılan her türlü kitle iletişim aracı dijital medya tanımına dahildir. Dijital medya, bilgisayar ortamında sayısal olarak kodlanmış her türlü ses, video, yazı ve fotoğraf içeriğini ve benzeri materyali ifade eder. Bilgisayar programları, oyunlar, dijital ses dosyaları, e-kitaplar, dijital medya materyalleri arasında akla ilk gelenlerdir (Kanat, 2016). Geleneksel medyaya göre daha düşük maliyet ve hızlı erişim gibi unsurlar dijitalleşme sürecinin hızını arttırmıştır. Teknolojinin bu denli yaygınlaşması her yaşta bireyin teknolojik cihazlarla iç içe yaşamasına sebep olmuştur.

Dijital medya sayesinde bireyler geleneksel medyadan farklı olarak bilgi ve enformasyona anında erişebilir hale gelmişlerdir. Ortaya çıkan bu yeni yapı içerisinde kullanıcılar sadece tüketici değil aynı zamanda üretici konumuna da gelmiştir. Ayrıca pek çok kişi sanal ortamda aynı anda aktif olabilir. Sosyal medya aracılığıyla bireyler sadece içerik oluşturmakla kalmaz aynı zamanda başkaları tarafından oluşturulan içeriği değiştirebilir, yorum yapabilir ya da paylaşabilir (Yeniçifti, 2016). Geleneksel medya, bireyleri sadece okuyucu, izleyici veya dinleyici olarak konumlandırırken, dijital medya, geri bildirim sağlayabilen yapısıyla "kullanıcı" konumunda olmalarına izin verir ve bireysel içerik üretme olanağı sunar (Karakuş, 2023). Buradan da anlaşılacağı gibi dijital platformların en önemli özellikleri arasında bilgi ve enformasyona hızlı ulaşım ve etkileşim olanakları gelmektedir.

Günümüzde gelişen bilgi ve iletişim teknolojileri ile birlikte dijital medya bireylerin günlük yaşantısında daha geniş bir yer almaya başlamıştır. Sosyal ve dijital medya ortamlarının en belirgin özelliği, Web 2.0 ortamı ile birlikte bireylerin enformasyonu üretebilmesi konumuna gelmesi ile birlikte katılımcı bir kültürün ortaya çıkmasıdır. Bu bağlamda yoğun bir şekilde medya mesajlarına maruz kalan bireylerin iletişim kanalları aracılığıyla iletilen mesajların içeriğini daha doğru ve etkili bir şekilde anlayıp kavraması gerekmektedir. (Böyük, 2022).

Dijital okuryazarlık kavramını popüler hale getiren Paul Gilster dijital okuryazarlığı, bilgisayarlar yoluyla bilgi sunulduğu zaman geniş kaynaklardan farklı biçimlerde bilgiyi kullanma ve anlama yeteneği olarak tanımlamaktadır (Acar, 2016). Teknolojinin yüzyılımızda dönüştürücü bir güç hâline gelerek, etkin ve yenilikçi kullanımı ile birçok alanda değişimi kaçınılmaz duruma getirmesi bireylerin ve kurumların teknolojideki değişime ve gelişime paralel olarak yaşam kalitesini artırmaya, bilgi ve becerilerini değiştirmeye, geliştirmeye çalışmasını zorunlu kılmaktadır (Kuru, 2019). Dijital okuryazarlık kişilerin iletişim teknolojilerini öğrenmede etkin olabilmelerini, bireysel gelişimine katkı sunmasını, yaşamının herhangi bir zamanında sorunları çözmesini, sosyal üretime arka çıkacak biçiminde teknoloji kullanımının yasal, ahlaki ve güvenli olma boyutlarının yeterli olması olarak tanımlanmaktadır (Kol, Batıhan, Keleş, Denk, & Demir, 2022).

Sosyal medya üzerinden gördükleri içerikleri okurken eleştirel düşünceye sahip olan kullanıcılar, görünen anlamların dışında içeriğindeki gizli mesajları da algılayabilir. Yani tek bir perspektif üzerinden değerlendirmek yerine çeşitli bakış açıları ile değerlendirmeyi gerektirir. Bireyler, kazandıkları sosyal medya okuryazarlığı becerileri sayesinde mevcut riskleri tespit edebilir ve ortamdaki iletleri doğru bir şekilde analiz edebilirler (Yığıter, 2022).

Bireylerin bilgi ve iletişim teknolojilerini aktif ve üretken şekilde kullanabilmeyi ifade eden dijital okuryazarlık, aynı zamanda yaşadığımız bilgi çağında dijital platformlarda sunulan bilgiye ulaşma, farklı şekillerde algılayıp kullanabilme yeteneği olarak ifade edilebilir. Günlük hayatta gerçekleştirilen birçok iş gelişen teknoloji ile birlikte artık internet üzerinden yapılmaya başlanmıştır. Ticaret e-ticarete, kitaplar e-kitaplara dönüşmüş; bankacılık işlemleri ve birçok devlet kademesindeki işler, kurumlara gidilmeden e-bankacılık ve e-devlet üzerinden yapılmaya başlanmıştır. (Öztürk ve Budak, 2019.) Dijitalleşmenin bu kadar yaygın olduğu çağımızda teknoloji becerilerimizin doğru ve etkili kullanımı da önemli bir rol oynamaktadır. Her statü ve meslek grubundaki bireyler için dijital okuryazarlık becerisinin gerekliliği kaçınılmaz bir konumdur.

Tüm bu ifadelerin sonucu olarak yaşadığımız bilgi toplumu içerisinde dijital okuryazarlık temel beceri olarak karşımıza çıkmaktadır. Her meslek grubunda olduğu gibi ev hanımlarının da dijital okuryazarlık becerilerinin gelişmesi toplumsal gelişmenin ve bireysel fırsat eşitliğinin oluşmasına katkı sağlayacaktır.

## YÖNTEM

İlgili literatür incelendiğinde dijital okuryazarlık konusu üzerinde yapılan çalışmalarda artış görülmüştür. Ulusal ölçekte yapılan araştırmalarda genellikle öğrencilerin, öğretmenlerin veya velilerin dijital okuryazarlık düzeylerini belirlemeye ve bazı değişkenlere göre incelemeye yönelik betimsel taramalar bulunmaktadır (Erbir, 2021). Literatür taraması sonucu ‘dijital okuryazarlık’ konusunda farklı meslek gruplarına ait çalışmalar bulunmaktadır ancak ev hanımları ile ilgili bir çalışmaya rastlanmamıştır. Yapılan bu çalışmanın ev hanımları üzerinden dijital okuryazarlıkla ilgili literatüre katkı sağlayacağı düşünülmektedir.

Çalışma kapsamında, nitel araştırma yönteminden görüşme tekniği kullanılarak verilere ulaşılmıştır. Yarı yapılandırılmış soru formu üzerinden 20 kadına yapılan mülakatlar Bursa şehri Nilüfer ilçesinde rastgele örnekleme yöntemi uygulanarak seçilen ev hanımları üzerinde uygulanmıştır.

Nitel yöntemle tasarlanmış araştırmalarda ele alınan konu hakkında derin bir kavrayışa ulaşma çabası vardır. Nitel araştırmayı, “gözlem, görüşme ve doküman analizi gibi nitel veri toplama tekniklerinin kullanıldığı, algıların ve olayların doğal ortamda gerçekçi ve bütüncül bir biçimde ortaya konmasına yönelik nitel bir sürecin izlendiği araştırma” olarak tanımlamak mümkündür (Yıldırım ve Şimşek, 2008, s. 39). Nitel araştırma, disiplinler arası bütüncül bir bakış açısını esas alarak, araştırma problemini yorumlayıcı bir yaklaşımla incelemeyi benimseyen bir yöntemdir. Üzerinde araştırma yapılan olgu ve olaylar kendi bağlamında ele alınarak, insanların onlara yükledikleri anlamlar açısından yorumlanır (Karataş, 2017).

Bu çalışmada öncelikle dijital okuryazarlık ve ev hanımları üzerine bir literatür taraması gerçekleştirilmiştir. Araştırmacının bulunduğu yer olması sebebiyle kolay ulaşılabilirlik özelliği ile kasti örnekleme yoluyla seçilen Bursa’da yaşayan ev hanımları örnekleme dahi edilmiştir. Çalışma ile örneklem grubunun dijital okuryazarlık oranlarının ne düzeyde olduğu saptanılması amaçlanmıştır. Ayrıca, ev hanımlarının yeterli düzeyde teknolojik cihaz bilgisi ve yeterliliği analiz edilmiştir. Bu genel amaç çerçevesinde ev hanımlarının dijital medya okuryazarlık düzeyleri ve sosyal medyayı kullanım düzeyleri, sosyal medya okuryazarlığına dair algıları vb. sorulara cevap aranmıştır.

## BULGULAR

Araştırmaya 20 ev hanımı katılmıştır. Aşağıda katılımcıların yaş ve sosyal medya kullanım süresine ait veriler Tablo 1, ve Tablo 2’de sunulmuştur.

| Yaş             | f  | %   |
|-----------------|----|-----|
| 50 yaş ve üzeri | 8  | %40 |
| 30-49 yaş arası | 10 | %50 |
| 29 yaş ve altı  | 2  | %10 |

**Tablo 1.** Çalışmaya katılan ev hanımlarının yaşlarına ilişkin veriler

Tablo 1’e göre katılımcıların 8’ini (%40) 50 yaş üzeri, 10’unu (%50) 30-49 yaş arası, 2’sini ise (%10) 29 yaş altı ev hanımlarını oluşturmaktadır.

| Kullanım saatleri | f | %   |
|-------------------|---|-----|
| 1 saatten az      | 4 | %20 |
| 1-2 saat          | 9 | %45 |
| 3-4 saat          | 5 | %25 |
| 5 saatten fazla   | 2 | %10 |

**Tablo 2.** Ev hanımlarının teknolojik cihazları (telefon, tablet, bilgisayar vb.) kullanım sürelerine ilişkin veriler Tablo 2’de ise sosyal medyayı kullanan ev hanımlarının 4’ü (%20) 1 saatten az, 9’u (%45) 1-2 saat, 5’i (%25) 3-4 saat ve 2’si (%10) 5 saatten fazla kullandığını belirtmiştir.

| Kullanım amaçları    | <i>f</i> | %   |
|----------------------|----------|-----|
| Sosyal medya         | 9        | %45 |
| Haberleşme           | 5        | %25 |
| Haber okuma          | 4        | %20 |
| Dizi izleme          | 1        | %5  |
| Bankacılık işlemleri | 1        | %5  |

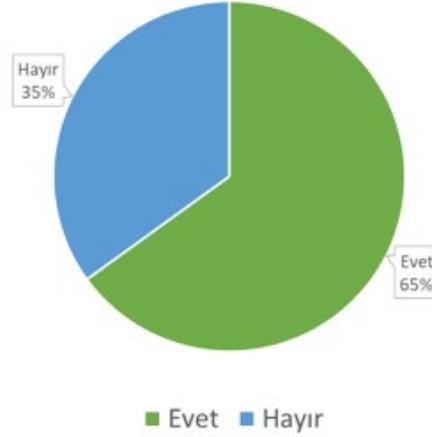

**Tablo 3.** Ev hanımlarının teknolojik cihazları (telefon, tablet, bilgisayar vb.) kullanım amaçlarına ilişkin veriler Tablo 3'te görülen sonuçlara göre ev hanımlarının 9'u (%45) sosyal medya, 5'i (%25) haberleşme, 4'ü (%20) haber okuma, 1'i (%5) dizi izleme, 1'i (%5) bankacılık işlemleri için kullandığı görülmüştür.

| Dijital yetkinlik | <i>f</i> | %   |
|-------------------|----------|-----|
| Evet              | 6        | %30 |
| Hayır             | 12       | %60 |
| Kararsız          | 2        | %10 |

**Tablo 4.** Katılımcıların dijital anlamda kendilerini yetkin bulma oranı Araştırmada ev hanımlarının %60'ı kendilerinin dijital anlamda başarılı ve yetkin bulmadığını belirtmiştir. %30'u ise dijital anlamda başarılı ve yetkin olduğunu düşünmektedir. %10'u ise dijital yeterlilik konusunda kararsız olduğunu belirtmiştir. Bu durumun nedeninin yüksek yaş ortalamasına sahip olmaları ve bununla birlikte teknolojik cihazlarla adapte olmaları konusunda zorluk yaşamaları olarak açıklayabiliriz.

| Yaklaşım  | <i>f</i> | %  |
|---|----------|----|
| Dijital okuryazarlık konusunda daha bilgili kişilere sormak | 9        | 45 |
| İnternette araştırma yapmak                                 | 5        | 25 |
| Güvenilir sayfaları dikkate almak                           | 3        | 15 |
| Kurumsal sayfaları dikkate almak                            | 3        | 15 |

**Tablo 5.** Katılımcıların yanlış içeriklere karşı sergiledikleri yaklaşıma ait veriler Tablo 5'de araştırmadaki katılımcıların yanlış içeriklere karşı sergiledikleri yaklaşıma ait veriler sunulmuştur. Görüldüğü üzere %45'lik kısım (9 kişi) karşılaştıkları yanlış içeriklere karşı dijital içerik konusunda kendilerinden daha bilgili kişilere sormayı tercih etmiştir. %25'lik kısım (5 kişi) gördükleri yanlış içerikleri araştırmayı tercih etmiştir. Geriye kalan %15'lik iki kısım ise güvenilir ya da kurumsal sayfaları dikkate aldıklarını belirtmişlerdir.

**Grafik 1.** Dijital okuryazarlık eğitimi almayı düşünen katılımcı grafiği

Grafik 1'e göre araştırmaya katılan ev hanımlarının %65'i dijital okuryazarlık eğitimi almak istediklerini, %35 ise almak istemediklerini belirtmiştir. Bunun nedeninin yüksek yaş ortalamasına sahip ev hanımlarının dijital okuryazarlık düzeylerinin düşük olmasından ve dijital anlamda çağa uyum sağlama isteklerinden kaynakladığı düşünülmektedir.

## SONUÇ VE ÖNERİLER

Dijital medya okuryazarlığında teknolojilere olan adaptasyon ile dijital okuryazarlık konusundaki beceriler doğru orantılıdır. Dolayısı ile dijital okuryazar olan bireyler dijital ortamlarda sunulan bilgiye ulaşabilmesi, ulaştığı bilgiyi algılayıp değerlendirebilmesi ve üretkenlikleri ile ön plana çıkmaktadır.

Ev hanımlarına yönelik gerçekleştirilen bu çalışmada elde edilen verilere göre ev hanımları genel olarak dijital okuryazarlık konusunda kendilerini yeterince yetkin hissetmediklerini ve bu konuda eğitime ihtiyaç duyduklarını düşünmektedirler. Araştırmada Bursa'da yaşayan ev hanımlarına odaklanılmıştır. Çoğu ev hanımı teknolojik cihazlar arasından en çok telefonu tercih ettiğini ve ortalama 1-2 saat kullandığını belirtmiştir. Kullanma amacına bakıldığında da en çok sosyal medyanın kullanıldığı görülmüştür. Sosyal medyada gördükleri yanlış bilgileri ise dijital okuryazarlık konusunda kendilerinden daha yetkin buldukları kişilere danışma eğiliminde bulduklarını belirtmektedirler.

Ev hanımlarının dijital okuryazarlıklarının incelendiği bu çalışmada, ev hanımlarının dijital okuryazarlık düzeylerinin kendi ifadeleriyle yeterli olmadığı sonucuna ulaşılmıştır. Ev hanımlarının teknolojik cihaz bilgisi, uygulamalar ve kullanım düzeylerinin olumsuz ve yetersiz düzeyde hissedildiği düşünüldüğünde dijital okuryazarlık konusunda risk grubunda oldukları söylenebilir. Özellikle bankacılık, e alışveriş vb. daha resmi ve teknik süreçlerde bu yetersizlik algısı sosyal medyada gerçekleşebilecek olumsuz durumlara karşı risk oluşturabilecektir.

Teknoloji ile herkes gibi ev hanımlarının da bir ilişkisi mevcuttur, ancak ev hanımlarının teknolojik dünyanın ne kadar içinde yer aldığı tartışmalı bir konu olmasından dolayı dijital okuryazarlık konusundaki becerilerinin artırılması ve daha bilinçli bir tüketim aile ve çocuk yetiştirmede olumlu yönde etkili olabilecektir. Yaşamı kolaylaştırmada ve sürdürmede önemli olan dijital okuryazarlık becerisi, diğer becerilerde olduğu gibi geliştirilebilir ve sürdürülebilir bir yapıdadır. Bu eksikliklerin giderilmesi ve ev hanımlarının dijital dünya ile daha etkin bir şekilde etkileşimde bulunmaları için çeşitli önlemler alınması gerekmektedir. Bu kapsamda eğitim kurumları, yerel yönetimler ve sivil toplum kuruluşlarının ev hanımlarına yönelik dijital okuryazarlık programları düzenleyerek bilinçlendirme çalışmalarının yapılması önerilebilir.

## EXAMINING THE CHALLENGES WOMEN FACE IN LEADERSHIP POSITIONS AT SCHOOLS: INSIGHTS FROM A LIBYAN DISTRICT

Abdualmuhsin ALDABOU  
mohsenaldbou2@gmail.com

### ABSTRACT

This study aims to find challenges facing female Libyan leaders in leadership positions and how they overcome them. The qualitative research method was used to collect data from the participants. Twelve Libyan leaders from primary and secondary schools participated in this study. The data were collected through interviews, and content analysis methods were used. The findings show that Libyan women leaders face various challenges including sociocultural challenges and the need to balance family duties and work. However, by using different strategies they could overcome these challenges.

**Keywords:** Women, leadership

### INTRODUCTION

Being a school leader requires diverse strategies and skills, whether a man or a woman takes on this responsibility. Education systems are constantly evolving, and these changes require visionary teacher leaders who understand their culture's harmonious, influential, and progressive nature. According to (Farrag, 2022), leadership is a process of persuasion undertaken by an individual or a management team to influence a group to pursue the goals the leader sets. This definition does not define or guide how women leaders can address specific issues related to women's leadership. Leadership involves motivating followers to act to achieve goals consistent with the values, motivations, desires, needs, and ambitions of the leader and followers. Women school leaders in Libya and around the world face many challenges that hinder their ability to provide effective school leadership.

Across the world, the representation of women in leadership positions has been widely discussed and highlighted over the past five decades ((Bowles et al.,2022). Similarly, underrepresenting women in educational leadership positions is a long-standing problem. Although 64 percent of teachers in the UK are women, women make up only 40 percent of school leaders. In secondary schools (2015-2016), only 38 percent of school principals were women (Fuller, 2017). Additionally, several studies indicate that women in private and public organizations hold 29 percent of all management positions in the United States. Despite these improvements, the proportion of women in management remains very low compared to their male counterparts, particularly in the education sector (Mbalilaki & Onyango 2021). In Canada, female principals represented only 42.1 percent (Holt, 2012). In Russia, only 19 percent of primary school principals are women (Shimalungwe, 2016). According to (Wood et al.,2018). in Australia, in all educational workplaces, women have not been able to obtain educational leadership positions, even though they have expressed the desire to do so and have the qualifications that justify their ability. In developed countries, the percentage of representation of women in management positions could be more encouraging.

According to a report by the United Nations Educational, Scientific and Cultural Organization (UNESCO), cited in Ramsay (2000), it was discovered that there is a significant global gender imbalance in government education. Men outperform women by about five times at the middle management level. Additionally, women tend to have limited aspirations, lack self-confidence, and experience work interruptions due to workplace instability (Alghofaily, 2019). This article explores the key barriers women face in leadership positions within schools, focusing on schools in one district in Libya.

### Women in Education Leadership

The situation for women in leadership positions in education presents a mixed picture, combining courage and frustration. Recent statistics indicate a positive trend of increasing representation of women in various leadership positions in the education sector. However, differences persist in different areas of formal leadership, including serving as school board directors (Bahati & Ali, 2021). In educational leadership, (Maheshwari & Nayak 2021) asserts that collaboration between male and female employees is essential to ensure the effective functioning of schools and improve organizational performance. Collaboration promotes the exchange of knowledge, skills, and experiences among employees, which helps provide high-quality education. Collaboration among teachers toward teaching and learning goals and leadership goals can be achieved through joint efforts. (Qadir, 2019) asserts that creating a legal environment that ensures equal opportunities in leadership positions is essential for employee satisfaction and prosperity in educational institutions.

### **Cultural Norms And The Underrepresentation Of Women In Leadership Roles**

Social structures and cultural values significantly hinder women's access to leadership positions. Culturally ingrained laws in many African societies assign specific tasks and responsibilities to each gender, assuming that individuals must conform to societal expectations based on gender (Kangas& Lämsä,2021). From this perspective, management positions are seen as the property of men, and women are encouraged not to aspire to such positions. This cultural dynamic is evident in the culture of traditional China, where women traditionally assume a submissive role at home and in the workplace (Fritz & Van Knippenberg, 2020). The belief that women are inherently weak compared to men and, therefore, unsuitable for leadership positions prevails in many developing countries (Shriberg et al., 2017). According to this hypothesis, management positions are reserved for men, and women should refrain from seeking these positions. Violating this expectation can lead to various social consequences, including reduced chances of marriage. (Fritz, & Van 2020). note that women, although they view themselves as equal to men, value their abilities less than their male counterparts. For example, when men and women are offered management positions, men express a greater desire to pursue these positions. In contrast, women may only hesitate once they feel fully prepared for these positions.

### **The Challenges Women Face In Balancing Family Life And Work**

Researchers Christman and McLellan 2012 highlighted the challenges women leaders face due to societal norms regarding leadership and gender. These barriers arise primarily from gender roles and greatly influence how women in leadership positions are perceived (Eagly & Karau, 2002). Women leaders are constantly exposed to sexism, male domination, and systemic injustice within organizations, as well as the burden of unpaid work (Anwer et al.,2021). Additionally, women leaders often find themselves juggling responsibilities in the private and public spheres, including raising young children or caring for vulnerable people in the home who are facing violence, substance abuse, or poverty. This type of care represents one of the most sexed and gendered forms of work in contemporary societies (Anwer et al.,2021). In general, Libyan women face many challenges in balancing family work and their job as managers. This study will determine what challenges women face in leadership positions at Libyan schools.

#### **Aim of the study**

This research paper aims to discover the challenges that Libyan women face in school leadership positions, particularly on sociocultural barriers and balancing work and family duties. The research questions are:

- What are the sociocultural factors affecting women's leadership positions in Libyan schools?
- What challenges do Libyan women's leadership face in balancing work and family responsibilities?
- What do women leaders do to overcome the challenges they face?

## **METHODOLOGY**

### **Research Model**

The research used a qualitative method of inquiry, where data was collected through interviews. The qualitative methodology was selected to gather substantial data, although the sample size was limited. Moreover, it is a more flexible approach since it enables participants to express themselves while providing data. (Guest & Mitchell, 2013). Furthermore, it offers the chance to develop specific insights. Such as speech, word choice, and non-verbal communication of the participants. The study uses a qualitative approach Using techniques influenced by researchers such as (Lewins & Silver,2014) and (Creswell, 2011)

### **Sample Of The Research**

The research focused on the Torhuna region, deliberately chosen due to its high representation of female leadership positions in educational agencies. The study included primary and secondary state schools, where twelve female leadership teachers participated, six teachers from primary schools and six female teachers from secondary schools. It included the school head and their deputy from each school. The interviews were audio-recorded and transcribed accurately. Before data collection, permission was obtained from the Department of Education of Tarhuna City, ensuring compliance with ethical principles.

### **Data Collection**

A semi-structured interview technique was used to collect information from the participants. It was collected through questions prepared by the researcher and reviewed by reviewers. Semi-structured interviews help to discover the problems faced by participants in the study, and the researcher can also study this problem in-depth areas with more detailed questions (Yıldırım & Şimşek, 2013). The questions that were prepared were related to knowing the challenges female leaders face in Libyan schools and the strategies they use to overcome them. Data

was collected from participants after work hours through the WhatsApp program and recording calls. Each teacher was interviewed individually, and the interview lasted approximately 30 minutes.

### **Data Analysis**

The acquired data was subjected to thematic analysis, a technique used to identify, document, and analyze patterns or themes in the data (Braun & Clarke, 2013; Rahi, 2017). Thematic analysis was chosen because it allows the researcher to explore the data from multiple perspectives. This approach allowed the researcher to comprehensively examine and interpret the meaning embedded in the data set. To protect the identity of the participants, they have been coded as follows: from (BS 1) to (BS 6) for primary school leaders and from (SS1) to (SS6) for secondary school leaders. The opinions of participating teachers were presented as quotations, aiming to provide validity for the research

### **Findings and discussion**

#### **Sociocultural Factors Affecting Women's Leadership Positions In Libyan Schools**

This study indicates the significant influence of Libyan society's cultural attitudes toward women in school leadership positions. Libyan society's culture towards women affects women's implementation of leadership roles. Traditional beliefs hold that men are right to assume leadership positions, not women (Carli & Eagly, 2011). Women face difficulty in overcoming these cultures that oppress women's rights within Libyan society and equate them with men. Despite what the former president, who ruled Libya for more than 40 years, said in his famous book, *The Green Book*, where Gaddafi said, there is no difference between men and women, and the distinction between them is blatant injustice and has no justification (Kawczynski, 2011). Cultural beliefs overcame these political opinions and distinguished between men and women. In every interview, the participants expressed concern about these cultures that prefer men over women in leadership positions. One of the participants (PS2) said that as long as we remain in our Libyan society, this culture will continue to affect us as a woman. In our culture, men come first, then women. "If there is one seat, a man and a woman, the man will take it while the woman remains standing". She wanted to clarify this by saying:

*"These cultural issues are not easy to change. When my brother and I get in the car, they will give the front seat to my brother while I must sit in the back. Also, in our social events, they give food to the men first, then the women. This is how society views women, which cannot be changed".*

In another interview with the participant (SS7), she said:

*"in our Libyan culture, only men's decisions are taken, and women must implement them. This belief affects women as they are often ignored when they attempt to assume leadership positions".* Another participant (SP9) said: Our predominant culture is that a woman's role is confined to domestic responsibilities at home, taking care of the children, and performing household duties, while leadership position is considered suitable only for men.

*"One time, I told my husband's mother that I had become the school leader, and she was amazed and said to me, "Are you going to be a male!"*

Another participant (SS11) said:

*"I took over the school administrator position after a man headed it. One of the parents came to ask about the school principal, and when I informed him that I was the principal, he refused to speak to me and said there was no man to talk to".*

All the participants show that they face many social and cultural factors that influence their positions as school leaders. Gender stereotypes, social values, and the cultural perception of authority that often favor men are considered major obstacles to the advancement of women in leadership positions. For Libyan society, it is not easy to accept the presence of a female director leading men. The man who refused to meet the manager asked for a man to tell him his problem. (Shava & Ndebele, 2014) Support these observations, noting that most men believe that women cannot be leaders except in the absence of men. On the other hand, (Al-Ahmadi, 2011) confirms that the link between management and male positions is the most important obstacle for women in developing countries. Culture and customs in Libyan society assume that positions and decision-making belong to men, while women must follow men.

In conclusion, the findings of this study show the effectiveness of sociocultural factors on women's leadership positions in Libyan schools. Cultural expectations, gender, and traditional beliefs in male authority hinder the advancement of women and perpetuate inequality between men and women in leadership positions. Addressing these sociocultural barriers requires a concerted effort to challenge gender equality and to foster an inclusive

environment that acknowledges and values women leaders. By breaking down these barriers, Libyan society can harness the full potential of its female leaders and provide an equitable and inclusive educational system.

### **Challenges Libyan Women's Leadership Face In Balancing Between Work And Family Responsibilities**

Despite efforts to achieve equality between men and women, women often make sacrifices when work conflicts with the needs of children and household duties (Carter, & Peters,2016) confirmed that women are declining in leadership positions due to the challenges they face in balancing work and home responsibilities.

All the participants in this study were married with children, which means they had many household duties that interfered with their leadership roles. The participants revealed that while balancing life and work, they needed help prioritizing self-care.

One of the participants (PS11) said: *"I intentionally prioritize family and work over my health. For example, I have dental issues, but I do not have time to go to the doctor for treatment."*

Another participant (PP7) said: *"I go to bed late and wake up early so that I do not sleep more than six hours a day despite the conflict from work, just to balance family duties and work."*

(Brown,2015). emphasized the importance of prioritizing health care and women getting enough sleep. However, most participants admitted to sacrificing their health and time to balance work and home. The study participants said they do not have enough time to enjoy with their husbands and children. Even on holidays, they do not go out to have fun but rather do their accumulated household duties.

One of the participants (PS12) said, *"I do not always join my husband and children on outings, and sometimes I apologize for attending family parties because I do not have enough time"*. This indicates that women sacrifice their leisure time to balance work and household duties. All the participants also indicated that their husbands do not help them with household chores, as one of them (PS5) said: *"Sometimes I work late, and my husband is at home, but he does not clean the house or cook food, as he considers it shameful to do women's work."*

This shows that Libyan women need more spousal support in household duties such as cleaning the house, cooking food, and caring for children. According to (Asma et al., 2024), sharing household chores positively impacts professional life and empowerment. It has also been shown that women whose husbands help them with household duties have less work-life conflict, are satisfied with their jobs, and enjoy their marriages. (Carman et al., 2013). Helping women with their family responsibilities positively impacts creating a balance between work and home responsibilities.

Another challenge Libyan women face in school leadership positions is achieving a balance between work and home responsibilities in the absence of their cars. Libyan culture considers women driving cars unacceptable, and this can create a major obstacle for women who hold leadership positions and need to travel to attend meetings frequently. Most participants said that their husbands bring them to work and return them home at the end of work. One of them (SP3) said: *"Sometimes I am late for work because I wait for my husband to take me to school, and sometimes I stay at school until my husband comes and takes me home"*. It is necessary to promote gender equality and empower women. This includes freeing them from traditional roles and societal norms and allowing them to drive cars to help them achieve a balance between their work and household responsibilities.

In conclusion, Libyan women in leadership face significant challenges in balancing work and family responsibilities. Despite gender equality efforts, women often make sacrifices, risk their health, put their families first, and work above their well-being. Study participants highlighted their challenges in managing household chores along with their leadership positions. One of the biggest problems these women face is the need for extra help from their partners with household chores. Many participants felt frustrated that their husbands did not help them with cleaning or cooking, as they viewed these tasks as exclusively female responsibilities. This not only increases the amount and duration of these women's work, but also perpetuates gender norms and differences within the family.

In addition, participants reported that they found it difficult to spend quality time with their spouses and children during the holidays. Constant juggling work and family obligations leave no time for personal hobbies or family interactions. This highlights the importance of finding a good work-life balance. In addition, the scarcity of women unable to lead in Libyan culture creates an additional barrier for women in leadership positions. Attending meetings or work-related activities can be time-consuming and difficult, as they rely on their partners and other means of transportation. To achieve gender equality and women's empowerment, we must challenge entrenched social roles and norms, such as allowing women to drive.

To solve these difficulties, a comprehensive approach is necessary, including changing Libyan women's life choices. They will be able to reconcile their personal and professional lives as free Libyan citizens. If some women have the ability to serve their nation as leaders, they have a chance to serve it. Every working woman must have a driving

license. They serve in a good way, and they save their time in this way. They will be able to balance their life. They have enough time for their family to spend leisure time with their children and husbands, increasing support for spouses and family members. Policies and programs that promote work-life balance and gender equality capable of providing, as well as fulfilling family life, play a vital role. If women in Libya balance life with work and home, they can serve their country well. If they face some medical issues, they have the option and time to visit their doctor by themselves; there is no need to wait. All these studies about Libyan women's needs were found during this study.

### **Overcoming The Challenges Women Leaders Face In Their Positions**

The study shows that women do many things to overcome the challenges they face in their leadership positions. Among them is the call for education in the field of gender equality. Changing cultural attitudes requires broad awareness and understanding. They organized workshops and held marches to support demanding equality between men and women and challenging cultural attitudes hindering women's progress. One of the participants, PS8, said: *"I was organizing many workshops and marches in support of the importance of gender equality in leadership"*. As a researcher, such initiatives can have a lasting impact on future generations, creating a more supportive environment for women. According to (Fisher & Coleman 2017) women are generally more methodical and planned in their advocacy, which can help the cause gain momentum and support. Women's participation in protests can also help dispel gender stereotypes and change public attitudes regarding women's responsibilities in public life. The study highlights the importance of women's marches and their beneficial effects in promoting change and expanding women's rights.

The study also shows that most participants tried to challenge the predominant cultural norms in society by starting a dialogue with their families and friends and changing the prevailing cultural views that hinder women from reaching leadership positions. In this way, the issue can be addressed from its roots. Participating in such conversations is a positive step towards breaking stereotypes and fostering a more supportive environment for women in leadership roles. One of the participants, PS3, said: *"I always talk to my family, relatives, and friends that these cultural norms that hinder women's progress are backward norms that must be changed."* While systemic change is crucial, individual actions within families and communities play a large role in gender equality. Women can employ such strategies to overcome social and cultural challenges and reshape them to suit women.

In order to achieve gender equality, individual actions within families and communities play an important role. (Women, U. N. 2015). The UN Women's Report Progress on the Status of the World's Women 2015-2016: Transforming Economies, Realizing Rights explores the interconnections between women's economic empowerment and the enjoyment of their rights and highlights the role of discriminatory social norms in limiting women's actions. The report believes that Progress toward gender equality requires changes in economic, social, and political areas and that individual work within families and communities plays an important role in achieving this.

According to the study, participants established support networks among their peers. They created a WhatsApp group and named it "Women School Leadership". SP12, one of the participants, said: *"I started this group seven years ago, and at first, the number of participants was no more than ten."* However, to date, more than 750 participants from inside and outside the city of Tahuna". Participants emphasized that to overcome challenges they face in leadership positions, they constantly consult with each other through this network and seek help from experienced school administrators. Another participant (SP1) said *"I have almost decided to resign from my position as headteacher after encountering a problem at school, however, when I raised this difficulty in the group, I received advice from experienced managers, and by following this advice, I could overcome all the difficulties and problems I encountered"*.

The study shows that participants collaboratively communicate via social media. They overcame all the challenges they faced in their leadership position because of this group. One of the ways women communicate and exchange experiences and information is through this organization. The organization provides a forum to share ideas and resolve any issues. Women leadership can share their problems and ask questions about specific ways to solve them. Additionally, the WhatsApp group provides peer support and encouragement, which builds members' self-confidence and helps them succeed in their leadership positions. According to (Medlin et al., 2020), WhatsApp is one of the most widely used messaging applications in the world. Through it, people can exchange ideas and solve problems. It is an effective tool for communication and forming a bond between individuals, through which ideas can be discussed and the problems they face can be solved.

According to the majority of participants, when asked what they do to overcome the challenges they face in balancing between work and home as women leaders, they expressed their need to bring work to home, especially in the face of deadlines. For example, (PS3) said, *"When homework becomes too much, I take some work to home and do it after I finish my household responsibilities."* However, she admitted that she had to bring certain documents to meet deadlines. These statements suggest that school leaders are seeking to seamlessly manage their family and

school responsibilities by trying to put work aside while at home. However, in reality, they had to multitask both at home and at school to achieve their goals in both areas. This study aligns with the research conducted by (Parker et al., 2017), which emphasizes that while there has been an increase in the number of women leaders in academia, they still have a greater responsibility in managing the demands of their home and work. Women frequently assume various responsibilities both in their households and educational institutions, in contrast to their male colleagues.

Another strategy expressed by school leaders is that they use to balance work and home responsibilities. Some of the participants said that they brought maids into the house to help them with household chores, while others said that their husbands refused to let them bring maids into the house, but they have relatives who help them. One of the participants, (SP11), said: *“When I am at work, I ask my sister-in-law, who is an unmarried girl, to come and help me, and sometimes she stays with the young children who have not yet gone to school until I return from school”*. All participants said that they ask other teachers to help them and assume some leadership positions when they are away from school for any reason

McKay & McKay (2010) described the situation of President Wilson, who lacked an efficiently organized secretarial team. He took excessive charge of evaluating and completing files and documents that should have been reserved mostly for his confidential assistants. President Wilson lacked the ability to make effective use of individuals. McKay & McKay maintain the position that leadership traits consist primarily of courage, resilience, courage and determination, but place less emphasis on delegation. They assert that the skill of delegating intelligently and efficiently is an underappreciated but absolutely essential trait for a leader's success.

Participants in this study used delegation to complete tasks at home and school. They sought help from their relatives and colleagues to overcome the challenges they faced in balancing work and home. By intelligently practicing delegation, they successfully reduced the burden of work commitments and managed household responsibilities perfectly. Through the implementation of several preceding techniques, Libyan women successfully surmounted the obstacles encountered in their leadership roles. Furthermore, they demonstrated her capacity for leadership within Libyan society, on par with men, despite the challenging circumstances around them.

## CONCLUSION

The study shows that Libyan women leaders face many challenges in their leadership positions. They face many sociocultural challenges like societal norms, gender stereotypes, and cultural perceptions of authority that prefer men over women. The results of our qualitative study are consistent with (Metcalfe & Mutlaq, 2011), who demonstrated that women in the teaching profession face multiple obstacles when seeking leadership positions. These challenges include the prevailing negative stereotype of women among men and significant cultural and structural barriers. Also, they face challenges in balancing work and family.

Additionally, Libyan women face challenges in managing the demands of their work and family duties. Despite efforts to achieve gender equality, women often compromise, put their health at risk, prioritize their children, and prefer work over their well-being. Libyan women leaders highlighted the challenges they face in managing the demands of their professional responsibilities and family obligations. One of the main barriers these women face is the need for increased support from their partners regarding domestic responsibilities. A significant percentage of participants expressed dissatisfaction with their husbands not helping them with household chores, such as cleaning and cooking, believing that these responsibilities fall solely on women. These results are consistent with previously conducted studies (Bahiru & Mengistu, 2018) (Cho et al., 2015) that show women leaders face many challenges in balancing work and family duties in their leadership positions.

Despite all the challenges that Libyan women leaders face in their leadership positions, they have not remained idle. They used different strategies, such as organizing workshops and creating groups through means of communication to exchange ideas and solve problems, and going out in peaceful demonstrations to demand their rights and requesting help from their relatives at home and their friends at work; the Libyan female leaders were able to challenge all the challenges they face and were also able to balance work and household responsibilities.

## IMPLICATIONS

The study highlights the cultural challenges women face in their leadership positions that hinder women's progress, calling for changing these cultures and establishing equality between men and women. The study also highlights the challenges women face in balancing work and home responsibilities, calling for support from their family members and friends to balance work and home. The study also reveals that Libyan female leaders use different strategies to overcome these challenges. These strategies can also be a guide for women aspiring to leadership positions. It also calls on the Libyan Ministry of Higher Education decision-makers to develop laws to support women in leadership positions and make them equal to men.

# EXAMINING THE CONCERNS OF PRIMARY SCHOOL ADMINISTRATORS ABOUT THE USE OF COMPUTER TECHNOLOGIES IN ACCORDANCE WITH THEIR OPINIONS

**Beril ÖZAY**

KSTU Education and Research Institute

berilozay04@gmail.com

## ABSTRACT

This research was conducted to identify primary school administrators' concerns about the use of computer technologies and to offer suggestions on this issue. The population of the research consists of 171 primary school administrators in primary schools affiliated with the TRNC Ministry of Education in the 2021-2022 academic year. The sample of the research includes 60 managers selected from the population by random sampling method. In the research, the personal information form for primary school administrators and the questions prepared to determine their level of computer technology usage were taken from expert opinions and as a result, 5 interview questions were determined. The obtained interview forms and interviewers were contacted directly by the researcher, and the data obtained were audio-recorded, and analyzes were carried out after the themes and coding were made. As a result of the research, in line with the data obtained from the managers, it was emphasized that computer technologies are an inevitable part of our lives, and it was stated that the use of computer technologies has both positive and negative aspects. It has been determined that primary school administrators have concerns about the use of computer technologies, regardless of their gender. When the primary school administrators' age grouping is examined, it has been determined that as the average age increases, their anxiety levels increase, and as the average age decreases, their anxiety levels decrease in direct proportion. When we look at the education levels of primary school administrators, it is concluded that as their education levels increase, their anxiety levels decrease inversely. Within the scope of the solution suggestions received from primary school administrators, in order to be a solution to eliminate the concerns that may be experienced, at the point where the person thinks that it causes anxiety in himself, sees that he is deficient and realizes that he needs to improve himself in this regard, he should attend individual courses or seminars on computer technologies or attend the TRNC Ministry of National Education. It has been suggested that the school should participate in in-service training programs organized by the Joint Education Services and to program the necessary training for school administrator candidates. In addition, it has been suggested that the practical nature of these courses or seminars will greatly reduce concerns by preventing problems that may arise in practice.

**Keywords;** Computer technologies, education, primary school, anxiety, manager.

## 1. INTRODUCTION

This research was prepared to understand the reasons for the anxiety experienced by primary school administrators about computer use. Technology is the accumulation of knowledge obtained for the control and change of the physical environment with the tools developed by humans (TDK, 2021). International Association of Technology and Engineering Educators; He expresses that the change that people make in the natural environment in line with their needs in their daily lives is called technology (ITEEA, 2007). Technology is the application of information that facilitates human life and causing changes in the environment in line with its purposes while applying (Britannica, 2020). People invent concrete objects to produce solutions to the problems surrounding them and develop discipline for the use of these objects. He calls this technology. The effective use of inventions made since the beginning of human history has enabled humanity to evolve and survive (Basalla, 2013). Technology, which is the product of human intelligence (Bensghir and Leblebici, 2001), refers to the ability of a person to make it useful and functional by adding information to his/her existing knowledge for himself and his environment (Eren, 1982).

Science and technology, which are developing rapidly, as in every aspect of our lives, are also in a rapid development process in the field of education. Depending on these developments, we encounter many changes and innovations in the learning and teaching processes. Classical techniques, tools and materials, which are old methods applied in education, are now out of date. Especially in the last quarter century, these old methods have been replaced by new technical and technological tools (Yılmaz, 2010). Just as the development of technology leads to changes in the methods and techniques of education, scientific, social and global influences also lead to changes in the structure and functions of education (Yurdakul, 2015).

In our age, science and technological advances are among the factors that deeply affect the structure of society and education systems. Developing modern technology, basic sciences, production, transportation and communication methods change the structure of societies and necessitate their structural adaptation to this change (Akkoyunlu, 1998).

When we look at the educational structures in the world, it is seen that educational institutions are planned to provide skills to suit today's developments (Yolcu and Demire, 2017). In our age where all kinds of technological and electronic means are used, the situation is no different for education. For this reason, research shows that people who are eager to acquire new knowledge and skills and have this perspective are needed in flexible societies (Aksoy, 2003). Therefore, the importance of educational institutions in meeting human needs comes to the fore once again at this point (Yılmaz, 2010).

Technological change and development in the world directly affects education and increases the value and efficiency of education within the framework of educational technologies. (Çakırer, 2002) For this reason, it is said that the use of computer technologies has become inevitable in order to make the education policy prepared for the future (Çallı, 2002) effective and efficient (Atman, 2005).

Educational institutions are among the institutions that need to use new technologies most effectively. Technological developments, which have become increasingly widespread since the early 1980s, are used in many areas such as presentations, teaching materials, and carrying out some administrative tasks in school environments. (Brush, 1998). The positive development that has occurred under the influence of education in the last quarter of a century can be seen in every aspect of our lives. Education that is so effective forces administrators to be leaders in teaching environments. They should be especially effective in the use of computer technologies, and school administrators should be the ones who guide and encourage teachers and students. For this reason, the school administrator must constantly improve and renew himself (Seven, 2021).

In order for educational organizations to become efficient and functional, educational administrators must provide leadership (Kurtuldu, 2007). The most important leadership qualities are being able to manage information in today's information age. Good management of information depends on ensuring the highest return and utilization in the most efficient way (Ata, 2006). School administrators and teachers bear the most responsibility for the use of technology in educational institutions (Yurteri, Fırat, Hayta & Yinal, 2023). The technological equipment of school administrators and their attitudes towards technology are very important for the efficiency of educational environments (Şahin, 2020).

Today, existing applications are being transformed and technologies suitable for the new system are being introduced (Fidan, 2007). The use of technology nowadays has pushed people to access information, use information and acquire new information. In order to use technology effectively while accessing information, leaders may be needed to guide from time to time. In the research carried out, standardization studies were carried out on this subject, and in the United States, technology leadership standards were developed by ISTE (International Society for Technology in Education) in 2009 and technology leadership standards (NETS-A) were developed for education managers. According to these standards, the characteristics that a technology leader must have are listed as follows (Hacıfazlıoğlu, Karadeniz and Dalgıç, 2010);

1. *Visionary Leadership* : Provides technology integration to the organization covering the entire institution, develops a common vision to achieve excellence in corporate transformation and leads by inspiring.
2. *Digital Age Learning Culture* : It ensures its continuity by creating interesting environments that are suitable for the culture of the digital age, taking into account the needs of all students.
3. *Excellence in Professional Practice* : It supports the learning of both educators and students with a professional and innovative approach, using digital and contemporary technological resources.
4. *Systematic Development* : Ensures the continuous development of the governing institution through the use of effective information and technology resources, ensuring digital age management and leadership.
5. *Digital Citizenship* : It helps the organization understand social, ethical, official and legal issues by developing responsibilities regarding the changing digital culture.

Technological leadership; It is defined as being able to use technology effectively, creating an environment to access technology, providing resources, encouraging, inspiring and collaborating (Seven, 2021). In order for educational organizations to become efficient and functional, educational administrators must provide leadership (Kurtuldu, 2007). The most important leadership qualities are being able to manage information in today's information age. Good management of information depends on ensuring the highest return and utilization in the most efficient way (Ata, 2006).

In recent studies, leaders who are familiar with technology, have sufficient technological knowledge, follow technological developments, are pioneers in the application of technology, enable the use of technology by influencing their environment, and can use technology in other areas are defined as visionary leaders. They explain visionary leader characteristics by dividing them into four groups: digital age learning culture, excellence in professional practice, systematic development and digital citizenship (Gökoğlu and Çakıroğlu, 2014).

A conscious school administrator is a leader who makes efforts to renew and improve himself with the requirements of the information age (Uğur, 2010). It has been stated that people with high self-efficacy beliefs in using computer technologies are more participatory in activities related to computer technologies and that it is easier for them to cope with any problems they encounter (Akkoyunlu and Orhan, 2003). From this point of

view, it is seen that school administrators, who are role models for teachers and students, provide guidance regarding anxiety and self-efficacy perceptions in terms of using computer technologies (Uğur, 2010).

Adapting to rapidly developing technology can become difficult and cause anxiety lately. Definition of anxiety; In case of experiencing any of the emotions such as sadness, distress, fear, sense of failure, helplessness, anxiety of making a mistake and being judged, it is stated as an expression of excitement that can be measured by different physiological reactions such as heartbeat, blood pressure, chemical structure of blood, breathing and exhalation rates (Cüceloğlu, 2009).

In general, anxiety is the feeling that something bad will happen to a person (Öktem, 1981). It is described as a threat to basic motivations such as self-esteem due to the feeling of not being able to achieve a task that a person has undertaken to do (Fiske and Morling, 1996). Emotional reactions that cause pressure and tension in stressful situations such as sadness, tension, worry, delusion, restlessness and fear are defined as anxiety (Köknel, 1989; Özgüven, 1994).

Symptoms of computer anxiety can manifest itself as feeling uncomfortable using the computer, experiencing heart palpitations and panic attacks (Brosnan, 1999). According to the research, the behavioral patterns seen in people with computer anxiety are as follows: (Maurer and Simonson, 1994);

1. Avoiding areas and computers where computers are located.
2. Be extremely cautious and take precautions when using the computer.
3. Negative conversations about computers.
4. Preferring short periods of time when using the computer.

As a result, a person with computer anxiety is someone who avoids and is afraid of using computers. These people avoid encountering computers and communicating (Smith and Kotrlík, 1997). Anxiety about computer technologies causes fear and anxiety. This situation drives people to change their attitudes and behaviors towards innovations and causes them to resist innovation. However, in order for institutions to survive, they must have an innovative understanding and exhibit innovative features as a necessity of keeping up with the times (Çetin and Bülbül, 2017).

Studies show that people can experience computer anxiety and that it can be measured scientifically (Maurer and Simonson, 1994; Hakkinen, 1994). Computer anxiety is the individual's thoughts, prejudices or fear about using a computer and its consequences (Marcoulides, 1989). In order for innovative managers to be successful in the cultural environment they will create in their institutions, it depends on their ability to be free from fear and anxiety, enterprising, courageous, sensitive to their environment, interested in uncertainties, and accepting of events and situations (Bülbül, 2010).

## **PURPOSE 2**

### **2.1. Purpose of the research**

In this study; It targets primary school administrators working in the 2021-2022 academic year under the Department of Primary Education within the Ministry of National Education of the Turkish Republic of Northern Cyprus. This research aimed to determine the concerns of primary school administrators regarding their use of computer technologies. In this regard, answers to the following questions were sought in the research;

1. What are your views on the use of computer technologies in education?
2. Have you ever worried about the use of computer technology? If so, what would you say these concerns are based on?
3. If you were to rate your anxiety towards computer technologies on a scale of 1-10, how would you give yourself?
4. Have you been able to overcome your concerns about computer technologies? If you have overcome it, what method did you follow to overcome it?
5. What do you think can be done to overcome concerns about the use of computer technologies in education?

In line with this research, it aims to contribute to the field by giving primary school administrators the opportunity to evaluate themselves in the light of information about their concerns about computer technologies.

### **2.2. Importance of Research**

Science and technology, which is now called the information age, continues to develop and renew at an incredible pace. In the face of this development and change, the education people receive remains inadequate throughout the process, which puts people in trouble in their own fields while practicing their profession. Primary school administrators have a critical importance in terms of the education and training process. It is thought that primary school administrators should have some innovations in order to use learning and teaching processes effectively and efficiently in terms of information and technology, which will positively affect other education workers and students. For this reason, primary school administrators' concerns about using computer technology should be determined and necessary arrangements should be made for the education system as a result of these concerns (Yılmaz, 2010).

In order for learning and teaching processes to be more efficient and effective, it is thought that school administrators' possession of certain technological competencies will have a positive impact on both teachers and students. For this reason, it is thought that it is important for the education system to determine the anxiety levels of primary school administrators in using computer technologies and take the necessary precautions in line with the results.

It is hoped that this research will provide guidance to primary school administrators in terms of what needs to be done by providing them with information to evaluate themselves in using computer technologies. Therefore, it is thought that school administrators will participate in applied courses or seminars to develop computer technologies and technological leadership competencies during their term of office, and by giving importance to in-service training activities, they will become more competent in recognizing technology and actively using these technologies.

When the literature was examined, it was seen that there were few studies on the use of computer technologies by primary school administrators in TRNC. For this reason, although the research is important in this respect, it is hoped that it will provide guidance to primary school administrators in TRNC in terms of what needs to be done by providing them with information to evaluate themselves in using computer technologies.

### **2.3. Limitations of the Research**

1. This study is limited to administrators working in primary schools affiliated with TRNC Ministry of Education, Department of Primary Education in the 2021-2022 academic year.
2. The study is limited to the surveys used in the research.
3. This study is limited to the participants' responses to the surveys.

## **3. METHOD**

### **3.1. Model of the Research**

This research; In the light of the questions asked to the participants about their computer technology concerns, a holistic approach, flexibility in the research design, and a qualitative method with an inductive analysis in revealing perceptions were applied (Yıldırım and Şimşek, 2018).

Qualitative research method; It is a method of obtaining information that provides the opportunity to reach a small number of participants on detailed information and situations (Patton, 2014). In the research; On the basis of "case study", one of the qualitative research methods, a "nested single case" design, which allows multiple analyzes using a single case design, was applied (Yin, 2016). The situation examined in the research was conducted on 60 administrators in line with the opinions of the participants working in the administrative staff in primary schools affiliated to the Ministry of National Education of Northern Cyprus.

### **3.2 Sample of the Study**

The sample of this research consists of 60 people working as administrators in public primary schools affiliated with the Ministry of National Education and Culture of Northern Cyprus in the 2021-2022 academic year. The sampled administrators consist of principals and assistant principals working in 24 different schools. The sample used for the research was made in accordance with the "purposive sampling" approach. Purposive sampling; It allows the desired situations to be examined in detail to obtain rich data (Yıldırım and Şimşek, 2018). The administrators selected in the research in accordance with purposive sampling, principals and assistant principals working in primary schools in different regions of the island, are suitable for "easily accessible case sampling". Easily accessible case sampling, or "convenience sampling", is based on items that are quickly and easily accessible (Patton, 2014).

### **3.3. Data Collection Tool and Data Collection**

In the research, interview technique was used to analyze the views of primary school administrators towards computer technologies. The most powerful features of the interviews are; It allows us to have information about the lives of people, observed or unobserved situations, and to understand how they convey it with alternative explanations (Creswell, 2017).

To obtain research data, a semi-structured interview technique was used to obtain the opinions of 60 administrators affiliated with the Ministry of National Education and Culture of Northern Cyprus on the subject. In semi-structured interviews, it is aimed to make the most of participant experiences by using pre-prepared open-ended questions (Creswell, 2017).

The questions in this research consist of two parts. In the first part, there are questions to determine the school administrators' age, gender, educational background, degree of education, and years of service as an administrator. In the second part of the survey; The interview form questions consist of 5 open-ended questions. The interviews were held in the schools where the administrators worked, and focus group interview technique was used. Focus group discussions; It is the use of predetermined instructions that prioritize people's

characteristics. Among qualitative data collection techniques, it has recently been frequently used in action research (Yılmaz and Oğuz, 2011).

Individual interviews with each participant lasted approximately 20 minutes. The interview was audio recorded and answers to the following questions were sought during the interviews;

1. What are your views on the use of computer technologies in education?
2. Have you ever worried about the use of computer technology? If so, what would you say these concerns are based on?
3. If you were to rate your anxiety towards computer technologies on a scale of 1-10, how would you give yourself?
4. Have you been able to overcome your concerns about computer technologies? If you have overcome it, what method did you follow to overcome it?
5. What do you think can be done to overcome concerns about the use of computer technologies in education?

### 3.4. Data Analysis

In this research, the "content analysis" method was used to analyze the data. Content analysis; It is the quantification of what is said or written, oral or written material by coding it with a systematic analysis (Balcı, 2004). In content analysis, four stages are applied (Miles and Huberman, 1994). The application was made as follows;

- a) *Coding of Data* : The information obtained and analyzed during the interviews was compiled and coded by numbering the lines. While creating the coding list; "Consensus" was achieved, and new regulations were made on issues of "disagreement" by discussing them.
- b) *Finding Themes* : The codes determined in the first stage were collected under the created categories. Thus, an attempt was made to find common aspects between the codes.
- c) *Organizing the Data According to Codes and Themes* : In order to convey the opinions of the participants to the readers, numbers starting from 1 are given for each participant (For example: Y-1). These codings were used when quoting participants' opinions.
- d) *Description and Interpretation of Findings* : The findings obtained as a result of the interviews with the managers participating in the research and the interpretation of these findings are discussed in this section. The findings were presented in detail with quotations, thus strengthening the validity of the research.

## 4. FINDINGS AND INTERPRETATION

### 4.1. Results

In this section, the research was examined in line with the problem statement and the data obtained was analyzed. If we look at the tables showing the findings and the interpretations of the findings ;

**Table 1.**

#### Information on Demographic Characteristics of Primary School Administrators

Information on the demographic characteristics of primary school administrators is given in Table 1.1, Table 1.2, Table 1.3 and Table 1.4.

**Table 1.1. Distribution of Participants by Gender**

| GENDER       | N         | %          |
|--------------|-----------|------------|
| Women        | 24        | 40         |
| Male         | 36        | 60         |
| <b>TOTAL</b> | <b>60</b> | <b>100</b> |

Table 1. one; 24 female and 36 male managers participated in the research. The percentages were determined as 40 to 60.

**Table 1.2. Distribution of Participants by Age**

| AGE          | N         | %          |
|--------------|-----------|------------|
| 27-32        | 10        | 16.66      |
| 33-38        | 14        | 23.33      |
| 39-44        | 24        | 40         |
| 45-over      | 12        | 20         |
| <b>TOTAL</b> | <b>60</b> | <b>100</b> |

Table 1.2; It was observed that most of the participants were between the ages of 42-47, with 40% . The least number of participants are the 31-36 age group who have just started their managerial duties .

**Table 1.3 Distribution of Participants by Education Level**

| EDUCATION LEVEL | N         | %          |
|-----------------|-----------|------------|
| Undergraduate   | 33        | 55         |
| Master's Degree | 22        | 36.66      |
| PhD             | 5         | 8.33       |
| <b>TOTAL</b>    | <b>60</b> | <b>100</b> |

Table1.3; When we look at the education levels of the participants in the study, it was determined that more than half of them had a bachelor's degree.

**Table 1.4. Distribution of Participants According to Their Term of Office**

| TERM OF OFFICE | N         | %          |
|----------------|-----------|------------|
| 0-5            | 20        | 33.33      |
| 6-10           | 18        | 30         |
| 11-15          | 10        | 16.66      |
| 16-20          | 8         | 13.33      |
| 21-25          | 4         | 6.66       |
| <b>TOTAL</b>   | <b>60</b> | <b>100</b> |

Table1.4 ; When the participants were asked about their tenure, the most common answer was 33.33% that they had been managers for 0-5 years.

**Table 2.**

**I. Computer Tech in Education of Managers . Opinions on Their Use**

| OPINIONS                 |  | N          | %            |
|--------------------------|--|------------|--------------|
| <b>Negative Comments</b> | * Diversity of information head confusion creates (N=3)<br>* Annoyed use should only be done vehicle must be (N=2)<br>* Use of if unknown problem habitable (N=2)<br>* Use areas ( sites , images ) if not found si - crumbs happens (N=2)<br>* Preparation if not, waste of time experienced (N=2)  | <b>12</b>  | <b>7.79</b>  |
|                          | * Without effort to knowledge to reach provides (N=1)  |            |              |
| <b>Positive Comments</b> | * Image memory supports ( more more to the sense address ) (N=16)<br>*It is of great importance (N=15)<br>* Subject in his presentation convenience , practicality (N=14)<br>* Education for is supportive (N=12)<br>* To resources in reaching convenience (N=11)<br>* Age to the necessity foot fake (N=10)<br>* Use of productive And required (N=10)<br>* Inevitable obligation (N=9)<br>* In education speed increases (N=8)<br>* Afar in education important contribution (N=7)<br>* Fun learning provides (N=6) | <b>142</b> | <b>92.20</b> |
|                          | * Education for useful (N=6)<br>* In children curiosity creates, attracts (N=5)<br>* Research desire , ability earns (N=3)<br>* To innovations path opens (N=3)<br>* Qualification And efficiency increases (N=3)<br>* In perception selectivity improves (N=2)<br>* A lot advantageous situations provides (N=2)  |            |              |
|                          | <b>TOTAL</b>   |            |              |

Primary school administrators expressed positive opinions about the use of computer technologies. Opinions such as " *it supports visual memory, it is of great importance, ease of presentation of the subject, practicality* " came to the fore the most . Participants who had a slightly negative opinion also stated that " *diversity of information creates confusion, if there is no preparation, there is a waste of time, and it allows access to information without effort.* " There were opinions such as:

**Table 3.**

**I. Managers ' Computer Tech . Their Views Regarding Their Concerns About Their Use**

| OPINIONS     |  | N         | %                  |
|--------------|--|-----------|--------------------|
| YES          | * Wrong Something don't do that I have fear (N=8)<br>* Previously education not taking (N=6)<br>* Tek.nin fast development anxiety donor (N=5)<br>* Wrong informations available (N=4)<br>* In-service education insufficient (N=4)<br>* Ads existence distressed (N=3)<br>* Initially I was afraid (N=2)<br>* Insufficient i am I think (N=2)<br>* Process before preparation required (N=1)<br>* Complicated use There are cases (N=1) | 36        | 60                 |
|              |  |           |                    |
| NO           | * Technology with drink inward i am for I didn't hear (N=8)<br>* Previously information And experience I own (N=7)<br>* None anxiety I didn't hear (N=5)<br>* Trying over time is learned (N=3)<br>* Subject with relating to course I bought (N=1)  | 24        | 40                 |
|              |  |           |                    |
| <b>TOTAL</b> |  | <b>60</b> | <b>one hundred</b> |
|              |  |           |                    |

In this table, 60% of the participants answered " *yes, I experience anxiety* ". The group that does not experience anxiety is 40% . Opinion of the participants who experienced the highest anxiety; " *I have a fear of doing something wrong* ". Another opinion is; " *I don't think I'm enough* ". The opinion of those who do not experience the highest level of anxiety among the participants is; It has been said, " *I have not heard of it because I am in touch with technology.* ". If we look at the lowest opinion, it was stated that " *I took a course on the subject* ".

**Table 4.**

**I. Computer Tech in Education of Managers . Their Self -Notes About Usage Concerns**

| POINT |    |    |   |   | 60 |   |   |   |   |   |

In this table, it was previously explained that anxiety increases as the grades move towards 10. In this case, if we take the average grade of 5 as seen in the table, 34 managers give themselves grades of 5 or above regarding the use of computer technologies; 26 managers gave themselves a score below 5 regarding anxiety.

Quotations about notations can be exemplified as follows;

1. "I gave myself 1. I have no concerns about this. "I think I will overcome the innovations that I may be worried about by getting education." (Y;11)
2. "I would give myself a 2 because I am competent to carry out many administrative and correspondence tasks in our school via computer and internet." (Y:13)
3. "I would give 3. "I do not have sufficient equipment in the field of computer technology." (Y:2)
4. "4 because, it is difficult, but it is not a problem that cannot be prevented." (Y:26)
5. "I give 5 because the information sources are diverse, there are inaccurate and non-standard sites." (Y:6)
6. "I give 6. "I am worried because I have not received sufficient training on this subject." (Y:49)
7. "My anxiety 7. I take many precautions to eliminate the problems, but they are not resolved." (Y:37)
8. "I would give 8. Because there is no reversal in any mistake and the efforts spent are wasted." (Y:15)
9. "I would give 9 because I think my level is good in this regard." (Y:58)
10. "I would give 10. "Like not having enough information, not being able to get help, not being able to correct me if I make a mistake." (Y:32)

**Table 5.**

**I. Managers' Computer Tech. Methods They Use to Overcome Usage Concerns.**

| MAIN THEME THEME N %                     |   |
|--|---|
| <b>I Overcame My Anxiety</b>             | <ul style="list-style-type: none"> <li>* Myself I developed (N=9)</li> <li>* To learn I made time for (N=8)</li> <li>* More _ I researched (N=8)</li> <li>* From the environment by asking I learned (N=7) <b>38 63.33</b></li> <li>* Understanding from people help I bought (N=3)</li> <li>* Subject relating to course I bought (N=1)</li> </ul> |
| <b>my anxiety I couldn't get over it</b> | * My anxiety I couldn't get over it , always innovations happens (N=12) <b>12 20</b>  |
|  | * Anxiety I did not experience (N=10) <b>10 16.66</b>   |
| <b>I Did Not Experience Anxiety</b>      |   |
| <b>TOTAL 60 100</b>                      |   |

In Table 5, 38 participants agreed on overcoming concerns; Methods such as "I improved myself, took time to learn, researched more, learned by asking people around, got help from people who understood, and took courses on the subject" were stated.

that there were 10 participants who said " I did not experience anxiety ", while there were 12 participants who said " I could not overcome my anxiety, there are always innovations ".

**Table 6.****I. Computer Tech. Through the Eyes of Its Managers. What are the Suggestions for Overcoming Usage Concerns?**

| OPINIONS  | N         | %          |
|---|-----------|------------|
| Adequate training should be provided                      | 28        | 46.66      |
| Opportunity should be given to repeat, practice and apply | 14        | 23.33      |
| Must be convinced of the necessity of its use             | 6         | 10         |
| Research should be done                                   | 3         | 5          |
| Users should be made aware                                | 3         | 5          |
| Users must be willing                                     | 2         | 3.33       |
| Purpose of use must be determined in advance              | 2         | 3.33       |
| People to get help should be determined                   | 1         | 1.66       |
| Time should be allocated for use                          | 1         | 1.66       |
| <b>TOTAL</b>  | <b>60</b> | <b>100</b> |

*adequate training should be provided* " comes to the fore with the highest percentage . The next highest opinion percentage was " *the opportunity for repetition, research and application should be given* ". The opinions with the lowest rates were as follows: " *The purpose of use should be determined in advance, people to get help should be determined and time should be allocated for use .* "

**4.2. Argument**

In the research, information on demographic characteristics is presented in Table 1.1, Table 1.2, Table 1.3 and Table 1.4, in line with the questions asked to the participants. In Table 2 participants in training Their opinions regarding the use of computer technologies were stated. Table 3 shows the participants' opinions regarding their concerns regarding the use of computer technologies. Table 4 presents the scores given by the participants regarding the use of computer technologies in education. Table 5 shows the methods used by participants to overcome their concerns about using computer technologies. Finally, Table 6 shows the participants' suggestions for overcoming their concerns about using computer technologies . According to this; When we look at the results of the research, it is seen that administrators with higher seniority in primary school administration have increased concerns about using computer technologies compared to administrators with lower seniority.

Similar findings have been found in many studies as follows; According to Kökdemir 's (1997) research, when the computer anxiety levels of managers were measured, it was determined that managers between the ages of 49-60 were more anxious than managers between the ages of 37-48 and 24-36. Considering that the group with high anxiety would retire soon, they said, "I am no longer away from you." It has been concluded that it is possible that they may act with thoughts such as "I'm over it" or "What good will I do after this age?" and therefore they may avoid the learning process.

School administrators should provide the necessary support to teachers, who play a key role in the education system, and should not be concerned about adapting all kinds of technology (Çevik and Baloğlu, 2007). In a similar study, the attitudes of young administrators and teachers towards computer anxiety revealed more positive results than the attitudes of middle-aged administrators and teachers towards computer anxiety (Karaltürk, 1997). In another study, when the attitudes of teachers over the age of 35 about computer technologies were examined, it was determined that they were more anxious than those under this age (Cambaz, 1999). In another study that reached the same conclusion, it was observed that young people had significantly lower anxiety than older people ( Rosen and Weil, 1995).

In a research conducted with teachers, it was found that those who had a bachelor's degree were more likely to use Windows , Word , Power . It has been observed that the level of anxiety they experience when using programs such as point is lower than teachers with associate degree degrees, and it has been concluded that they use such programs more frequently (Eroldoğan, 2007). When we look at another research, it was seen that there is no significant difference between managers' perceptions of their competence in technology leadership and their seniority (Çakır and Aktay, 2018; Dinç, 2019). In another study, it was revealed that a person's ability and desire to use computers in the teaching process is highly related to his or her level of education (Eliaçık , 2006).

It has been determined that school administrators who have worked in schools for 1-10 years are more competent than more senior administrators ( Ergishi , 2005 ). In addition, it was found that managers with 10 years or less experience have lower anxiety towards computer technologies compared to managers with more than 10 years of experience (Bostancı, 2010). Another study found that there was no significant difference in the perceptions of seniority in management and technology leadership competencies (Çakır and Aktay, 2018; Dinç, 2019).

**5. CONCLUSION AND RECOMMENDATIONS**

The research findings were examined in line with the problem statement and it was seen that school administrators' concerns about using computer technology should be taken into consideration. A study with

similar conclusions concluded that it is necessary to train school administrators who will lead technology so that they can use technology effectively in schools (Turan, 2002). Informal interviews were held with school principals to determine the use of technology and the role of school administrators. In this research, it was stated that the technology to be used within the school is important and necessary, but they have little knowledge about using technology. In addition, it has been emphasized that professional courses should be held so that teachers can improve (Brooks, 1997). As a matter of fact, the same conclusion was reached with the findings obtained in this research. Based on this result, suggestions are made below.

1. This research was conducted with TRNC primary school administrators. Another study may be conducted at the level of middle and high school administrators.
2. Qualitative research method was applied in this research. Another study can be conducted on this subject in which the quantitative research method and the mixed method of quantitative and qualitative methods are used together.
3. In this research, managers were studied. Another study can be conducted to examine the reflection of administrators' anxiety levels on the school environment from student or teacher perspectives.
4. Solutions can be produced by examining the infrastructure in schools of school administrators who are experiencing anxiety.
5. When we look at the programs that train educational administrators, it is seen that there are no elements that will provide technology-related competence. In this context, in-service training, seminars, courses or postgraduate education programs can be organized for school administrator candidates with the support of universities.
6. Technology can be used as a facilitating element in manager selection. In this way, it can be aimed to train managers who are not afraid to use these technologies and who can integrate technology into their institutions.

# EXPLORING HOW PHYSICAL ARTIFACTS MOTIVATE TEACHER LEADERS: A HERMENEUTIC PHENOMENOLOGY ABOUT THE LIVED EXPERIENCES OF TEACHER LEADERS

Allison CRUM

Ph.D.

Curriculum and Instruction, Liberty University  
aacrum@liberty.edu

## ABSTRACT

This hermeneutic phenomenology addressed the problem of falling teacher retention rates of K-12 teachers due to teacher burnout by exploring the lived experiences of teacher leaders and how they are motivated by physical artifacts. The theory framing this study is thing theory. Thing theory framed the study by exploring life experience and the relationship between teacher leaders and their things. The study offered additional information on the use of physical artifacts in qualitative research and the object discussion. This hermeneutic phenomenology used a triangulation of data collection including the semi-structured interview, object discussion, and in-person interviews. The research study setting was a K-12 charter school incorporated in rural Southeastern United States. The study included 16 teacher leaders from grades 2-12. Eligible candidates earned a qualifying score between 124 and 155 on the pre-screening survey, a valid and reliable tool adapted from two specific teacher leadership instruments. Findings suggest that teacher leadership creates positive experiences for teacher leadership and that physical artifacts motivate teacher leaders by creating a relational bridge and affirming professional choice.

**Keywords:** teacher leadership, thing theory, physical artifact, object discussion, self-efficacy, collective efficacy, teacher identity

## INTRODUCTION

Historically, teacher leadership served as a means of improving school reform. The implementation of teacher leadership aimed to improve school reform efforts by democratically sharing authority through leadership frameworks such as distributed leadership (Spillane, 2005), in which leadership is shared between school administration and teacher leaders (Smylie et al., 2002; York-Barr & Duke, 2004). Moreover, adding leadership to the role of teacher was meant to professionalize and empower teachers and offer a solution to teacher attrition (Hallinger et al., 2020). To date, teacher leadership has existed for well over a century, yet teacher turnover and attrition are at an all-time high, with some research reporting that half of all new teachers leave the field within the first five years (Lovett, 2023; Madigan & Kim, 202).

Socially, increasingly more educational research reports fewer teachers remaining in the field for many reasons, including but not limited to environmental factors such as school climate and culture and, to a greater degree, psychosocial factors such as being overworked, experiencing burnout, and feeling stress (Madigan & Kim, 2021; Nguyen et al., 2020; Schott et al., 2020). Teacher leadership remains a relevant and practical means of school reform, if only for the teacher leaders themselves. Teacher leaders experience positive leadership outcomes such as diverse collaborative leadership, empowered professional growth, transformative learning connections, and leadership and validation (Crum, 2024). Primarily, teacher leaders show high degrees of influence in the classroom, on peers, and in the school (Yalçın & Çoban, 2023). The influence expressed by teacher leaders takes many forms, such as pedagogical excellence (Harris & Jones, 2019) and overall school improvement (Shen et al., 2020) through professional development and mentorship (Nerlino, 2020). The role of the teacher leader and partnership with school administration, through shared authority, empowers the teacher leader to support increased self-agency and self-efficacy within the teacher leader (Nguyen et al., 2020). Nevertheless, the problem of teacher attrition continues to grow.

Theoretically, the field of teacher leadership lacks robust empirical evidence extending the research base of teacher leadership (McGinity et al., 2022; Pan et al., 2023). Therefore, this study aimed to make a significant theoretical contribution by applying the thing theory (Brown, 2001). The study explored the lived experiences of teacher leaders and how physical artifacts, or things, motivate them. Things collected and kept by teacher leaders often induce nostalgia, promoting the authentic self and action-forward motivation (Sedikides & Wildschut, 2023). Thing theory expresses the idea of objects transcending to the place of things through a relationship with the human, particularly the subject-object relationship, and is rooted in Heidegger's thing-centered worldview of "das ding" (Brown, 2001; Zhao, 2023). Things inhabit and animate; things deliver artistic and philosophical findings, bringing with them their presence, force, and meaning to society (Brown, 2001). Dipert (1995) reported the hesitancy of

literature in defining artifacts. Hence, physical artifacts in this study are things collected and kept by teachers because they hold significance. Objects that become things have lives of their own and are no longer being used in their practical or usual way but in a new way that is representative of the "uncanniness" and nostalgia of the fantasy of life (Robertson, 2020).

### **Problem and Purpose of the Study**

The research study addressed the problem of the falling teacher retention rates of K-12 teachers due to teacher burnout (Lovett, 2023; Pineda-Báez et al., 2020; Shen et al., 2020). Teacher leadership, a widely implemented solution to school reform efforts, holds the potential for increased teacher motivation and retention (Gordon et al., 2021; Y. Liu et al., 2021). Extant literature reported teacher leaders as experiencing increased self-efficacy and motivation due to increased possibility and avenues of influence on peers and students (Nerlino, 2020; Schott et al., 2020), yet attrition looms as an insurmountable challenge to teacher leadership due to burnout caused by high degrees of responsibility on the part of the teacher leaders (Arthur & Bradley, 2023; Ingersoll, 2023; Madigan & Kim, 2021).

This hermeneutic phenomenological study explored how physical artifacts motivate teacher leaders at a K-12 charter school system in the rural Southeastern United States. The seminal work of York-Barr and Duke (2004) defined teacher leadership as the individual or collective manner by which teachers influence peers, principals, students, and stakeholders to improve instructional practices to increase student achievement. The theory framing this study is thing theory (Brown, 2001). This hermeneutic phenomenology exploring how physical artifacts motivate teacher leaders was necessary to extend the current body of teacher leadership literature and provide workable solutions to teacher attrition through the practical avenue of motivation represented by physical artifacts.

### **The Significance of the Study**

The research study drew theoretical significance from the thing theory (Brown, 2001). Thing theory aligned with the focus of hermeneutic phenomenology through Heidegger's phenomenological traditions of joining phenomenology and the philosophy of appearances (Rømer, 2011). Thing theory framed the study by exploring life experience and the relationship between teacher leaders and their things. The lens of thing theory allowed the researcher to examine the importance of things collected, kept, treasured, and used by teacher leaders for optimism, motivation, authenticity, and the pursuit of goals (Sedikides & Wildschut, 2023). Moreover, the framework of thing theory allowed the examination of things belonging to teacher leaders and what they say about teacher leaders concomitant with nostalgia and its affair with one's imagined life (Robertson, 2020). Many researchers report extant teacher leadership research to be unconcerned with theory (Ford et al., 2020; McGinity et al., 2022). Thus, the application of theory to the field of teacher leadership research is vitally significant in extending the knowledge base. Although thing theory primarily applies to human sciences such as psychology and anthropology, it was relevant to this study to examine the relationship between teachers and the things they keep (Robertson, 2020).

The empirical significance of the research study was to fill a gap in the current research by exploring how teacher leaders are motivated (Gordon et al., 2021; Y. Liu et al., 2021) by physical artifacts. Teacher burnout and attrition pose ongoing challenges to educational leaders, so understanding what induces the motivation causing teachers to stay in the classroom is an under-developed area of research integral to teacher retention (Arthur & Bradley, 2023). Intrinsic motivation is an innate factor driving teacher performance currently augmented through professional learning opportunities meant to improve teacher quality through teacher accountability (Guenther, 2021). The persistent and growing problem of teacher attrition demands answers to gaps in the literature about teacher identity development (Hong et al., 2024). Teacher identity is a complex construct revealing what teachers do and how and why they do it (Schutz et al., 2020). Understanding how physical artifacts motivate teacher leaders offers a unique view of teacher identity that is often unexplored and an avenue into apprehending what causes teachers to stay in the classroom. The physical artifacts collected and kept by teacher leaders show relevant messages about the lived experiences of teacher leaders supporting the extension of the field (Mozeley et al., 2023). The field of teacher leadership research is rife with myriads of definitions and unclear avenues of teacher leadership influence, so further research into the lived experiences of teacher leaders offers the possibility of consolidating the term and potential for best implementation (Nguyen et al., 2020). Other empirical significance regards using physical artifacts in qualitative methodologies and the material potency of things teachers keep (Harrison et al., 2024; Mozeley et al., 2023).

The research study was significant because it explored how physical artifacts motivate teacher leaders, revealing the potency of physical artifacts (Woodward, 2020) in the lives of teacher leaders. The research study aimed to maximize teacher leadership as a school reform effort, offering a potential solution to teacher burnout by using physical artifacts to motivate and provide professional learning for teacher leaders. The research study revealed how

the physical artifact functions as a relational bridge, revealing experiences with well-being (Mozely et al., 2023; Thorpe et al., 2024). Thus, the research study targeted why teacher leaders stay in the classroom by finding physical artifacts to validate and confirm through storytelling (Woodward, 2020).

### **Central Research Question**

How do physical artifacts motivate teacher leaders?

## **LITERATURE REVIEW**

### **Teacher Leadership**

Extant literature shares a variety of definitions related to teacher leadership inhibiting the extension of knowledge (Berg & Zoellick, 2019; Nerlino, 2020). The variety of definitions includes the differing positions, dimensions, and roles of teacher leadership, incurring ambiguity and impeding the potency of teacher leadership as a means of school reform effort (York-Barr & Duke, 2004; Nguyen et al., 2020; Wenner & Campbell, 2017). The seminal work of York-Barr and Duke (2004) called attention to the role of teacher leader due to the complexities related to the position. Similarly, Wenner and Campbell (2017) shared concerns about the position of the teacher leader, dubbing it an 'umbrella' term that integrates infinite possibilities of functions. Within the field, definitions mistakenly promote normative teacher actions and behaviors like the assumption of authority, decision-making, and collaboration as leadership (Gümüş et al., 2022; Sawalhi & Chaaban, 2022; Wenner & Campbell, 2017). The ambiguity of the term exhausts research, slowing advancement with redundant and competing definitions and dimensions varying from the idea of leadership residing in the classroom next door and every teacher sharing ideas and being a leader (Gordon et al., 2021) to exhibiting leadership outside the classroom and school (Wenner & Campbell, 2017). Other seminal works report teacher leadership centered on the teacher leader's influence, position, and performance (Katzenmeyer & Moller, 2001; Lieberman, 1988) such as needing proof of teacher leadership measured by the improvement of colleagues (Reid et al., 2022).

The variety of definitions and dimensions of teacher leadership reveal disagreement on the core theoretical meaning of the term diminishing rather than improving the legitimacy of teacher leadership (Bellibaş et al., 2021; Nguyen et al., 2020; T. Wang et al., 2022). Recent research in the field of teacher leadership recognizes the need for a combined and operational definition, maximizing the potential of teacher leadership by offering unique variations of the term. Supovitz and Comstock (2023) targeted distributed leadership as a positive antecedent to teacher leadership. Distributed leadership, the most popular means of teacher leadership (Hallinger & Kovačević, 2022) elevates the role of the teacher leader from the classroom to the school and organization, thereby empowering teacher leaders (Gordon et al., 2021; Pineda-Báez et al., 2020). Oppi et al. (2023) delineated between the formal and informal and individual and collective aspects of teacher leadership, while Nerlino (2020) proposed four relevant dimensions of teacher leadership with a specific and compensated role for the teacher leader, extending the work of Berg and Zoellick (2019). Notably, out of 150 empirical articles, Nguyen et al., (2020) reported 17 different definitions along with the inadequacy of reports, 11 stating their definition of teacher leadership, and only six articles sharing their chosen definition from the extant literature. Therefore, the definition guiding this work is that of York-Barr & Duke (2004), stating that teacher leadership is how teachers influence all educational stakeholders, improving pedagogical practices to improve student achievement. Regardless of the manner, extant research agrees that teacher leadership unites the school community and promotes success for all stakeholders (Friesen & Brown, 2022).

### **Teacher Burnout and Attrition**

The practice of teacher leadership produces overwhelmingly positive results, as reported in the literature (Schott et al., 2020), including both job satisfaction and student achievement as related outcomes (Fernández Espinosa & López González, 2023); however, a duality of teacher leadership exists whereby the nexus of burnout leading to attrition resides (Nerlino, 2020). Teacher attrition is a global problem, with the need for the global recruitment of 69 million teachers by 2030 (Madigan & Kim, 2021) to provide quality education. Teacher attrition is a common, longstanding problem in the United States (Han, 2023). Moreover, extant literature reports attrition in the ranks of new teachers, causing the loss of at least half of all new teachers within five years (Perryman & Calvert, 2020). Burnout, a state of exhaustion caused by demanding work conditions, cannot be reported as a direct cause of teacher attrition, but it is a contributing factor (Marcionetti & Castelli, 2023). The role of teacher leader offers a practical solution to burnout and attrition due to increased self-efficacy and feelings of empowerment, yet, coincidentally, the higher workload and greater responsibility of the role pose threats to job satisfaction (Nerlino, 2020). Often, when teachers transition from classroom teacher to teacher leader, the change generates resistance and opposition, resulting in isolation from peers due to the egalitarian nature of teaching (Nerlino, 2020; Sawalhi & Chaaban, 2022). Experiences such as these induce guilt and shame for the teacher leader, competing with the positive outcomes of

teacher leadership (Schott et al., 2020). Nonetheless, extant literature reports teacher leadership, due to greater self-agency gained from leadership experience (Yoon & Goddard, 2023), as a means of increasing self-efficacy for the teacher leader and improving job satisfaction. These positive outcomes might draw stronger candidates to the field and support teacher retention (Akman, 2021; Conan Simpson, 2021). This research study explored ways to increase teacher job satisfaction, offering a potential solution to teacher burnout, attrition, and gaps in the literature related to teacher identity (Hong et al., 2024) by answering how physical artifacts motivate teacher leaders.

### **Self-Efficacy and Collective Efficacy**

Self-efficacy and collective efficacy are critical factors related to teacher motivation and degree of job satisfaction. Self-efficacy is an individual's belief about their ability to produce change and reach desired goals (Bandura, 1977a; Khan et al., 2024). Specifically, when teachers experience self-efficacy related to student engagement, learning, and achievement outcomes, it is known as teacher self-efficacy (Shafiee & Ghani, 2022). Self-efficacy is an essential factor in teacher leader because, when facing burnout and low job satisfaction, efficacious teachers exhibit greater degrees of resilience and self-esteem and are more active in leadership (Bellibaş et al., 2021; Kılınç et al., 2021) subsequently leading to higher morale and additional positive outcomes (Fernández Espinosa & López González, 2023; King & Holland, 2022; Yoon & Goddard, 2023). Efficacious teachers experience less conflict and closer relationships with students and exhibit persistence when facing challenging situations, positively affecting their teaching practices and overall commitment to the field (Marcionetti & Castelli, 2023; Yin et al., 2022). Collective efficacy includes the beliefs of the faculty, grade level, or department members related to their capability to create positive change and reach set goals (Bandura, 2000). Extant literature reports improved teacher morale and successful schools resulting from collective efficacy, while higher degrees of self-efficacy produce successful teachers, potentially leading to improved teacher retention (De Jong et al., 2022; Hosseingholizadeh et al., 2023; Y. Liu et al., 2022; Qadach et al., 2020).

### **Physical Artifacts in Qualitative Research**

For this research study, artifacts are any objects humans make to which symbolic, emotional, and affective meanings are connected (Saldaña & Omasta, 2021). The physical artifacts collected by teacher leaders reveal their attitudes, beliefs, and values. Physical artifacts have stories, and through this research study, the researcher looked to infer the meanings of the artifacts that teacher leaders keep. The researcher applied four analytic frames for incorporating physical artifacts into qualitative research, including analysis of how the artifact is an extension of the owner, how the artifact belongs in its space, the symbolism of the artifact, and the process related to the thing (Saldaña & Omasta, 2021). The research study included object interviews during which the participants shared an artifact standing for their teacher leadership (Thorpe et al., 2024). The object interview prioritizes human experience and intelligence with objects instead of relying upon dialogue alone (Holmes, 2020).

### **The Study**

The research study engaged a hermeneutic phenomenological research design with inductive data analysis and criterion sampling. The research study setting was a K-12 charter school incorporated in rural Southeastern United States. The study included 16 teacher leaders from grades 2-12. Eligible candidates earned a qualifying score between 124 and 155 on the pre-screening survey, a valid and reliable tool adapted from two specific teacher leadership instruments created by Katzenmeyer and Moller (2009) and J. Chen (2022). After acquiring IRB approval from Liberty University and site permission from the K-12 charter school incorporation Chief Educational Officer, all employed teachers, up to 190, were invited to participate in the study via email.

In total, 24 teachers responded. The researcher collected informed consent from 18 teachers, resulting in a final number of 16 participants. The 16 candidates participated in all three data collection methods: the semi-structured interview, object discussion, and in-person focus group meetings. For each method, data was collected in person and via Microsoft Teams to fit the candidate's schedule.

The researcher has a current CITI certification and receives no financial or otherwise gains from conducting the research. The data was stored on a password-protected computer that no one else could access. The researcher used qualitative data analysis software, NVivo 14, to aid the data analysis process and derive themes from codes with the highest frequency using theory as a lens.

### **Researcher's Positionality**

The interpretive framework suited to my position as a researcher is social constructivism because, through it, I assign meaning to the world concerning my lived experiences, including both where I live and where I work (Denzin & Lincoln, 1994). Like hermeneutic phenomenology, social constructivism seeks to find meaning through people's

personal and subjective experiences and views, such as the research study participants (Naidoo & Mabaso, 2023). Social constructivism is well partnered with hermeneutic phenomenology because both "borrow" the experiences of others to find more profound and more significant meaning in the world (van Manen, 2015).

### **Interpretive Framework**

The qualitative methodology of hermeneutic phenomenology permits the researcher to understand and interpret participants' lived experiences. Before delving into the research study's findings, the reader must understand how my thoughts and behaviors influence my personal beliefs and biases, acting as a lens through which I view the world (Smith, 2020).

I am the middle of three siblings and a first-generation college graduate. My younger sister earned her college degree in adulthood, four months before succumbing to breast cancer. My older sister graduated from high school and stayed home due to her disability. My parents both dropped out of high school in their teenage years to earn their general equivalency diploma (GED) in adulthood. My parents are determined and hard-working individuals who inspired and motivated me from an early age to pursue my education. I grew up believing in the power of education even though I did not have a role model with higher learning to whom I could look, so I found my role models at school as teachers.

While still in grade school, I decided, rightfully so, that I would become a teacher. Thus far, I have been in school my entire life, whether as a student, teacher, administrator, instructional specialist, or curriculum coordinator; I have dedicated my life to pursuing education for myself and my students. I have been a teacher leader in middle and high schools, and the teacher leader role has been the best professional development I have ever experienced. Teacher leadership empowered my personal growth as an educator and a leader, and this is why I earned my master's in educational leadership and, finally, my doctorate. Although I no longer have a classroom or students, I still consider teacher leadership my responsibility and duty. On every possible occasion, I champion teacher leadership.

Therefore, this research study on how teacher leaders are motivated by physical artifacts holds excellent personal value because I see the vitality of teacher leadership diminishing under the strain of increased workload and responsibility. Teacher leadership is valuable to education, and it is incumbent upon educational researchers to uncover ways to fill the gaps in the literature, like teacher identity and motivation, and solve the pervasive problems, such as burnout and attrition, facing the field. This research study aimed to present the experiential reality of teacher leaders' lifeworlds (van Manen, 2015) through the theoretical framework of thing theory and is a work of human science research and the heart, which Rousseau says provides surer insight than reason (van Manen, 2015).

### **FINDINGS**

This hermeneutic phenomenological study explored how physical artifacts motivate teacher leaders at a K-12 charter school system in the rural Southeastern United States. The seminal work of York-Barr and Duke (2004) defined teacher leadership as the individual or collective manner by which teachers influence peers, principals, students, and stakeholders to improve instructional practices to increase student achievement. The theory framing this study is thing theory (Brown, 2001). Table 1 provides an overview of the study's themes, sub-themes, and codes.

The study revealed the lifeworld of the teacher leaders and how they are motivated by physical artifacts. The triangulation of data collection methods provided rich evidence revealing themes and sub-themes expressing the lifeworld of the candidates. Data analysis uncovered three themes with two sub-themes each. The themes and sub-themes follow:

- Inspired Leadership Embracing Growth with the sub-themes Motivating and Challenging and A Bridge to Connection
- Personal Connections Facilitating Engagement with sub-themes Sense of Belonging and Reflection and Emotional Connection
- Small Victories Confirming Effort with the sub-themes Accomplishment and Ownership and Affirmation of Effort

**Table 1**

Themes, Sub-themes, and Codes

| Themes  | Sub-Themes  | Codes   |
|---|---|---|
| Theme 1<br>Inspired Leadership Embracing Growth         | Motivating and Challenging<br>A Bridge to Connection      | Belief in Self, Leading with Peers, How I changed, Where TL Happens, Answering to Others, I Can Do It, Confidence, Experienced Teacher, Collaborative Culture, Lending a Hand, Influencing Peers, Leading in the Classroom, Modeling for Peers, Modeling for Students, Practical Use, Taking Initiative, Improved Job Satisfaction, More Work and Stress, Teacher Leadership Behaviors, Trusting Relationships, Purposeful Planning |
| Theme 2<br>Personal Connections Facilitating Engagement | Reflection and Connection<br>Emotional Sense of Belonging | Evidence of Student Learning, Improving Learning, Close Relationships with Students, Curriculum and instruction, Encouraging Students, Any Signs of Growth, Applying Learning to Real Life, Reaching Goals, Student Grades, Handwritten Notes from Students, Students Share Feedback, Students Gave it To Me, Very Important to Me  |
| Theme 3<br>Small Victories Confirming Effort            | Accomplishment and Ownership<br>Affirmation of Effort     | Confirms My Career Choice, Motivating, Feeling Good, Delegating Tasks to Peers, Uncertainty about Leading Peers, Being Just the Leader, Frustrating, Self-Doubt, Greater Responsibility, Highly Stressed, Improved Job Satisfaction, Keeps Me Going, Leading Peers, Just the Leader, Uncertain about Leading, Monitoring Students, Challenging, Types of Physical Artifacts, Notes and Cards from Students and Colleagues           |

**Inspired Leadership Embracing Growth**

All rounds of data collection, including the semi-structured interview, object discussion, and in-person focus groups, created evidence supporting theme one. All 16 participants referenced theme one in their interviews and discussions. The data collection resulted in the most significant references to this theme, with the richest quotes allowing for a deeper understanding of the lifeworld of teacher leaders and how physical artifacts motivate them. Theme one revealed that the role of teacher leadership nurtures inspiration within the teacher leader through the experiences of facing and overcoming challenging situations, resulting in motivation and fueling future success. Further, the role of the teacher leader allows the leader to build bridges of connection with students, peers, and stakeholders. Lilly Marie, a second-year teacher, said, "Everyone needs to feel supported." She also wanted to reassure others that they were "doing things right" and ensuring students and peers were "seen and heard." Jennifer, an 18-year veteran teacher, shared her goal of "doing what is best for the section" and "showing positive examples" in a teacher leader's

classroom. Jennifer directly addressed the sub-theme of motivating and challenging when referring to "not bossing" and leadership opportunities requiring her to be "assertive" and to "pick their battles."

Lisa, a veteran teacher with over 30 years of experience, shared about leadership in the classroom. She does not tolerate misbehavior in the classroom and takes care of student behavior without the aid of the school administration. This information directly relates to the motivating and challenging experiences of teacher leadership. With this quote, Lisa also shared additional challenges related to leading peers, "I have been privately a mediator between folks." Moreover, Lisa shared experiences of "there are haters" and teacher leadership of peers "being more collaborative than leadership." Most importantly, Lisa shared their inspiration and motivation for students to have fun in class so they "would come to school every day" and the utmost desire to "keep their team together."

*Trusting relationships*, a nuanced code supporting theme one and the sub-theme of bridges of connection, revealed how teacher leaders forge relationships with students and peers. A veteran math teacher, Bethany, shared how students who hate math love her class. Courtney, another veteran math teacher, shared her goal of making students comfortable in class, and Debra, another veteran math teacher, repeatedly emphasized her goal of building a classroom community. While math can be daunting for some students, these math teacher leaders work hard to build bridges of connection, embracing growth.

*Improved job satisfaction*, a code with 52 references, included phrases such as, "I do not feel like I will get burned out" and "You cannot associate teacher leadership with extra work." Several teacher leaders in the study referred to emotional well-being and how they maintain self-care. Bobby, a third-year high school electives teacher, said, "I mentally prepare for what I need to do beginning on Sunday afternoon." Courtney shared how she prepares for school, so they do not have to bring work home. Further, Courtney shared that her leadership goal is to retain teachers by helping them reduce their workload. Lisa shared the decision to not "dabble in too many things," thereby protecting herself from burnout.

Directly related to the embracing growth aspect of theme one, *belief in self*, a dense code with 65 references revealed that teacher leaders experience self-efficacy and have confidence in their abilities. Related to this, teacher leaders shared words such as "self-fulfilled," "proud of myself," "I feel important," "I positively affect others," "More confident," "Gave me a little boost," and "I am doing what I am supposed to be doing." Although teacher leadership of students and peers can be challenging, teacher leaders experience inspiration through leadership, which results in growth.

### **Personal Connections Facilitating Engagement**

A triangulation of data supports theme two with references from each data collection method. Theme two exemplified the lived experiences of teacher leaders by capturing the essence of personal connection through the sub-themes of reflection, emotional connection, and sense of belonging. Teacher leaders create personal connections through academic means such as instruction and learning, as shown by the codes, with 73 references related to *evidence of student learning*, *curriculum and instruction*, and *student grades*. For example, the following descriptions capture the essence of the codes, student data related to testing, meeting the goals set by behavior plans, feeling emotionally secure, bridging gaps in academic learning, and students showing progress and mastery of content. However, the most powerful method of facilitating engagement occurs through reflection, emotional connections, and feeling a sense of belonging. The emotional connections created by teacher leaders significantly impact the engagement of peers and students. Emotional connections confirm the leader's career path and forge strong and lasting bonds, inducing feelings of belonging for the teacher leader and the recipients of the teacher's leadership. To this end, Pam shared that "Empowering students to become problem solvers" facilitates engagement. During the object discussion, Elizabeth stated, "[Physical artifacts] state I made a difference in somebody's life."

The study participants with the most to say about these two were Debra, with 32 references; Elizabeth, with 25 references; Jillian, with 15 references; and Hayley, with 16 references. Debra shared that the satisfaction she experiences from teacher leadership is "verification that I am doing what I am supposed to be doing." Further, Debra shared that she desires to instill faith in her teaching ability and that student learning is the reason she teaches directly relating to the sub-theme of sense of belonging. Elizabeth, regarding the object discussion and collection of physical artifacts, said many of the objects she collected throughout her 40-year career are notes written by former students who struggled and succeeded in her math class. A veteran math teacher, Jillian, shared that she collects and rereads handwritten notes from students, parents, and administration because they "encourage her to be a good teacher." A novice teacher, Hayley shared how she monitors student progress through "conversations with students" and "happy mail notes." The physical artifacts shared during the object interview exemplify a sense of belonging for teacher leaders.

*Influencing students*, a parent code with 245 references included child codes referencing the ways teacher leaders influence students. The study revealed ways of influencing students, including *trusting relationships*, *evidence of*

*student learning, encouragement of students, and handwritten notes.* Relating the emotional influence exhibited by teacher leaders, Lilly Marie, during the object discussion, recounted a story about her first-year teaching as a preschool teacher and a challenging situation with one student. The student, formerly combative, grew to trust Lilly Marie, and the physical artifact chosen for the object interview, a silly, seasonal headband, was the vehicle for building that trust. Lilly Marie shared how she allowed the student to wear the headband and how the gesture sparked a trusting relationship. She went on to say that, although she teaches high school now, she wears the headband as a reminder of the first powerful experience of winning her student's trust. From a different point of view, Marie, a veteran high school English teacher, shared how she works to find ways to help her students achieve and do well. Marie related an example of personal connection and facilitating engagement by influencing students by creating a data sheet collecting students' answers to questions about what motivates them to learn. Marie shared student answers such as "ice cream" and "using headphones." Teacher leaders maximize the power of their influence to create personal connections and facilitate engagement.

### Small Victories Confirming Effort

Theme three included references from all three data sources, resulting in data triangulation. Theme three depicts the dual nature of teacher leadership by exploring the notion of small victories. Small victories often yield compromises, yet teacher leaders view them as proof that personal effort wins. The sub-themes of accomplishment and ownership and affirmation of effort portray the essence of teacher leadership through codes such as *keeps me going*, illustrating how the objects collected by teacher leaders incite them to keep working because the objects "show they love me too." The code *motivating* supports the sub-theme of accomplishment and ownership by apprehending how teacher leaders view the work of leadership. Regarding the code *motivating* and the sub-theme affirmation of effort, the study participants used words such as "genuine," "warm feelings to my heart," and "I mattered."

In *leading peers*, a code with 66 references, Harper, a veteran teacher secondary teacher, shared about mentoring a novice science teacher, trouble-shooting with experienced colleagues, and promoting positive behavior through positive feedback. Heather shared that teacher leadership means engendering "followership" among students and peers. Stanley, a third-year teacher, shared how he finds leading peers whose experience exceeds his challenging. Conversely, Pam called for "training sessions" on teacher leadership and more teacher leaders in general. In that vein, the competing ideas of *delegating tasks to peers*, *uncertainty about leading peers*, and *being just the leader* add layers of meaning to theme three. Lisa shared that she "likes to delegate more." Considering feeling uncertain about leading, Marie mentioned "self-confidence" as an issue. In the in-person focus group, Heather and Elizabeth shared that the best leaders "treated me as an equal." The code, *leading peers*, offers insight into the small victories that confirm effort for teacher leaders.

*Challenging*, a code with 31 references and *confirms my career choice*, with 33 references, relates the elements of effort, accomplishment, victory, and affirmation within the contradictory lifeworld of teacher leaders. Bethany shared about her physical artifact, a toolbox, and how it symbolizes what she tries to do for students and peers. Autumn shared that the written feedback she gets from students is "humbling" in sincerity. Debra said her physical artifact, a quilt with a motivational quote, challenges her "to go for it every day." Elizabeth, relating how student behavior can be challenging, said some students for whom math was hard were "goofy," yet she ended the sentiment by saying they made "me laugh." The physical artifact was integral to the code and *confirmed my career choice* because it physically confirmed the influence and leadership of the teacher leader.

Table 2 follows, listing participants, years taught, words describing the artifact, physical artifact, and grade level taught. Following Table 2, a short narrative provides more information about the object discussion and how the research study answered the central research question.

**Table 2**  
Participants and Physical Artifacts

| Teacher Participant | Years Taught | Words Describing Artifact            | Physical Artifact   | Grade Level |
|---------------------|--------------|--------------------------------------|---|-------------|
| Debra               | 30 +         | Treasure, reflection, inspirational, | Inspirational hanging quilt from parents from first-year teaching | 9-12        |
| Autumn              | 1            | Humbling, empowering, sweet          | Notes and pictures from students from first-year teaching         | 6-12        |
| Harper              | 16           | Vital, fluid, neat                   | Portable, paper calendar  | 6-12        |

|             |    |  |  |      |
|-------------|----|--|--|------|
| Jennifer    | 18 | Encouragement, a breath of fresh air, a reminder | Holy Bible   | 6    |
| Marie       | 15 | Research-based, inspirational                    | useful, Table of student motivators, self-created                    | 10   |
| Heather     | 8  | Sentimental, fulfilling, sad                     | Manilla folder kept in classroom with notes from stakeholders        | 6-12 |
| Bobby       | 3  | Connection, personal                             | feel good, School yearbook with handwritten notes from students      | 9-12 |
| Lisa        | 32 | Special, relevant, funny                         | Kitty paw pointer from student                                       | 5    |
| Bethany     | 26 | Portable, organized chaos                        | resource, adapt, Toolbox with tools inside inspired by her father    | 8    |
| Stanley     | 3  | Empathy, caring, motivate                        | A note left by student from first year teaching                      | 6-8  |
| Elizabeth   | 42 | Uplifting, treasured                             | motivating, and A box of student letters from first year teaching    | 9-12 |
| Hayley      | 1  | Special, heartfelt, and honest                   | Flashback Friday student worksheet                                   | 2    |
| Pam         | 20 | Delicate, unique, and ongoing                    | Seashell reference book  | 6-8  |
| Courtney    | 27 | Confidence, intelligent                          | relevance, and Cross-curricular student math unit, self-created      | 7-8  |
| Jillian     | 18 | Motivating, good                                 | heartwarming, Folder of things collected from first year of teaching | 6-12 |
| Lilly Marie | 2  | Perseverance, empathy, joy                       | Seasonal, silly headband from self-bought                            | 9-12 |

### Debra

Debra is a veteran math teacher with over 30 years of experience. She used the words *treasure*, *inspirational*, and *reflection* to describe her physical artifact. Debra's artifact was a hanging wall quilt with an inspirational saying stitched into it. The saying follows, "Good, better, best! Never let it rest until your good is better and your better is best." Debra explained how her mother, a non-quilter, now in her late 80s, quilted that for her to hang in her first classroom over 30 years ago. She shared how the quilt has decorated each of her classrooms throughout the years and how the inspirational saying has become her motto. Debra related the story of receiving the quilt with tears in her eyes because her dad had passed away and charged her with not stopping until her better was best. She mentioned how she often points it out to students when they struggle and nostalgically recalls her dad's voice. While relating this story, Debra brushes tears from her eyes. For Debra, the physical artifact evokes memories of transitioning into adulthood and how her parents "sent" her off to work. The artifact motivates her to do her best for her students because that is what her daddy, an educator like her, would have wanted.

### Autumn

Autumn is a new teacher with only one year of experience. She used the words *humbling*, *empowering*, and *sweet* to describe her artifacts. She had two artifacts: a handwritten note from a student explaining why she was her favorite teacher and a note with a doodled picture saying how she was the number one teacher. In the object discussion, Autumn directly answered how the physical artifact motivated her when she related how the artifacts confirm "why she does this." She also shared how, should she stop receiving physical artifacts like these, she would have to "re-evaluate" herself.

**Harper**

Harper is a veteran teacher who is currently not assigned to students. She used the words *vital*, *fluid*, and *neat* to describe her physical artifact, a portable paper calendar into which she pencils crucial, time-sensitive information. For her, the artifact symbolizes how she is a role model for students and teaches them to be responsible with their time by modeling the attribute herself. The physical artifact motivates her because it reminds her of a critical attribute she must model for her students and those around her.

**Jennifer**

Jennifer is a veteran teacher at the middle school. She used the words *encouragement*, *breath of fresh air*, and *reminder* to describe her physical artifact, the Holy Bible. She related a story about how she was a member of an unhealthy teaching team, and the bible encouraged her to be to others what she needed during that negative time in her life. She said teaching and leading in middle school is challenging, but the bible motivates her through encouraging and soothing scriptures.

**Marie**

Marie is a veteran high school English teacher. She used the words *research-based*, *useful*, and *inspirational* to describe her artifact, a self-created spreadsheet of students' self-reported items describing what would motivate them to participate in class. Marie said the artifact inspires her to do more for her students, answering the central research question.

**Heather**

Heather is a veteran high school English teacher in the Exceptional Student Education department. She used the words *sentimental*, *fulfilling*, and *sad* to describe her artifact. Her artifact was a folder of handwritten notes, cards, and pictures from students, colleagues, and parents. She pulled three different artifacts from the folder and shared stories related to each. She shared how the artifacts remained with her for motivation even though she recently moved classrooms. She directly answered the central research question when sharing how the artifacts belonged to her so she could access them when she had a "hard" day. Interestingly, Heather described her artifact as sad because she thinks it sad that she needs something like an artifact for personal affirmation when she works so hard as a teacher leader.

**Bobby**

Bobby is a third-year electives teacher in high school. He used the words *connection*, *feel good*, and *personal* to describe his artifact, a high school yearbook with handwritten notes from students. Bobby's eyes were full as he described what it meant to him that students took the initiative to write in his yearbook on their own time. The artifact motivates him because it shows that he did reach a few students.

**Lisa**

Lisa is a veteran elementary teacher who used the words *memorable*, *relevant*, and *funny* to describe her artifact, a pointer with a kitty paw at the end of it. She shared that a student bought it for her one year when she took her class to the book fair. Lisa said it was a surprise. She uses it for practical purposes, such as pointing out things with a dash of humor. Related to the central research question, the physical artifact motivates Lisa to instill humor into her lessons by reminding her that she teaches children who look up to her.

**Bethany**

Bethany is a veteran teacher currently teaching middle school math. Her physical artifact was a tool box containing typical tools. She used the words *portable*, *resource*, *adapt*, and *organized chaos* to describe her artifact. She shared how her dad inspired her to have her toolbox at school and how she helps many teachers during preschool planning when decorating classrooms. However, she related the symbolic meaning of the toolbox regarding teaching and learning math and the need for tools to complete the work. She also related the symbolic meaning of the toolbox and how it is a connecting point between her and other teachers who now see her as someone to rely upon for help. In answer to the central research question, Bethany's toolbox motivates her to provide what others need when they need it.

**Stanley**

Stanley is a third-year electives teacher at the middle school level. His artifact was an anonymous student note left behind on his desk. He used the words *empathy*, *caring*, and *motivate* to describe the note. The note said, "The way I see it. If you want the rainbow, you must put up with the rain." He said the note arrived by "cool timing." Stanley said he references the note every few weeks when he "is not having a good day." Stanley's artifact motivates him because it shows that someone "did care."

**Elizabeth**

Elizabeth is a veteran teacher with over 40 years of experience. She brought a few handwritten notes and cards from a more extensive collection she keeps at home. She described the artifacts as *uplifting*, *motivating*, and *treasured*. She stated that she has been collecting artifacts like these since her first year of teaching. The physical artifacts motivate Elizabeth because they tell her why she teaches and encourages her when she questions whether she is making a difference. When asked to read from one of the cards, Elizabeth begins only to stop with tears in her eyes, saying it is too "emotional" for her.

**Hayley**

Hayley is a novice elementary teacher, and her artifact was a Flashback Friday student handout, which she described as *unique*, *heartfelt*, and *honest*. Hayley shared how the handout proved she could help a student make friends in class. During the object discussion, Hayley shared about the student to whom the handout belonged. The student was struggling to make friends. The handout related to Hayley and how the student made "great friends." This year, Hayley challenged herself to work on the social-emotional learning of her students, and the artifact proved that she achieved her goal.

**Pam**

Pam, a veteran teacher, chose a seashell reference book as her physical artifact. She described it as *delicate*, *unique*, and *ongoing*. Pam symbolically related the seashell and its growth to teacher leadership and the influence of a teacher leader. She expressed how the seashell is a "metaphor for beauty and uniqueness in handling other humans." Pam's physical artifact motivated her because it figuratively reminded her to handle her students carefully.

**Courtney**

Courtney is a veteran middle school teacher whose physical artifact was her first self-created cross-curricular project. She described the artifact as *confident*, *relevant*, and *intelligent*. She explained how and why she developed the unit on her own and how her students engaged with it. The artifact is significant because it was her first unit of that type. Since then, Courtney has created several units, which she posted online for free teacher use. Courtney's physical artifact motivates her to believe in her ability to create learning units for students.

**Jillian**

Jillian, a veteran secondary teacher, brought a few handwritten notes from students, colleagues, and administrators as her physical artifact. Jillian described the artifacts as *motivating*, *heartwarming*, and *sound*. Jillian shared the importance of her artifacts by describing how her file of artifacts follows no matter where she moves as a military wife and teacher. She also files the artifacts next to her tax documents. Like Debra and Elizabeth, Jillian grew very emotional when reading from her artifacts. Jillian shared that she thinks every teacher should have a folder of artifacts and work to be the teacher the artifacts describe.

**Lilly Marie**

Lilly Marie is a second-year high school teacher whose artifact was a silly, seasonal headband that she described as *perseverance*, *empathy*, and *joy*. She recounted how the artifact was integral in helping her build a trusting relationship with a struggling student. She keeps the artifact to remind herself when having a "really bad day" that what she does matters.

**Conclusion**

The research study corroborated several existing empirical findings in teacher leadership research. To begin, teacher leaders experience many positive outcomes, including earning legitimacy from peers, such as Harper's mentorship of new teachers. Legitimacy occurs when peers recognize leadership in the classroom next door (Bezzina & Bufalino, 2019; Harris & Jones, 2022) and seek help from those with the necessary "toolbox" like that belonging to Bethany. Another positive outcome of teacher leadership is individual and collective improvement experienced

through self-efficacy and collective efficacy (Donohoo et al., 2020; Goddard et al., 2021). For example, Lisa's desire to keep her team together and the codes referencing improved pedagogy. Further, as expressed in the themes and sub-themes, teacher leadership embodies various behaviors and nuanced meanings (Nguyen et al., 2020; Pan et al., 2023; Schott et al., 2020; Wenner & Campbell, 2017).

The study addressed burnout-related factors through all three themes and sub-theme groupings. While the physical artifact and the object discussion do not offer an overall solution to teacher burnout and subsequent teacher attrition, the lived experiences expressed by the study's participants provide insight into why teachers stay (Marcionetti & Castelli, 2023). Further research into making every teacher a teacher leader must occur to maximize the influence of teacher leadership for all stakeholders, but most importantly, the teacher leader. Further, for the teacher leader, the physical artifact is a tangible reminder of why they teach. When teachers have bad days, the physical artifact lifts their spirits, reminding them that they make a difference and have the skills to complete the job. Teacher leaders express great resiliency; the physical artifact is a touchpoint for that resiliency. The artifacts hold material potency (Mozely, 2023), expanding the understanding of the lifeworlds of teacher leaders and creating relational bridges (Thorpe et al., 2024).

### ABSTRACT

Social gender is a concept associated with distinct roles, duties, and responsibilities between women and men. It introduces a binary distinction defining household and caregiving responsibilities for women and livelihood provision and public space responsibilities for men. The organization of public spaces directly influences and directs the use of space by women, men, and other disadvantaged groups, offering opportunities to some while constraining others. In the spatial organization of park areas, diversity and inclusivity, flexibility and adaptability, comfort and convenience, safety and security, accessibility, and maintenance principles are expected to be ensured. Similar principles in the same urban park are perceived and utilized differently by women and men.

Given the roles imposed by gender, investigating the spatial features required for a park to achieve equal usage levels for both genders forms the basis of this study. The main hypothesis of the research is that Faroz-Ganita Seaside Park does not exhibit equal usage levels between women and men. Qualities and design principles of urban parks with equal usage levels by women and men were determined by reviewing relevant literature and examining the most visited park areas in countries with the lowest Gender Inequality Index (GII). Within this framework, the spatial qualities of Faroz-Ganita Seaside Park in Trabzon province, Ortahisar district (Central district), and its relationship with its immediate surroundings depending on its location in the city (accessibility, security, etc.) were examined. In the field study, a two-stage process was conducted: 1. Spatial Analyses: The spatial organization and qualities of the park were mapped based on findings obtained from relevant institutions, Google Earth, and observations made in the field. 2. Survey Study with Male and Female Users: A total of 740 individuals, consisting of 359 women and 381 men using the park, were randomly selected for the survey. Participants were asked questions about their demographic characteristics, purposes of park usage, reasons for preference, frequency of usage, aspects they liked and complained about regarding the area. Faroz-Ganita Seaside Park is predominantly perceived as a walking area with a green area/hard surface ratio of approximately 1/3. People come to this area mainly for walking and using the cafes. There are 7 cafes, 2 restaurants, 6 children's parks, and a 1.11 ha parking area in the vicinity. People mostly use hard surfaces and rocky areas for sitting. The bike path passes through the park but does not continue to the east; it extends westward but is not integrated with the city as a whole.

**Keywords:** Social Gender, Park, Spatial Qualities, Urban Design

### INTRODUCTION

The concept of gender distinguishes between biological differences between women and men, while gender refers to the differences between femininity and masculinity resulting from socio-cultural factors (Butler, 2019). While gender is inherent, gender is shaped over time based on the values and lifestyles of societies. There is no superiority between the female and male sexes; however, inequality exists/has been created between femininity and masculinity based on social values and roles (Beauvoir, 2011). The responsibilities imposed by gender identity negatively affect a woman's life (Friedan, 2015). Since the earliest ages of human history, there has been an issue of women being confined to private spaces and men being directed towards public spaces (Yılmaz Bayram, 2011). As societies develop and urban environments grow, the dimensions and diversities of the problems experienced have also changed. Urban planning and urban design processes can sometimes be a means of reproducing inequality. Decisions made, policies produced, and spaces created can, albeit unconsciously, have exclusionary effects that prevent different groups from coming together (Yılmaz Bayram, 2020). One of the most important inequalities and exclusionary effects in urban spaces occur between women and men. One of the main reasons for this is the responsibilities imposed on women by gender. From this perspective, women are considered as individuals who perform household services and take care of children and other family members. From the perspective of gender, cities are defined as areas where spatial segregations based on gender occur without considering issues specific to women, and where inequality and injustice are reproduced (Bayraktar, 2005). In this context, urban planning and urban design remain limited in terms of producing areas where

economic and spatial structure is sufficient, safe, and suitable for women. Consequently, these shortcomings necessitate new spatial arrangements.

One of the areas where women and men experience the most differences in the use of urban services and spaces is recreational areas. In the production processes of recreational services and spaces in today's cities, certain generalizations and standards are taken into account, while demands arising from perceived gender differences in detail are disregarded. Criticism is often directed towards the standards and generalizations used in the formation processes of urban green spaces and parks, as they fail to contribute to the needs and priorities of all segments of society. Especially, women face more difficulties in spaces produced based on standards and generalizations compared to men. However, the issue is not the deliberate exclusion and victimization of women from urban environments; rather, it stems from practices that fail to consider the special and different needs of women arising from social gender (Yılmaz Bayram, 2011).

For an activity to be truly recreational, it must be actions individuals undertake according to their own preferences, apart from actions they are compelled to take to sustain their lives within the social structure they are in. Recreation need is an indispensable need for every individual. However, the way this need is met varies among individuals and societies because recreational demands vary depending on individual and societal characteristics and the qualities of recreational areas. One of the most important variables determining recreational demand is gender (Yılmaz Bayram, 2011).

When determining the recreational demands of women and men, it is necessary to examine in detail the individual and societal characteristics and factors related to the quality of recreational areas. For example, one of the individual and societal factors is the time constraints women face due to household and childcare responsibilities, leading them to primarily utilize residential areas and their immediate surroundings. However, there are generally children's play areas in neighborhood units. Women's needs are suppressed and pushed into the background due to the needs of children (Yılmaz Bayram, 2011).

### **Urban Parks**

Tanrıverdi (1987) defines parks as social green spaces that provide residents of various neighborhoods and surroundings with active and passive entertainment and relaxation environments, creating measured, balanced, and beautiful compositions (Emür & Onsekiz, 2007). Additionally, parks are fundamental elements of urban open space planning because they support ecological diversity within the city with natural and/or artificial vegetation, occupying more space compared to other facilities. They serve as a prominent tool in social planning by not only enhancing the mental and physical health of urban residents but also creating an environment for entertainment and socialization. Individuals with different social, cultural, economic, and demographic characteristics who gather in parks learn to perceive each other's differences and look upon each other with tolerance (Thompson, 2002)

In the broadest sense, parks are green areas that enable residents of various age groups to engage in recreational activities such as relaxation, walking, playing games, and sports, as well as various cultural and social events (Baykan, 2005). Parks should be established in various parts of the city and in specific sizes. As seen in Table 1, parks are listed at the regional, city, district, neighborhood, and neighborhood unit levels, and the capacity of each park at each level varies according to the population it serves and its spatial size (Table 1).

There is no universally accepted standard for the norms used in park area arrangement worldwide. Moreover, differences can be found between cities in the same country. This is because the age, culture, occupation, and economic status of residents in each city vary, leading to diverse requirements for park areas (Steiner & Butler, 2007).

Table 1. Park Grading and Coverage (Aydemir, 1999; Aydemir, 2004; Ersoy, 2009, cited in Yılmaz Bayram, 2011).

| SCALE (POPULATION)  | PROVISION   | SERVICE AREA RADIUS  | UNIT AREA   | COVERAGE  |
|---|---|----------------------|---|---|
| <b>Region</b>   | Forest and Woodland areas<br>Regional park<br>National park | Approximately 20 km  | 3-6 m <sup>2</sup> /person<br>25-60 m <sup>2</sup> /person              | Should allow for active and passive sports activities (such as hiking, living in nature, climbing, hunting, etc.), enabling interaction with nature, equipped camping areas (kitchen, toilet, shower) should be available (approximately 80-120 units). |
| <b>Urban</b><br>(starts from a minimum of 50,000 people. Expands as the city grows. Maximum 100,000 people) | City park   | City-wide            | 4 m <sup>2</sup> / person   | Should accommodate cultural activities (concerts, shows, exhibitions, etc.), sports (various sports and games, fishing, walking, etc.), picnic and entertainment (amusement park, etc.) functions.  |
|   | Zoo (priority may be given to animals or humans)            | City-wide            | 4 m <sup>2</sup> / person (min. 40ha)                                   | Within the zoo, there may also be a city farm where children and young people provide services to animals (This is an effective tool in the education of disabled children), providing opportunities for relaxation, education, and shopping.           |
|   | Botanic Garden  | City-wide            | 4 m <sup>2</sup> / person (min. 40ha)                                   | The presence of facilities for relaxation, education, and shopping also enhances the potential usage of the area.   |
|   | Urban District Park (Serves several neighborhoods .)        | Approximately 3-5 km | 4-8 m <sup>2</sup> /kişi  | Picnicking, amateur nature observation/research, walking, and sports activities are facilitated, the presence of natural/artificial water surfaces is preferred.  |
| <b>Quarter</b><br>45,000-50,000 population  | Quarter Park  | 1.5-2,5 km           | 1,5 m <sup>2</sup> / person (min. 20ha)                                 | Should be close to nature, catering to picnicking, sports, and recreational needs. (Traffic education area, recreation center, countryside café, etc., facilities may also be available.)   |
|   | Playground (sports adventure playground)                    | 1-1,5 km             | 7-10 m <sup>2</sup> / person  | Sports facilities and adventure playground may not coexist.   |
| <b>Neighborhood</b><br>10,000-15,000 population   | Neighborhood Park (Serves several neighborhoods )           | 0.8-1 km             | Approximately 1.4 m <sup>2</sup> /person (half of it sports area)       | Should be arranged suitable for sports, viewing, entertainment, games, socializing, and relaxation activities.  |
| <b>Neighborhood Unit</b>  | Neighborhood Unit Park                                      | 250-500m             | Approximately 1.5 m <sup>2</sup> /person (minimum 5000 m <sup>2</sup> ) | Short-term relaxation, viewing, socializing, sports, equipped and unequipped (with and without vehicles) gaming activities are included.  |
| <b>Residential Group</b>  | Resting Area  | Max. 100m            | 50-100m <sup>2</sup> /person  | Near the residence, a space for relaxation, socializing, child observation, etc., as an extension of the residence.   |
|   | Children's Play Area  | Max. 300m            | 0,75 m <sup>2</sup> / person  |   |
|   | Children's Play Spot  | Max. 100m            | 0,2-0,5 m <sup>2</sup> / person   |   |

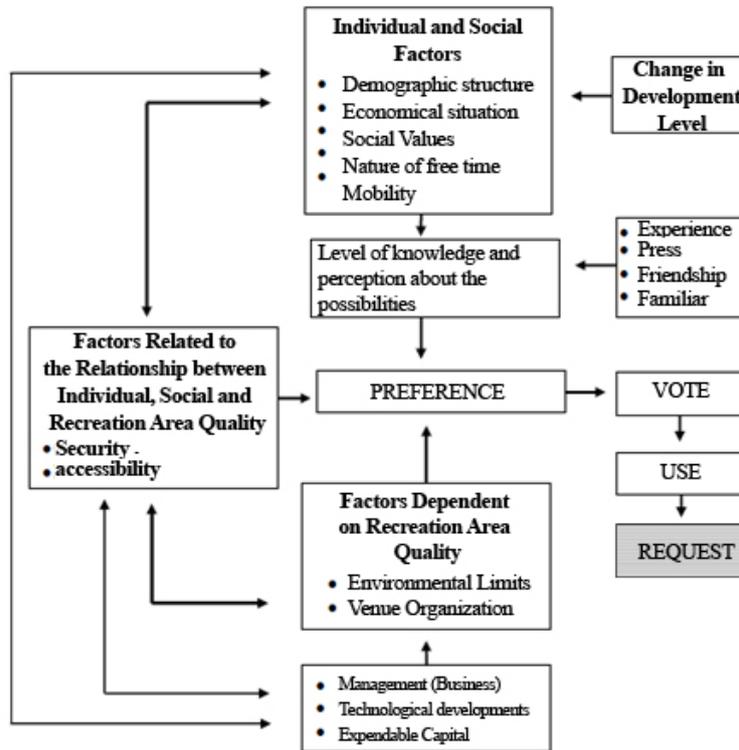

Recreation pertains to activities individuals engage in during their leisure time outside of working hours. According to Edginton and Ford (1985), recreation, as a modern social institution, is considered as a repository of knowledge and a professional field: it is independent of work, inherently valuable, and serves as a means for

fulfilling many important needs, contributing to a fulfilling and happy life (Karaküçük, 1997). Gökmen (1985) defines recreation as a series of activities that individuals can choose independently after fulfilling their occupational, familial, and societal obligations, aiming at relaxation, entertainment, skill enhancement, and self-renewal (Karaküçük, 1997). From a different perspective, recreation is seen as the preparation for a new and evolved work cycle, rejuvenating the worn-out body, and gaining freshness and energy for a new working period (Uzun and Altunkasa, 1997). Additionally, Gülez (1979) defines recreational activities as non-profit activities such as games, sports, entertainment, and relaxation, undertaken amateurishly, with the purpose of earning money (Gedikli, 1998). While all recreational activities are carried out during leisure time, not all activities done during leisure time can be considered as part of the phenomenon of recreation.

**Recreational Demand And Factors Affecting It**

Recreational demand refers to individuals' desire to use or not to use any recreational opportunity. The demand for recreation among all individuals (both men and women) in a society is not the same because demand is determined by a series of internal and external factors. According to Gold (1980), the fundamental factors influencing people's recreational demand vary depending on user potential, recreational area, and the relationship between user potential and recreational area (Uzun and Altunkasa, 1997; Yılmaz Bayram, 2011).

Factors related to the quality of recreational areas include the area's attractiveness to users, alternatives available, carrying capacity, and natural features (Yılmaz Bayram, 2011). Additionally, factors such as area management, keeping up with technological developments, and available capital indirectly affect the mentioned factors (Figure 1). Factors related to the relationship between individual and societal qualities and the quality of recreational areas include travel time and distance, the cost of recreational resources and equipment, knowledge and user perception of the area, safety, and accessibility. Particularly, safety and accessibility depend on the demographic structure of individuals (Yılmaz Bayram, 2011). For instance, to assert that the same location is equally safe and accessible for women and men, it is necessary to carefully examine and address the specific sensitivities of women and arrange accordingly (Figure 1).

Şekil 1. Factors Influencing Individuals' Demand for Urban Green Space - Park Usage (Yılmaz Bayram, 2011).

Şekil 1 illustrates the relationship between the factors influencing individuals' demand for urban green space - park usage. Individual and societal factors vary depending on people's level of self-improvement. These factors shape preferences based on individuals' knowledge and perception. Here, communication tools and the experiences of individuals around us can influence people, leading hidden demands to turn into directed demands (Yılmaz Bayram, 2011). Preferences are formed with the varying effects of all the factors described above. Choices determine individuals' selections. By choosing the type of recreation and area, new demands begin to emerge accordingly. In the context of gender, individual and societal factors influencing women's and men's demand for urban green space usage can be examined under the headings of demographic structure,

economic status, societal values, the nature of leisure time, and mobility. The most fundamental distinction arises from gender. Due to gender roles, individuals' educational levels vary. It is observed that women, in some cases, have limited educational opportunities, leading to insufficient employment opportunities for them. Consequently, they lead their lives as economically low-paid or unpaid individuals. Even economically affluent women, at the middle and upper levels, are known to be not as comfortable as men in terms of societal values. The tasks and responsibilities imposed on them restrict their use of public spaces. Particularly, their use of recreational facilities is suppressed by the priorities and demands of their children.

### The Gender Inequality Index (Gender Inequality Index-GII)

The Gender Inequality Index (GII) is an indicator developed by the United Nations Development Programme (UNDP) as a measure of gender inequality. This indicator was introduced as an alternative to the Gender Empowerment Measure (GEM) in the Human Development Report (GDI) of the UNDP in 2010. GII considers three fundamental dimensions of gender inequality: 1.Reproductive Health: Reflects maternal mortality rates, adolescent birth rates, and inequalities in access to services. 2.Empowerment: Assesses women's participation in decision-making processes and access to education. 3.Economic Activity: Takes into account the gender gap in labor force participation and the ratio of earned income between women and men.

According to the Gender Inequality Index, in the 2020 report containing 2019 data, countries marked in red on the world map represent countries experiencing higher levels of gender inequality, while countries marked in green reflect greater equality (UNDP). GII combines these dimensions into a single index ranging from 0 to 1; higher values indicate greater gender inequality. Countries with higher GII scores typically face inequalities in health outcomes, limited access to education and economic opportunities for women, and lower levels of women's participation in political decision-making processes.

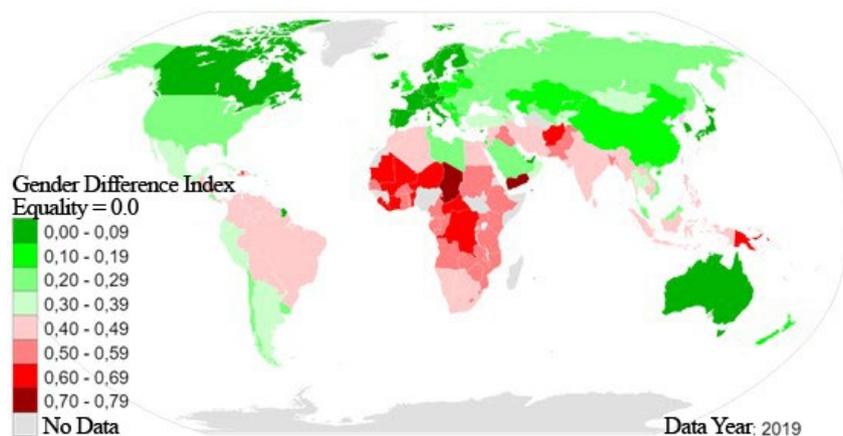

Figure 2. Gender Inequality Index of Countries (URL1)

Gender Inequality Index provides policymakers and researchers with a comprehensive measure of societal gender inequality, allowing for comparisons between countries and over time. It serves as a tool for monitoring progress towards gender equality and identifying areas where interventions are needed to address gender inequalities (URL1). In this study, the most frequently used parks in the capitals of the top 10 countries leading the GII ranking in the Gender Inequality Index were examined: namely, Zürichhorn in Zurich, Switzerland (GII value = 0.025); Slottsparken in Oslo, Norway (GII value = 0.038); Kaivopuisto in Helsinki, Finland (GII value = 0.039); Vondelpark in Amsterdam, Netherlands (GII value = 0.043); Ørstedsparken in Copenhagen, Denmark (GII value = 0.043); Kungsträdgården in Stockholm, Sweden (GII value = 0.045); Parc de Bruxelles in Brussels, Belgium (GII value = 0.045); Seoul Forest Park in Seoul, South Korea (GII value = 0.047); Jardin des Tuileries in Paris, France (GII value = 0.049); and Hljómskálagarðurinn in Reykjavik, Iceland (GII value = 0.058).

### Examples Of Parks In Countries With High Scores On The Gender Inequality Index

#### Zürichhorn (Switzerland - Zurich)

At Zürichhorn, located on the shores of Lake Zürich, there are numerous dock structures. This park, with a total area of 11.4 hectares, consists of 5.8 hectares of green areas, 1.7 hectares of recreational areas, and a 0.33-hectare Chinese garden. Within the park, there are facilities such as a sailing club building, an art workshop, the Le Corbusier museum, and a casino (covering 0.6 hectares).

The Zürichhorn Park, located in the Seefeld district of Zurich, stands out as the most frequently visited park, situated 3-4 minutes away from the city center and hosting various tourist attractions. This area, protected by trees and reeds, became the focal point of national exhibitions such as the 1939 'Landi' and the 1959 'G59'. Zürichhorn Park serves as a place of relaxation for both locals and foreign visitors (URL2). The park offers modern amenities such as sculptures like Jean Tinguely's 'Heureka', playgrounds, and recreational areas (URL3). It provides various facilities appealing to people, including playgrounds, picnic areas, and sports facilities. Located by the lake, the park offers opportunities for swimming, boat trips, and walks along the shoreline. Throughout the year, concerts, festivals, and cultural events are held in Zürichhorn Park. Accessible by public transportation and designed to integrate with the city's bicycle paths and pedestrian walkways, the park features limited vehicular roads, with surrounding roads restricted to a maximum speed of 50 km/h. A bicycle lane is positioned east of the area to seamlessly connect with the city. Pedestrian crossings are provided to ensure safety at intersections between pedestrians and vehicles.

### **Slottsparken (Norway - Oslo)**

Slottsparken, also known as the Royal Palace Park, encompasses greenery, winding paths, and serene ponds within an area of 5.3 hectares. With a total area of 21.4 hectares, the park comprises 12.5 hectares of green spaces, 0.49 hectares of water areas, and a total of 4.8 hectares of parking areas. The parking area designated for the art museum covers 0.28 hectares, while the parking area designated for the hotel occupies 0.1 hectares. The art museum occupies an area of 0.32 hectares, with a storage area of 0.075 hectares, and a single hotel occupies an area of 0.40 hectares. Additionally, there are parking areas allocated for an office (0.040 hectares), a children's playground (0.012 hectares), a greenhouse (0.055 hectares), and a small park area (0.033 hectares). Designed by architect Hans Linstow in the 19th century, the park reflects the principles of English landscape design (URL5). Slottsparken offers a wide range of facilities including cafes, recreational areas, and ample space for outdoor activities (URL6). Throughout the year, Slottsparken hosts cultural events that contribute to Oslo's cultural scene (URL7). Apart from service roads providing access to the hotel and museum within the area, there are no vehicular roads, but stairs are available for pedestrian pathways. Public transportation routes pass through the south and east of the area. The maximum speed on vehicular roads is limited to 50 km/h, and pedestrian-vehicle encounters are facilitated by pedestrian crossings. Due to its central location, the majority of surrounding uses consist of office spaces .

### **Kaivopuisto (Finland - Helsinki)**

Kaivopuisto, located in the southern part of Helsinki, offers recreational activities such as sightseeing, skiing, and playgrounds. With a total area of 16.6 hectares, this park covers 11.8 hectares of green spaces and is situated along the coastline. The parking area in the park totals 0.11 hectares, and there is a field measuring 0.80 hectares. Additionally, the park features a dog park spanning 0.087 hectares, a children's playground covering 0.090 hectares, and commercial buildings occupying 0.2 hectares.

The Cygnaeus Gallery, Finland's oldest art museum, is located in this area. It features pathways for walks (URL8). Known for its sculptures, playgrounds, and natural beauty, Kaivopuisto demonstrates Helsinki's heritage and commitment to green spaces through conservation efforts and societal engagement (URL9). People are drawn to the lawns, pathways, and panoramic views of the sea (URL10). Additionally, the park serves as a hub for cultural events and picnics, enhancing its appeal with its proximity to the sea and nearby islands (URL11).

### **Vondelpark (Netherlands - Amsterdam)**

Vondelpark boasts sports facilities such as running and walking tracks, football fields, and playgrounds. The park offers recreational activities. With a total area of 47.5 hectares, wooded areas cover 11.7 hectares, grass areas cover 13.7 hectares, and water areas cover 8.5 hectares. Additionally, there are sports fields covering 0.31 hectares and children's playgrounds covering 0.99 hectares. Furthermore, the park features outdoor theater areas, musical areas, and cafe-restaurant-kiosk areas totaling 0.21 hectares.

During the summer months, free concerts/shows are held at the open-air theater, and the cafes/restaurants located throughout the park also provide relaxation opportunities (URL12). Dogs and their owners are allowed to roam freely in designated areas (URL12). Vondelpark is adorned with a national monument bridge and viaduct. Historical structures such as the Pavilion, where the Vondel statue is located, and the music-dome Groot Melkhuis are found in the park. The topography over the waste storage area in Vondelpark is utilized to prevent flooding (URL13). Being pedestrian and cyclist-friendly, the park serves as a bustling activity center where people from all walks of life come together to relax, socialize, and enjoy outdoor activities (URL14). While vehicular roads exist in the area, they are currently not open to vehicle traffic but are accessible for vehicles servicing the facilities and for emergency response in case of fire or emergencies. Bicycle paths are present to the north, west, and east of the area, with public transportation serving the vicinity. Although the surrounding roads have a width of 35 meters, the speed limit is restricted to 30 km/h.

**Ørstedsparken (Denmark - Copenhagen)**

Located centrally in Copenhagen, Ørstedsparken is situated amidst the bustling streets and cultural venues of the city. Offering panoramic views, Ørstedsparken sprawls over approximately 12 hectares of land. The total area of the park is 6.5 hectares, within which 2.4 hectares are wooded areas and 1.8 hectares are water areas. Additionally, there are six parking lots covering a total area of 0.2 hectares. The park features eight structures, including a café; the remaining structures are utilized as sheltered seating areas. In total, these structures cover an area of 0.046 hectares.

The park features concerts, outdoor events, and a public playground. Additionally, Ørstedsparken offers outdoor recreational activities such as yoga, tai chi, and cycling, and hosts cultural events throughout the year (URL15). Surrounding the park are vehicular roads with a width of 20 meters. However, within the restricted area with a speed limit of 50 km/h, there are no vehicular roads, but stairs are available for elevation differences. A bicycle path serving the city is present to the west of the area. Pedestrian pathways have an average width of 2-3 meters, with lighting every 15-20 meters.

**Kungsträdgården (Sweden - Stockholm)**

This park in Sweden is surrounded by a 20-meter-wide vehicular road, with a speed limit of 30 km/h, and it has been designed as an integral part of the city. With a total area of 10.9 hectares, the park consists of 6 hectares of green spaces, 0.6 hectares of monument areas, and 0.33 hectares of water areas. Additionally, there are planned areas for events (0.1 hectares), retail space (0.35 hectares), and walking paths (4.08 hectares).

Bicycle lanes dominate the cityscape and also traverse through the area. Roadside parking has been preferred along the vehicular road passing through the eastern part of the area, where bicycle lanes are also present. The main pedestrian axis to the east of the park connects to other park areas and the marina, enhancing the accessibility of the area. Pedestrian crossings are available for pedestrian-vehicle encounters. In the center of the park, there is typically a large fountain serving as a meeting point for visitors (Johnson, E., 2018).

**Parc de Bruxelles (Belgium - Brussels)**

Located north of the Brussels Royal Palace, this park area houses artistic activities, open-air buffets, and cafes. To the south of the area, there is a 2x2 lane vehicular road with a speed limit of 30 km/h on all surrounding roads. A tram line runs from west to north of the area, and a metro line passes under the area at a depth of 4 meters, with a station within the area. With a total area of 13 hectares, the park comprises 11 hectares of green space. Additionally, there are designated areas for a children's playground (0.14 hectares), a theater and live music area (0.35 hectares), and an open-air buffet area (0.03 hectares).

The park serves as a hub for public transportation lines. While there are bicycle lanes around the perimeter of the area, there are no bicycle lanes within the park itself. Parking areas are located within the facilities within the area and to the south of the park. There are two water features within the area. Throughout the park, there are monuments, statues, and memorials. The park features ample open spaces suitable for picnics, recreational activities, and gatherings. Strategically placed benches and seating areas provide resting spots and relaxation areas along the park's length (Dupont, M., 2015).

**Seoul Forest Park (South Korea - Seoul)**

Seoul Forest Park is the largest park in Seoul, the capital of South Korea, with a population of 10 million. Major city roads pass through the area, necessitating the presence of overhead crossings due to their hazardous nature. Additionally, the area houses facilities such as a high school, water treatment plant, and equestrian club. With a total area of 78 hectares, the park encompasses 40 hectares of green space. Furthermore, there are designated areas for playgrounds (0.4 hectares), sports fields (1 hectare), and the high school (1.8 hectares). The water treatment plant occupies an area of 28.5 hectares, while the water area covers 1.96 hectares.

The bicycle lanes located at the center of the area are uniformly distributed throughout the entire park. The area is integrated with the city, and the speed limit on the road passing through the area is restricted to 50 km/h. Pedestrian-vehicle encounters are facilitated by pedestrian crossings in the center of the area, while pedestrian paths connecting the area to the river outside are provided by overhead crossings. Public transportation stops serve the area. The park features wetlands, ponds, and streams that provide habitat for various plant and animal species. As the name suggests, Seoul Forest encompasses forested areas with walking trails for visitors to explore nature and enjoy outdoor walks. Cultural facilities such as art galleries, exhibition spaces, and performance venues are located within the park. Seoul Forest also includes a special children's park with playgrounds, sandpits, and other amenities for young visitors. Sports enthusiasts are catered to with facilities such as football fields, basketball courts, and tennis courts within the park. Bicycle and rollerblade paths are available for recreational activities (Kim, J., 2019).

### **Jardin des Tuileries (France - Paris)**

The parking area is underground, with a bicycle path passing through the northern part of the area, where the speed limit is 30 km/h. Metro transportation is available in the area. Illumination within the area provides people with the opportunity to sit safely on benches. With a total area of 21 hectares, the area encompasses 11 hectares of green space. Additionally, the museum area covers 0.23 hectares, the built area (cafe and restaurant) covers 0.08 hectares, and water elements span 0.65 hectares. The amusement park occupies 2.8 hectares, while the children's play area covers 0.7 hectares.

Pedestrian crossings are available for pedestrian-vehicle encounters. Along the southern part of the area, there is a promenade pathway along the banks of the River Seine. (Pierre, L., 2020). The park is aligned along the central axis from the Louvre Museum to the Place de la Concorde, providing spatial connectivity. Within the garden, there are ponds, fountains, and basins such as the Grand Bassin Rond and Bassin Octogonal. (Leclerc, M., 2018).

### **Hljómskálagarðurinn (Iceland-Reykjavik)**

On the shore of Lake Tjörninn, this park boasts a children's play area, a concert hall, and commercial structures. A city road traverses through the park, with a speed limit of 50 km/h enforced. Urban pedestrian pathways and bicycle lanes pass through the area, contributing to the coherence of the city. With a total area of 10.35 hectares, the park encompasses 8 hectares of green space. Additionally, there is a 1-hectare children's play area and a 0.05-hectare building zone within the park. Bicycle lanes are also present within the area.

The lake is completely covered with ice during the winter months, allowing people to engage in activities such as ice skating and skiing on the lake. The only complaint about the area is the lack of a café with toilet facilities. Pedestrian-vehicle encounters are facilitated by pedestrian crossings. Hljómskálagarðurinn offers various recreational activities, including playgrounds for children, sports fields, and exercise equipment for adults. The park is accessible to people of all ages, including wheelchair users, with asphalt paths and ramps (Jónsson, Ó., 2018).

## **RESEARCH QUESTIONS AND METHODOLOGY**

Considering the gender roles attributed to women, investigating the spatial characteristics that a park should have to achieve equal usage levels for both genders forms the basis of this study. Starting from the hypothesis that Faroz-Ganita Coastal Park does not have equal usage levels by women and men, the study aims to answer the following questions: How do the spatial qualities and location of Faroz-Ganita Coastal Park affect its usage levels by genders?, For what purposes do women and men prefer the park?, What are the complaints and spatial qualities in the park identified by women and men?. In this study, the qualities and design principles of urban parks with equal usage levels by women and men were determined by reviewing relevant literature and examining the most visited park areas in countries with the lowest scores on the Gender Inequality Index (GII). Within this framework, the spatial qualities (size, functional diversity, amenities, area size, security, etc.) of Faroz-Ganita Coastal Park in Trabzon province, Ortahisar district (Central district), and its relationship with its immediate surroundings based on its location in the city (accessibility, security, etc.) were investigated. The fieldwork consisted of a two-stage process: 1. Spatial Analysis: The spatial organization and qualities of the park were mapped based on findings obtained from relevant institutions, Google Earth, and observations made in the field. 2. Survey Study with Female and Male Users: A total of 740 participants, consisting of 359 women and 381 men using the park, were randomly selected for the survey. Participants were asked demographic questions, as well as questions regarding their reasons for park usage, preferences, frequency of use, aspects they liked and complained about the park. The survey aimed to assess individual factors influencing urban open and green space usage in the context of gender (gender, age, education level, economic status), the park's capacity to meet needs (walking opportunities, recreational services, resting facilities, etc.), and people's satisfaction levels with the park. The survey was conducted between February 6, 2024, and February 25, 2024.

### **Study Area**

The Faroz-Ganita Coastal Park is located in the Ortahisar District, which is the central district of Trabzon, Turkey. Situated west of the Trabzon Port, it is the park closest to the city's central business district. The park originated in the early 1900s when a Greek family built the Ganita Tea Garden on the rocks. The name "Ganita" derives from the Greek word "Καίητα," meaning "beautiful place." Over time, this area has evolved into one of the most significant parks along the coastal strip of Trabzon, with various recreational enhancements (Figure 3).

Figure 3. Faroz-Ganita Coastal Park (Trabzon Metropolitan Municipality)

The area is located along the seaside and comprises three pier structures. While one of the piers is designed with seating areas, serving as an internal structure, the two pier structures located to the east are primarily utilized as docking areas for tourist boats.

**FINDINGS AND EVALUATIONS**

**Spatial Findings**

The total area of this site is 12 hectares, with 3.3 hectares designated as green space. Additionally, there is a 0.2-hectare children's play area, a 2.6-hectare walking path, and a 0.2-hectare bicycle path. Within the area, there is also a total of 0.3 hectares allocated for kiosks, cafes, etc. (Figure 4).

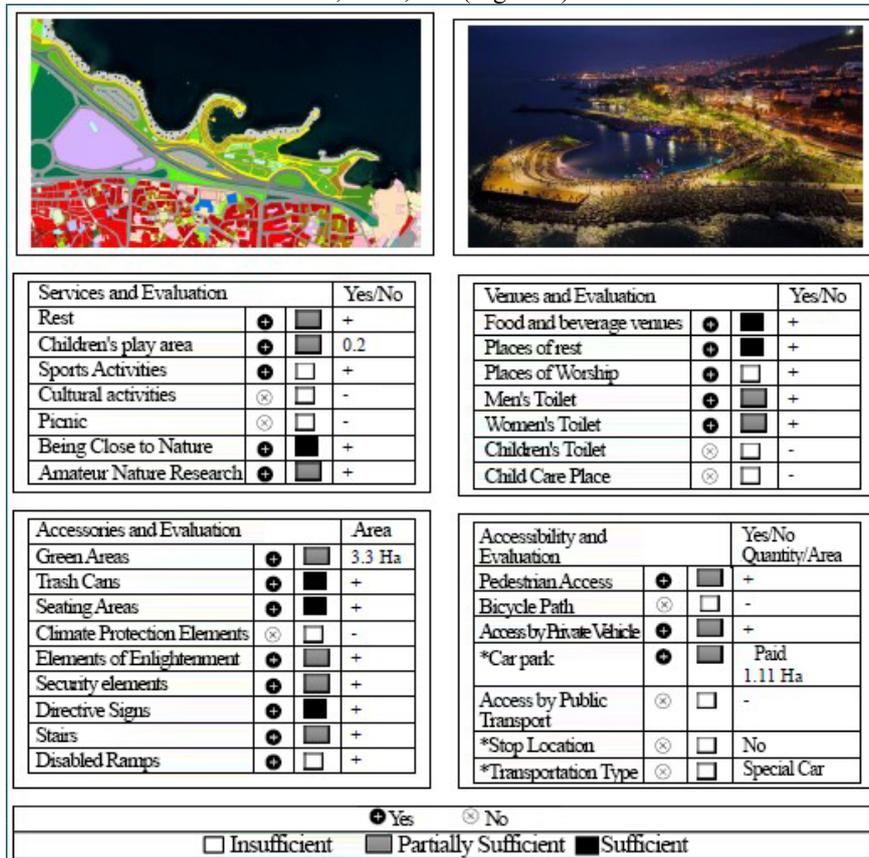

Figure 4. Evaluation of the Spatial Characteristics of Faroz-Ganita Coastal Park (Turkey-Trabzon)

In contrast to the other parks examined (See; Park Examples in Countries with Good Gender Inequality Index), there is a 35-meter-wide Black Sea coastal road passing from the south, which is the D010 Black Sea coastal road connecting the city to other cities. Although the normal speed limit of this road is 82 km/h, due to its three lanes, vehicles usually travel at speeds exceeding 90 km/h (Trabzon Directorate of Security, Regional Traffic Control Department). As a result, while people can access other parks through pedestrian crossings, pedestrian overpasses are mandatory in Faroz-Ganita Coastal Park. This restricts the access of disabled individuals and young children to the area. Access to the area is typically provided by using 3-meter sidewalks alongside the 15-meter-wide roads used from the Square-Gazipaşa slope-Ganita direction, followed by stairs or elevators. This is considered a disadvantage for those who walk to the area. For those arriving by car, the parking area in the park

is used with a fee (up to 1 hour for 20 TL (0.61 \$), up to 4 hours for 30 TL (0.92 \$) as of April 2024, exchange rate 1\$=32.53 TL). After getting off the vehicle, it is necessary to walk about 500 m to reach the busiest part of the area (Figure 4). When compared to the parks in the aforementioned countries (See; Park Examples in Countries with Good Gender Inequality Index), Ganita Park, other parks are more accessible and safe, there are spaces prioritizing nighttime use, there are more green areas for picnicking, and the area is designed as an integral part of the city. Also, having a city-wide bicycle route, having a pedestrian transportation system where city pedestrian roads are connected, and the surrounding roads of the park having low speeds such as 30-50, which are city limits, making them suitable for pedestrian crossings, also increase disabled access. The noticeable decrease in the number of people towards the ends of the area is also due to its separate design from the city (Figure 4).

Table 2: A Comparison of Parks in Countries with Good Gender Inequality in the Context of Social Gender Inequality and Faroz-Ganita Park

| Good examples of gender equality in public parks within the context of societal gender inequality |  | OrstedPark, Denmark Copenhagen | Kaivopuisto Finland Helsinki | Slottsparken Norway Oslo | Vondelpark Netherlands Amsterdam | Zürichhorn Switzerland Zürich | Hljomskalagar durinn Iceland Reykjavik | Kungsträdgård en Sweden Stockholm | Parc de Bruxelles Belgium Brüksel | Jardin des Tuileries France, Paris | Seoul Forest Korea Seoul | Faroz-Ganita Turkey Trabzon |

In Table 2, the cells shaded in light gray represent existing variables, while those shaded in dark gray represent non-existent variables. When examining the most commonly used parks in the capitals of countries with the lowest scores on the Gender Inequality Index (GII) in the context of social gender inequality, many common features stand out. These features include the homogeneous organization of urban parks throughout the city. For instance, the travel routes of individuals commuting to work in the mornings are planned along urban pedestrian and bicycle paths leading to the parks. In contrast, Faroz-Ganita Coastal Park, due to its internal arrangement of pedestrian and bicycle paths, is designed as an area to be visited solely for the purpose of enjoying the park, independent of the city. Therefore, the number of visitors to Faroz-Ganita Coastal Park is lower during weekdays and working hours. This is because the park is situated outside the city as a destination to be visited according to a specific plan. Since there are no bicycle lanes in Ortahisar district of Trabzon, people use their bicycles in this area solely for sports purposes. In contrast, in countries with good gender equality in terms of social gender inequality, bicycle lanes are dominant throughout the city, including those passing through park areas. During off-peak hours, Faroz-Ganita Coastal Park is deserted; however, it is used on holidays, weekends, and sunny days. Climate protection facilities are also available in other cities. For instance, enclosed areas are provided to people during windy times. These facilities include shaded areas under trees, umbrellas, and covered seating areas (excluding cafes and restaurants). In Faroz-Ganita Coastal Park, only cafe and restaurant areas have enclosed spaces. In parks in countries with good gender inequality, there are ramps for disabled access. Although Faroz-Ganita Coastal Park also has ramps, there are no facilities for disabled vehicles along the access routes to the area. Due to the high sidewalks, a disabled individual attempting to reach the park in a wheelchair encounters many obstacles. Unlike in parks in countries with good gender inequality, where bus and taxi stops and metro stations directly serve the parks, the nearest stop to Faroz-Ganita Coastal Park is 600 m away, and access is provided via stairs, overpasses, and 1.5-2 m sidewalks. Insufficient pedestrian access is the most important deficiency. The majority of married women using Faroz-Ganita Coastal Park visit the area to take their children for a walk. Women who cannot deviate from their childcare responsibilities spend their park visits dependent on their children, feeling obligated to act outside their own personal desires. When examining parks in countries with good gender inequality, women visit these areas comfortably at all times of the day, either with their children or alone or with friends. Each park has a green area ratio of over 50% compared to paved areas, while Faroz-Ganita Coastal Park has a green area ratio of only 20%. All parks have a water feature, with parks located by the sea or lake having pools and pond structures. Faroz-Ganita Coastal Park is also located by the sea, which is a prominent feature. Unlike in other cities, where bicycle lanes dominate and are planned in accordance with this structure, Faroz-Ganita Coastal Park has a bicycle lane that starts within the park and ends at Faroz Port. In parks in countries with gender inequality, ground-level pedestrian crossings are provided for pedestrian-vehicle encounters. However, due to the presence of the D010 Black Sea Coastal Road, which is a long-distance road passing from the south of the park, with a speed limit of 82 km/h, individuals only access the area via overpasses. In parks in countries with good gender inequality, the surrounding roads have speed limits of 30-50 km/h, allowing people to visit the park without the necessity of crossing a parkour using pedestrian crossings (Table 2).

## FINDINGS AND EVALUATION OF THE SURVEY

More than half of the respondents in the survey are male (359 females, 381 males), with the average age of female park users being 33, while males have an average age of 37. The majority of park users, regardless of gender, are married (N: 379, 51.21%). Single users account for 342 individuals (46.21%), while there are 19 users who are widowed or divorced (2.56%). Most of the park users have attained a university-level education, with a significant portion of them being females. While the number of female high school graduates exceeds that of males, users with lower levels of education are predominantly male (Table 3).

| Homeownership Status               | Renter                | 74  | 81  | 155 | 47.74 | 52.26 |
|                                    | Homeowner             | 285 | 300 | 585 | 48.72 | 51.28 |
| Accompanying Person(s) to the Park | Individual            | 52  | 95  | 147 | 35.37 | 64.63 |
|                                    | Group                 | 307 | 286 | 593 | 51.77 | 48.23 |
| Health Status                      | Has illness           | 59  | 104 | 163 | 36.20 | 63.80 |
|                                    | Does not have illness | 300 | 277 | 577 | 51.99 | 48.01 |

The majority of park users express that their economic status is good. While women mostly indicate that their economic situation is good, men tend to provide responses indicating a moderate status. The vast majority of park users either reside in their own homes (N: 585, 79.05%) or with their families. A large proportion of park users visit the park in groups. While the number of men coming alone (64.63%) exceeds that of women, the number of women coming in groups (51.77%) exceeds that of men (48.23%). Women tend to visit the park with their spouses or relatives, whereas men mostly come with friends or alone. The overall health status of park users is generally good. All disabled individuals visiting the park arrive using their family's private vehicle. Due to the lack of facilities for disabled access, the park is not suitable for disabled individuals; the majority of park users are healthy adults (Table 3).

As described in Table 4, when park users were asked how often they use the park, the majority stated that they rarely visit (1-2 times a month) (N: 379, 51.21%). However, those spending a few days a week in the park outnumber those who visit every day. The majority of those who rarely use the park are women. Additionally, the majority of users who visit 1-2 days a week are men. Consequently, women tend to use the park less frequently than men (Table 4).

Table 4. Factors Related to Park Usage

| VARIABLES                                      |                             | FEMALE | MALE | TOTAL | FEMALE % | MALE % |
|--|-----------------------------|--------|------|-------|----------|--------|
| <b>2. Factors Related to Park Usage</b>        |                             |        |      |       |          |        |
| Frequency of Park Usage                        | For Touristic Purposes      | 13     | 6    | 19    | 68.42    | 31.58  |

|                                 | Socializing (Meeting friends, spending time together, etc.) | 109 | 109 | 218 | 50.00 | 50.00  |
|                                 | Natural Beauties: Sea                                       | 0   | 2   | 2   | 0.00  | 100.00 |
|                                 | Touristic Excursion   | 30  | 19  | 49  | 61.22 | 38.78  |
|                                 | Other   | 17  | 32  | 49  | 34.69 | 65.31  |

As the park does not have a minibus or bus stop, approximately half of the arriving users (N: 343, 46.35%) come by their own vehicles. The number of pedestrians approaching the park is close to the number of minibus passengers, as minibuses from the city center pass near the park. The low number of cyclists coming to the park is due to the absence of bicycle lanes in the city. Nearly half of the users come to the park for walking purposes (N: 334, 45.13%). Additionally, those who come for dining and walking purposes outnumber those with other purposes. Women generally show more interest in outdoor activities such as walking and taking children for a stroll. Furthermore, their interest in dining activities is remarkable (N: 297, 82%). However, their interest in indoor activities such as listening to music and reading books is slightly lower (N: 4, 0.01%). Men, on the other hand, tend to show more interest in outdoor activities, especially fishing and hiking (N: 223, 58.5%). Additionally, their interest in indoor activities such as listening to music and reading books is slightly higher compared to women (N: 20, 0.04%). When users were asked about their reasons for choosing the park, the majority, regardless of gender, stated that they came for socialization and relaxation. The proportion of those engaged in sports, using dining areas, and visiting the park for tourism purposes is very close. Observations and interviews clearly indicate that during weekend holidays and lunch hours, people visit the park more frequently. The number of visitors during weekdays decreases by half compared to weekends, and this ratio remains the same during both day and night hours (Table 4).

As described in Table 5, when users were asked about their favorite aspects of the park, the majority, regardless of gender, expressed appreciation for the park's location, panoramic views, and the presence and variety of seating areas (N: 378, 51.1%). (Table 5).

Table 5. Satisfaction and Complaints Regarding the Park

| VARIABLES   |  | FEMALE | MALE | TOTAL | FEMALE % | MALE % |
|---|--|--------|------|-------|----------|--------|
| <b>3. Satisfaction and Complaints in the Park</b> |  |        |      |       |          |        |
| Most Liked Criteria in the Park                   | Variety and Quality of Food and Beverage Venues                          | 19     | 27   | 46    | 41.30    | 58.70  |
|   | Cleanliness and Maintenance of Food and Beverage Venues and Surroundings | 31     | 30   | 61    | 50.82    | 49.18  |
|   | Panoramic View   | 138    | 141  | 279   | 49.46    | 50.54  |

|   |  |    |     |     |        |       |
|---|--|----|-----|-----|--------|-------|
|   | Connecting with Nature   | 24 | 24  | 48  | 50.00  | 50.00 |
|   | Meeting with the Sea   | 8  | 40  | 48  | 16.67  | 83.33 |
|   | Presence of Quiet Areas within the Park                              | 38 | 25  | 63  | 60.32  | 39.68 |
|   | Existence and Variety of Seating Areas                               | 55 | 44  | 99  | 55.56  | 44.44 |
|   | Presence of Playgrounds and Amusement Equipment                      | 5  | 9   | 14  | 35.71  | 64.29 |
|   | Organizing Cultural and Art Events                                   | 27 | 20  | 47  | 57.45  | 42.55 |
|   | Other  | 13 | 22  | 35  | 37.14  | 62.86 |
| Most<br>Complained<br>Criteria in the<br>Park | Inaccessibility of Venues  | 26 | 39  | 65  | 40.00  | 60.00 |
|   | Lack of Separate Areas for Different Age Groups                      | 11 | 12  | 23  | 47.83  | 52.17 |
|   | Obstacles in Pedestrian Access                                       | 14 | 4   | 18  | 77.78  | 22.22 |
|   | Sidewalks and Walkways not Suitable for Wheelchair Use due to Height | 13 | 15  | 28  | 46.43  | 53.57 |
|   | Distance of Minibus-Bus Stops from the Park or Residence             | 12 | 17  | 29  | 41.38  | 58.62 |
|   | Transportation Costs   | 15 | 8   | 23  | 65.22  | 34.78 |
|   | Paid Parking   | 8  | 12  | 20  | 40.00  | 60.00 |
|   | Paid Toilets   | 15 | 32  | 47  | 31.91  | 68.09 |
|   | Odors of Algae and Wastewater  | 55 | 56  | 111 | 49.55  | 50.45 |
|   | Noise Pollution from Surrounding People, Children, and Animals       | 62 | 101 | 163 | 38.04  | 61.96 |
|   | Presence of Stray Street Animals                                     | 3  | 10  | 13  | 23.08  | 76.92 |
|   | Inadequacy of Emergency Assistance Facilities                        | 12 | 0   | 12  | 100.00 | 0.00  |
|   | Neglected and Dirty Playground Equipment                             | 12 | 19  | 31  | 38.71  | 61.29 |
|   | Inadequacy of Park Facilities  | 66 | 51  | 117 | 56.41  | 43.59 |
|   | Lack of Place of Worship   | 6  | 12  | 18  | 33.33  | 66.67 |
|   | Other  | 16 | 6   | 22  | 72.73  | 27.27 |

When park users were asked about the issues they were complaining about, people expressed the most discomfort with noise (N:163, 22%). Among the complaints raised by individuals are the odors generated by structures that dispose of wastewater into the sea, as well as the inadequate equipment in the park (Table 5).

#### CONCLUSION AND RECOMMENDATIONS:

The Faroz-Ganita Coastal Park, located in the center of Trabzon, is an important park area; however, it faces challenges in terms of access and usage. Accessibility issues, especially for disabled individuals and children, pose a significant barrier. Insufficient pedestrian crossings, underpasses, and overpasses present difficulties for visitors using wheelchairs or strollers. Additionally, safety concerns in the park particularly deter women from using it.

Comparing Faroz-Ganita Coastal Park with parks in countries with good gender equality, it is evident that it lacks in terms of accessibility and security. To enhance safety in the park, it is necessary to improve nighttime lighting and strengthen security measures. Facilitating access to the park requires the installation of disabled ramps and prioritizing pedestrian access on existing roads (creating pedestrian crossings, reducing speed limits). Measures such as increasing lighting in the park and installing additional security cameras in areas with security deficiencies should be implemented to increase nighttime usage and ensure visitor safety. Establishing public transportation stops around the park perimeter would facilitate easier and more economical access for visitors. Park areas can be organized to accommodate different age groups and disabilities through the principles of diversity and inclusivity. Flexibility and adaptability can be achieved by equipping parks with modular designs for easy adaptation to different activities and allocating spaces for temporary events. Sufficient seating areas should be provided for comfort, and areas designed to protect visitors from the sun and rain. Accessibility measures should include the provision of ramps, elevators, and barrier-free pathways for disabled individuals to comfortably use the park.

Regarding safety and security, parks should be equipped with lighting systems, camera systems, and adequate security personnel presence to ensure overall safety. Communication and intervention systems for emergencies should also be established. Finally, expert teams should be assigned for the regular maintenance of park areas, and regular maintenance plans should be developed. Implementing these recommendations can transform the Faroz-Ganita Coastal Park into a more accessible, secure, and attractive urban park. These improvements will contribute to the overall silhouette of the city and enhance the quality of life for its residents.

# FACTORS AFFECTING OCCUPATIONAL HEALTH AND SAFETY AWARENESS

**Halil İbrahim KURT**  
halilkurt059555@gmail.com

**Yrd. Doç. Dr. Azmiye YINAL**  
azmiye.yinal@akun.edu.tr

## ABSTRACT

The main purpose of this study is to determine the factors affecting occupational health and safety awareness in workplaces in the Turkish Republic of Northern Cyprus. The research was conducted on 305 randomly selected participants in an explanatory descriptive survey type. In the study, participants' Occupational Health and Safety (OHS) awareness levels were evaluated on four sub-dimensions: general OHS awareness, occupational health education-communication, occupational health risk perception and total OHS scale. In the general occupational health awareness sub-dimension, the average OHS awareness level of the participants was measured as 51.59 points. It was determined that receiving OHS training had significant effects on general occupational health awareness and occupational health risk perception. When OHS awareness levels were analyzed according to marital status, no significant differences were found between married and single participants in general. However, it was determined that OHS awareness levels of single participants were higher than married participants under occupational health risk perception and total OHS scale. When OHS awareness levels were analyzed according to the sectors of employment, significant differences were found between the sectors in general. It was observed that participants working in the food sector obtained higher scores under general occupational health awareness, occupational health training-communication and total OHS scale than those working in other sectors. When OHS awareness levels were analyzed according to position, no significant differences were found between participants with different positions. Although participants who received OHS training had lower scores under general occupational health awareness, this difference was not significant. However, it was determined that participants who received OHS training obtained higher scores under occupational health risk perception.

**Keywords:** Occupational health, occupational safety, Awareness.

## 1. INTRODUCTION

### 1.1. Problem Status

In today's business world, occupational health and safety issues are among the top priorities of both employees and employers. Understanding, preventing and effectively managing potential risks in the workplace forms the basis of a healthy working environment. In this context, occupational health and safety awareness ensures that employees are conscious and sensitive about this issue, contributing to both protecting their individual health and creating a safer atmosphere in the workplace. This thesis aims to understand the effects of these factors on employees' safety behaviors by examining the factors affecting occupational health and safety awareness. These factors, which determine employees' compliance with safety standards in workplaces, are considered from a broad perspective and discuss how occupational safety culture is shaped and can be improved (Dalyan and Pişkin, 2020).

Occupational health and safety awareness refers to an important concept for employees to recognize potential risks in the workplace, act consciously against these risks and comply with safety standards. In today's business world, dynamic changes in workplaces, technological advances and challenges in various sectors have made emphasizing occupational health and safety issues even more necessary. Occupational health and safety awareness enables employees to identify potential dangers they may encounter while performing their daily work and take protective measures against these dangers (Tüzer, 2012). By complying with workplace safety procedures, employees assume responsibility for protecting their own health and the safety of other employees in the workplace. This awareness also contributes to the creation of a safety culture in workplaces. Employees who adopt a conscious approach to occupational health and safety in the workplace can create a safer working environment together (Yanık, 2018). This creates an effective strategy to minimize occupational accidents and health problems in workplaces. Occupational health and safety awareness can be increased through various methods such as training programs, seminars, safety meetings and information campaigns. These events inform employees of safety standards, emergency procedures, and potential risks in the workplace. Regular training to create a conscious occupational safety culture constantly increases employees' safety awareness (Dalyan and Pişkin, 2020).

Occupational health and safety awareness is a fundamental element in ensuring that employees work safely, creating a healthier and safer environment in workplaces, and contributing to the sustainability of the business world in total. In the Turkish Republic of Northern Cyprus (TRNC), occupational health and safety is becoming more important day by day. Dynamic changes in the business world, technological developments and

globalization increase the potential risks that employees are exposed to, and this makes occupational health and safety issues more critical. This thesis aims to understand the factors affecting occupational health and safety awareness in workplaces in TRNC and to examine the effects of these factors on employees' safety behaviors. Occupational health and safety not only protects the physical health of employees in a workplace, but also increases work efficiency by creating a sustainable working environment in workplaces. Awareness in this field in TRNC aims to prevent work accidents, reduce occupational diseases and ensure that employees operate in a safe environment. (Yilmaz and Oktay, 2015).

### 1.2. Purpose and Importance of the Research

Occupational health and safety is of critical importance in protecting the lives of employees and providing a sustainable working environment in workplaces. The main purpose of this thesis is to determine the factors affecting occupational health and safety awareness in workplaces in the Turkish Republic of Northern Cyprus (TRNC). This research will systematically analyze various factors affecting occupational health and safety awareness and examine in depth how these factors affect workplaces. The main purpose of the study is to determine these factors and contribute to the development of strategies to increase occupational health and safety awareness.

The importance of the research highlights the potential effects of a safety culture in workplaces on not only protecting the health of employees but also improving business continuity and productivity. Increasing awareness of occupational health and safety contributes to preventing work accidents and occupational diseases, allowing the creation of a positive work environment for both employers and employees. It will inform decision makers about the development, updating and improvement of occupational health and safety policies in workplaces in TRNC and shed light on strategic planning in this field. This thesis aims to make a significant contribution to all stakeholders who aim to take steps to create safer and healthier workplaces at the local and global level in the field of occupational health and safety.

### 1.3. Hypotheses

The hypotheses of this research are as follows:

1. H<sub>1</sub>: There is a significant difference between OHS awareness level and marital status.
2. H<sub>1</sub>: There is a significant difference between the OHS awareness level and the sector in which one works.
3. H<sub>1</sub>: There is a significant difference between OHS awareness level and task.
4. H<sub>1</sub>: There is a significant difference between the OHS awareness level and the participants' OHS training status.

### 1.4. Assumptions

research participants gave their answers to the scale questions sincerely.

### 1.5. Limitations

Research;

- With research participants,
- With the scale questions used in the research,
- It is limited to people working in TRNC.

### 1.6. Definitions

**Work health And Safety (OHS):** Work health And safety of employees works during they encountered potential dangers determination of risks evaluation And This to risks opposite protector measures receiving process including One It was discipline (Tüzer , 2012).

**Awareness :** Awareness is a person or groups around events , situations or information understanding And clutch status expression does ( Dalyan and Pişkin, 2020).

## 2. THEORETICAL FRAMEWORK

### 2.1. Occupational Health and Safety Concept

Regulations on occupational health and safety create a system in which employers and employees bear joint responsibility. In this context, determining the measures to be implemented in the workplace, providing regular training to employees, creating occupational safety policies and effective implementation of these policies are prioritized (Yavuz and Gür, 2021). Occupational health and safety is to ensure the safety of employees, to prevent work accidents and occupations. It refers to an area that requires a multidisciplinary approach in order to prevent diseases and is regulated within the framework of Law No. 6331. Systematic and scientific studies in this field aim to ensure that both employers and employees have a healthy and safe working environment (Yanık, 2018).

Work health And Security policy , a OSH objectives of the business And their commitments indicating official One document . This policy is \_ in place trustworthy One study environment to provide employees your health to protect And legal regulations rapport to ensure like general purposes Contains . Work health And Safety (OHS) Policy , a OSH objectives of the business And their commitments determining , employees health And your security to protect aiming official One document . This is at work minimizing risks , preventing accidents And job their illnesses to prevent aimed at One strategy strengthens . Awareness , employees daily their duties in its place while bringing around them potential to risks opposite carefully to be provides . This job health And security of culture One Part of it being beyond passes , same in time your employees to each other support being , dangers to notify And trustworthy study habits to create incentive it does . Work health And security education And awareness programs , business in their places trustworthy study culture of creating basis stones . Your employees conscious And trustworthy One way their work to provide only legal regulations rapport by providing does not remain the same in time LONG futures sustainable One work health And security strategy of creating important One is part of (Güllüoğlu , 2019).

## 3. METHOD

### 3.1. Research Method

Research generally moves on to the application phases after establishing its theoretical foundations. Documentary foundations generally form the basis of a research. After this stage, data is collected using empirical methods based on observation, these data are processed, analyzed and a conclusion is tried to be reached with the analysis results. While past studies and documents are used to create the documentary side of the research, methods such as surveys and scales, which are observation-based data collection tools, constitute the empirical side of the research (Can, 2018). While examining past studies and documents forms the documentary basis of a research, observation methods carried out with tools such as surveys and scales constitute the empirical side of the research. Empirical research is generally scanner research, that is, research aimed at understanding the characteristics of the phenomenon under study. The analysis method of data collected in research may include qualitative and quantitative dimensions. Quantitative studies are studies in which data are

processed numerically and analyzed using quantitative techniques. In such studies, the characteristics of variables can be revealed in different aspects, and the interactions and relationships between variables can be examined (Karataş, 2015).

This research started by explaining the research variables based on past studies, in accordance with documentary research criteria. Data collected by observational methods from a valid sample created from the population representing the research variable were analyzed with quantitative methods. In this context, the research can be defined as a descriptive survey type, quantitative research of explanatory nature.

### 3.2. Population and Sample

In research, the population refers to all of the elements or individuals within the scope of the study and from whom data is collected through observation or other methods. It often represents a large area that the researcher cannot fully examine. Researchers conduct their studies by creating a more accessible universe and taking a sufficient number of samples from this universe (Can, 2018). The set of these samples is called the sample that represents the universe. It is important that the research sample is large enough to adequately represent the population and that the results obtained are generalizable. Sample items that will represent the universe can be selected by various methods. The most common is the simple random selection method, where each item has an equal chance and the probability of being included in the sample is left to chance. Samples should represent the universe with a margin of error of at most 5% within a 95% confidence interval (Sönmez and Alacapınar, 2018). The population of this study consists of individuals residing in the Turkish Republic of Northern Cyprus and working in various sectors. 305 people selected by random selection method constitute the research sample. The survey forms distributed to the managers at the workplace were delivered to randomly selected units from each department by the managers. Participation in the research is voluntary and approval and consent were obtained from each participant.

### 3.3. Data Collection Tools

In the research, two separate data collection tools were used to determine the demographic characteristics of the participants and measure Occupational Health and Safety (OHS) awareness. These tools are primarily the survey form used to determine the demographic characteristics of the participants and secondarily the Occupational Health and Safety Culture Scale (Olçay, 2021). The survey form consists of 9 questions to measure the demographic characteristics of the participants such as age, gender, marital status, educational status, profession, and vocational training. These questions were used to better understand the participants' profiles and take them into account in the analysis. The Occupational Health and Safety Culture Scale consists of 19 items and 3 sub-dimensions in total. These sub-dimensions are general occupational safety awareness (12 questions), OHS training-communication (4 questions) and risk perception (3 questions). These sub-dimensions, determined as a result of the factor analysis of the scale, explain 49.74% of the total variance. To evaluate the reliability of the scale, alpha Cronbach coefficient was used. Alpha is 0.92 for the occupational safety awareness sub-dimension, 0.75 for OHS training-communication, and 0.66 for risk perception. Cronbach values show that the scale is quite reliable. Additionally, the overall reliability of the scale was calculated as 0.89. Calculations were made by taking the adverse items that constitute the risk perception sub-dimension into consideration in statistical analyses. These data emphasize that the research is based on a solid methodology and the scales used are reliable (Olçay, 2021).

The reliability analysis results of the scales used in this study are given in Table 1:

Table 1. Reliability Analysis

| Cronbach's Alpha | Article |
|------------------|---------|
| 0.801            | 19      |

Reliability analysis of the Occupational Health and Safety (OHS) awareness scale was evaluated using Cronbach's Alpha statistic. The obtained Cronbach's Alpha value was found to be 0.801. This value indicates that the internal consistency of the scale is high. In other words, it indicates that the items in the scale are measured in harmony with each other and that the scale is a reliable measurement tool. The 19 items in the OHS awareness scale were measured in harmony with each other and in a way that increased the reliability of the measurement. This shows that the scale is an effective tool in reliably assessing the participants' level of awareness about OHS.

### 3.4. Analysis of Data

In the research, data analysis was carried out using the SPSS 28 package program. Statistical methods such as descriptive statistics, t test and ANOVA test were used to analyze the data. The main focus of the research is to consider the skewness and kurtosis values of the scales when choosing parametric tests. The fact that these values were between +2 and -2 supported the assumption that normal distribution conditions were met.

Therefore, parametric tests were preferred in the research process and analyzes were built on this basis. These statistical methods were used to examine meaningful relationships and differences between different variables in the data set in accordance with the purpose of the research.

#### 4. FINDINGS

##### 4.1. Demographic features

Demographic variables of the participants are given in Table 2.

Table 2. Demographic Information

|                         |  | N   | %     |
|-------------------------|--|-----|-------|

|                         | Manager/Manager                              | 37  | 12.1  |
|                         | Other  | 70  | 23.0  |
| Professional experience | less than 2 years                            | 36  | 11.8  |
|                         | 3-5 years                                    | 46  | 15.1  |
|                         | 6-10 years                                   | 95  | 31.1  |
|                         | 11-15 years                                  | 88  | 28.9  |
|                         | more than 16 years                           | 40  | 13.1  |
| Total                   |  | 305 | 100.0 |

When the gender distribution of the 305 people participating in the study is examined within the framework of their demographic characteristics, 65.9% of the participants are men and 34.1% are women. Distribution by age groups: 31.8% are between the ages of 22-30, 35.1% are between the ages of 31-40, 24.9% are between the ages of 41-50, and 8.2% are between the ages of 51 and 51. It is in the above age group. When examined in terms of marital status, 53.8% of the participants were determined to be married while 46.2% were single. Regarding education levels, 24.3% of the participants are secondary school/high school graduates, 38.0% are associate degree graduates, 13.8% are undergraduate graduates, and 23.9% are graduate/doctoral graduates. Distribution according to the sectors they work in: 52.5% of the participants work in the service sector, 28.9% in other sectors, and 6.9% each in the automotive, food and industrial sectors. When examined by duty, 34.1% of the participants are workers, 22.6% are supervisors/masters, 12.1% are managers/managers, 8.2% are civil servants,

and 23.0% are other duties. is performing. Finally, in the distribution according to professional experience, 11.8% have less than 2 years, 15.1% have 3-5 years, 31.1% have 6-10 years, 28.9% have 11-15 years, and 13.1% have more than 16 years of professional experience. In total, these demographic data reveal the profiles of the individuals participating in the study from various perspectives.

Table 3. OHS Information of Participants

|                                   |     | N   | %     |
|-----------------------------------|-----|-----|-------|
| Participants' ISG Training Status | Yes | 136 | 44.6  |
|                                   | No  | 169 | 55.4  |
| Work accident situation           | Yes | 82  | 26.9  |
|                                   | No  | 223 | 73.1  |
| Near Miss Experience              | Yes | 32  | 10.5  |
|                                   | No  | 273 | 89.5  |
| Total                             |     | 305 | 100.0 |

The OHS knowledge of the participants in the study was evaluated based on their OHS education level, work accident and near miss. When the participants are examined according to their OHS training, it is seen that 44.6% have received training and 55.4% have not received training. When the situation of experiencing a work accident is evaluated, 26.9% of the participants have experienced a work accident before, while 73.1% have not had a work accident. Additionally, when the near miss situation was examined, 10.5% of the participants experienced such a situation, while 89.5% did not experience such a near miss situation. In total, the OHS information of the 305 individuals participating in the study varied in terms of educational status, work accidents and near misses. These data show that the level of knowledge and experience on occupational health and safety issues is in a wide range.

#### 4.2. Descriptive Findings Regarding OHS Awareness

Table 4. Scale Descriptive Statistics

|   |  | Min.  | Max . | Cover.  | ss      |
|---|--|-------|-------|---------|---------|
| General occupational health awareness sub-dimension       |  | 41.00 | 58.00 | 51.5934 | 4.64800 |
| Occupational health education-communication sub-dimension |  | 12.00 | 19.00 | 16.6820 | 1.79010 |
| Occupational health risk perception sub-dimension         |  | 10.00 | 15.00 | 12.8328 | 1.04578 |
| OHS Scale total   |  | 70.00 | 92.00 | 81.1082 | 5.71857 |

Occupational Health and Safety (OHS) awareness levels of the individuals participating in the study were evaluated through four sub-dimensions: general OHS awareness, occupational health education-communication, occupational health risk perception and total OHS scale. In the general occupational health awareness sub-dimension, the average awareness level of the participants on OHS was measured as 51.59 points. While an average score of 16.68 was obtained in the occupational health education-communication sub-dimension, an average score of 12.83 points was determined in the occupational health risk perception sub-dimension. Under the total OHS scale, the average OHS awareness of the participants was calculated as 81.11 points. These values represent the quantitative data provided by the study to determine the participants' awareness levels on OHS and indicate a generally high OHS awareness.

#### 4.3. OHS Awareness Levels According to Demographic Information

Table 5. OHS Awareness Levels by Marital Status

|                                       |         | N   | mean    | Ss .    | f     | p.    |
|---------------------------------------|---------|-----|---------|---------|-------|-------|
| General occupational health awareness | Married | 164 | 51.6159 | 4.81867 | 3,320 | 0.069 |
|                                       | Single  | 141 | 51.5674 | 4.45823 |       |       |

| sub-dimension   |         |     |         |         |       |              |  |
|---|---------|-----|---------|---------|-------|--------------|--|
| Occupational health education-communication sub-dimension | Married | 164 | 16.6768 | 1.84003 |       |              |  |
|   | Single  | 141 | 16.6879 | 1.73672 | 0.257 | 0.613        |  |
| Occupational health risk perception sub-dimension         | Married | 164 | 12.7683 | 0.98826 |       |              |  |
|   | Single  | 141 | 12.9078 | 1.10777 | 4,098 | <b>0.044</b> |  |
| OHS Scale total   | Married | 164 | 81.0610 | 6.01603 |       |              |  |
|   | Single  | 141 | 81.1631 | 5.37271 | 6,134 | <b>0.014</b> |  |

p < 0.05

When Occupational Health and Safety (OHS) awareness levels were examined according to marital status, some significant differences were determined between married and single participants. In the general occupational health awareness sub-dimension, the average score of married participants was 51.62, while the average score of single participants was 51.57. However, this difference is not statistically significant (p=0.069). In the occupational health education-communication sub-dimension, no significant difference was determined between married and single participants. While the average score of married participants was 16.68, the average score of single participants was 16.69 (p = 0.613). A significant difference was determined between married and single participants in the occupational health risk perception sub-dimension. While the average score of married participants is 12.77, the average score of single participants is 12.91 (p = 0.044). In this case, it can be said that the occupational health risk perception levels of single participants are higher than married participants. Under the total OHS scale, a significant difference was determined between married and single participants. While the average score of married participants was 81.06, the average score of single participants was 81.16 (p=0.014). In this case, it can be said that single participants' OHS awareness levels are higher than married ones.

p < 0.05

When Occupational Health and Safety (OHS) awareness levels were examined according to the sectors worked, generally significant differences were determined between the sectors. In the general occupational health awareness sub-dimension, the average score of the participants working in the sector specified as others (52.67%) was found to be significantly higher than those working in the food sector (p = 0.021). In the occupational health education-communication sub-dimension, the average score of the participants working in

the sector specified as others (16.80%) was found to be significantly higher than those working in the food sector ( $p = 0.010$ ). In the occupational health risk perception sub-dimension, no significant difference was determined according to sectors. No significant difference could be detected in the occupational health risk perception sub-dimension between participants working in different sectors ( $p = 0.338$ ). The average score (82.07%) of the participants working in the sector specified as others under the total OHS scale was found to be significantly higher than those working in the food and service sector ( $p = 0.006$ ). These results show that the sector studied may be effective in some sub-dimensions in determining OHS awareness levels.

Table 7. OHS Awareness Levels by Task

|   |                 | N   | Cover.  | ss      | f     | p.    |

$p > 0.05$

When Occupational Health and Safety (OHS) awareness levels were examined by task, generally no significant differences were determined between participants with different duties. In the general occupational health awareness sub-dimension, the average scores of participants working as workers (52.13%), supervisors/masters (51.83%), civil servants (50.24%), managers/managers (51.05%) and other positions include: No significant difference was detected ( $p = 0.362$ ). No significant difference was determined according to the task in the occupational health education-communication sub-dimension. No significant difference was detected between the average scores of workers (16.79%), chief/master (16.84%), officer (16.08%), manager/manager (16.38%) and participants working in other positions ( $p = 0.301$ ). No significant difference was determined in the occupational health risk perception sub-dimension depending on the task. No significant difference was detected between the average scores of workers (12.90%), chief/master (12.88%), officer (12.48%), manager/manager (12.78%) and participants working in other positions ( $p = 0.469$ ). Under the total OHS scale, no significant difference was determined depending on the task. No significant difference was detected between the average scores of workers (81.82%), chief/master (81.55%), officer (78.80%), manager/manager (80.22%) and participants working in other positions ( $p = 0.132$ ). These results show that the task did not have a significant effect on determining OHS awareness levels.

p < 0.05

When the OHS awareness levels of the participants were examined according to their Occupational Health and Safety (OHS) training status, some significant differences were determined between the participants who received and did not receive OHS training in general. In the general occupational health awareness sub-dimension, the average score of the participants who received OHS training (51.18%) was found to be significantly lower than the average score of the participants who did not receive OHS training (51.93%) ( $p=0.039$ ). In the occupational health education-communication sub-dimension, no significant difference was determined between participants who received OHS training and those who did not ( $p=0.120$ ). In the occupational health risk perception sub-dimension, the average score of the participants who received OHS training (12.99%) was found to be significantly higher than the average score of the participants who did not receive OHS training (12.71%) ( $p = 0.010$ ). Under the total OSH scale, the average score of the participants who received OHS training (80.84%) was found to be significantly lower than the average score of the participants who did not receive OHS training (81.33%) ( $p = 0.098$ ). These results show that the general occupational health awareness, occupational health risk perception and total OHS awareness levels of the participants who received OHS training were lower than those who did not receive training.

#### 4. CONCLUSION AND RECOMMENDATIONS

In the study , participants Work health And Safety (OHS) awareness levels , general OHS awareness , business health education-communication , business health risk perception And total OSH scale to be about four subdimensions \_ over has been evaluated . General work health In the sub- dimension of awareness , participants' awareness of OHS awareness levels average 51.59 points aspect measured . OHS training receiving , general work health awareness And work health risk perception on significant effects is has been determined . Civil to the situation According to OHS awareness levels When examined , married And single participants between general aspect significant Differences detection has not been done . However , work health risk perception And total OHS scale under single participants' OHS awareness levels for married people according to more high is has been determined . studied to sectors According to OHS awareness levels When examined , overall aspect sectors between significant Differences has been determined . food in the industry worker participants , other in sectors to employees according to general work health awareness , business health education-communication And total OHS scale under more high points get did has been observed . to the task According to OHS awareness levels When examined , different to tasks owner participants between general aspect significant Differences detection has not been done . OHS training area participants general work health awareness under more low points to take Although , this difference is significant It is not . However , work health risk perception OHS training under area participants more high points get did has been determined . Conclusion As , the study OHS awareness throughout levels high is however some demographic And process relating to factors This levels may affect has been observed . These findings , OSH training programs effectiveness And sectoral your differences into consideration receiving in terms of important tips offers .

Research finally the following Suggestions has been prepared :

- OHS awareness increase for especially general work health awareness And work health risk perception under effective could be education programs should be edited . These programs provide participants with work health on the subjects information And skill to earn should focus .
- Married And single participants between general work health awareness under significant difference detection not done Even though he is married participants work health risk perception more low has come out . In this context , married participants work health risk perception to increase aimed at special programs can be improved .
- Sectoral Differences eyelash before taking into account , especially other in sectors to employees aimed at wide comprehensive OHS training programs should be edited . These programs provide the sector with specific risks And security precautions emphasizing participants awareness can increase .

- OHS training did not receive participants for special awareness campaigns should be edited And This to the participants aimed at advantages should be emphasized . In this way , OHS training getting benefits more wide to the masses can be delivered .
- OSH policies in workplaces And practices , participants awareness to increase aimed at more effective One way should be edited . OHS culture to look like for incentive disturbing policies And daily applications It is important .
- Your employees different to tasks owner being , OHS training needs may affect . Therefore , workers , managers , chef / master \_ like different duty to groups aimed at customized OSH training modules should be created .

### ÖZET

Gazetecilik mesleğinin sadece kamuoyunun bilgi alma özgürlüğünü sağlamak değil, aynı zamanda bireylerin ihtiyaç duydukları demokrasiyi sağlamak gibi önemli bir görevi bulunmaktadır. Gazetecinin bu sorumluluk karşısında meslek etik değerlerini benimseyerek hem meslek saygınlığını koruması hem de kamuoyunun ihtiyacı olan gazeteciye güven duygusunu sağlaması gerekmektedir. Ancak gazeteciliğin sermayenin gölgesinde kalması durumu, gazetecinin etik değerlerine zarar vermekte ve kamuoyunun bilgiye ulaşma özgürlüğünün geri plana atılmasına zemin hazırlamaktadır. Bu durum mesleğe ve gazetecinin kimliğine zarar verdiği düşüncesi ile hem meslek örgütleri tarafından hem de akademik camiada sıkça gündeme getirilmektedir. Para ya da güç gibi heveslerin, mesleki değerlerin önüne geçmesi şüphesiz pek çok olumsuz geri dönüş sağlamakta ve uzun vadede mesleğe olan güveni ortadan kaldırmaktadır. Nitel olan bu çalışmada günümüzün en büyük mesleki sorunları olan bu tartışmalar, Nightcrawler filmi üzerinden ele alınmaktadır. Çalışmada daha büyük maddi güce ulaşmak isteyen gazetecinin sergilediği etik dışı davranışlar incelenmekte ve mesleki değerlerin bir defa sekteye uğratılmasının ne gibi ihlallere yol açtığı üzerinde bir değerlendirme yapılmaktadır. Veri toplama yöntemi olarak doküman incelemesi yönteminin kullanıldığı bu çalışmada elde edilen bulgular, Türkiye Gazetecileri Hak ve Sorumluluklar Bildirgesi ve Gazetecilik Meslek Etik İlkeleri Küresel Bildirisi'nde çizilen etik çerçeve bağlamında içerik analizi yöntemi ile değerlendirilmektedir. Aynı zamanda çalışmada elde edilen bulgular Deontoloji kuramı ile ilişkilendirilerek incelenmektedir. Çalışmada; gazeteci imajının filmde etik değerler dışında bir anlayış ile yansıtıldığı, haber üretim sürecinde gazetecinin maddi-manevi çıkarlar elde etme çabası içinde olduğu, haber içeriklerinde abartılı söylemlere yer verildiği ve haberlerin gerçek bağlamından uzaklaştırıldığı, gazetecinin çıkar ilişkisi gözeterek meslek etiğini çiğnediği gibi birtakım sonuçlara ulaşılmıştır. Bunlara ek olarak çalışmada; basın ve sermaye ilişkisine dikkat çekildiği, medyanın ticari bir boyut kazandığı, özgür basın anlayışının sarsıldığı ve haber üretim süreçlerinin rekabete dayalı bir şekilde gerçekleştiği ile ilgili sonuçlara ulaşılmıştır.

**Anahtar Kelimeler:** Gazetecilik, Etik, Medya ve Etik, Amerikan Sinemasında Gazetecilik

**ABSTRACT**

The journalism profession has an important duty not only to ensure the freedom of public opinion to receive information, but also to provide the democracy that individuals need. By adopting professional ethical values in the face of this responsibility, a journalist should both protect his professional reputation and provide a sense of trust to a journalist that is needed by the public. However, the fact that journalism is overshadowed by the capital harms the ethical values of journalists and prepares the ground for the public's freedom of access to information to be put on the back burner. This situation is frequently brought up by both professional organizations and the academic community with the idea that it harms the profession and the identity of a journalist. The fact that ambitions such as money or power get in the way of professional values undoubtedly provides many negative returns and eliminates the trust in the profession in the long run. In this qualitative study, these discussions, which are the biggest professional problems of today, are discussed through the Nightcrawler film. In the study, the unethical behaviors exhibited by the journalist who wants to achieve greater financial power are examined and an assessment is made on what kind of violations the disruption of professional values once leads to. The findings obtained in this study, in which the document review method is used as a data collection method, are evaluated by the content analysis method in the context of the ethical framework drawn in the Declaration of Rights and Responsibilities of Journalists of Turkey and the Global Declaration of Professional Ethical Principles of Journalism. At the same time, the findings obtained in the study are examined in relation to Deontology theory. In the study, some results were reached, such as that the journalist's image is reflected in the film with an understanding other than ethical values, that the journalist is trying to obtain material and spiritual interests in the news production process, exaggerated rhetoric is included in the news content and the news is removed from its true context, the journalist violates professional ethics by considering the relationship of interest. In October, in addition to these, in the study; conclusions have been reached about the fact that attention has been drawn to the relationship between the press and capital, the media has gained a commercial dimension, the understanding of a free press has been shaken, and news production processes have been realized in a competitive manner.

**GİRİŞ**

Demokratik toplumlarda bireylerin özgürlük alanlarının korunmasında medya; yasama, yürütme ve yargının ardından dördüncü sırada gelmektedir. Medya aynı zamanda otoriteler ve kamuoyu arasında bir köprü görevi görerek etkili iletişimi sağlamaktadır. Bu noktada medyanın ve gazetecinin etik değerlere ilişkin hassasiyetleri önem kazanmaktadır. Medyanın hizmet ettiği toplumun kültürel yapısından etkilendiği gibi toplumu da kendi değerleri doğrultusunda etkilediği bilinmekte ve toplumların ahlaki yapılarında değişimlere neden olabilmektedir. Medyanın bu işlevi toplumsal etiğe ilişkin tartışmalarda sıkça yer almasına ve etik değerler noktasında sıkça eleştirilmesine neden olmaktadır (Erimli, 2014). Medya emekçilerinin sürekli bu tartışmaların odağında kalmasının sebebi, gazetecilik meslek etik kurallarının ihlaliyle sıkça karşılaşılmasıdır. Toplum faydasının ön sıralarda yer aldığı medya meslek gruplarında gazetecilik mesleğinin etik ilkeleri gazetecinin ayrılmaz parçası olarak konumlandırılmakta ve haberin oluşturulma sürecinde en önemli kriter olarak değerlendirilmektedir (Demir V. , 2006). Dolayısıyla Gazeteci başkalarının merakını giderirken yasal kuralların yanı sıra mesleğin etik ilkelerini de dikkate almalıdır.

Etik, iletişim alanında çalışanların işlerini yaparken uymayı kabul ettikleri kuralları ifade etmektedir. Gazeteciliğe ilişkin etik değerler kamuoyunun gazeteciye olan güven duygusunun sağlanması için oluşturulmuştur. Gazeteciler için oluşturulan etik ilkelere uyulmaması hukuki olarak bir anlam ifade etmez, herhangi bir zorlayıcılık söz konusu değildir (Alemdar & Uzun, 2013). Bu noktada gazetecinin etik değerleri kendi iradesiyle uygulamaya koyması ve bunu mesleğinin ayrılmaz bir parçası olarak görmesi gerekmektedir. Bu bilinci kazanmamış bir gazeteci hem toplumsal değerlere hem de mesleki değerlere zarar verebilmektedir. Gazetecinin mesleğini yaparken dikkat edeceği etik kurallar birtakım metinlerle düzenlenmiştir. Türkiye Gazeteciler Cemiyeti de gazetecinin uyması gereken ilkeleri düzenleyen bir meslek kuruluşu olarak karşımıza çıkmaktadır. Cemiyet tarafından oluşturulan “Türkiye Gazetecileri Hak ve Sorumluluklar Bildirgesi” ile uzmanlaşmış bir mesleğin objektif etik kodları sunulmaktadır (Kaya & Uçak , 2020).

Gazetecilerin uyaacağı evrensel etik değerler ise Gazetecilik Meslek Etik İlkeleri Küresel Bildirisi’nde düzenlenmiştir. Medya, tarihsel süreç içerisinde devlete karşı mücadele ederek dördüncü güç niteliği kazanmıştır. Medyanın amacı kamuoyunu dolayısıyla da demokrasiyi güçlendirmek olarak belirlenirken zamanla maddi kaygılar ön plana geçmiş, bunun sonucu olarak sermayeyle bütünleşmiş ve sermaye çıkarlarının sözcüsü haline gelmiştir (Uzun , 2011). Bu bağlamda paranın gücü karşısında gazeteci, maddiyatı mesleki sorumluluklarının önünde tutar hale gelmiştir. Bu çalışmada; paranın gücü karşısında mesleğe ilişkin etik değerlerden vazgeçen, kamuoyunu bilgilendirme ve demokrasiyi sağlama güdülerini bir kenara bırakan, meslek etik ihlallerini yapmaktan çekinmeyen bir gazetecinin hayatının anlatıldığı Nightcrawler filmi üzerinden “gazetecilik etiği” bağlamında bir değerlendirme yapılmaktadır. Aynı zamanda reyting kaygısının ön planda tutulduğu, reyting getiren haberlerin değer gördüğü ve asıl amacın para kazanmak olarak ele alındığı filmde etik değerlerin ihlal

ediliş biçimleri üzerinde durulmaktadır. Çalışmada elde edilen etik ihlallere ilişkin bulgular yukarıda bahsedilen Türkiye Gazetecileri Hak ve Sorumluluklar Bildirgesi ile Gazetecilik Meslek Etik İlkeleri Küresel Bildirisi'nde düzenlenen etik çerçeve bağlamında değerlendirilmektedir. Çalışma sonucunda filmdeki Lou Bloom isimli gazetecinin; çıkar ilişkisi gözetmemek, gerçeklerin olduğu gibi çarpıtılmadan aktarılması, şiddeti övmekten, haklı göstermekten kaçınma, ayrımcılık yapmaktan kaçınma, belgeleri göz ardı etmemek, demokratik değerlerin savunulması, özür dileme, düzeltme ve cevap hakkı tanımak gibi etik ilkeleri ihlal ettiği gözlemlenmiştir.

## KAVRAMSAL ÇERÇEVE

### Gazetecilik Mesleğine Kısa Bir Bakış

İnsanlar tarih boyunca içinde bulunduğu topluma dair bilgi edinme ve bu toplumu keşfetme ihtiyacı hissetmiştir. Bu ihtiyacın karşılanması; toplum bilincinin oluşmasında ve beşeri bağların kurulmasında büyük bir önem taşımaktadır. Haberleşme kavramı bu noktada devreye girmekte ve sosyal bağların kurulmasında ihtiyacımız olan bilgi eksikliğinin karşılanmasını sağlamaktadır. İnsanlar, bu haberleşme ihtiyacını gidermek için gazetecilik mesleğini ortaya çıkarmıştır. Bilgi açlığı olarak yorumlanan bu ihtiyacın giderilmesi adına oluşturulan gazetecilik mesleğinin birtakım tanımları bulunmaktadır (Parlak, 2019). Gazetecilik mesleği, kamuoyunu toplumsal olaylar hakkında bilgilendiren ve güncel bilgileri topluma aktaran bir meslek olarak tanımlanmaktadır. Aynı zamanda gazeteciler; yazılı, sözlü ve elektronik basında yer alan haberleri üreten ve bu haberlerle ilgili çalışmaları yürüten kişiler olarak ifade edilmektedir (Eraslan, 2022). Gazetecilik haber yapımı ve haber üretimi süreçlerini kapsamaktadır. Dolayısıyla gazeteciler; habere konu olabilecek her türlü olay ile ilgili bilgileri bir araya getiren kişiler olarak tanımlanabilmektedir. Gazeteciler bu bilgileri; toplayan, yazan, görüntü alan ve bunları sistematik olarak bir araya getirip, yayınlayan kişilerdir. Siyasal, ekonomik, toplumsal, eğitim, spor ve sağlık gibi pek çok alanda kamuoyunu bilgilendiren gazetecilerin, toplumsal yaşamda büyük bir öneme sahip olduğu yadsınamaz bir gerçektir. Gazeteciler elde ettiği her türlü bilgiyi bir araya getirmekte, onları düzenlemekte, yorumlamakta ve yazıya aktarmaktadır. Yazıya aktarılan bu bilgiler, hedef kitleye ulaştırılmakta ve böylelikle hedef kitle konuyla ilgili bilgilendirilmektedir (Eraslan, 2022).

Toplumsal yaşamda haberlerin doğru bir şekilde aktarılması, somut verilerle oluşturulması ve gerçek bilgilere dayandırılması oldukça önemlidir. Bu özellikleri içeren haberler, hedef kitlede büyük bir etki yaratarak, kamuoyunu bilgilendirme işlevini yerine getirmektedir. Dolayısıyla gazetecilerin haber üretim sürecinde bu unsurlara dikkat etmesi ve haberleri bu çerçevede oluşturması gerekmektedir. Gazetecinin buradaki en önemli görevi, haber üretim sürecinde araştırmaya büyük önem vermesi ve iyi bir araştırma sonucunda haber üretimini gerçekleştirmesidir. Bu durum gazetecilerin en önemli sorumluluklarından biri olarak karşımıza çıkmaktadır. Bunların yanı sıra gazetecilerin bilgi edinme sürecinde de dikkat ettiği birtakım hususlar bulunmaktadır. Bunlar aşağıdaki gibidir:

- Gazeteciler bilgi erişiminde hız, doğruluğa ve kolay ulaşılabiliğe önem vermektedir.
- Gazeteciler; yaş, cinsiyet, eğitim ve deneyim farklılıklarını gözetmeksizin haberle ilişkili bilgilere ihtiyaç duymaktadır. Bu nedenle bilgiyi aramaya ve bilgiye erişmeye odaklanmaktadır.
- Gazeteciler, haber üretim sürecinde ilgili kaynaktan orijinal kaynağa ulaşma eğilimi ile hareket etmekte ve bilgiye bu şekilde ulaşmayı hedeflemektedir.
- Gazeteciler, bireysel farklılıkları bağlamında geliştirdikleri kendilerine ait bir bilgi arama davranışına sahiptir.
- Gazetecilerin bilgi toplamada kullandığı araçlar; arama motorları, haber ajansları, bilgi merkezleri, veri tabanları ve kupürler olarak sıralanmaktadır (Eraslan, 2022).

Toplumu bilgilendirme ve aydınlatma görevini üstlenen gazetecilerin toplumsal sorumluluk bilinci ile hareket etmesi gerekmektedir. Basın kuruluşlarında kadrolu veya sözleşmeli olarak çalışan gazetecilerin çalıştığı kuruma karşı da birtakım sorumlulukları bulunmaktadır. Bu sorumluluklar yasalar tarafından belirlenmekte ve gazetecilerin mesleki gerekliliklerini ortaya koymaktadır. Gazeteciler bu mesleki gereklilikleri yerine getirmek ve bağımsız kamu haberciliği yapmak ile yükümlüdür.

### Gazetecilik ve Etik

Etik kavramı yaşamın her alanında karşımıza çıkan ve bazı kesimler tarafından tartışılan bir konudur. Geçmişten günümüze birçok düşünür etik ile ilgili birtakım tanımlamalarda bulunmuştur. İlk olarak Aristoteles tarafından felsefe bilimine kazandırılan etik kavramı ile insan davranışlarının ardında yatan ahlaki yargılar üzerine bir değerlendirme yapılmaktadır. Bu bağlamda etik; insan davranışlarında neyin iyi veya neyin kötü olduğu, neyin doğru veya neyin yanlış olduğunu ortaya koyan ahlaki yargıları içermektedir. Kökeni Yunanca Etos kelimesinden gelen Etik kavramının ilk kullanımı; alışkanlık, töre ve görenek anlamlarını taşımaktadır (Eraslan, 2022). Toplumsal yaşamda geçerli olan töreye uygun bir şekilde eylemde bulunmak, etik davranmak olarak nitelendirilmektedir.

Dar ve gerçek anlamı ile değerlendirildiğinde etik kavramı; toplumda aktarılan eylem kurallarının üzerinde düşünmek ve onları iyiye ulaşmak adına alışkanlık haline getirmek olarak tanımlanmaktadır. Etik davranmak, erdemli olmak anlamını taşımakta ve etik kavramı bir karakter anlamına gelmektedir. Toplumsal yaşamda etik ve

ahlak kelimeleri sıklıkla karıştırılan veya birbiri yerine kullanılan kelimeler olarak karşımıza çıkmaktadır. Latince kökenli “mores” kelimesinden türetilen ahlak kelimesi, insanların “iyi” veya “kötü” olarak yorumlanması ve standart davranışların belirlenmesinde kullanılmaktadır. Her toplumun kendi içinde belirlediği bir ahlak anlayışı bulunmaktadır. Bu anlayış toplumun tarihine, coğrafi özelliklerine ve kültürel yapısına göre değişmektedir. Dolayısıyla etik kavramı ile kültür arasında doğrudan bir bağlantı bulunmaktadır. Bir ahlak felsefesi olan etik; insan davranışlarını, bu davranışların altında yatan anlamları, davranışa ilişkin kuralları, davranış ilkelerini ve bu ilkelerin ahlaki temelini inceleyen felsefe dalı olarak tanımlanmaktadır. Etik ve ahlak kavramları arasında uygulama ve teorik farklılıklar bulunsu da ahlak etik kavramının toplumsal yaşama yansıyan kurallar bütünüdür. Etik yalnızca kurallardan veya ilkelerden oluşmamaktadır. Etik insan davranışlarının doğruları ve yanlışları ile ele alınması, bu davranışlara ait ilkelerin kuramlara dayandırılarak, tarafsız bir bakış açısı ile uygulanmasını kapsamaktadır.

Gazetecilik meslek etiği bu anlayışa göre oluşturulan bir alt etik kategorisini oluşturmaktadır. Gazeteciler, bu alt etik kategorisinde ortaya konan birtakım ilkelere uymak zorundadır. Bu etik anlayış iki farklı çerçevede ele alınmaktadır. Bunlardan ilki John Stuart Mill’e dayandırılan ve sonuçla ilgilenen yaratıcı etik anlayışıdır. Kant’a dayandırılan ikinci etik anlayışta ise önceden belirlenen kural ve ilkeler üzerinde durulmaktadır. Kant’a göre akıl, özgürlük ve ahlaklı olmak arasında sıkı bir bağ bulunmaktadır. Kant, ahlakın temelini ise özgür insana bağlamaktadır. Ona göre insanın varlığı, akıl ile ilişkilidir ve akıl insanda ahlaki anlamda vicdan olarak ortaya çıkmaktadır. Yaratıcı etik anlayış 19. Yy’da Jeremy Bentham ve John Stuart Mill tarafından geliştirilmiştir. Bu anlayışta kararların, çıkarlar için alınması gerektiği düşüncesi hakimdir. John Stuart Mill’e göre iyi ve kötü arasında ayırımı yapılmasını sağlayan temel ölçüt, yarardır. Eylemlerin sonucu mutluluk getiriyorsa doğru, getirmiyorsa yanlış olarak ifade edilmektedir (Eraslan, 2022). Bu nedenle doğruları yazıya dökmek, bir erdem olarak görülmektedir. Dolayısıyla gazetecilerin şartlar ne olursa olsun doğru bilgileri yazıya dökmesi beklenmektedir. Doğruluk, etik anlayışın önsözünü oluşturmaktadır.

Etik kavramı, gazetecilik etiğini de şekillendirmiş ve mesleğe yönelik güven tartışmalarının küresel alana yayılmasına katkıda bulunmuştur. Bu durum bilim insanlarını etik kodlar üzerinde düşünmeye ve bu alanda çalışmalar yapmaya itmiştir. Bunlara karşın kamuoyunu bilgilendirme görevini üstlenen gazeteciler, haber üretimi ve sunumunda etik dışı davranışlarda bulunmakta ve alana yönelik yaptırımları yetersiz kılmaktadır. Basın özgürlüğü temelinde sorumluluk bilinci ile haber üretmesi gereken kişiler olarak gösterilen gazetecilerin, etik dışı davranışları tartışmalara yol açmaktadır. Bu etik dışı davranışlarla toplumsal sorumluluğa ilişkin ilkeler ve etik normlar çiğnenmektedir. ABD’de gazetecilik etiği ilkelerini belirleyen Profesyonel Gazeteciler Cemiyeti (Society Of Professional Journalists-SPJ) bu alana önemli katkılar sunmuştur. SPJ’nin belirlediği etik ilkeler özdenetim ile ilgili olarak oluşturulmuştur ve hukuki olarak bir yaptırımı yoktur. Dört bölümden oluşan bu ilkeler; gerçeği aramak ve rapor etmek, zararı en aza indirmek, bağımsız olmak, hesap verebilir ve şeffaf olmak şeklindedir.

### **Amerika Birleşik Devletleri’nde Geliştirilen “Gazetecilik Etiği Kuramı”**

ABD’de yapılan çalışmalar gazetecilik mesleğinin gelişiminde etkili olmuştur. Eylemlerin moral temelleri üzerine yoğunlaşıldığı bu çalışmalarda meslek etiği ile ilgili birtakım tartışmalar ön plana çıkmıştır. İkinci Dünya Savaşı’nın yaşandığı yıllarda ABD’de kurulan Basın Özgürlüğü Komisyonu, Özgür ve Sorumlu Basın Raporu’nu yayınlamıştır. Bu raporda; Amerikan basınının demokratik işlevleri yerine getiremediği ve toplumsal işlevleri karşılayabilmesi için toplumsal sorumlulukların farkına varması gerektiği üzerinde durulmuştur. Kamuoyunun bilgilendirilmesi için toplumsal sorumluluk bilincinin gerekli olduğunu vurgulayan raporda, basın özgürlüğü ve demokrasinin altı çizilmiş ve böyle bir basın ortamının oluşmasında herkesin çabalaması gerektiği anlayışı savunulmuştur. Bunların yanı sıra raporda, özdenetim modelleri üzerinde de durulmuştur. Özdenetimin sağlanamadığı noktada hükümetin medyada söz sahibi olabileceği, bunun dışında medyaya yönelik müdahalenin yanlış olduğu düşüncesi aktarılmıştır.

### **Kitleli Haberciliğin Doğuşu ve Gazetecilik Söylemi**

Ticari bir oluşum haline gelen basın; içerik, biçim ve dağıtım açısından bir dönüşüm geçirmiştir. Okurlar açısından bakıldığında da basının, öncüllerinden farklı bir şekilde yapılandırıldığı görülmektedir. Basında yer alan haberler; çarpıcı başlıklar ve illüstrasyonlar ile dramatik bir hale getirilmektedir. Basında giderek yaygınlaşan bu anlayış, ana sayfalara taşınmakta ve basının haber sunuş biçimleri değişmektedir. Basında yer alan haberler genellikle suç, dedikodu, spor, mizah, moda ve ailevi konularda oluşturulan haberlerden oluşmaktadır. Bu anlayış 1880’lerde W. T. Stead’in öncülüğünde ortaya çıkan “Yeni Gazetecilik” anlayışı ile ortaya çıkmış ve bir yükseliş yakalamıştır. Okurun dikkatini çekmek üzerine oluşturulan haberlerin ön planda olduğu yeni gazetecilik anlayışında, tipografik teknikler büyük bir öneme sahiptir. Haber üretim sürecinde kullanılan bu tipografik tekniklerin, gazeteleri daha çekici hale getirdiği ve haberin okunurluğunu arttırdığı düşüncesi hakimdir. Büyük puntolarla oluşturulmuş başlıklar, kısa bir şekilde yazılmış paragraflar, görsel öğelerin artırılması, büyük manşetlerin kullanılması gibi birçok özellik gazeteleri, eski gazetelerin monoton görünümünden uzaklaştırmaktadır. İçerik bağlamında bakıldığında ise bu haber formu, sansasyonelliğe ve

milliyetçiliğe vurgu yapmaktadır. Milliyetçilik, gazete içeriklerini hareketlendirmek ve okuyucuların dikkatinin çekmek adına kullanılmaktadır. Aynı zamanda milliyetçilik; okur kitlesinin yabancılaştırılması tehlikesini ortadan kaldırmanın bir yolu olarak partizan tavır almanın gerekli görüldüğü bir stratejidir. Sansasyonellik ise haber seçim süreçleri ile ilişkilidir. Bu bağlamda editörler; haber seçimi yaparken yazım biçimine, sözcüklere, anlatı öğelerine, bakış açılarına, hitap biçimine ve olayı dramatize etmeye yönelik söylemsel pratiklere dikkat etmektedir. Dolayısıyla kitlesel haberciliğin doğuşu ile her türlü habere sansasyonel bir boyut katmak mümkün hale gelmiştir. Ekonomik rekabetin ortaya çıktığı kitleselleşme sürecinde gazetelerin gerçeklik ile olan ilişkileri farklı bir boyut kazanmıştır. Toplumsal sorunların bir haber değeri olup, olmadığı okur ilgisine ve ticari potansiyele bağlı hale gelmiştir. Bir haberin haber değerini belirlemek için bu ölçütler temel alınmaya başlanmıştır. Önceleri haber değeri siyasal boyutlarla belirlenirken, bu durum yerini ticari boyuta bırakmıştır. Burada ön plana çıkan iki farklı söylemsel oluşum; tarafsızlık ve çeşitlilik (Taş, 2011).

Kitlesel olarak üretim yapan gazeteciler, farklı beğenilere odaklanmış ve bu beğenilere yönelik haber üretme yoluna gitmiştir. Bu durum basının topluma eğlendirme işlevini gündeme getirmiştir. Basın artık okurların görüşlerini değiştirmek gibi bir amaç gütmemeye başlamıştır. Böylelikle gazeteler, siyasi niyetlere sahip kurumlar olmaktan çıkmış, haberlerin nesnel olarak topluma yansıtıldığı kurumlar haline almıştır. Özellikle 1880'li yıllarda kurulan gazetelerin en dikkat çekici iddiası, apolitik bir anlayış benimsediklerini söylemeleri olmuştur. Haberlerin editoryal amaca bağlanması, kamusal idealinin kitlesel haber üretimi ile bağdaştırılması ve bağımsız haberciliğin temel alınması gazeteciliğin merkezini oluşturmaya başlamıştır. Bu dönemde objektiflik olgusu dört temel norma bağlanmıştır. Bunlar; doğruluk (accuracy), dengelilik (balance), tarafsızlık (impartiality) ve yansızlık (neutrality) şeklindedir. Bu normlar gazetelerin siyasi bağlamdan kopuşunun gerçekleştiği dönemde savunulmuştur. Siyasal arena ve kamusal alanda tarafsız olma anlayışını benimseyen gazeteciler, kendilerini siyasal sürecin katılımcıları olarak görmemektedir. Gazeteciler kendilerini bu sürecin bir dolayımıcısı olarak görmektedir (Taş, 2011).

Kitlesel habercilik anlayışında geniş bir okuyucu kitlesine ulaşabilmek adına siyasal görüşler farklılaşmıştır. Gazeteler artık siyasal olarak tarafsız olmanın ve kamu yararına yönelik haber üretmenin önemine vurgu yapar hale gelmiş ve etik mecraya yerleşmiştir. 1880'de kurulan Gazeteciler Enstitüsü ile birlikte tüm gazeteler siyasal anlamda bağımsızlaştıklarını ifade etmişlerdir. Popüler basında gazeteci, okurlara haber ürünü sağlayan bir profesyonel olarak tanımlanmıştır. Bu durum gazetecilerin eğitici rolüne yönelik normatif kavrayışta bir zayıflama yaşadığına dikkat çekerken, basın endüstrisi kavramının baskın bir hale gelmesine sebep olmuştur. Dolayısıyla basın endüstrisinde neyin haber olacağı, neyin kamusallaştırılacağı ile ilgili normatif iddiada bulunma yetkisi, pazar mekanizmalarına devredilmiştir. Böyle bir ortamda gazeteciler, objektif bir bakış açısı elde etmek adına bağımsız habercilikten beslenmeye başlamıştır. Bu davranış biçimi, objektif bilgiye dayalı habercilik piyasası fikrinin siyasal olarak haklılaştırma gerekçesi olarak sunulmuştur. Objektiflik ideale bağlı olarak hareket eden gazeteciler üç temel unsura dikkat etmektedir. Bunlar olgusalılık, profesyonellik ve tarafsızlıktır. Ticari gazetecilik anlayışının kitleleri keşfetmesi ile bu unsurların uygulama biçimleri farklılaşmıştır.

### **Türkiye Gazeteciler Sendikası Gazetecilik Etik İlkeleri**

12 Haziran 2019'da Tunus Uluslararası Gazeteciler Federasyonu (IFJ) 30. Kongresi'nde kabul edilen "Gazetecilik Etik İlkeleri Küresel Bildirisi" ile gazetecilik mesleğini bağlayan birtakım etik haklar ve ilkeler belirlenmiştir. 1954 IFJ Gazetecilik Prensipleri Deklarasyonu'nun (Bordeaux Deklarasyonu) bir tamamlayıcısı olarak nitelendirilen bu bildiri, uluslararası yasalara ve uluslararası İnsan Hakları Beyannamesi'ne dayandırılarak oluşturulmuştur. 16 madde ve başlangıç kısımlarından oluşan bu bildiri, gazetecilik mesleğine yönelik haklar ve etik ilkeler sıralanmıştır. Uluslararası İnsan Hakları Beyannamesi'nin 19. Maddesi, bilgi ve fikre erişim hakkı ile ilişkilidir. Bu hak, gazetecilik mesleğinin temelini oluşturmaktadır. Bu bildiriye göre; gazetecilerin topluma karşı sahip olduğu sorumluluk, diğer sorumluluklardan önce gelmektedir. Aynı zamanda bu sorumluluk, işverenlere ve kamu otoritelerine karşı sorumluluklardan da önceliklidir. Gazetecilik mesleğinin icra edilmesi; zamana, kaynağa ve uygulama alanına bağlıdır. Mesleğin bağımsızlığı adına tüm bu unsurların sağlanması büyük bir önem taşımaktadır. Bu uluslararası bildiri; haber üretiminde araştırma, derleme, aktarma, yayımlama, yorumlama veya herhangi bir mecrada haber anlatımı ile ilgili tüm süreçler ele alınmaktadır. Bu bağlamda bildiri, gazetecilik mesleğinde bir kılavuz görevi görmekte ve mesleğin ana hatlarını belirlemektedir (TGS, 2019).

*Gazetecilik Etik İlkeleri'nin Belirlendiği Bildiri Maddeleri aşağıdaki gibidir:*

- i. Hakikate ulaşmak, toplumun bilgiye erişim hakkına riayet etmek, gazetecinin ilk görevidir.
- ii. Gazeteci toplumun bilgiye erişim hakkına riayet ederken; dürüst bir şekilde haber toplama ve yayımlama özgürlüğünü daima savunmalıdır. Aynı zamanda gazeteci, adil yorum ve eleştiri haklarını da savunmalıdır. Olguya dayalı bilgiler, gazeteci tarafından yorum ve eleştiriden açıkça ayrılmalıdır. Gazeteci tüm bu yükümlülükleri yerine getirmelidir.
- iii. Gazeteci kaynağından emin olduğu gerçekler üzerine haber yapmakla yükümlüdür. Kritik öneme sahip bilgiler gazeteciler tarafından saklanmamalı, belgeler çarpıtılmamalıdır. Gazeteciler toplumda

- tanınmamış kişilerin sosyal mecrada veya başka mecralarda yayımladıkları içerikleri aslına uygun olarak kullanmaya özen göstermelidir.
- iv. Gazeteci haber için topladığı her türlü belgeyi, hakkaniyetli yöntemlerle elde etmeli ve karşı tarafa gazeteci olduğunu bildirmelidir. Gazeteci kamu yararı gözetilerek toplanan bilgilerin haricinde, gizli bir şekilde ses ve görüntü kaydı almaktan kaçınmalıdır. Bunların yanı sıra gazeteci, tüm bilgi kaynağına kesintisiz bir şekilde erişebilmeyi ve kamu yararını sağlayan bilgileri araştırma özgürlüğünü savunmalıdır.
  - v. Aciliyet ya da hız kaygıları, bilgi ve kaynakların doğrulanmamasına fırsat vermemeli ve yanıt hakkını çiğnememelidir.
  - vi. Gazeteci, yayımlanan haberlerin hatalı olduğu anlaşıldığında hızlı ve şeffaf bir şekilde bu hataları düzeltmelidir.
  - vii. Gazeteci kendisine verilen gizli bilgi kaynaklarını, mesleki sır olarak saklı tutmakla yükümlüdür.
  - viii. Gazeteci mahremiyete dikkat etmeli ve saygılı olmalıdır. Adı geçen veya temsil edilen bireylerin haysiyetlerine saygılı olmalı, bireylere konuşmaların yayımlanma ihtimalini söylememelidir. Gazeteci, görüştüğü kişilerin deneyimsizliği veya savunmasızlığına karşı özenli davranmakla yükümlüdür.
  - ix. Gazeteci, yayımladığı bilgilerin veya görüşlerin nefrete ya da önyargılara yol açmayacağından emin olmalıdır. Bu bağlamda; etnik köken, ırk, din, dil, cinsiyet, engellilik, siyasi görüş, cinsel yönelim veya başka nedenlerle yapılan her türlü ayrımcılığı yaymamak için çaba sarfetmelidir.
  - x. Gazeteci bazı durumlarda da meslek etiğine aykırı davranmaktadır. Bunlar; intihal, gerçeklerin çarpıtılması, hakaret, karalama, iftira ve asılsız suçlamalardır.
  - xi. Gazeteci, güvenlik güçlerine (polis ya da diğer) yardımcı olma görevi üstlenmekten kaçınmalıdır. Gazeteci sadece bir medya platformunda yayımladığı bilgileri, güvenlik güçlerine vermekle yükümlüdür.
  - xii. Gazeteci meslektaşları ile bir dayanışma içinde olmalıdır. Bunu yaparken kendi araştırma, bilgi edinme, eleştiri yapma, yorumda bulunma gibi özgürlüklerinden feragat etmemeli; hiciv ve editöryel seçim haklarını saklı tutmalıdır.
  - xiii. Gazeteci basın özgürlüğünü başka amaçlar için kullanmamalı, yaydığı veya yaymadığı bilgiler sayesinde haksız bir avantaj elde etmekten kaçınmalıdır. Dolayısıyla gazeteci, mesleğini yaparken çıkar çatışması yaratan durumlardan kendini sakınmalıdır. Buna sebebiyet verdiği durumlarda hemen buna bir son vermelidir. Gazeteci, mesleki faaliyetlerinin reklam veya propagandaya karışmaması için çaba göstermeli ve bunlardan uzak durmalıdır. Bilgi ticaretinden ve piyasa manipülasyonlarından kaçınmalıdır.
  - xiv. Gazeteci kendi bağımsızlığına dikkat etmeli, bunu tehlikeye atacak her türlü eylemden kaçınmalıdır. Bunların yanı sıra kayıt dışı (off the record), ambargo veya anonimlik gibi özgürce kabul ettiği bilgilerin toplanması/yayılması gibi yöntemlere taahhütlerin şeffaf ve tartışılmaz olması şartı ile saygı göstermelidir.
  - xv. Gazeteci unvanı kazanmış kişiler, yukarıda sıralanan ilkelere sadık hareket etmeyi görev bilmektedir. Bu bildiriye göre gazeteciler, mesleki kanaate ve vicdana aykırı faaliyetlerde bulunmaya ya da görüş bildirmeye zorlanamazlar.
  - xvi. Gazeteci, her ülkenin kendi hukuk kurallarına göre meslek ahlakı ile ilişkili konularda -hükümetlerin veya diğer güçlerin müdahalelerini reddederek- kamuya karşı şeffaf bağımsız özdenetim organlarının yargı yetkisini tanımaktadır.

### **Türkiye Gazetecileri Hak ve Sorumluluk Bildirgesi**

Herkes bilgi edinme, özgür düşünme, düşüncelerini ifade etme, eleştiri yapma ve haber alma hakkına sahiptir. Düşünce ve ifade özgürlüğünün sağlanabilmesinin temelinde basın ve yayın özgürlüğü bulunmaktadır. Bu özgürlük temel insan hak ve özgürlükleri arasında yer almaktadır. Tüm bu hakların, demokratik hukuk devletinde anayasal olarak güvence altına alınması gerekmektedir. Gazetecinin temel hakları, halkın haber alma ve ifade özgürlüğü ile ilişkilidir. Meslek ilkeleri ise doğru ve dürüst bir iletişimin temelini oluşturmaktadır. Dolayısıyla meslek ilkeleri basın ve yayın organları ile ilgili bir özdenetim görevi görmektedir. Burada değerlendirme mercii ilk olarak vicdanlardır. Bu bağlamda; gazeteciler, basın ve yayın organlarına sahip yöneticiler bu meslek ilkelerine uymalı ve diğerlerinin de bu meslek ilkelerine uymasını sağlamalıdır. Gazeteciler dışında gazetecilik mesleğine ilişkin faaliyetlerde bulunan kişiler de bu meslek ilkelerine karşı sorumludur. Türkiye Gazetecileri Hak ve Sorumluluk Bildirgesi; sadece geleneksel medyada değil, dijital medyada yapılan her türlü yayıncılık faaliyetlerini de kapsamaktadır.

**Tablo 1. Medya İçerikleri Etik Analiz Kategorileri**

| Kategoriler  | Türkiye Gazetecileri Hak ve Sorumluluk Bildirgesinin İlgili Maddesi (TGC, 2019)   |
|--|---|
| i. Gerçeklerin Olduğu Gibi Çarpıtılmadan Aktarılması                                 | Halkın bilgi edinme hakkına bağlı kalarak; haber alma, yorum ve eleştiri yapma özgürlüğünü kullanan gazeteci, sonuçlar kendi açısından ne olursa olsun gerçekleri olduğu gibi çarpıtmadan aktarmak ile yükümlüdür.  |
| ii. Demokratik Değerlerin Savunulması  | Gazeteci; hukukun üstünlüğünü tanır, demokrasi, laiklik, barış, insan hakları gibi evrensel değerleri savunur.  |
| iii. Ayrımcılık Yapmaktan Kaçınma  | Gazeteci; ırk, din, dil, milliyet, cinsiyet, cinsel yönelim, cinsel kimlik, mezhep, inançsızlık, inanç, etnisite, dünya görüşü ve sınıf ayrımcılığı yapmaksızın tüm ulusların, halkların ve bireylerin haklarını tanır ve onlara saygı gösterir.  |
| iv. Düşmanlığı Körüklemekten Kaçınma   | Gazeteci; uluslar, topluluklar ve insanlar arasında düşmanlığı ve nefreti körükleyebilecek her türlü yayından kaçınır.  |
| v. Dini ve Kültürel Değerlere Karşı Saygılı Olma                                     | Gazeteci; bireylerin, toplulukların ve ulusların benimsediği kültürel değerleri, inançları ya da inançsızlıkları küçümsemeyebilir, bu değerlerle alay edemez ve bu değerleri saldırı konusu haline getiremez.   |
| vi. Şiddeti Övmekten, Haklı Göstermekten Kaçınma                                     | Gazeteci; şiddete özendirir, şiddeti haklı kılacak, bireyleri şiddete karşı kışkırtacak yayınlar yapamaz.   |
| vii. Kaynaktan Emin Olma ve Kaynak Bilgisini Şeffaf Bir Şekilde Kamuoyu ile Paylaşma | Gazeteci; kaynağından emin olmadığı bilgi ve haberlerle ilgili yayın yapmaz. Yayınlamaya karar verdiği haberde, kaynak açık bir şekilde belirtilmiyorsa, bununla ilgili kamuoyuna gerekli bilgilendirmelerde bulunur.   |
| viii. Belgeleri Göz Ardı Etmemek   | Gazeteci; bilgileri yok edemez, göz ardı edemez ve belgeler üzerinde değişiklikler yapamaz.   |
| ix. Özel Yaşamın Gizliliğine Uygun Davranmak   | Gazeteci; kamuoyunun haber alma hakkı ile ilgili olmayan hiçbir amaç uğruna, izin alınmadıkça hiçbir kimsenin özel yaşamının gizliliğine müdahale edecek bir ihlalde bulunamaz.   |
| x. Özür Dileme, Düzeltme ve Cevap Hakkı Tanımak                                      | Gazeteci; yayınlarıyla alakalı yaptığı her yanlış kısa zamanda düzeltmek ve gerekli durumlarda bu yanlışlarla ilgili özür dilemek ile yükümlüdür. Kötüye kullanılmaması ve kabul edilebilir şekilde yapılması koşuluyla cevap hakkına saygılı olmakla yükümlüdür.   |
| xi. Kimliğini Gizlemekten Kaçınma  | Gazeteci; bilgiye erişim sürecinde kimlik gizleme ve sosyal mecralarda kimlik gizleme gibi yanıltıcı eylemlerde bulunamaz.  |
| xii. Çıkar İlişkisi Gözetmemek   | Gazeteci; bilgi, haber yayını veya haberin yayınlanmaması adına maddi-manevi hiçbir menfaat sağlayamaz. Çıkar çatışmalarından kaçınır. Gazeteci her türlü faaliyetinde konumundan bağımsız olarak, haber kaynağı olan kişiler ya da kurumlar ile iletişim ve ilişkisinde meslek ilkelerini gözetir. Elde ettiği bilgileri ve belgeleri kendi çıkarlarına göre kullanamaz. |
| xiii. Reklam ve Propagandalardan Kaçınmak  | Gazeteci; mesleğini halkla ilişkiler, reklamcılık mesleği ile karıştıramaz. Mesleği propaganda aracı haline getiremez. Reklam ve ilan kaynaklarından herhangi bir öneri ve telkin alamaz veya maddi olarak bir kazanç elde edemez.  |
| xiv. Hak ve Özgürlükleri Temel Alma  | Gazeteci; ulusal ve uluslararası politikalara ilişkin yayınlar yaparken öncelikli olarak halkın haber alma hakkına, meslek ilkelerine ve özgürlükçü demokrasi ölçütlerine göre hareket eder.  |
| xv. Güçsüzün Yanında Durma   | Gazeteci; ötekileştirilen, mağdur olan, güçsüz, yoksul ve sesini duyuramayan kişilerin sesi olmak ile yükümlüdür.   |
| xvi. Kamuoyunun Haber Alma Hakkının Savunucusu Olmak                                 | Gazeteci basın özgürlüğünü; kamuoyunun haber alma ve bilgi edinme hakkı için dürüstçe kullanmakla yükümlüdür.   |

|  |   |
|--|---|
|  | Gazeteci her türlü sansür ve oto sansürün karşısında durur. Önce halka ve gerçeğe karşı yükümlüdür. Bu yükümlülükler kamu otoritelerine ve işverene karşı olan yükümlülüklerden önce gelir. Gazeteci; bilgi kaynaklarının tümüne serbestçe ulaşabilme hakkına sahiptir. Bunların yanı sıra gazeteci kamu yaşamını belirleyici, kamuoyunu ilgilendiren her türlü olayı izleme ve araştırma hakkına sahiptir. Gazeteciyi sınırlandıran engeller, hukuka ve uluslararası normlara uygun olmalıdır. |
|--|---|

### Medya Etiği

Medya günümüzde reyting temelli şekillenen, nicelik üzerine kurulu bir sektör halini almıştır. Bu medya ortamında ne söylendiği veya ne yazıldığı önemli değildir. Burada önemli olan izlenme ve satış oranlarıdır. Etik bağlamında değerlendirildiğinde, medyanın etiğinde reyting kaygıları yer almaz (Demir G. Y., 2012). Dolayısıyla medyada etik anlayıştan bahsedebilmek için ilk olarak bu kaygıların olup, olmadığı konusunda bir değerlendirme yapmak gerekmektedir. Medya etiği; medyada çalışan herkesi kapsayan birtakım mesleki ve etik ilkelerin belirlendiği değerlerden oluşmaktadır. Yasama, yürütme ve yargıdan sonra dördüncü güç olarak nitelendirilen medyanın topluma ayna tutması, toplumu bilgilendirmesi ve kamusal yarar sağlaması gibi birtakım sorumlulukları bulunmaktadır. Medyanın sahip olduğu bu sorumluluklar, medya ile ilgili etik ilkelerin sorgulanmasının ve bu etik sorunların konuşulmasının önünü açmıştır (Yüksel, 2009). Medyada etik, basın ahlakını da ifade eden geniş bir çerçeveyi kapsamaktadır (Şimşek, 2001). Bu bağlamda; yalan haber yapmamak, haberleri çarpıtmamak, art niyetli bir şekilde haber üretmemek, uydurulmuş bir senaryo üzerinden haber yazmamak, yargısız infaz yapmaktan kaçınmak, kamuoyunu yanlış yönlendirmemek, kişi haklarını ihlal etmemek, suça yönlendirmemek, suçluyu övmemek, kamuoyunu çıkarlarını gözetmek gibi maddeler medyada etik anlayışa uygun davranmanın gereklilikleridir. Medya kamuyu bilgilendirme görevini üstlenmekte ve toplumsal sorumluluk bilincinin yayılmasına katkı sağlamaktadır. Bu durum medyanın, kamu vicdanına yönelik doğru bir değerlendirme yapması gerekliliğini ortaya çıkarmaktadır. Medya etiği, medya çalışanlarının mesleğin gerektirdiği gibi hareket etmesini sağlayacak ilkeler ortaya koymaktadır. Bu ilkeler medya çalışanlarına kılavuzluk etmekte ve meslek etiğinin bir bütün olarak ele alınmasını sağlamaktadır. Medya etiğini oluşturan ilkeler hem yerel hem de evrensel değerleri taşımaktadır. Teknolojide yaşanan hızlı değişimler, medya etiği ilkelerinin sürekli güncellenmesi ve yenilenmesi gerekliliğini ortaya çıkarmaktadır. Soyut ve düzenleyici ilkelere dayanan medya etiğinde; dürüstlük, haber ve yorum ayrımı, yansızlık, mahremiyet, cevap ve tekzip hakkına saygı duyulması, eleştiri sınırlarını aşmama, şahsi ve kurum çıkarlarına göre hareket etmeme, şiddet-terör vb. her türlü olumsuz faaliyete karşı olma, masumiyet karinesine uyma gibi ilkeler üzerinde durulmaktadır (Katıtaş, Seylim, & Demirkan, 2022).

### Görsel ve İşitsel Medya Etiği

Görsel içeriklerin daha sık kullanılır hale gelmesi ile birlikte bu anlamda da etik ilkelerin belirlenmesi gerekliliği ortaya çıkmıştır. Haber içerikleri, programlar, filmler gibi görsel ve işitsel öğelerin yer aldığı içeriklerde, neyin doğru veya neyin yanlış olduğunu belirlemek adına birtakım etik ilkeler belirlenmiştir. Televizyonun Avrupa kültürüne yönelik yarattığı olumsuz etkileri önlemek ve buradaki yayın içeriklerini düzenlemek adına “Avrupa Sınır Ötesi Televizyon Sözleşmesi” hazırlanmıştır. Bu sözleşme Avrupa konseyi üyeleri, Avrupa Kültür Anlaşması taraf devletleri ve Avrupa Birliği'nin imzasına sunulmuştur. Bu sözleşme 22 Kasım 1993'de Türkiye'de Bakanlar Kurulu tarafından imzalanmıştır. 12 Aralık 1993'de yayımlanan Resmi Gazete ile birlikte de ilan edilmiştir (Öztürk, 2004). Türkiye'de yayıncılık ile ilgili düzenlemeler yapan kurum Radyo ve Televizyon Üst Kuruludur. Bu kurum radyo ve televizyon programlarının denetlenmesinden, bunlar hakkında düzenlemeler yapılmasından ve hizmet ilkelerinin belirlenmesinden sorumludur. 6112 sayılı Radyo ve Televizyonların Kuruluş ve Yayın Hizmetleri Hakkında Kanun çerçevesinde belirlenen bu ilkeler ile medya uygulayıcılarının mesleki sorumlulukları belirlenmektedir. Bu ilkeler; Türkiye Cumhuriyeti'nin bölünmez bütünlüğünü koruma, farklılıkları tanıma ve toplumu düşmanlığa sevk etmeme, adil ve tarafsız olma, kişilerin mahremiyetine ve haysiyetlerine aykırı yayın yapmama gibi ilkeleri kapsamaktadır (RTÜK, 2014). Bunlara ek olarak ilkeler; ayrımcılık, yargının üstünlüğü, özel hayatın gizliliği gibi maddeleri de içermektedir (Katıtaş, Seylim, & Demirkan, 2022). Genel etik ilkeler ile uyumlu olan bu maddeler görsel ve işitsel medyada etik davranma ile ilgili sorumlulukları belirtmektedir.

### Medya Etiği Yaklaşımları: Deontoloji ve Teleoloji

Medya etiğinde farklı yaklaşımlar ortaya konmuştur. Bunlar deontoloji ve teleoloji olarak karşımıza çıkmaktadır. Bu yaklaşımlar; medyanın özgürlüklerini, etik ilkelerini ve sorumluluklarının anlamlandırılmasına katkı sunmaktadır. Bu yaklaşımlar dışında; sözleşmeci, sosyal sorumluluk yanlısı, feminist, kıyaslamacı, kültür

çoğulculuk yanlısı ve yurttaş gazeteciliği yaklaşımları da bulunmaktadır (Işıklı & Üzer, 2023). Deontolojik etikte, eylemin doğasına odaklanılmakta ve eylemin kendisine yönelik ahlaki prensipler üzerinde durulmaktadır. Burada eylemin doğru olup, olmadığı eylemin kendisine ve içeriğine bağlanmaktadır. Teolojik etikte ise; eylemlerin sonuçlarına odaklanılmaktadır. Burada eylemin doğruluğu, o eylemin ortaya koyduğu sonuçlar çerçevesinde değerlendirilmektedir.

Sözleşmeci etik; etik değerleri sosyal ve kültürel bağlamlar çerçevesinde ele almaktadır. Dolayısıyla etik ilkelerin ve normların toplum tarafından kabul edilen kural ve sözleşmeler ile belirlenmesi gerektiğini savunur. Kıyaslamacı etikte; eylemlerin doğruluğu kıyaslama ve karşılaştırma yapma yoluyla belirlenmektedir. Ahlaki açıdan bir eylemin, diğer seçenekler arasında daha az kötü olanın seçilmesi ile ilişkili olduğu anlayışına sahiptir. Sosyal sorumluluk etiğinde; medya kuruluşlarının topluma ve kamu yararına uygun bir şekilde hareket etme yükümlülüğü olduğu savunulmaktadır. Feminist etikte; cinsiyet eşitliği üzerinde durulur ve kadın öncelenir. Medyanın kadınları temsil etme biçimlerine odaklanılır. Kültürel çoğulculuk yanlısı etikte ise; kültürel farklara ve farklı toplulukları ayrımcılık yapmadan temsil etmeye yönelik ilkeler değerlendirilmektedir. Yurttaş gazeteciliği; bireylerin haberleşme sürecine katkısı, bilginin yayılmasının teşvik edilmesi, doğru kaynaklarla, objektif haberlerin yapılması gibi temel etik ilkelerin korunmasını vurgulamaktadır. Tüm bu etik yaklaşımlar, medya profesyonellerine mesleğe yönelik iç görüler sunmaktadır. Yunanca “deontos” (ödev) ve “logos” (bilim) kelimelerinden türetilen deontoloji, bir mesleğe ilişkin kurallar ve sorumluluklar listesini ifade etmektedir. Bu nedenle deontoloji, bazı kesimler tarafından “görev bilinci” ile eşdeğer olarak kabul edilmektedir. Teleoloji ise Yunanca “telos” (gaye ve amaç) ve “logos” (bilim) kelimelerinden türetilmiştir. “Erek-bilim” olarak tanımlanan teleolojide, eylemlerin sonuçlarına odaklanılmaktadır. Bu yaklaşımda çoğunluğa ulaşmak adına, azınlık kesimin haklarının yok sayılması veya göz ardı edilmesi gibi birtakım riskler ortaya çıkmaktadır. Bu da insan haklarının ihlallerine yol açabilmektedir. Deontolojik tutumda görev bilinci yüksektir. Bu anlayışı benimseyen gazeteciler, yasalara, ilkelere ve prensiplere bağlı kalmaktadır. Yaptıkları her haberde kamuoyunu bilgilendirme ilkesine uygun davranmayı görev edinmektedirler. Fakat bu tutumda gazeteciler, çalıştıkları kurumun sahipleri veya çeşitli güç grupları ile çatışma riski yaşamaktadır. Bu noktada gazetecilerin vicdani sorumlulukları devreye girebilmektedir. Dolayısıyla vicdani sorumluluklar ve kamu çıkarı arasında bir sıkışma yaşanması da söz konusu olabilmektedir (Işıklı & Üzer, 2023).

Immanuel Kant tarafından ortaya konan Deontolojik etik, ilkelere bağlı kalarak karar verme şeklinde tanımlanmaktadır. Kant’ın geliştirdiği bu sistemde önemli olan eylemlerin sonucu değil, benimsenen ilke ve kuralların doğruluğudur. Deontolojik etikte hakkaniyet ilkesi oldukça önemlidir. Bu nedenle tüm kararların doğru, tutarlı ve tarafsız bir şekilde ele alınması gerekmektedir. Kant’a göre ahlaki olarak kusursuzluk, dürüstlük ve doğruluğa erişebilmenin temelinde ilkelere uygun hareket etmek ve erdemli davranışa erişebilmek yatmaktadır. Bu anlayışa göre daima çıkar elde etmeye odaklanan fırsatçı bireyler erdemli değildirler. Dolayısıyla bir bireyin erdemli olarak tanımlanabilmesi için ahlaki ilkeleri benimsemesi ve içselleştirmesi gerekmektedir. Aynı zamanda bu ilkeleri eylemlerinde bir kılavuz olarak kullanmalıdır. Kant’ın üzerinde durduğu bir diğer varsayım ise bireylerin kişisel çıkarlar için diğer bireyleri araç olarak kullanmaması gerektiği düşüncesidir. Deontolojik etikte eylemlerin etik duruma uygun olup olmadığı sorgulanmaktadır. Davranışların ortaya çıkaracağı sonuçlara, faydaya veya mutluluk duygusuna odaklanılmamaktadır. Burada odaklanılan nokta davranışın ardında yatan niyet, ödev, yükümlülük, hak ve görev bilinci üzerinedir. Deontolojik etikte kişiden kişiye değişmeyen, saf etik anlayış bilincine değinilmekte ve eylemler bu anlayış ile değerlendirilmektedir. Bu kurama göre bir davranış; yasa, hak, hukuk, görev ve ilke gibi kavramlarla tutarlı ise o davranışın etik bir davranış olduğu ifade edilmektedir. Kant’ın ahlak anlayışına göre kişileri veya kurumları etik davranışa yönlendiren haz, etki, fayda veya mutluluk olmamalıdır. Çünkü bu kavramlar öznel kavramlardır ve etik açıdan değerlendirildiğinde tutarsızlıklar ortaya çıkabilmektedir. Kant’a göre ahlakın temelinde kişiden kişiye değişmeyen bir “ahlak yasası” bulunmalıdır. “Kendine davranılmasını istediğin şekilde başkalarına davranmak” düşüncesi bu kuramın temel düşüncesini yansıtmaktadır (Esen, 2020).

Teleolojik etik ise davranışların sonuçlarına odaklanılmaktadır. Davranışların ortaya çıkardığı ahlaki durumlar sonuca göre değerlendirilmektedir. Bu etik anlayışta davranışların yarattığı sonuçlar toplumun geneline bir fayda sağlıyorsa o davranışlar, etik ve ahlaklı olarak nitelendirilmektedir. Teleolojik etikte bir davranış tek başına iyi veya kötü olarak değerlendirilmemektedir. Bu anlamda bir değerlendirmede bulunmak için o davranışın sonuçlarına bakmak gerekmektedir. Teleolojik etik, faydacılık görüşü ve egoizm düşüncesinden beslenmektedir. Egoizmde bireyin çıkarları ahlakın temeli olarak nitelendirilmektedir. Niccola Machiavelli ve Max Weber bu düşüncenin öncüleridir. Egoizmde her birey kendi çıkarını gözeterek, kendisi için en iyi olan davranışı arzulamaktadır. Dolayısıyla bu anlayışta bireysel menfaatler ön planda tutulmaktadır. Faydacılık kuramında ise ahlaki davranışın herkese mutluluk getirmesi beklenmektedir. Burada ifade edilen davranışların yarattığı sonuçların, bu davranışlardan etkilenen herkes için bir fayda sağlaması ve iyiliğe yol açması düşüncesidir. John Stuart Mill ve Jeremy Bentham Faydacılık kuramının temsilcileridir (Esen, 2020). Jeremy Bentham bireylerin yaradılış olarak hazzı odaklı olduğu ve acıdan kaçınma davranışı sergilediği düşüncesini savunmaktadır. Burada “iyi” olarak nitelendirilen davranışlar hazzı arttıran davranışlardır. “Kötü” olarak nitelendirilen davranışlar ise acıya ve mutsuzluğa sebep olan davranışlardır. Bentham bu anlayışta bireysel iyi ve toplumsal iyi arasında nasıl

bir ilişki olduğunu sorgulamaktadır. John Stuart Mill ise bireylerin, kendi çıkarlarını gözetmeleri için diğer bireylerin faydasını gözetmek durumunda olduğu düşüncesini savunmaktadır. Mill'e göre bir davranış, bireyde ve toplumda mutluluk yaratıyorsa o davranış ahlaki olarak nitelendirilmektedir. Etik anlayış bağlamında değerlendirildiğinde burada nihai amaç mutluluğa ulaşılabilir. Dolayısıyla mutluluğu arttıran davranışlar etik olarak değerlendirilmektedir.

### **Amerikan Sinemasında Gazeteci Temsili**

Çalışmaya konu olan filmin Amerikan sinemasına ait olması sebebiyle; Amerikan sinemasına ilişkin birtakım bilgilere yer vermek yararlı görülmüştür. Bu bağlamda; Amerikan sinemasında 1930'lu yıllardan bu yana gazetecilik mesleği ile ilgili birçok film yapıldığını söylemek mümkündür. Bu filmlerde genellikle özgür basın miti desteklenmekte, basının toplum ve iktidar ile olan ilişkisine yönelik birtakım toplumsal ve siyasi söylemlere yer verilmektedir. Drama, gerilim, komedi, aksiyon gibi pek çok türde gazeteci karakterlerin yer aldığı Hollywood sinemasında, mesleğe dair önemli göndermeler yapılmaktadır. Hollywood'da konusunu basının oluşturduğu ve ana karakterin gazeteci olduğu ilk film *The Front Page* (1931) adlı filmidir. Filmdeki ana karakter; haber uğruna her şeyi yapan, neşeli, alaycı, sansasyonel, etik değerleri olmayan, yalan söyleyen bir gazeteci olarak temsil edilmektedir. Basınla ilgili içeriklerin Hollywood sinemasında kullanılabilirliğinin keşfedilmesi ile birlikte romantik komedi, aşk, drama, korku gibi pek çok yapımda gazeteci karakterlere yer verilmeye başlanmıştır. *The Front Page* filmi ile başlayan bu süreç, gazeteci tiplerinin farklı sunumları ile devam etmiştir.

1940'lı yıllarda Amerikan sinemasında basının gücünün sorgulandığı bir anlayış yaygınlaşmaya başlamıştır. Basının gücünün sorgulandığı ilk film *Citizen Kane* (1941) adlı film olmuştur. Bu filmde basındaki sermaye gücüne yönelik eleştiriler yapılmış ve basınla ilgili farklı söylemlere yer verilmiştir. Bu süreç televizyon yayıncılığının başlaması ve reyting kaygılarının ortaya çıkması ile devam etmiştir. Bu kaygılara eleştirel olarak yaklaşan, habercilik üzerine yapılmış *Network* (1976) adlı film bu dönemde yayınlanmıştır. Gerçek gazetecilerin sinemanın ana karakterleri olarak temsil edilmesi ise Amerika'da Washington Post muhabirlerinden Bob Woodward ve Carl Bernstein'in Watergate skandalının ortaya çıkarılma sürecini anlatan *ALL President's Men* (1976) adlı film ile başlamıştır. 1980'li yıllarda ise gazetecilik mesleği ile ilgili filmlerde bir artış yaşanmış, bu artış 1990'lı yıllara kadar devam etmiştir. 2000'li yıllara gelindiğinde ise sinemada gazetecilik mesleğinin temsili büyük bir ivme yakalamıştır (Ünal, 2018). Özellikle toplumsal konuları ele alan, basın-sermaye- iktidar üçgenini inceleyen ve bunlar hakkında eleştiride bulunan bu filmler, toplumsal yaşamda büyük bir yankı yaratmıştır. Örneğin; *The Boston Globe* gazetesinin rahipler ile ilgili skandalının ele alındığı *Spotlight* (2015) 'da gerçek olayların araştırılması, medyada sunuluş biçimlerinin yansıtılması ve bunların haber yapılmasına ilişkin içgörüler sunulmaktadır.

Bunların yanı sıra Amerikan sinemasında gazetecilerin sunuluş biçimleri geçmişten günümüze farklılaşmakta ve mesleğe ilişkin temsiller değişmektedir. Bu bağlamda etik sorumluluklar sinema filmlerinde bazen olumsuz bir bakış açısıyla da ele alınmaktadır. Gazeteciler bu tür filmlerde etik dışı davranan, bencil, manipülatif olarak da tasvir edilebilmektedir. Tarihsel süreç incelendiğinde Amerikan sinemasında basının temsilinde özgür basın miti dikkat çekmektedir. Sinema filmlerinde genellikle bu anlayış ile kurgulanan karakterler bulunmaktadır. Son olarak; Amerikan sinemasında bu tür filmlerin birtakım toplumsal, siyasal veya sosyal unsurlar çerçevesinde oluşturulduğunu söylemek mümkündür. Dolayısıyla bu filmler, yayınlandığı döneme ışık tutmakta ve bu döneme ait bilgiler vermektedir.

### **ARAŞTIRMANIN YÖNTEMİ**

Toplum için iyi ya da kötü olanı ayırt edebilme duygusu olarak tanımlanabilen etik, toplumsal yaşamın bir parçası olarak güncel yaşamda olduğu gibi bilimsel alanlarda da sıklıkla tartışılan ve üzerinde durulması gereken bir kavram olarak karşımıza çıkmaktadır (Ay & Aytakin, 2005). Bu çalışmada nitel araştırma yöntemi kullanılmakta ve gazetecilik mesleğine ilişkin etik sorunlar *Nightcrawler* filmi üzerinden incelenmektedir. Aynı zamanda çalışmada *Nightcrawler* filminde yer alan gazetecilik meslek etik kural ihlalleri, Türkiye Gazetecileri Hak ve Sorumluluklar Bildirgesi ve Gazetecilik Meslek Etik İlkeleri Küresel Bildirisi bağlamında ele alınmaktadır. Nitel araştırma yöntemi; bir problemi ele alma, sorgulama, yorumlama ve anlama olanağı sunmaktadır. Sosyal yaşamın içindeki olay ve olgulara odaklanan ve bunları irdeleyen nitel araştırma; karmaşık ve çok yönlü olan sosyal yaşamın doğasını anlamaya ilişkin farklı bakış açıları ortaya koymaktadır. Sosyal yapı ve sistemleri keşfetmeyi sağlayan nitel araştırma yöntemi, insanın kendi potansiyelini ortaya koymasında etkilidir. Olay ve olgular ile ilgili derin bir algıya ulaşabilmeyi mümkün kılan nitel araştırmada; görüşme, doküman analizi, gözlem, söylev analizi gibi veri toplama teknikleri kullanılmaktadır. Bunların yanı sıra insan ile ilişkili olay ve olguların, sosyal gerçeklik ile doğal sürecinde detaylı bir şekilde incelendiği bu araştırma biçimi farklı disiplinlerin bir araya geldiği bütüncül bir anlayışa sahiptir. Nitel araştırmalarda araştırmacı daima bir keşif halindedir ve kişisel fikirler araştırmanın seyrinde farklılıklar yaratabilmektedir. Bu durum nitel araştırmaları öznel kılmaktadır. Bu bağlamda çalışmada veri toplama tekniği olarak doküman incelemesi ve literatür taraması

kullanılmıştır. Doküman olarak konuyla ilişkili rapor, yazılı belge, dijital materyaller ve literatüre başvurulmuştur. Elde edilen bulgular içerik analizi yöntemi kullanılarak açıklanmış ve yorumlanmıştır.

### **Kapsam ve Sınırlılıklar**

Çalışmada; bir gazetecinin mesleğinde başarılı olmak ve daha çok para kazanmak için etik değerleri hiçe sayarak geçirdiği meslek hayatını konu edinen Nightcrawler filmi ele alınmaktadır. Gazetecinin meslek etik değerlerine ilişkin yaptığı ihlaller; Türkiye Gazetecileri Hak ve Sorumluluklar Bildirgesi ile Gazetecilik Meslek Etik İlkeleri Küresel Bildirisi bağlamında ele alınmakta, bunun dışındaki herhangi bir bildiri ya da meslek etik kuralları çalışmaya dahil edilmemektedir. Bu bağlamda; gazetecilik mesleğine ilişkin etik değerlerin örnek bir film üzerinden ele alınması ve iki farklı meslek etik bildirgesi çerçevesinde bir değerlendirme yapılması çalışmanın sınırlılıklarını oluşturmaktadır.

### **Verilerin Toplanması**

Çalışmada Nightcrawler filminin tamamı izlenerek her bir sahne sosyal bilimler araştırmalarında sıkça başvurulan doküman analizi tekniğiyle incelenmiş ve veriler bu yolla elde edilmiştir. Hızla gelişen bilişim teknolojileri sayesinde yapılan araştırmaların sayılarında artışlar gözlenmektedir. Önceleri sadece nicel veri toplama teknikleri ve analizleri ile sayısal ve genellenebilir ifadelerin kullanıldığı araştırmalar yapılırken; 21. yüzyılın başlarından itibaren olayları, olguları, durumları yorumlayıcı ve anlamlandırmaya dönük yeni bir araştırma yöntemi de kullanılmaya başlanmıştır (Kıral, 2020). Doküman analizi tekniği bu gelişimin ardından ortaya çıkan ihtiyacı karşılamaktadır. Doküman analizi, araştırma verilerinin birincil kaynağı olarak çeşitli dokümanların toplanması, gözden geçirilmesi, sorgulanması ve analizi olarak tanımlanabilen bilimsel bir araştırma yöntemidir. Bu yöntem, alan yazında çoğunlukla diğer araştırma yöntemlerinin tamamlayıcısı olarak hizmet ederken, tek başına bir yöntem olarak da kullanılmaktadır (Sak, Sak, Öneren Şendil, & Nas, 2021). Belgesel tarama olarak da bilinen doküman analizinde, var olan kayıt ve belgeler incelenerek veri elde edilmektedir. Doküman analizi, belli bir amaca dönük olarak kaynakları bulma, okuma, not alma ve değerlendirme işlemlerini kapsamaktadır (Karasar, 2005).

### **Verilerin Analizi**

Çalışmada elde edilen veriler nitel bir araştırma yöntemi olan içerik analizi tekniğiyle çözümlenmektedir. Bu verilerin etik ilkelere uygunluğu ise Türkiye Gazetecileri Hak ve Sorumluluklar Bildirgesi ile Gazetecilik Meslek Etik İlkeleri Küresel Bildirisi çerçevesinde değerlendirilmektedir. İçerik analizi; nesnel, ölçülebilir, doğrulanabilir bilgilere ulaşmak amacıyla doküman, metin ve evrak gibi pek çok farklı materyali belli kurallar dahilinde (örnekleme, kodlama, kategori vs.) analiz etmeyi amaçlayan nitel araştırma yöntemi içerisinde yer alan bir tekniktir (Metin & Ünal, 2022). İçerik analizi, sosyal bilimlerde yapılan bilimsel çalışmalarda sıkça başvurulan bir yöntemdir. İçerik analizi yönteminde veriler ele alınan kriterler doğrultusunda incelenir ve objektif bir değerlendirme yapılır. Herhangi bir içerik analizi çalışmasında kullanılan kurallar, mesajın içeriğindeki her türlü değişimi hesaba katacak kadar ayrıntılı bir şekilde oluşturulmalıdır. Aynı zamanda bu kurallar, tutarlı ve sabit bir şekilde uygulanmalıdır. Böylelikle diğer araştırmacılar veya okurlar aynı mesajlara baktıklarında, aynı ya da karşılaştırılabilir sonuçlara ulaşabilmektedir. Bu, ölçümlerin güvenilirliği ve sonuçta elde edilen bulguların geçerliliği olarak düşünülebilir (Seltiz, Jahoda, Deutsch, & Cook, 1959).

### **LİTERATÜR ARAŞTIRMASI**

Literatür araştırmasında gazetecilik mesleğindeki etik kodlar ve Amerikan sinemasında gazetecilik mesleğinin işlenişe ilişkin çalışmalar incelenmiştir. Çizilen bu çerçeveye ilişkin literatür çalışmaları şu şekilde sıralanmaktadır:

İlk çalışmada gazetecinin ve medya kuruluşlarının etik değerlere yaklaşımındaki farklar ortaya konulmuştur (Atabek, 1994). Çalışmada gazetecinin mesleğini icra ederken karşılaştığı çevresel koşullar (haber baskıya yetiştirme, rakiplerle oluşan rekabet ortamı, ekonomik koşullar vb.) etik değerlere uygun hareket etme noktasında gazetecinin önündeki engeller olarak belirlenmiştir. Bunun dışında gazetecilik mesleğindeki etik çerçeveyi koruyabilmek için bu alanda eğitim almış kişilerin mesleği yapmasının elzem olduğu sonucuna ulaşılmıştır. İkinci çalışmada gazetecilik etik kodları ile basındaki özgürleşme süreci, etik bağlamda idealleşmiş gazeteciliğin dördüncü güç olma pozisyonuna etkisi, meslek gelişimi ile kazanılan özgürleşme durumlarının ilişkileri irdelenmiştir (Durna, 2012). Çalışmada basında ticarileşme olgusu ile etik kodların neo-liberal ekonominin ideolojik varsayımlarından ayrı olarak değerlendirilemeyeceği sonucuna ulaşılmıştır. Üçüncü çalışmada Hürriyet Gazetesi Ombudsmanı Faruk Bildirici tarafından yazılan "*Günahlarımızda Yıkandık: Örneklerle Gazetecilik Meslek Etiği*" isimli kitabındaki etik yaklaşımı ve medyadaki etik bilinci tartışılmıştır. Çalışmanın sonunda medyadaki etik problemlerin tamamen sonlanmadığı ancak gazetecilik mesleğinde etik ilkelerine ilişkin bilinç olduğu görüşü bildirilmiştir. Dördüncü çalışmada gazetecilikte meslek etiği kavramının kapsam ve sınırlılıkları ile meslek etik ilkelerinin uygulanması önündeki engeller üzerinde durulmuştur (Erimli, 2014). Araştırmacı, çalışmasında medya patronlarının basın üzerindeki etkisi, ombudsmanlık pozisyonu, editör

kontrolü, kurum politikaları gibi etmenlerin etik kavramını etkilediği sonucuna ulaşmıştır. Bunun dışında etik ilkeleri benimsemeye yönelik denetim mekanizmasının önemine de vurgu yapılmıştır. Beşinci çalışmada Kırklareli Üniversitesi Pınarhisar Meslek Yüksekokulu medya ve iletişim bölümü öğrencilerine Nightcrawler filmi izletilmiş ve öğrencilere filmi izlemeden önce/izledikten sonra gazeteciliğe bakışları sorulmuş, ideal gazeteci tanımları dinlenmiş, etik olan/olmayan gazeteci davranışlarına ilişkin değerlendirmede bulunmaları beklenmiş ve gazetecilik mesleğini yapacak kişi bunun eğitimini almış olmalı mıdır? Sorusunu cevaplamaları beklenmiştir. (Eraslan , 2022) Çalışmanın sonucunda Nightcrawler isimli filmin okullarda eğitim alan öğrencilere izletilmesi gerektiği yönünde görüş bildirilmiş, gazeteci adayı öğrencilerin mesleğe farklı perspektiflerden baktığı değerlendirilmiş ve gazetecilik mesleğini yapacak kişilerin mutlaka bir eğitimden geçmesi gerektiği sonucuna ulaşılmıştır. Altıncı çalışmada *Spotlight*, *Truth* ve *Nightcrawler* isimli filmleri Amerikan demokrasisi kavramına dair görüşleri açısından değerlendirilmiş ve döneme ilişkin özgür basın anlayışı irdelenmiştir (Ünal, 2018). Çalışmada, ele alınan filmlerin reyting odaklı gazetecilik olgusunu uç noktalarda işlediği sonucuna ulaşılrken, Amerikan halkının basına yönelik kaygı ve şüphelerinin de bu filmlerde incelendiği bildirilmiştir. Yedinci çalışmada Amerikan sinemasından ele alınan 55 filmdeki gazeteci inşası ve özgür basın teması ele alınmıştır (Ünal, 2023). Çalışmanın sonucunda gazetecilerin ele alınan filmlerde sansasyonel karakterler olarak incelendikleri görülmüştür. Ayrıca ele alınan örneklerden yola çıkılarak Amerikan sinemasında iyi gazetecinin her zaman kazandığı; kötü olanın ise her zaman yenilgiye mahkum olduğuna ilişkin bir profil çizildiği çıkarımı yapılmıştır.

### FİLM KÜNYESİ (NIGHTCRAWLER)

- a) **Yönetmen:** Dan Gilroy
- b) **Senaryo:** Dan Gilroy
- c) **Yapımcı:** Jennifer Fox, Tony Gilroy, Michel Litvak, Jake Gyllenhaal, David Lancaster
- d) **Başrol Oyuncular:** Jake Gyllenhaal, Rene Russo, Riz Ahmed, Bill Paxton
- e) **Orijinal Adı:** Nightcrawler
- f) **Yapım Yılı:** 31 Ekim 2014 yılında Open Road Films tarafından yayına girmiştir.
- g) **Yapım Yeri:** Amerika Birleşik Devletleri (ABD)
- h) **Türü:** Dram, Suç Gerilim Filmi
- i) **Ödüller:** 87th Academy Awards'da (Akademi Ödülleri'nde) En İyi Özgün Senaryo adaylığına layık görülmüştür.
- j) **Süre:** 117 dakika
- k) **Metraj:** Uzun Metrajlı
- l) **Görüntü Yönetmeni:** Robert Elswit
- m) **Kurgu:** John Gilroy
- n) **Müzik:** James Newton Howard,
- o) **Karakterler:** Jake Gyllenhaal – Louis Bloom, Rene Russo – Nina Romina, Riz Ahmed – Rick, Bill Paxton – Joe Loder, Michael Papajohn – Güvenlik Görevlisi, James Huang – Marcus Mayhem, Carolyn Gilroy – Jenny, Kevin Rahm – Frank Kruse, Ann Cusack – Linda, Kiff Vanden Heuvel – Editör, Dig Wayne – Komşu, Myra Turley – Kadın Komşu.

### Filmin Konusu ve Özeti

Film; uzun süredir hırsızlık yaparak hayatını sürdüren Louis Bloom'un iş araması ile başlamaktadır. İş için görüştüğü yerlerde kimse onu işe almak istememektedir. Stajyer olarak bile işe alınmayan Louis Bloom, her şeye rağmen iş bulma çabasını sürdürmektedir. Louis Bloom, yolda arabası ile seyir halindeyken bir kazaya şahit olmaktadır. Arabadan inip, kazaya baktığında ise amatör bir film ekibinin, araba kazasını kamera kaydına aldığına tanık olur. Bunun üzerine Louis, karşılaştığı amatör film ekibinden iş istemekte fakat film ekibi bu iş teklifini geri çevirmektedir. Bu görüntülerin sabah haberlerine çıktığını gören Louis Bloom, bu işle ilgilenmeye başlamaktadır. Louis bu işi yapabilmek için ilk olarak sahilde çaldığı bisikleti satarak bir kamera ve bir polis telsizi satın almaktadır. Böylelikle polis telsizini kullanarak, çevrede yaşanan olayları takip etmeye başlamakta ve olay yerine ilk giden kişi olmaya çalışmaktadır. Louis polis telsizini dinleyerek, araba hırsızlığının yaşandığı olay yerine gitmekte ve burada olayla ilgili çekimler yapmaktadır. Araba hırsızlığının gerçekleştiği olayın görüntülerini kayıt altına alan Louis, bu görüntüleri yerel bir televizyon şirketine satmak için haber müdürü Nina Romina ile görüşür. Haber müdürü Nina Romina, Louis'in iyi açılarda çekim yapabilme yeteneğine dikkat çekerek onun görüntülerini satın alır. Bu görüntüleri satmasından sonra Louis sürekli olarak farklı olayları çekmeye, sansasyonel çekimler yapmaya odaklanmaktadır. Bir süre sonra Louis, paraya ihtiyacı olan genç bir adamı (Rick) ortağı olarak işe alır ve onunla şehirde gezerek gece vakti meydana gelen olayları araştırır. Kısa süre sonra çektikleri görüntüler televizyonda popüler olunca haber ajansı Louis'e iyi para ödemeye başlar. Louis ise kazandığı paralar ile daha kaliteli çekim yapabilmek adına yeni bir araba ve ekipman satın alır. Bu sırada çevrede yaşanan adli olayların peşinde olan bir başka gazeteci, Louis'den önce olay yerine ulaşır ve bir uçak kazasının görüntülerini çeken ilk kişi olur. Bunu öğrenen Louis, diğer gazeteciyi oyun dışı bırakmak için plan

yapar. Rakibinin arabasına gizlice zarar verir, bu da onun kaza yapmasına neden olur. Gazeteci kontrolü kaybederek bir direğe çarpar ve omurgasını kırar. Kazaya sebebiyet veren Louis, kaza sonrası olay yerine giderek o görüntüleri kayıt altına alır ve sansasyonel bir haber haline getirir. Bir başka gece gezisinde Louis ve Rick kendilerini zengin bir mahallede, bir ev soygununun yaşandığı olay mahalinde bulurlar. Louis, polis gelmeden önce failler arabayla olay yerinden uzaklaşırken bu anları kayıt altına alır. Sonrasında Louis eve girer ve evin her yerini çekmeye başlar. Yerde hareketsiz bir şekilde kanlar içinde yatan kurbanları tüm detayları ile videoya alır. Polisten önce eve girerek olay mahalinde çekim yapan Louis, çektiği bu görüntüleri Nina'nın haber ajansına 15.000 dolara satar. Louis bu görüntüleri satarken, Nina ile olan iş birliğini sürdürmek adına ona birtakım şartlar sunar. Nina'yı bu şartları kabul etmesi için zorlar ve onu görüntüleri başka bir haber merkezine satmakla tehdit eder. Nina Louis'in bu şartlarını kabul eder ve onunla anlaşır. Louis bunun üzerine "Video Haber Prodüksiyonu" adlı şirket adı ile haber üretmeye başlar. Rick ve Nina ise artık bu şirketin bir çalışanı olarak konumlanır. Nina, Louis'i haber merkezinde çalışanlarla tanıştırır ve haber içeriklerini Louis'in oluşturduğunu duyurur. Bu sırada ev soygunu ile ilgili olayı araştıran polis, haberlerde yer alan görüntüleri Louis'in çektiği bilgisine ulaşır. Bunun üzerine Louis'in ifadesine başvurur. İfade sırasında polis Louis'in bilgi sakladığından şüphelenmeye başlar. Soygunla ilgili ifade veren Louis, soyguncuları görmediğini ve elinde onlarla ilgili bir görüntü olmadığını söyler. Olay yeri ile ilgili çektiği görüntüleri kesen ve soyguncuların görüldüğü kısımları ortadan kaldıran Louis üzerinde oynadığı bu görüntüleri polise verir. Polis sorgusundan kurtulan Louis, bu olayla ilgili daha sansasyonel bir haber üretme peşine düşer. Polisten önce, olay yerinde çektiği görüntülerde yer alan araba plakasından faillere ulaşmaya çalışır. Ortağı Rick ile faillerin peşine düşen Louis, failleri bulur ve onları takip etmeye başlar. Fakat polisi aramak için acele etmez, bunun yerine soyguncular evden çıkana kadar bekler ve ardından onları bir şeyler yemek için durdukları bir fast food restoranına kadar takip eder. Louis ancak o zaman polisi arar ve suçluların nerede olduğunu açıklar. Burada amacı polis ve faillerin arasında yaşanacak çatışmaları kayıt altına almak ve bundan sansasyonel bir haber yaratmaktır. Polisi beklerken daha fazla maaş alması gerektiğini düşünen Rick, Louis'e şantaj yapar ve suçlularla ilgili bazı bilgileri polisten sakladığını bildiğini Louis'e söyler. Rick, Louis'i maaşına zam yapmazsa onu polise şikayet etmekle tehdit eder. Louis bunun üzerine Rick'in şartlarını kabul etmek zorunda kalır. Bu konuşmaların yaşandığı sırada polisler olay yerine gelmeye başlar. Louis ve Rick bu anları kayıt altına almak için görev dağılımı yaparlar. Polislerin gelmesi ile birlikte restoranda silahlı bir çatışma başlar. Polisler, faillerden birini olay yerinde vurur, diğer fail ise arabaya binerek kaçmayı başarır. Faillerden birinin araba ile kaçtığını gören Louis onu takip etmeye başlar. Rick de Louis'e eşlik eder ve tüm bu kovalamacayı kayıt altına alır. Polis ve fail arasında yaşanan kovalamacada bir kaza yaşanır ve failin içinde bulunduğu araç, tersyüz olur. Louis, kaza yapan failin aracına yaklaşır ve failin ölmediğini görür. Buna rağmen Rick'e öldüğünü ima ederek, çekim yapmasını söyler. Çekim için araca yaklaşan Rick, fail tarafından vurulur. O sırada olay yerine gelen başka bir polis aracı, faili de öldürür. Louis fail tarafından silahla vurulan yaralı ortağına yaklaşır ve güvenilmez bir çalışanı şirketinden uzaklaştırmak için ona yalan söylediğini itiraf eder. Rick olay yerinde ölür. Haber ajansında herkes video karşısında şok olur, bu onların TV kanalı için gerçek bir sansasyondur. Ancak polis farklı düşünür, insanların öldüğü çatışmayı filme almak için kasıtlı olarak suçluları hemen teslim etmediğinden şüphelenerek Louis'i gözaltına alır. Ancak Louis'e karşı yeterli kanıtları olmadığından polis onu serbest bırakmak zorunda kalır. Filmin sonunda ise Louis'in kendi haber şirketi için yeni çalışanları stajyer olarak işe aldığı gösterilir ve film bu sahneyle son bulur.

## BULGULAR

### Sahne 1

**Sahne Zaman Bilgisi:** 08. Dakika 24. Saniye

#### Sahne Diyalog Bilgisi

**Louis Bloom:** Affedersiniz! Bu televizyonda yayınlanacak mı?

**Joe Loder:** Sabah haberlerinde. Kan demek reyting demek.

**Louis Bloom:** Hangi kanal?

**Joe Loder:** En çok parayı hangisi verir.

**Louis Bloom:** Böyle bir olay için ne kadar verirler?

**Joe Loder:** Fazla değil aslında.

**Gerçekleşen Etik İhlal:** Olay yerinde kazazede araç içinde sıkışmıştır. Polisler kazazede için büyük çaba göstermektedir. Haberi alan iki kameraman olay yerine gelir ve görüntü almaya başlar. Polisler tarafından kadın aracın içinden sağ bir şekilde çıkarılır. Kameramanlar farklı açılardan olayı kayıt altına alır. Daha sonra Louis Bloom ile Joe Loder arasında yukarıda yer verilen diyalog gerçekleşir. Yaşanan bu sahnede haberin maddi çıkarlar doğrultusunda satıldığı gösterilmektedir. Gerçekleşen bu eylem gazetecilik etik ilkelerinden çıkar ilişkisi gözetmemek ilkesi ile çatışmaktadır.

**Türkiye Gazetecileri Hak ve Sorumluluk Bildirgesinin İlgili Maddesi (TGC, 2019) “Çıkar İlişkisi Gözetmemek”:** Gazeteci; bilgi, haber yayını veya haberin yayınlanmaması adına maddi-manevi hiçbir menfaat sağlayamaz. Çıkar çatışmalarından kaçınır. Gazeteci her türlü faaliyetinde konumundan bağımsız olarak, haber kaynağı olan kişiler ya da kurumlar ile iletişim ve ilişkisinde meslek ilkelerini gözetir. Elde ettiği bilgileri ve belgeleri kendi çıkarlarına göre kullanamaz. (T.G.S., 2024). Gazeteci haberini yapmak için olaylara erişim imkanı hakkına sahiptir. Ancak elde ettiği bu bilgileri ve verileri kendi maddi-manevi çıkarları doğrultusunda kullanması etik ihlalidir.

### Sahne 2

**Sahne Zaman Bilgisi:** 17. Dakika 22. Saniye

#### Sahne Diyalog Bilgisi

**Nina Romina:** Komşuyu şuraya koy. Anneyi de çocuklarla birlikte kapının yanına. 02:16'dan itibaren oynat. Biraz ses efekti eklemeni istiyorum. Komşuların olduğu sahneye köpek sesini ekle ve birde arka planda ağlayan çocuk sesi olsun.

**Teknisyen:** Tamam.

**Gerçekleşen Etik İhlal:** Her haber yayına girilmeden önce editoryal süreçten geçmektedir. Nina Romina yayınlanacak haber üzerinde kurgu ve sesler aracılığıyla haberi ilgi çekici hale getirmeye çalışmaktadır. Nina Romina'nın habere ağlayan çocuk sesleri ekletmesi ve sahneler üzerinde oynaması gerçeklerin olduğu gibi çarpıtılmadan aktarılması ilkesi ile çatışmaktadır.

**Türkiye Gazetecileri Hak ve Sorumluluk Bildirgesinin İlgili Maddesi (TGC, 2019) “Gerçeklerin Olduğu Gibi Çarpıtılmadan Aktarılması”:** Halkın bilgi edinme hakkına bağlı kalarak; haber alma, yorum ve eleştiri yapma özgürlüğünü kullanan gazeteci, sonuçlar kendi açısından ne olursa olsun gerçekleri olduğu gibi çarpıtılmadan aktarmak ile yükümlüdür (T.G.S., 2024). Haberi yayınlamadan önce mevcut içeriğinden uzaklaştırmak, abartıya yer vermek habercilik için ortama sis bombası bırakmak demektir. Oysa ki gazeteci mesleki etik ilkeleri gereği gerçeği abartmadan ve bağlamından kopartmadan vermekle yükümlüdür.

### Sahne 3

**Sahne Zaman Bilgisi:** 19. Dakika 08. Saniye

#### Sahne Diyalog Bilgisi

**Nina Romina:** Ne görüntüsü var?

**Louis Bloom:** Sizi heyecanlandırarak bir şey olduğuna eminim.

**Nina Romina:** Nedir?

**Louis Bloom:** Bir vurulma olayı. Birkaç yerinden vurulan adam yerde yatıyor. Yerde yatarken kanaması var. Bana kalırsa hayatta kalması mucize. Aracı gasp edilirken vurulmuş.

*Nina Romina: Birinci batı caddesindeki mi?*

*Louis Bloom: Evet doğru.*

*Nina Romina: O olayla ilgili yeterince görüntümüz var.*

*Louis Bloom: Ordaydım. Ben olaya daha yakındım.*

*Nina Romina: Tamam tamam göster bakalım.*

*(Görüntü izlenir ve Nina Romina Haber Editörü olan Frank'ı görmeni istediğim bir şey var diyerek yanlarına çağırır. Frank içeri girer ve onu Louis Bloom ile tanıştırır.)*

*Nina Romina: Baştan oynat. Bu baş haber olur. Görüntüyü kesitlere ayır. Saat beş ve beş buçukta olmak üzere iki tanıtım girsin. Ayrıca başına uyarı yerleştirilmiş bir kopyasını istiyorum.*

*Frank: Bunu yayınlayacak mısın?*

*Nina Romina: Uyarı koyarak.*

*Frank: Aşırı şiddet içerikli.*

*Nina Romina: Her gün böyle bir haber koymalıyız ama.*

*Frank: İnsanlar kahvaltılarını yapıyor olacak.*

*Nina Romina: İşe gittiklerinde de bu haberi konuşuyor olacaklar. Glendan ve Palms ta ki araç gasplarıyla bunun arasında bir ortak nokta kurun. Ne zamandı martta mı? Araç gasplarında artış. Başlık bu. Kurbanın ailesi ile iletişime geç. Ağzlarından laf al. Ne kadar?*

*Louis Bloom: Bu özel parça için 1000 dolar istiyorum.*

*Nina Romina: Yok öyle bir fiyat. Bu saatte gidecek başka bir yerin yok. Ayrıca görüntü kalitesi de berbat. 250 dolardan fazla vermem. Tamamsa ödemeni yapalım.*

**Gerçekleşen Etik İhlal:** Haber ile ilgili görsel kan ve derin yara içerikli bir görseldir. Nina Romina görüntüyü yayınlamak isterken Frank aşırı şiddet içerikli uyarısında bulunur. Ancak Nina Romina reyting uğruna bunu yayınlamayı tercih eder. Bu sahne ile şiddeti övmekten, haklı göstermekten kaçınma ilkesi ihlal edilmiştir.

**Türkiye Gazetecileri Hak ve Sorumluluk Bildirgesinin İlgili Maddesi (TGC, 2019) “Şiddeti Övmekten, Haklı Göstermekten Kaçınma”:** Gazeteci; şiddete özendirilecek, şiddeti haklı kılacak, bireyleri şiddete karşı kıskırtacak yayınlar yapamaz (T.G.S., 2024).

**Gerçekleşen Etik İhlal:** Louis Bloom çekmiş olduğu kan ve derin yara içerikli görseli kanala para karşılığında satarak maddi kazanç elde etmek istemiştir. Gerçekleşen bu eylemde gazetecilik etik ilkelerinden çıkar ilişkisi gözetmemek ilkesi ile çatışmaktadır.

**Türkiye Gazetecileri Hak ve Sorumluluk Bildirgesinin İlgili Maddesi (TGC, 2019) “Çıkar İlişkisi Gözetmemek”:** Gazeteci; bilgi, haber yayını veya haberin yayınlanmaması adına maddi-manevi hiçbir menfaat sağlayamaz. Çıkar çatışmalarından kaçınır. Gazeteci her türlü faaliyetinde konumundan bağımsız olarak, haber kaynağı olan kişiler ya da kurumlar ile iletişim ve ilişkisinde meslek ilkelerini gözetir. Elde ettiği bilgileri ve belgeleri kendi çıkarlarına göre kullanamaz. (T.G.S., 2024).

#### Sahne 4

**Sahne Zaman Bilgisi:** 20. Dakika 30. Saniye

#### Sahne Diyalog Bilgisi

*Nina Romina: Hali vakti yerinde beyazların azınlık ya da fakir kesim tarafından kurban edilmesi öncelikli tercihimiz olacak.*

*Louis Bloom: Sadece suç mu?*

*Nina Bloom: Hayır, kazada olur. Araba, otobüs, tren, uçak, yangın.*

*Louis Bloom: Ama kanlı olmalı.*

*Nina Romina: Şey çarpıcı diyelim.*

**Gerçekleşen Etik İhlal:** Bu sahnede geçen diyalogda haber önceliklerinde beyaz ve siyahlar arasındaki ayrımcılığa değinilmiştir. Buda gazetecinin ayrımcılık yapmaktan kaçınma ilkesi ile çatışmaktadır. **Türkiye Gazetecileri Hak ve Sorumluluk Bildirgesinin İlgili Maddesi (TGC, 2019) “Ayrımcılık Yapmaktan Kaçınma** Gazeteci; ırk, din, dil, milliyet, cinsiyet, cinsel yönelim, cinsel kimlik, mezhep, inançsızlık, inanç, etnisite, dünya görüşü ve sınıf ayrımcılığı yapmaksızın tüm ulusların, halkların ve bireylerin haklarını tanıyarak ve onlara saygı gösterir. (T.G.S., 2024). Gazetecilerin görevleri gereği toplum üzerinde etkisi oldukça büyüktür. Bu nedenle

hassas davranmaları gereken en önemli ilkelerden biri ayrımcılık ilkesidir. Gazeteci ayırım yapmadan tüm bireylerin haklarını tanımalı ve saygı göstermelidir. Beyazların yaşadığı herhangi bir olumsuzluğun daha fazla haber değeri olduğunu ve bunu gündeme getirerek diğer gurubu ötekileştirmeleri gazetecilik etik ilkelerinden ayrımcılık yapmaktan kaçınma ilkesi ile çatışmaktadır.

### Sahne 5

**Sahne Zaman Bilgisi:** 32. Dakika 40. Saniye

#### Sahne Diyalog Bilgisi

*Nina Romina: Harika bir çekim. Bu inanılmaz. Muazzam bir video bu.*

*Frank: Çiftle röportaj yapmadın mı?*

*Louis Bloom: Görüntülerini aldım. Komşularıyla röportaj yaptım. Küfrediyor ama o kısmı kesersiniz. Frank: İçeri nasıl girdin?*

*Louis Bloom: Kapı açıldı.*

*Frank: İzin aldın mı?*

*Louis Bloom: İçeri gir diyen birini duydum. Sonra herkes çıktı bende çıktım.*

*Nina Romina: Hoşuna gitmeyen ne?*

*Frank: Ama alabildiğin tek görüntü camın arkasından. Bu hiç hoşuma gitmedi. İçeri izinsiz girmiş görünüyor. Ev sahibinin yakın plan çekimi yok. İsimlerini de çaldığı bir mektuptan öğreniyoruz.*

*Louis Bloom: Evet ama o önemsiz bir konu.*

*Frank: Evet ama buna itirazım var.*

*Nina Romina: Bu haberi yayına veriyoruz.*

*Frank: Bu benim işim.*

*Nina Romina: Hayır senin işin günün tweetini yazmak. Hava durumunu sunan kişinin ne tarafa döneceğini söylemek. Bunu yayınlıyoruz.*

**Gerçekleşen Etik İhlal:** Louis Bloom olay yerine izinsiz bir şekilde girer. Evleri kurşunlanan aile dışarıda polise ifade verirken o evin içerisinde kurşunların isabet ettiği buzdolabı üzerinde fotoğrafların yerlerini değiştirerek haberi daha fazla dramatize edecek görüntüler çeker. Görüntü dışarıda kucaklarında bebekleri ile ifade veren aile ile sonlanır. Ailenin kişisel bilgilerini alabilmek için masanın üzerindeki posta zarfını izinsiz alır ve olay yerinden ayrılır. Yapılan bu eylem gazetecinin belgeleri göz ardı etmemek ilkesi ile çatışmaktadır. **Türkiye Gazetecileri Hak ve Sorumluluk Bildirgesinin İlgili Maddesi (TGC, 2019) “Belgeleri Göz Ardı Etmek”:** Gazeteci; bilgileri yok edemez, göz ardı edemez ve belgeler üzerinde değişiklikler yapamaz (T.G.S., 2024). Gazetecinin temel görevi, olaylar hakkında bilgileri toplumla paylaşmak ve halkın bu bilgilere erişimini sağlamaktır. Medya, bu nedenle veriyi toplumla paylaşan ve aktaran araç olarak tanımlanır. Gazeteci bu sorumluluğu ile olay yerine hiçbir şekilde müdahale etmemeli ve olay yerinden izinsiz bir şekilde veri-bilgi hırsızlığı yapmamalıdır. Yapılan bu eylem etik ihlalidir.

### Sahne 6

**Sahne Zaman Bilgisi:** 41. Dakika 15. Saniye

#### Sahne Diyalog Bilgisi

*Louis Bloom: Televizyon haberleri neler oldu?*

*Olay Tanığı: (Telefonla konuşur) Sanırım kafa kafaya çarpışmışlar. Sonra diğer tarafta yerde ölü yatan bir adam var. Birde sıkışmış bir kadın. Onlara yardım etmem mi gerekiyor?*

*Louis Bloom: Kazanın nasıl olduğunu gördünüz mü?*

*Olay Tanığı: Görmedim ben sonradan geldim.*

*Louis Bloom: Tam olarak nasıl oldu anlatabilir misiniz?*

*Olay Tanığı: Şu kamerayı üzerimden çeker misin? Git başımdan 911 ile konuşmaya çalışıyorum. (Olay Tanığı 911 ile konuşmaya devam eder.)*

**Gerçekleşen Etik İhlal:** Louis Bloom kaza yerine geçer ve oradan görüntü almaya başlar. Ancak görüntüyü kaydettiği kadraj ona yetersiz gelir. Kamerayı bırakarak aracın yanında yatan ölü adamı ayaklarından çekerek kendine uygun bir kadraj oluşturacak şekilde yerini değiştirir. Olay yerinde gerçekleştirdiği bu değişiklik ile artık istediği kadrajı çekebilecektir. Bu yaptığı eylem ile hem etik ihlali gerçekleştirmiş hem de olay yeri bulgularını karartmıştır. Ayrıca bir kazazedenin hayatını tehlikeye atmıştır. Polis ve acil yardımın gelmesi ile olay yerinden uzaklaşır. **Türkiye Gazetecileri Hak ve Sorumluluk Bildirgesinin İlgili Maddesi (TGC, 2019) “Belgeleri Göz Ardı Etmek”:** Gazeteci; bilgileri yok edemez, göz ardı edemez ve belgeler üzerinde değişiklikler yapamaz (T.G.S., 2024).

### Sahne 7

**Sahne Zaman Bilgisi:** 50. Dakika 50. Saniye

#### Sahne Diyalog Bilgisi

*Nina Romina: Tamam bak iyi iş çıkardın. Bizde sana iyi ödeme yaptık. Hem de çok iyi. İstersen seni sözleşmeli personel yapabilirim. Bu şekilde aldığın ücret çok daha yukarı çıkar. Hatta kanalda bir iş bile ayarlayabilirim. Prodüksiyon asistanı olursun böylece işi içerden öğrenirsin. Hedefin doğrultusunda ilerlersin.*

*Louis Bloom: Beni dinlemiyorsun Nina. Hiçbir kanalda iki yıldan fazla çalışmadığımı burada da iki yılının dolmak üzere olduğunu biliyorum. Sözleşmenin bitmek üzere olduğunu göz önünde bulundurursak gelecek ayın reytingleri kaderini doğrudan etkileyecektir.*

*Nina Romina: Yani beni tehdit ediyorsun öyle mi?*

*Louis Bloom: Pazarlık yapıyorum.*

*Nina Romina: Bana görüntü satmamakla tehdit ediyorsun.*

*Louis Bloom: Bu senin seçimin. Bir malın gerçek fiyatını onu talep edenler belirler. Sen bir şey istiyorsun. Bende seni istiyorum.*

*Nina Romina: Yatağa atmak için.*

*Louis Bloom: Ve arkadaşlık etmek için.*

*Nina Romina: Aman tanrım insan arkadaşını zorla yatağa atmaya çalışmaz.*

**Gerçekleşen Etik İhlal:** Louis Bloom hazırladığı haberler ile reytingleri arttırdığını bilir. Nina Romina hakkında her şeyi öğrenmiştir. Kariyeri için onun haberlerine ihtiyacı olduğunu farkındadır. Nina Romina'ya haber satma karşılığında ilişki teklif eder. Louis Bloom haberleri üzerinden maddi kazanç sağlamanın yanında artık ahlak dışı teklifler lede etik ihlali yaptığı görülmektedir. Yapılan bu eylem gazetecilik etik ilkeleri kapsamında çıkar ilişkisi gözetmemek ilkesi ile çatışmaktadır. **Türkiye Gazetecileri Hak ve Sorumluluk Bildirgesinin İlgili Maddesi (TGC, 2019) “Çıkar İlişkisi Gözetmemek”:** Gazeteci; bilgi, haber yayını veya haberin yayınlanmaması adına maddi-manevi hiçbir menfaat sağlayamaz. Çıkar çatışmalarından kaçınır. Gazeteci her türlü faaliyetinde konumundan bağımsız olarak, haber kaynağı olan kişiler ya da kurumlar ile iletişim ve ilişkisinde meslek ilkelerini gözetir. Elde ettiği bilgileri ve belgeleri kendi çıkarlarına göre kullanamaz. (T.G.S., 2024).

**Sahne 8**

**Sahne Zaman Bilgisi:** 55. Dakika 35. Saniye

**Sahne Diyalog Bilgisi**

**Joe Loder:** Hey kardeşim! Beş ölü. İnanılmaz mutluyum. Hepsi kül oldu. Aman tanrım bu çok özeldi. Haberi patlattım bu sefer. Bu arada diğer aracım da Carlson'da intihar görüntüsü çekiyor. Biliyorsun keşke beni dinleseydin dostum. Sana yol göstermeye çalışıyordum. Geleceğe hoş geldin kardeşim.

**Louis Bloom:** (Joe Loder'e cevap vermez ancak bu haberi kaçırdığı için öfkelenir. Sessiz bir şekilde olay yerinden ayrılır)

**Gerçekleşen Etik İhlal:** Joe Loder olay yerine Louis Bloom'dan önce varmış ve olayı görüntülemiştir. Joe Loder'in Louis Bloom'a söylediği ifadeler bir habercinin meslek etiği açısından asla kabul edilemeyecek söylemlerdir. Gazeteci bir insanın ya da canlılığın hayatını kaybetmesinden ötürü mutluluk duyduğunu ifade etmemelidir. Bu meslek etiğinin yanında insan olmasının bir göstergesidir. Yapılan bu eylem demokratik değerlerin savunulması etik ilkesi ile çatışmaktadır. **Türkiye Gazetecileri Hak ve Sorumluluk Bildirgesinin İlgili Maddesi (TGC, 2019): "Demokratik Değerlerin Savunulması":** Gazeteci; hukukun üstünlüğünü tanır, demokrasi, laiklik, barış, insan hakları gibi evrensel değerleri savunur (T.G.S., 2024). Gazeteci önce insan olduğunu unutmamalı daha sonra mesleğinin bilinci ile hareket etmelidir. Haber değeri adına insani değerlerini hiçe sayan bir haber yaptığında meslek ilkesinin yanında insan olmakla sahiplendiğimiz etik eylemleri de çiğnemiş olacaktır. Haberin değeri, kayıt altına alınması, aktarılma şekli gazetecilik ilke ve esasları ile belirlenmiştir. Ancak haber karşısında yaşanan kayıplardan duyulan mutluluğu ifade etmek gazetecilik ilke ve esaslarının yanında bizi var eden, insan olduğumuzu hissettiren etik davranışların yerle bir olmasıdır.

**Sahne 9**

**Sahne Zaman Bilgisi:** 59. Dakika 25. Saniye

**Sahne Diyalog Bilgisi:**

(Rick ve Louis araç içinde haber peşindedirler. Telsize bir tecavüz haberi düşmüştür ancak Louis gerçekleşen kaza yerine gitmek istemektedir. Rick bu önemsiz haber için Louis'in neden bu kadar acele ettiğini ve istekli olduğunu anlayamamaktadır.)

**Rick:** Oooo lanet olsun. Tanrım lanet olsun. Mayhem'in minibüsü değil mi bu? Joe Loder ve diğer adam. İsmi neydi onun Marcus muydu?

**Louis Bloom:** Aracı park et ve kameranı unutma.

**Rick:** Ne olmuş burada böyle?

**Louis Bloom:** Görgü tanıklarına göre aşırı hız yapıyorlarmış. Muhtemelen Grafick park etrafında turlarken buradaki trafik ışığına girdiler. Başka araç yokmuş.

**Rick:** Trafik ışığına nasıl girmişler peki? Hey çekip durma dostum o bizden biri.

**Louis Bloom:** Artık değil Rick. Biz profesyoneliz. Kolay satılır.

**Gerçekleşen Etik İhlal:** Louis Bloom haber için olay yerine varmada sürekli Mayhem Video gazetecileri ile yarışmaktadır. Joe Loder'in Louis Bloom'u bir haberde atlatması ve ona söyledikleri Louis'i kızdırır. Bunun üzerine hırslarına yenilen Louis, Joe Loder'in haber aracını bozar. Bunun üzerine Mayhem video habercileri olay yerine giderken bir kaza geçirirler. Louis daha önemli bir haber varken yaşanan bu kaza yerine gitmek için acele eder. Bu olay Rick'in dikkatini çeker. Çünkü yaşanan bir tecavüz olayı varken neden bu basit haber olayına

gittiklerini sorgular. Olay yerine vardıklarında aracın Mayhem videoya ait olduğunu gördüğünde Rick çok şaşırır. Louis'in bu haberi de görüntüye almak istemesinden rahatsızlık duyar ve daha fazla görüntü almamasını ister. Ancak Louis intikamını almak istemektedir. Haber için yarıştığı rakibinin kaza görüntülerini çekmekten ve bunu haber yapmaktan ötürü mutluluk duyar. Louis'in haber uğruna yapacaklarının artık bir sınırı kalmamıştır. Yapılan bu eylemde kazazedenin yaralı ve kanlı görüntülerinin çekilmesinde şiddeti övmekten, haklı göstermekten kaçınma etik ilkesi, haberi kendi menfaati doğrultusunda kullanmasında ise çıkar ilişkisi gözetmemek ilkesi ihlal edilmiştir. **Türkiye Gazetecileri Hak ve Sorumluluk Bildirgesinin İlgili Maddesi (TGC, 2019) "Şiddeti Övmekten, Haklı Göstermekten Kaçınma"**: Gazeteci; şiddete özendirecek, şiddeti haklı kılacak, bireyleri şiddete karşı kıskırtacak yayınlar yapamaz (T.G.S., 2024). **Türkiye Gazetecileri Hak ve Sorumluluk Bildirgesinin İlgili Maddesi (TGC, 2019) "Çıkar İlişkisi Gözetmemek"**: Gazeteci; bilgi, haber yayını veya haberin yayınlanmaması adına maddi-manevi hiçbir menfaat sağlayamaz. Elde ettiği bilgileri ve belgeleri kendi çıkarlarına göre kullanamaz. (T.G.S., 2024).

### Sahne 10

**Sahne Zaman Bilgisi:** 1 Saat 4. Dakika 02. Saniye

**Sahne Diyalog Bilgisi:**

*Nina Romina: Bir saattir sana ulaşmaya çalışıyorum. Bir daha elinde haber olmadığı zaman lanet olası telefonlarıma cevap ver.*

*Louis Bloom: Elimde bir haber var.*

*Nina Romina: Ne?*

*Louis Bloom: Konut baskını ve üçlü cinayet.*

*Nina Romina: O olay daha yeni patlak verdi.*

*Louis Bloom: Polisten önce oraya gittik.*

*Nina Romina: Sende mi?*

*Louis Bloom: Bu parçanın avantajlarını sıralamama gerek olduğunu sanmıyorum tamam mı en iyisi kendin izle.*

*Nina Romina: Oraya birini yollayabilirdim bana neden haber vermedin?*

*Louis Bloom: Bana ihtiyacını ve pazarlık gücümü arttırmak için.*

*Nina Romina: Frank, Jenny iki numaraya hemen. Linda'yı buraya gönder. Granada da konut baskını. Polisten önce oraya varmış. Yayına on dakikamız var. Bunun ne kadarını gösterebiliriz?*

*Linda: Yasal açıdan mı?*

*Nina Romina: Yok ahlaki açıdan. Tabi ki yasal açıdan.*

*Linda: Kimlikleri belirlendi mi?*

*Frank: Olay daha yeni bu yüzden açıklanmadığını farz etmek zorundasın.*

*Linda: Birinci dereceden yakınlarına haber vermeden kimlikleri yayınlamayız.*

*Nina Romina: Kimlikleri ifşa etmeyeceğiz.*

*Linda: Yüzlerini göstererek etmiş olacaksınız.*

*Nina Romina: Yüzlerini mozaikleriz.*

*Linda: Bunu nereden buldun?*

*Nina Romina: Bir strangerdan.*

*Louis Bloom: Merhaba Linda ben Louis.*

*Nina Romina: Tanrı aşkına bunu yayınlarsak yasaları çiğnemiş olur muyuz?*

*Linda: Yüzlerini gösterme, açık adres verme. Bu şekilde olursa sanıyorum ki yani bilmiyorum sanırım çiğnemiş sayılmayız.*

*Frank: Habercilik etiği açısından da mı? Bu yayınla tüm yayıncılık standartlarını aşıyoruz.*

*Nina Romina: Gece haberlerini izledin mi? Bu hiçbir şey değil.*

*Frank: Buna ne kadar ödedin?*

*Louis Bloom: Haberin fiyatı henüz konuşulmadı.*

*Nina Romina: Ah bize bir iki dakika izin verin. Ne kadar?*

*Louis Bloom: Yüz bin dolar.*

**Gerçekleşen Etik İhlal:** Louis olayı frekans yayınından duyduğu anda olay yerine gider. Polis henüz olay yerine intikal etmemiştir. Sabırsız olan Louis polisleri beklemeden olay yerine girer. Olay yerinde suçluları görür ve kayıt altına alır. Bununla yetinmeyerek evin içine girer ve vurulan insanların görüntülerini izinsiz kayıt eder. Evin içinden görüntüler aldıktan sonra polis gelmeden evi terk eder. Elde ettiği görüntüleri Nina'ya götürür ve bununla ilgili pazarlık yapar. Görüntüler için eve nasıl girdiği sorgulandığında Louis yardım için eve girdiğini ifade ederek yalan beyanda bulunur. Nina görüntüleri mozaikleterek ve montajlayarak yayına alır. Ancak haber sunumunda sunuculardan olayı abartı ifadeler ile anlatmalarını ister. Görüntülerde şiddet ve korku içerikleri mevcuttur. Olayın asıl sebebinin uyuşturucu olmasına rağmen haberi konut baskını olarak kurgular. Olayı araştıran dedektifler haber görüntüleri üzerine Louis ile iletişime geçerler. İzinsiz ve polis gelmeden aktif bir suç mahaline girmiş olmasından dolayı ona sorular sorarlar. Louis suçluları görmüş ve görüntülerini almış olmasına rağmen dedektiflere sadece gördüğünü ama karanlık olduğu için tarif edemeyeceğini ifade eder. Dedektifler görüntülerin bir kopyasını ister. Louis daha önce hazırlamış olduğu görüntülerin kopyasını onlarla paylaşır ancak paylaştığı görüntülerde suçluların görüntüsü yer almamaktadır. Olayın yarattığı infialin devam etmesi ve yaptığı haberin devamlılığının sağlanması adına suçluları dedektiflerden gizler. Ancak kendisi kayıt altına aldığı görüntülerden suçlulara ulaşır. Haber görsellerinin şiddet içerikli olmasına rağmen reyting uğruna yayınlanması ile şiddeti övmekten, haklı göstermekten kaçınma ilkesi ihlal edilmiştir. Haberin maddi çıkarlar doğrultusunda satılması ile çıkar ilişkisi gözetmek ilkesi ihlal edilmiştir. Louis'in olay yerine ait görüntüleri montajlayarak ve keserek yayına teslim etmesi ve dedektiflere vermesi ile belgeleri göz ardı etmek ilkesi ihlal edilmiştir. Nina Romina'nın haberi yayına alışı şekli ve sunan kişilerden istediği abartı söylem tarzı ile gerçeklerin olduğu gibi çarpıtılmadan aktarılması ilkesi ihlal edilmiştir. **Türkiye Gazetecileri Hak ve Sorumluluk Bildirgesinin İlgili Maddesi (TGC, 2019) "Şiddeti Övmekten, Haklı Göstermekten Kaçınma":** Gazeteci; şiddete özendirerek, şiddeti haklı kılacak, bireyleri şiddete karşı kışkırtacak yayınlar yapamaz (T.G.S., 2024). **Türkiye Gazetecileri Hak ve Sorumluluk Bildirgesinin İlgili Maddesi (TGC, 2019) "Çıkar İlişkisi Gözetmemek":** Gazeteci; bilgi, haber yayını veya haberin yayınlanmaması adına maddi-manevi hiçbir menfaat sağlayamaz. Çıkar çatışmalarından kaçınır. Gazeteci her türlü faaliyetinde konumundan bağımsız olarak, haber kaynağı olan kişiler ya da kurumlar ile iletişim ve ilişkisinde meslek ilkelerini gözetir. Elde ettiği bilgileri ve belgeleri kendi çıkarlarına göre kullanamaz. (T.G.S., 2024).

**Türkiye Gazetecileri Hak ve Sorumluluk Bildirgesinin İlgili Maddesi (TGC, 2019) "Belgeleri Göz Ardı Etmemek":** Gazeteci; bilgileri yok edemez, göz ardı edemez ve belgeler üzerinde değişiklikler yapamaz (T.G.S., 2024). **Türkiye Gazetecileri Hak ve Sorumluluk Bildirgesinin İlgili Maddesi (TGC, 2019) "Gerçeklerin Olduğu Gibi Çarpıtılmadan Aktarılması":** Halkın bilgi edinme hakkına bağlı kalarak; haber alma, yorum ve eleştiri yapma özgürlüğünü kullanan gazeteci, sonuçlar kendi açısından ne olursa olsun gerçekleri olduğu gibi çarpıtılmadan aktarmak ile yükümlüdür (T.G.S., 2024).

### Sahne 11

**Sahne Zaman Bilgisi:** 1 Saat 26. Dakika 17. Saniye

**Sahne Diyalog Bilgisi:**

*Rick: Polisi arayacak mıyız?*

*Louis Bloom: Bekleyeceğiz.*

*Rick: Ne için?*

*Louis Bloom: Önce içeride kim var görelim. Sonra tutuklanma anı için daha ilginç bir yere gitmelerini bekleriz.*

*Rick: Neresi mesela?*

*Louis Bloom: Nereye istersek. Çıkmasını bekleyeceğiz. Sonra peşine takılacağız. Sonra da daha kalabalık bir semte geçtiğinde polise ihbar edeceğiz. Şiddete meyilli biri o yüzden olay çıkarmadan teslim olacağını sanmıyorum.*

*Rick: Daha fazla para istiyorum. Çok daha fazla.*

*Louis Bloom: Bir işi cazip kılan tek şey onun karşılığında aldığın ücret değildir Rick. Sen gelişmekte olan bir şirketin içindesin. Senin ödülün bir kariyer.*

*Rick: Boş versene abuk subuk bir işten bahsediyorsun bana. Sürekli dediklerine boyun eğmemi bekliyorsun. Daha fazla para istiyorum.*

*Louis Bloom: İnsanlara zorla bir şey yaptıramam Rick bunu yapmak istiyorsan yaparsın istemiyorsan seni zorla tutamam.*

*Rick: Beni kovmakla mı tehdit ediyorsun? Hey benimde bir kozum var. Suçluların yerini ihbar etmek yerine malzeme yakalamak için olay çıkmasını beklemenin yasalara aykırı olduğunu söylesem evet bu kesinlikle polisin ilgisini çekecektir. Anladın mı o yüzden daha fazla para istiyorum.*

**Gerçekleşen Etik İhlal:** Louis konut baskını olayında yer alan şüphelileri görmüş ve kayıt altına almıştır. Bu bilgiyi haber kanalından ve dedektiflerden gizleyerek haberin büyümesini ve devamlılığını istemiştir. Suçluları plaka numaralarından ve görüntüdeki yüzlerinden tespit eden Louis onları aramaya koyulur. Rick ile suçluların adresine giden Louis polise haber vermek yerine onların daha kalabalık olan bir ortama girmelerini beklemektedir. Çünkü suça meyilli olan bu kişiler sorunsuz bir şekilde teslim olmayacaktır. Louis te bu karmaşadan yeni haberler elde etme peşindedir. Yapılan bu eylem çıkar ilişkisi gözetmemek ilkesi ile çatışmaktadır. **Türkiye Gazetecileri Hak ve Sorumluluk Bildirgesinin İlgili Maddesi (TGC, 2019) “Çıkar İlişkisi Gözetmemek”:** Gazeteci; bilgi, haber yayını veya haberin yayınlanmaması adına maddi-manevi hiçbir menfaat sağlayamaz. Çıkar çatışmalarından kaçınır. Gazeteci her türlü faaliyetinde konumundan bağımsız olarak, haber kaynağı olan kişiler ya da kurumlar ile iletişim ve ilişkisinde meslek ilkelerini gözetir. Elde ettiği bilgileri ve belgeleri kendi çıkarlarına göre kullanamaz. (T.G.S., 2024).

### Sahne 12

**Sahne Zaman Bilgisi:** 1 Saat 26. Dakika 17. Saniye

**Sahne Diyalog Bilgisi:**

*Rick: İçeride insanlar var.*

*Louis Bloom: Ben altı kişi sayıyorum.*

*Rick: Ateş açabilirler.*

*Louis Bloom: Olabilir.*

*Rick: Bana kalabalık bir semte gideceğimizi söylemiştin. Lanet olası bir restorana değil.*

*Louis Bloom: Umduğunu değil bulduğunu ye. Sokağın başına gidip tam şu açıdan görüntüler çekiyorsun eller sabit.*

**Gerçekleşen Etik İhlal:** Louis saldırganları bir restorana gelene kadar takip eder. Saldırganlar restorana girdiklerinde polisi arayarak ihbarda bulunur. Tüm ayrıntılarıyla eşkâllerini ve yerlerini söyler. Polis ekipleri restorana yönlendirilir. Rick bu durumdan çok rahatsızdır çünkü restoranda başka masum insanlarda yer almaktadır. Ateş açıldığında onların hayatları için tehlike söz konusudur. Louis için bu hiç önemli değildir. Çünkü o haberin sansasyonelliği ile ilgilenmektedir. Kaç kişinin öldüğü ya da yaralandığı onun için haber değerinden farklı bir önem teşkil etmemektedir. Louis'in kendi çıkarları doğrultusunda gerçekleştirdiği bu eylem çıkar ilişkisi gözetmemek ilkesi ile çatışmaktadır. **Türkiye Gazetecileri Hak ve Sorumluluk Bildirgesinin İlgili Maddesi (TGC, 2019) “Çıkar İlişkisi Gözetmemek”:** Gazeteci; bilgi, haber yayını veya haberin yayınlanmaması adına maddi-manevi hiçbir menfaat sağlayamaz. Çıkar çatışmalarından kaçınır. Gazeteci her türlü faaliyetinde konumundan bağımsız olarak, haber kaynağı olan kişiler ya da kurumlar ile iletişim ve ilişkisinde meslek ilkelerini gözetir. Elde ettiği bilgileri ve belgeleri kendi çıkarlarına göre kullanamaz. (T.G.S., 2024).

### Sahne 13

**Sahne Zaman Bilgisi:** 1 Saat 41. Dakika 39. Saniye

**Sahne Diyalog Bilgisi:**

*Louis Bloom: Konağı kapat. (Saldırmanın aracına doğru yönelir.) Ölmüş gel görüntü al. Eller sabit. Zoom kullan.*

*Rick: Onu gördün. Onu gördün.*

*Louis Bloom: Güvenilmez bir eleman için şirketimin başarısını göz göre göre riske atamam. Anlıyor musun?*

*Rick: Sen delisin. Sen delisin.*

*Louis Bloom: Benim pazarlık gücümü elimden aldın Rick. Bana karşı kullandın. Tekrar yapabiliyordun itiraf et.*

*Rick: Bilmiyorum.*

*Louis Bloom: Ben biliyorum. Biliyorum. (Rick hayatını kaybeder.)*

**Gerçekleşen Etik İhlal:** Saldırmanın kaçması ile polis onu takibe başlar. Rick ve Louis te onların peşinden gitmektedir. Yaşanan tüm kovalamaca sürecini kayda alırlar. Polis aracı ve saldırının aracının kaza yapması sonucu Louis araçtan iner ve kamerası ile olayı görüntülemeye çalışır. Saldırmanın araç içinde ölmediğini görmesine rağmen Rick'i çağırır ve görüntüyü kayıt etmesini ister. Rick görüntü almaya yaklaşırken Louis te biraz uzaklaşıp olanları kayıt etmeye başlar. Rick'i gören saldırın ona ateş açar ve Rick vurulur. Louis Rick'i tuzağa düşürmüştür ve onun ölmesine sebep olmuştur. Louis yaptığı tüm etik ihlallerin yanında iş ortağının ölümüne sebep olmuş ve bununla da yetinmemiş bu sahneyi de haberleştirmiştir. Louis Rick'i tuzağa düşürerek çekmiş olduğu bu görüntüler ile gerçeklerin olduğu gibi çarpıtılmadan aktarılması ilkesini hem de şiddeti övmekten, haklı göstermekten kaçınma ilkelerini ihlal etmiştir. **Türkiye Gazetecileri Hak ve Sorumluluk Bildirgesinin İlgili Maddesi (TGC, 2019) "Gerçeklerin Olduğu Gibi Çarpıtılmadan Aktarılması":** Halkın bilgi edinme hakkına bağlı kalarak; haber alma, yorum ve eleştiri yapma özgürlüğünü kullanan gazeteci, sonuçlar kendi açısından ne olursa olsun gerçekleri olduğu gibi çarpıtılmadan aktarmak ile yükümlüdür (T.G.S., 2024). **Türkiye Gazetecileri Hak ve Sorumluluk Bildirgesinin İlgili Maddesi (TGC, 2019) "Şiddeti Övmekten, Haklı Göstermekten Kaçınma":** Gazeteci; şiddete özendirerek, şiddeti haklı kılacak, bireyleri şiddete karşı kıskırtacak yayınlar yapamaz (T.G.S., 2024).

**Sahne 14**

**Sahne Zaman Bilgisi:** 1 Saat 47. Dakika 56. Saniye

**Sahne Diyalog Bilgisi:**

*Frank: Charles suçla mücadele biriminin Granada Hills teki evde uyuşturucu ele geçirildiğine dair bir haber almış. Evin zemininde yirmi kilodan fazla kokain ve sarılı paket bulunmuş ve olay yerindeki müfettişte bunu doğrulamış. Olay konut baskını değil. Uyuşturucu soygunuymuş.*

*Nina Romina: Akşam ekibine ver bunu.*

*Frank: Haberin aslı bu.*

*Nina Romina: Bizim olayın üzerine gölge düşürür.*

*Frank: Olayın aslı bu ama.*

*Nina Romina: Bu olay kenar mahallede işlenmiş kentsel bir suç. Hikâye bu işte.*

*Frank: Tanrım Louis gibi konuşuyorsun.*

*Nina Romina: Bence Louis biraz daha yukarı ulaşmamız için hepimizi teşvik ediyor.*

**Gerçekleşen Etik İhlal:** Haber editörü Frank haberin bir konut baskını değil bir uyuşturucu hırsızlığı olduğunu ve haberi doğrulandığını Nina'ya haber verir. Ancak Nina bunun haber değeri taşımadığını ve akşam haberlerine verilmesi gerektiğini söyler. Frank haberin düzeltilmesi gerektiği üzerine ısrar ederken Nina kendilerine gölge düşürmemek için bunu duymazdan gelmektedir. Bu eylem ile özür dileme, düzeltme ve cevap hakkı tanımak ilkesi ihlal edilmiştir. **Türkiye Gazetecileri Hak ve Sorumluluk Bildirgesinin İlgili Maddesi (TGC, 2019) "Özür Dileme, Düzeltme ve Cevap Hakkı Tanımak":** Gazeteci; yayınlarıyla alakalı yaptığı her yanlış kısa zamanda düzeltmek ve gerekli durumlarda bu yanlışlarla ilgili özür dilemek ile yükümlüdür. Kötüye kullanılmaması ve kabul edilebilir şekilde yapılması koşuluyla cevap hakkına saygılı olmakla yükümlüdür (T.G.S., 2024). Yanlış haber yayınlamak her gazetecinin mesleki açıdan en büyük korkularından biridir. Yapılan hatalı haberler medya kanalına güvenin azalması sonucunu doğurabilir. Ayrıca bazı kişi ve gruplar için büyük sıkıntı verici sonuçlar ortaya çıkartabilir. Hızlı ve tempolu bir sürecin içinde yer alan haber kanallarında yanlış haberler yapmak insani

bir olgu olarak görülebilir. Ancak en kısa sürede hatalı haber ile ilgili düzeltme aksiyonu alınması gerekmektedir. Böylece verilen zarar bir nebze de olsa azaltılabilir.

**Tablo 2. Bulgularda Tespit Edilen Sahnelerin Etik İhlalleri**

| Kategoriler   | 01 | 02 | 03 | 04 | 05 | 06 | 07 | 08 | 09 | 10 | 11 | 12 | 13 | 14 |
|---|----|----|----|----|----|----|----|----|----|----|----|----|----|----|

Yukarıda yer alan tablo incelendiğinde; Gerçeklerin Olduğu Gibi Çarpıtılmadan Aktarılması 3, Demokratik Değerlerin Savunulması 1, Ayrımcılık Yapmaktan Kaçınma 1, Şiddeti Övmekten, Haklı Göstermekten Kaçınma 4, Belgeleri Göz Ardı Etmemek 3, Özür Dileme, Düzeltme ve Cevap Hakkı Tanımak 1, Çıkar İlişkisi Gözetmemek 7 olarak tespit edilmiştir.

## SONUÇ VE ÖNERİLER

Bireylerin mesleki faaliyetlerinde ve kurdukları ilişkilerde uymaları gereken ahlaki standartları ifade eden kavrama meslek etiği denilmektedir. Meslek etiği, bireylerin davranışlarını düzenlemekte ve topluma karşı sorumluluklarını yerine getirmelerinde onlara yardımcı olmaktadır. Gazetecilik etiği ise; yansızlık, nesnellik, denge, mahremiyet ve kamu yararı gibi birtakım konuları içermektedir. Gazetecilerin kamuoyunu bilgilendirme sürecinde; tarafsız haber oluşturması, demokrasiye uygun davranması ve meslek etik ilkeleri çerçevesinde hareket ederek, kamuoyunu doğru bir şekilde bilgilendirmesi gerekmektedir. Gazetecilik etiği; gazetecilerin profesyonel bir şekilde hareket etmesini ve mesleğin gerekliliklerini yerine getirerek, ahlak kurallarına ve toplum normlarına uyulmasını sağlamaktadır. Yasama yürütme ve yargıdan sonra dördüncü güç olarak karşımıza çıkan medyanın, etik dışı olaylarla adından söz ettirmesi, gazeteciliğe olan güveni azaltmaktadır. Özellikle günümüzde teknolojinin gelişmesiyle beraber dönüşen medya, daha fazla okunma ve tıklanma amacıyla etik kurallardan uzaklaşmaktadır.

Basın Konseyi'nin hazırladığı "Basın Meslek İlkeleri" ve Türkiye Gazeteciler Cemiyeti'nin hazırladığı "Türkiye Gazetecileri Hak ve Sorumluluk Bildirgesi'nde" gazetecilik mesleğine ilişkin birtakım etik kurallar belirlenmiştir. Gazetecilik mesleğinin güvenilirliğini korumak amacıyla hazırlanan bu ilkeler bir gazetecinin kamuoyunu bilgilendirme sürecinde izlemesi gereken süreçleri açıklamaktadır. Yapılan haberlerin etik ilkelere uygun olabilmesi için mesleki kuruluşlar tarafından geliştirilen bu etik kodlar tek başına yeterli olmamaktadır. Farklı kuruluşlar tarafından hazırlanan bu etik kodların televizyon ve gazete haberlerinde ne kadar uygulandığı ise bir tartışma konusudur. Sinema sektörü bu tartışmaların şekillenmesinde etkin bir rol oynamaktadır. Sinemada gazetecilik mesleğine ilişkin sunulan imajlar, bu mesleğin algılanış biçimlerini de etkilemektedir. Dolayısıyla sinemada gazeteci imajının nasıl oluşturulduğu oldukça önemlidir. Gazetecilik mesleğini konu edinen filmler, kamuoyunda bu mesleğe ilişkin ortak bir anlayışın oluşmasında etkilidir. Aynı zamanda bu filmler, gazetecilik mesleğine yönelik güven kaybının yeniden inşa edilmesinde önemli çıktılar sağlamaktadır. Bunların yanı sıra sinema filmlerinde izleyicilerin kolayca tanıyabileceği ve bağ kurabileceği evrensel anlam taşıyan arketipler mevcuttur. Sinemada kullanılan gazetecilik arketipleri, film ya da dizi içerisinde gazetecinin sahip olması gereken karakterin temsilidir. Bu arketipler, gazetecilerin mesleklerini icra ederken karşılaşılabilecekleri zorlukları, etik sorunları ve toplum üzerindeki etkilerini ele almaktadır. Geçmişte bu konu ile ilgili yapılmış sınırlı sayıda araştırma bulunmaktadır. Bu araştırmalarda incelenen Hollywood filmlerinde gazetecilik arketipi, genellikle ilgi çekici ve heyecan verici bir şekilde temsil edilmektedir. Bu filmlerde karakterlerin mesleklerine olan bağlılıkları ve verdikleri mücadeleler izleyicilerde ilgi uyandırmaktadır. Aynı zamanda bu filmler gazetecilik mesleğinin önemini ve zorluklarını da yansıtmaktadır. Ancak son dönemde bu konu ile ilgili yapılmış alan araştırmalarında mevcut gazetecilik arketiplerinin, daha fazla okunma ve tıklanma amacıyla sahip olduğu etik değerlerden uzaklaştığı görülmektedir. Bu durumda bilişim çağı ile hayatımıza giren dijitalleşmenin sinemada mevcut arketipleri de değişime uğrattığını söylemek yanlış olmayacaktır. Bu çalışmada Amerikan sinemasında gazetecilik mesleğinin sunuluş biçimi, Nightcrawler filmi üzerinden ele alınmıştır. Nightcrawler filmi, Türkiye Gazeteciler Cemiyeti tarafından hazırlanan Türkiye Gazetecileri Hak ve Sorumluluk Bildirgesi ve Gazetecilik Meslek Etik İlkeleri Küresel Bildirisi'nde düzenlenen etik çerçeve bağlamında içerik analizi yöntemi ile incelenmiştir. Bu bağlamda çalışmada şu sonuçlara ulaşılmıştır:

Haber üretimi sürecinde olaylara erişim imkanına sahip olan gazeteci, elde ettiği tüm bilgileri kendi çıkarları için kullanmakta ve maddi-manevi bir yarar elde etme çabası içine girmektedir. Haber içeriklerinde abartılı söylemlere yer verilmektedir. Bu durum haberleri, gerçek bağlamından uzaklaştırılmaktadır. Bunların yanı sıra gazeteci; şiddete özendirilen, şiddeti haklı kılan ve şiddete karşı insanları kışkırtan yayınlar yapan kişi olarak gösterilmektedir. Gazeteci burada çıkar ilişkisi gözetilen ve bu çıkar ilişkisi ile meslek etiğini çiğneyen kişidir. Toplum üzerinde gazetecilerin etkisi oldukça fazladır. Bu durum onların daha hassas davranması gerektiğine dikkat çekmektedir. Fakat çalışmada incelenen filmde gazeteci; ayrımcılık ilkesi ile karşı karşıya getirilmektedir. Tüm bireylerin haklarına saygı göstermesi, ayrımcılık yapmaması ve herkese eşit davranması gereken gazeteci, bu filmde ayrımcılık yapmaktan kaçınmamaktadır. Gazetecinin temel görevi olan kamuoyunu bilgilendirme işlevi bu filmde farklı bir anlayış ile ele alınmaktadır. Gazeteci, haber üretim sürecinde elde ettiği verilere müdahale ederek, veri ve bilgi hırsızlığı yapmaktadır. Belgeler üzerinde değişiklik yapan, bilgileri yok eden ve elde ettiği bazı bilgileri göz ardı eden gazeteci, etik ilkelerin dışında hareket etmektedir. Hukukun üstünlüğü, demokrasi, laiklik, insan hakları ve barış gibi evrensel değerleri temel alması gereken gazetecinin bu değerlere aykırı olarak hareket etmesi, gazetecilik mesleğine ilişkin farklı bir imajın yaratılmasında etkili olmaktadır. Bunlara ek olarak; gazetecinin her türlü faaliyetinde konumundan bağımsız olarak haber kaynağı olan kişiler ya da kurumlar ile iletişim ve ilişkisinde meslek ilkelerini gözetmesi gerektiği düşüncesi filmde ters yüz

edilmektedir. Filmde yer alan gazeteci karakter, haber üretim sürecinde her türlü etik ihlali gerçekleştirmekte ve meslek ilkelerine zarar vermektedir. Dolayısıyla filmde gazetecilik mesleğinin ele alınış biçimi deontolojik etikte yer alan; ilkelere bağlı kalarak karar verme, tüm kararların doğru, tutarlı ve tarafsız bir şekilde ele alınması gibi düşüncelerle ters düşmektedir. Hakkaniyet ilkesinin ön planda tutulduğu deontolojik etikte, önemli olan eylemlerin sonucu değil benimsenen ilke ve değerlerdir. Bu bağlamda filmde meslek etiği dışında hareket edilmesi, doğru kararların alınmaması gibi durumlar deontolojik yaklaşımın dışındadır. Deontolojik etik ahlaki kusursuzluğu, dürüstlüğü ve doğruluğu erdemli davranışa bağlamaktadır. Filmde yer alan gazeteci karakterin sansasyon yaratabilmek adına sergilediği etik dışı davranışlar bu ilkelerin yerine getirilmesinin önünde büyük bir engel oluşturmaktadır. Deontolojik etik kuramında çıkar elde etmeye odaklanan fırsatçı bireylerin erdemli olmadığı düşüncesi hakimdir. Bu bireyler kendi çıkarları için diğer bireyleri bir araç olarak kullanmaktadır. Çalışmada incelenen filmde gazeteci karakter kendi çıkarları için diğer insanları bir araç olarak kullanmakta ve bundan maddi-manevi bir kazanç elde etmektedir. Deontolojik etikte odaklanılan nokta davranışın ardında yatan niyet, ödev, yükümlülük, hak ve görev bilinci üzerinedir. Dolayısıyla bu etik anlayışta kişiden kişiye değişmeyen, saf etik anlayış bilincine değinilmekte ve eylemler bu anlayış ile değerlendirilmektedir. Bu kurama göre bir davranış; yasa, hak, hukuk, görev ve ilke gibi kavramlarla tutarlı ise o davranışın etik bir davranış olduğu ifade edilmektedir. Filmde yer alan gazeteci karakterin mesleği icra ediş şekli bu kavramlarla tutarlılık göstermemektedir.

Bu bağlamda Nightcrawler filmi; gazetecilik meslek etiği ilkelerini olumsuz bir bakış açısı ile ele almaktadır. Basın ve sermaye ilişkisine dikkat çeken bu filmde, medyanın ticari bir boyut kazandığına değinilmektedir. Filmde yer alan gazeteci ana karakterin, meslek etiği ilkelerine aykırı hareket etmesi, özgür basın anlayışına yönelik bir eleştiri olarak karşımıza çıkmaktadır. Gazetecinin etik ilkeler dışına çıkarak sansasyonel senaryolarla haber üretmesi, haber üretim süreçlerinin rekabete dayalı bir şekilde gerçekleştiğine ilişkin yapılmış bir eleştiridir. Gazeteciler bu filmde; sansasyon yaratacak haberleri üreten, gerçeği inşa eden ve dönüştüren kişiler olarak ele alınmaktadır. Ayrıca filmde gazetecilik mesleğini yapabilmek için meslek erbabı olma zorunluluğunun bulunmaması ve bu mesleği herkesin yapabilmesi durumu, bu mesleğe ilişkin getirilen bir diğer önemli eleştiridir. Bu filmde haberin yapılma amacı reytingleri arttırmak ve para kazanmaktır. Sistem bu anlayış üzerine kurulmakta ve sektörde fark yaratmak adına meslekte her türlü sahtekarlık yapılmaktadır. Burada asıl amaç kamuoyunu bilgilendirmek değil, sansasyon yaratarak reytingleri arttırmaktır. Amerikan sinemasında gazetecilere yönelik çizilen bu imaj meslekte; karanlık ve aydınlık, adalet ve adaletsizlik, bireysellik ve toplumsal çıkarlar gibi ikilemler arasındaki gerilimi ortaya koymaktadır. Dolayısıyla film bu ikilemlere karşı farklı bakış açıları geliştirerek, mesleğe yönelik birtakım eleştiriler sunmaktadır.

Son olarak; gazetecilik filmleri toplum üzerinde farkındalık yaratmak, onları düşündürmek, onların güvenlerini kazanmak gibi amaçlar doğrultusunda yapılan kültürel bir mirasın parçasıdır. Bu bağlamda gelecek dönemde yapılacak çalışmalarda; sinemada kullanılan gazetecilik arketiplerinin sahip olduğu ve savunduğu etik değerlerin; geçmişte ve günümüzde yapılan filmler üzerinde karşılaştırmalı bir analiz yapılması, literatüre önemli katkılar sağlayacaktır. Bu etik değerlerin nasıl inşa edildiği, topluma nasıl lanse edilmek istendiği gibi birtakım unsurların ortaya konması gazetecilik mesleğine ilişkin önemli çıktılar sağlayacaktır. Bunlara ek olarak gelecek çalışmalarda gazetecilik mesleğinin ele alındığı filmler üzerine John Stuart Mill'in "Faydacılık Etiği", Immanuel Kant'ın "Deontolojik Etiği" ve Profesyonel Gazeteciler Cemiyeti (SPJ) 'nin "Etik Kuralları" çerçevesinde de bir değerlendirme yapılması literatüre büyük bir katkı sağlayacaktır.

## ÖZET

Web 2.0 ile birlikte internetin hayatımıza kattığı hız, gündelik alışkanlıklarımızda köklü değişikliklere sebep olmuştur. Bunların başında da tüketim alışkanlıklarımız gelmektedir. Akıllı telefonlar sayesinde her şeyi bir tık ötemizde bulabilmekteyiz. İnternetin küreselliği sayesinde dünyanın herhangi bir noktasındaki ürünle ilgili tüm bilgiler elimizin altında olabilmektedir. Bireylerin satın alma reflekslerinde de değişikliklere sebep olan dijital çağda rekabet de küresel bir boyuta taşınmıştır. Neyin pazarlandığı kadar ürünün pazarlandığı mecra ve pazarlayan da önem arz etmektedir. Klasik pazarlama stratejileri yerini, sosyal medyayla yoğrulmuş dijital yeni nesil tüketicilere hitap eden yöntemlere bırakmaktadır. Bu kapsamda karşımıza sosyal medyanın hayatımıza kattığı "dijital çevrimiçi kanaat önderleri" çıkmaktadır. Tüketim alışkanlıklarının değişiminde (influencer) çevrimiçi etkileyicilerin önemli bir payı bulunmaktadır. Özellikle sosyal medya üzerinden paylaşım yapan etkileyicilerin her paylaşımı, mecrayı ya da kendilerini takip edenlerin düşüncelerine etki ederek, satın alma ve tüketim davranışlarını yönlendirmektedir. Kullanıcılar fenomenlerle kurdukları iletişimde, görsel içeriklere kodlanmış anlamlara maruz kalmakta ve kendi dijital kimliklerini bu mesajlarla şekillendirerek yeniden dönüştürmektedirler. Araştırmanın amacı, sosyal medya mecralarında fenomen olarak görülen influencer'ların tüketim kültürünün inşasında ne gibi yöntemler uyguladıklarını ve bunun kullanıcıların, takipçilerin üzerinde nasıl bir etki oluşturduğunu belirlemektir. Araştırmanın evrenini Instagram fenomenleri oluşturmaktadır. Örneklem olarak amaçlı örneklem tercih edilerek Instagram'da bir milyonun üzerinde takipçisi olan influencer'lardan Yasemin Sakallıoğlu ele alınmıştır. Çalışmada yer alan görsellerin çözümlemesinde Roland Barthes'in göstergebilim çözümleme yöntemi tercih edilmiştir. İçerikler düz anlam, yan anlam ve derin anlam olarak incelenmektedir. Çalışmada ulaşılan bulgular doğrultusunda, örneklemdeki influencer'ların vücut dillerinden, mimiklerine kadar tüm görsel ifade kodları, takipçilere tüketim noktasında pozitif mesajlar iletmektedir. Araştırma sosyal medya üzerinden tüketim alışkanlıklarının yeniden şekillenmesinde bilinç ve duyarlılık oluşturması noktasında önem taşımaktadır.

## ABSTRACT

The speed that the internet has added to our lives with Web 2.0 has caused radical changes from the past to the present. The first of these is our consumption. Thanks to smartphones, we can find everything just a click away. Thanks to the globality of the Internet, all the information about the product in any collection in the world is at our fingertips. In the digital age, which also causes changes in the purchasing reflexes of individuals, competition has also moved to a global dimension. What is marketed is as important as the medium where the product is marketed and the marketer. The classical target marketing place is left to those who aim to appeal to the digital new generation homeowners mixed with social media. This hosting is the "digital browsing opinion protectors" provisions that social media has added to our lives. Online influencers have a significant share in the consumption responsibility (influencer). In particular, each share of influencers who share on social media is directed to purchase and consumption by influencing the use of the media or similar ones by their followers. Users are exposed to coded meanings in visual content in their communication with phenomena and they re-transform their digital identities by shaping them with these messages. The aim of the research is to determine what kind of targeting influencers, who are seen as a phenomenon in social media channels, apply in the construction of the consumption culture and how it affects users and followers. The home of the research is Instagram phenomena. As an example, Yasemin Sakallıoğlu, one of the influencers who have more than one million followers on Instagram, is chosen on purpose. Roland Barthes' semiotic analysis method was preferred in the analysis of the visuals in the study. The contents are examined as denotation, connotation and deep meaning. Measuring the research reached in the study, all visual expression codes, from the body language to the mimics of the influencers in the observation, convey

the positive messages targeted by the users to the followers. Research focuses on creating awareness and security in the reshaping of consumption expenditures through social media.

**Keywords:**Advertising, Consumption Culture, Social Media, Instagram, Semiotics

## GİRİŞ

Dünya ile birlikte var olan insanoğlu için iletişim kurma isteği ilk andan itibaren önemli bir yer tutmuştur. İnsanlar gündelik temel gereksinimlerin karşılanması, diyalog kurmak, ticari ilişkilerde bulunmak gibi farklı amaçlar için çeşitli iletişim yöntemleri ve araçlar kullanmışlardır. İlk insanların ateş yakarak iletişim için çıkan dumanı kullanmalarının üzerinden çok uzun asırlar geçmiş ve iletişim teknolojilerindeki gelişmeyle birlikte süreç bambaşka bir boyuta ulaşmıştır. İnternet olgusunun hayatımıza girmesi ve yeni medya araçları, sosyal medya platformları süreçteki sıçrama tahtaları olarak kabul edilmektedir. Web 2.0 ile birlikte teknolojik gelişmeler baş döndüren bir hızda toplumsal yapıyı etkilemiş, yeni iletişim kanallarının belirmesi ile birlikte konvansiyonel medya unsurları tahtını sosyal medyayla paylaşmak durumunda kalmıştır. İletişimde iki yönlü etkileşimi geçerli kılan yeni medya platformları, tek yönlü iletişimi temel alan geleneksel medyanın aksine etkileşimi, paylaşımı, çok sesliliği, tercih edebilirliği geçerli kılarak izleyici konumundaki kullanıcıları içerik üreticisi pozisyonuyla iletişimin içine çekmiştir.

Yeni medya araçları kullanıcılara sosyalleşme imkânı sunarken diğer yandan ekonomi bağlamında pazarlama ve reklam algısında da değişikliğe sebep olmuştur. Önceden televizyon, radyo, gazete veya sinema üzerinden herhangi bir ürün, fikir, şirket v.b. için verilmek istenen mesajlar; artık sosyal medya platformları üzerinden çok daha geniş kitlelere çok daha hızlı şekilde aktarılabilmektedir. Yeni medya araçlarının bu azımsanmayacak etkisini fark eden şirketler, sosyal medya platformları üzerinden müşterilerine tanıtım gerçekleştirebilmekte ve daha düşük maliyetlerle ürünlerinin reklamlarını yapabilmektedirler. Bu da pazarlama pratiklerinin tekrar gözden geçirilmesini ve revize edilmesini gerekli kılmaktadır. Tüm bunlar olurken; müşterilerde oluşturulmak istenen eylemi desteklemek için; renklerden, şekillere; sloganlardan, ürünü tanıtan canlı veya cansız aracıya kadar bir çok alt mesaj barındıran unsur da reklam içeriğine yerleştirilmektedir. Bu aşamada ilk anda fark edilmesi zor olan mesajları anlamlandırmak, diğer tanımıyla okumak için; göstergebilim çözümleme yöntemi nitel araştırma teknikleri içinden sıyrılarak kullanıcılara kılavuz olmakta ve yön vermektedir.

Reklam içeriklerindeki yazılı, sesli veya görsel içerikli göstergelerin anlamlandırılması sayesinde, tüm unsurların kendi aralarında kurdukları birliktelikle verilmek istenen mesaj da çözümlenebilmektedir. Kullanıcılara anlamlı gelen bütünsel yapıdaki içerik; birbirini destekleyen yazınsal, sözel ve görsel boyuttaki küçük parçalarına ayrılarak incelendiğinde aslında iletişim eylemi de yeni bir boyut kazarmış olmaktadır. Yeni medya platformlarında göstergebilim, içerik üreticilerinin oluşturdukları mesajın değerlendirilmesi ve profil özelliklerinin çözümlenebilmesi için tercih edilebilmektedir. Soylu (2022) bu anlamlandırmayı üç farklı kategoride değerlendirerek Barthes'in analizlerinde yer verdiği derin anlamı da işin içine katarak anlamlandırma sürecini düz anlam, yan anlam ve derin anlam olarak ele almaktadır (Soylu, 2022, s. 26-27). Araştırmada düz anlam, yan anlam ve derin anlam incelemesinde ilk akla gelen anlam olarak tanımlanan düz anlam ve çağrıştırdıkları olarak nitelenen yan anlamın yanı sıra tüm göstergeler toplumsal kodlar üzerinden ideolojik anlamları bulunan derin anlamlar da ihtiva etmektedir. Çalışmada seçilen görsellerdeki göstergelerin çağrıştırdıkları derin anlamlar; modernizm, teknoloji, ideoloji, bilim, pragmatizm, hedonizm, kültür, mistisizm, mitoloji, pragmatizm, kapitalizm, v.b. ideolojiler ışığında çözümlenmiştir (Soylu, 2022, s. 45-46).

Bu araştırmanın sınırlılıklarını içinde bulunduğumuz süreçte popülerliğini her geçen gün arttıran Instagram platformundaki influencer'lar oluşturmaktadır. Örneklem olarak influencerlar arasından seçilen Yasemin Sakallıoğlu'nun "Bianca Stella Boya" tanıtım videosu seçilmiştir. Araştırmada reklam, tüketim olgusu, gösterge ve gösterge bilim kavramları işlenmektedir.

## Literatür Taraması

Literatür incelemesinde araştırmamızla ilgili çalışmalara rastlanmaktadır. Bunlardan ilki Değerli'nin (2021) göstergebilim temelli, sosyal ağ konulu afişlerinin çözümlenmesine dair çalışmadır. Araştırma kapsamında 2009 yılından çalışmanın hazırlandığı zamana kadar süregelen, uluslararası afiş yarışmasındaki afişler incelenmiş, yalan haber başlığıyla ödül kazanan ilk üç afiş değerlendirilerek, göstergebilim yöntemi aracılığıyla çözümlenmiştir (Değerli, 2021, s. 183).

Bir başka çalışma ise Ünlü ve Filan tarafından tüketim toplumu eksenli Instagram influencer'larının analiz edildiği çalışmadır. Çalışma çerçevesinde takipçisi sayısı fazla olan beş influencer'ın gösteriş tüketimini desteklediği düşünülen fotoğrafları göstergebilim yöntemiyle işlenmiştir. Profillerindeki göstergeler, tüketim analizine imkan sağlayan eşya, ürün, mekan içerikli fotoğraflar üzerinden incelenmiştir (Ünlü & Filan, 2021, s. 47).

Konu ile ilgili diğer bir araştırma ise Netflix'teki Türk dizilerinin afişlerini göstergebilim yöntemiyle ele alan Holat'ın çalışmasıdır. Araştırma kapsamında yapımcılığını yayınlanan platformun üstlendiği "Atiye" ve "Muhafız" dizilerinin afişlerindeki göstergeler Charles Sanders Peirce tarafından "görüntüsel gösterge, belirti, simge" başlıklarıyla çerçevesi çizilen üçlü gösterge kurgusuyla değerlendirilmiştir (Holat, 2021, s. 309).

Literatür taramasında konumuzla ilgili Demirel ve Karanfiloğlu'nun çalışması da dikkat çekmektedir. İkili araştırmalarında Instagram platformunda paylaşılan yemek görsellerinin kimlik inşası kapsamında tüketime etkisini ele almıştır. Platformda bir hafta süresince 24 saat boyunca yemek etiketi üzerinden yapılan paylaşımlar ele alınmış ve içerisinden paylaşımlar arasından son on tanesi seçilerek Roland Barthes'ın göstergebilimsel analiz yöntemiyle çözümlenmiştir (Demirel & Karanfiloğlu, 2020, s. 246).

Bu alanda yapılan başka bir araştırmada Bilbil ve Aydoğdu (2021), STK'ların yayınladıkları reklamların kullanıcılar nezdindeki çağrışımlarını, içeriklerdeki göstergeler üzerinden değerlendirmiş ve verilmek istenilen mesajların kodlarını yine göstergebilimsel çözümleme tekniğiyle incelemişlerdir. Çevre, sağlık ve eğitim sektöründe hizmet veren STK'ların reklamlarındaki göstergeler yorumlanarak; kullanıcılar nezdindeki çağrışımları analiz edilmiş ve mana farklılıklarının bağlantıları, göstergelerin ele alınış biçimi analiz edilmiştir (Bilbil & Aydoğdu, s. 198).

## Reklam

Geleneksel tüketim ve satış fonksiyonlarının ana unsurlarından biri olan reklam olgusu, teknoloji ve internetle yaşanan gelişmelere paralel olarak yeni bir hale bürünmüştür. Bu kavram artık sadece firmalar için değil bireyler için de öne çıkan bir unsur olarak görülmektedir. Ürün satışı ve pazarlama aşamalarında tercih edilen reklam; ortaya konulan bir fikrin, ürünün, hizmetin; alıcı konumundaki kişilerde o ürünü satın alma güdüsü oluşturacak ve sonrasında alım fiiline yönlendirecek teşvik edici bir araç, sunum olarak nitelenebilmektedir.

İletişim çerçevesinde reklam kavramı ele alındığında, çeşitli iletişim platformları üzerinden, maddi bedeli tespit edilmiş olan ürünle ilgili, satın alma ya da almama fiilini kişinin rızasına bırakan tanıtma ve istek oluşturma sistematigi olarak tanımlanabilmektedir. Satış fiilinin yanı sıra, bilinirlik oluşturmak, algıları yönetmek, ilan etmek, enformasyon sağlamak, farkındalık oluşturmak gibi gayelerle de kullanılarak bu amaçlara hizmet eden eylemler bütünü nitelemesi de yerinde bir tanımlama olacaktır (Dokeroglu & Gökçearslan, 2020, s. 315).

TDK sözlüğünde kelime Fransızca kökenli olarak tanımlanmakta ve "Bir şeyi halka tanıtmak, beğendirmek ve böylelikle sürümünü sağlamak için denenen her türlü yol, bu amaç için kullanılan yazı, resim, film vb." (Türk Dil Kurumu, 2023). olarak nitelenmektedir. Literatür taramalarında terimin farklı yorumlarına da rastlanmaktadır. Maigret (2013)'a göre reklam; doğrudan olmasa da dolaylı yoldan geniş bir etki bırakarak, kişisel tercih etme ve toplumsal ölçekte algıyı yöneterek, benzerlerinden sıyrılabilmek adına pazarlanan ürünün imajlarla desteklenmesi olarak adlandırılmaktadır (Maigret, 2013, s. 80).

Diğer yandan farklı tanımlamalarda reklam; anlam oluşturma süreci olarak ele alınmaktadır. Reklamlarda kullanılan öğelerin, kelimelerin, ifadelerin; metalara kutsallık yükleyerek, sahiplik arzusunu tetiklediğine dikkat çekilmiştir. Tesirli bir propaganda mecrası olarak konumlandırılan reklam sayesinde, kültürler şekillendirilebilmekte, istek ve arzular değiştirilebilmekte ve tüketim olgusu harekete geçirilerek yeni istek ve arzular inşa edilebilmektedir (Hızal, 2005, s. 54).

Reklam kavramının kırılma ve ivmelenme aşamalarının başında; kağıdın Avrupa ülkelerinde kullanımı, matbaanın güncel hayata girmesi, yazılı basın 18. yüzyıl öncesi etkinliği, sonrasında tv ve radyo ile birlikte konvansiyonel medyanın etkisini artırması ve ardından yeni medya ile birlikte mesajların üretim ve dağıtım içeriklerinin değişmesi gösterilmektedir. Reklam, ürün satış stratejilerinin önemli bir ögesi olup; kişiyi, kullanıcıyı, tüketiciyi, bilgilendirme ve iknaya dönük amaca hizmet etmektedir. Bu çerçevede yayınlanma alanı olarak da farklılık gösteren reklam mecraları; gazete, billboard, TV, dergi, radyo ve internet, sosyal medya platformları olarak gösterilebilmektedir (Hilmi, 2008).

Geleneksel medyadan farklı çalışma dinamiklerine sahip olan sosyal medya ile birlikte reklam kavramı da yeni bir tanımlamaya tabi tutulmaktadır. Uygulama şekilleri, icra alanları, zamanlama, geri dönüş süresi, ölçülebilirlik gibi veriler yeni medyada reklam tanımlamasını ve amacını başka bir forma sokmaktadır. Yeni medya ile birlikte artık tüketiciler aynı zamanda üretici konumuna da gelmiş bu da kullanıcıları pasif olmaktan çıkararak aktif duruma getirmiştir. Ağ bağlantısı sayesinde reklamla verilmek istenilen mesaj, daha geniş kitlelere ulaştırılabilmekte ve algılar toplumsal ölçekte yönlendirilebilmektedir. Bu bağlamda reklam kavramı da kabuk değiştirmiştir. Günümüzde internet sayesinde zaman mefhumu ortadan kalkarken artık tüketicilere her an ve her mekânda reklamlar aracılığıyla ulaşılabilir ve ürün pazarlanabilmektedir. Dijital reklamcılığı; temelinde geleneksel reklamcılık öğelerini barındıran ancak teknolojik gelişmelere bağlı olarak internetin de sağladığı artı avantajları lehine kullanarak, çift yönlü etkileşime imkân tanıyan, yeni reklam türü olarak tanımlamak doğru olacaktır. Tanıtım fonksiyonunun yanına artık satış ve dağıtım fonksiyonları da eklenmektedir (Cömert & Yükselen, 2017, s. 52-53).

## Sosyal Medya ve Tüketim Kültürü

Varoluşla birlikte insanlar da güncel hayatlarını daha konforlu hale getirmek için çabalamışlardır. İşlerini kolaylaştıran yeni aletlerin yanı sıra; karşılıklı iletişim ve anlaşma için de farklı deneyimleri yüzyıllar boyunca tecrübe ederek tekâmül ettirmişlerdir. Dumanla haberleşmeden, yazılı kitabelere; güvercinle mesajlaşmadan, ulaklarla ferman iletimine kadar birçok merhaleden geçen iletişim olgusu günümüzde bambaşka bir hal almıştır. İletişim; bu uzun soluklu hikayesinde artık sadece haberleşme olarak düşünülmemekte, bunun yanı sıra eğlence,

bilgilenme, tanıtım gibi birçok formda karşımıza çıkmaktadır. Öyle ki toplumsal refleksler ve ülkelerin beyanatları dahi bu yeni iletişime ayak uydurmaktadır. Sembollerle başlayan iletişim süreci, yazıyla devam etmiş, onu telefon ve radyo takip etmiş, sonrasında televizyonla sıçrama yapmıştır. Şimdi ise bu süreç internet ve sosyal medya platformları ile en etkin dönemini yaşamaktadır.

İletişimin bu tarihsel süreçte geçirdiği hızlı dönüşümün sıçrama tahtası olarak internet ön sıralarda yer almakta, bilginin kaynağı misyonuyla, bilgi çağı olarak isimlendirilen çağımıza isim babalığı yapmaktadır (İspir, 2013, s. 9). Motivasyonu büyük bilgi havuzundaki verileri paylaşmak olan Web 1.0 ile başlayan süreç kullanıcıların da aktif olarak işin içerisine çekilmesiyle karşılıklı etkileşimi olanaklı kılmış ve bir sonraki aşama olan web 2.0, Web 1.0'ın yerini almıştır. Bu değişimle birlikte artık tüm kullanıcılar birer içerik üreticisi olarak, gönüllü şekilde yeni medyanın zenginleşmesine katkı sunmaya başlamışlardır (Bircan, 2022, s. 311).

İnternetin hayatımızın her alanındaki etkisi, içinde bulunduğumuz bin yılın başlangıcında Web 2.0 ile birlikte sosyal medya olgusuna da hayat vermiştir. Akıllı telefonla ivme kazanan süreç içerisinde; tablettten, bilgisayara, sanal ödeme sistemlerinden, sanal gerçeklik aparatlarına kadar birçok teknolojik enstrüman da sosyal medyaya eklenerek her anımızda bizimle birlikte yaşamaya, büyümeye, kendini geliştirmeye devam etmektedir (Tosyalı & Sütçü, 2016, s. 9). Karşılıklı iletişime imkân tanıyan yeni medya platformları kendi içinde ayrı bir yaşam dinamiklerini oluşturarak, insanların zamanlarının büyük bir kısmını bu platformlarda geçirmelerine ve tüm aktivitelerin, beğenilerin, tasarımların, dataların anlık paylaşımına imkân tanımaktadır (Uzundumlu, 2015, s. 230). Bu aşamada tüketim ve tüketim kültürü kavramını da ele almak yerinde olacaktır. İhtiyaçların giderilmesi ve temini noktasında tüketme ya da satın alma fiili olarak nitelenen tüketim olgusu; zamanla duygusal doyum için de kullanılabilir. Tarih boyunca meydana gelen her olayla birlikte tüketim kavramı kabuk değiştirmektedir. Sanayi Devrimi'nden, dünya savaşlarına, teknolojik atılımlardan, günümüzde geldiğimiz yapay zekâ çalışmalarına kadar her merhale tüketim alışkanlıklarını ve tüketim kültürünü derinden etkilemektedir. Ortaya çıkartılan ürünün satışında; kullanıcılar ya da tüketicilerde etki oluşturmak kalıbıyla tanımlanan tüketim kültürüne yeni misyonlar da eklenmiş ve kavram isteklerde, yaşam tarzında farklılığın ve üstünlüğün öncelendiği bir hayat tarzı olarak tanımlanmaya başlanmıştır. Tüketim kültürü; günümüzde statü kurma, ilgi çekme, imaj oluşturma görevlerini de bünyesine katarak yeniden anlamlandırılmaktadır (Ünlü & Filan, 2021, s. 41).

Ürün pazarlamanın tamamlayıcı unsurlarından biri olan reklamın tanımı da sosyal medyanın günümüzdeki etkisiyle birlikte değişikliğe uğramaktadır. Daha önceleri tek yönlü olarak bilgi ve tanıtım amaçlı yapıldığı söylenen reklam; artık çift yönlü, geri dönüşleri olan, etkileşime açık ve internet tabanlı ortamlarda hayat bulmaktadır. Bu interaktif yanı sadece ürünün pazarlanmasını destek olmakla kalmamakta, etkileşimin sağladığı bilgi akışıyla ürünün hem bireysel hem de toplumsal etkisi ölçülebilmektedir. Ayrıca daha mükemmelin yakalanması noktasında ürün pazarlayıcılara destek olmaktadır. Ağ bağlantısı sayesinde tüketicilerin etkileri de değişiklik göstermektedir. Artık kişiler sadece tüketici değil aynı zamanda içerik üreten, farklı tüketim alışkanlıklarını takip edebilen, deneyimleyebilen, görüş aktarabilen, yorumları ve paylaşımlarıyla ürüne ve satışa yön veren konumuna gelmektedirler. Yeni medya platformları ile sağlanan etkileşim, hız; tüketim alışkanlığının daha geniş kitlelere yayılmasına ve artmasına zemin tesis etmektedir (Ünalın, 2021, s. 19).

Yeni medya araçlarına, toplumu ve alışlagelmiş kültürel dinamikleri dönüştürme gücü veren öncüllerin başında; kullanıcıların düşük maliyetlerle platformlara erişim imkânı bulmaları ve internet sayesinde küresel ölçekte etkileşim fırsatı sunması gösterilebilmektedir (Hatıplı, 2017, s. 46).

## Instagram

2010 yılında; Kevin Systrom ve Mike Krieger'in fotoğraf düzenleme ve dolaşıma sokma platformu olarak hayata geçirdiği Instagram; kısa sürede popülerliğini arttırmış, alanında birincilikler almış, bir yıl içerisinde 15 milyon üye ve 400 milyon fotoğraflık veriye ulaşarak birçok ünlünün ilgisini çekmiştir (Bostancı, 2019, s. 43-44).

Diğer sosyal paylaşım platformlarıyla benzer kuruluş hikayesine sahip olan Instagram'ın, ortaya çıkış mottosu da aynı şekilde benzerlikler göstermektedir. Kişilerin sosyalleşme ihtiyacına cevap verme amacıyla yola çıkan Systrom ve Krieger; bilişimin sağladığı olanaklardan sonuna kadar yararlanmış ve bilişim sektörü alanında edindikleri deneyimleri yeni platforma yansıtarak inovatif bir çalışmayla Instagram'ı hayata geçirerek alandaki önemli bir boşluğu gidermişlerdir (Alamaslı, 2021, s. 43).

Instagram uygulama alanıyla ilgili yaptığı tanımlamada kendisini; kişilerin çevrelerindeki dostlarıyla ve dijital ağ üzerinden istedikleri herkesle, anlık olarak video ve fotoğraf formatında içerik paylaşmalarına imkân sağlayan ortam olarak nitelendirmektedir. Kullanıcılara ürettikleri içeriklere filtrelerle müdahale kolaylığı sunan Instagram, bu fonksiyonuyla bireylere profesyonel deneyimler de sunmaktadır. Farklı platformlarla entegrasyonu sayesinde üretilen içeriğin farklı mecalarda sunumuna da imkân sağlayan Instagram'da kullanıcılar; yayınlanan içeriklerle ilgili fikir beyan edebilmekte, beğenide bulunabilmekte, beğenilerini kayıt altına alarak, arşivleyerek kişisel data oluşturabilmektedirler.

Kullanıcı olarak temel prensipleri karşılayan herkes profil oluşturabilmektedir. Etkileşim imkânı sayesinde kullanıcılar tercihte bulunabilmekte ve beğenileri doğrultusunda başka bireyleri ve paylaşımlarını beğenerek takibe alabilmektedir. Karmaşık olmayan yapısı Instagram'a kolay erişimi mümkün kılarken, farklı kişilik ve

beğeni reflekslerine sahip bireyleri aynı ortamda buluşturma imkânı da tanımaktadır. Birçok kişi tarafından kullanılan ve tercih edilen Instagram'ın şirketler tarafından bu pozitif yönlerinin fark edilmesi, onu yeni bir pazarlama alanı olarak öne çıkarmakta; hedef kitleye erişim sağlama ve mesajların karşı tarafa ulaştırılarak, kanaatleri davranışa dönüştürme açısından tercih edilir sosyal medya platformu konumuna taşımaktadır (Yavuz, 2017, s. 3-4).

Çıkış pratiğinde; fotoğraf paylaşma amacı taşıyan Instagram; beklendiğinden ya da tahmin edilenden çok daha farklı bir aşamaya evrilerek artık içinde bulunduğumuz zaman diliminde, alışveriş ortamına dönüşmektedir. Bu başarıyı platforma kazandıran ana etmenlerden biri de internet ve teknolojiye yaşanan hızlı gelişmeler olarak gösterilmektedir. Popülerliğini kısa sürede artıran Instagram kişilerin yanı sıra satış noktasında reklamı ön planda tutan firmalar tarafından da öncelikli tercih edilen alan olarak kullanılmaktadır. Kurumsal firmaların yanı sıra şirketler kadar bütçeye ve etkiye sahip olmadıklarını düşünen bireysel üreticiler ve kullanıcılar tarafından da Instagram reklam ve satış mecrası olarak tercih edilmektedir. Kullanıcı sayısının milyonlara ulaştığı Instagram; bu sebeple bile ister istemez kişiler ve kurumlar tarafından yeni bir reklam alanı ve yeni bir alışveriş merkezi konumuna taşınmıştır. Ona bu başarıyı sağlayan unsurların başında; her geçen gün takipçi sayısını daha da arttırması ve buna bağlı olarak kullanıcı sayısının getirdiği ünle, etki gücünü fark eden fenomen dediğimiz ünlüler tarafından tercih edilmesi gösterilmektedir.

Zamanla kendi içerisinde satış ve reklam dinamiklerine yeni bir anlayış kazandıran Instagram; yorum yapma, alışveriş için link bırakma, beğeni gibi fonksiyonlarla kitlesini kendisine daha da bağlamaktadır. Tüm bu unsurlar domino etkisi yaratarak; reklam ve satış mecrası olarak daha fazla kişinin Instagram'ı tercih etmesini tetiklemekte ve abone sayısının da gün be gün artmasına itici güç desteği sağlamaktadır. Geleneksel alışveriş kültürüne farklı bir konsept kazandıran Instagram'da fiziki olarak gidip mağazadan alınabilecek ürünler artık bir tuşla çok kısa bir sürede ayağınıza gelmekte, ayrıca sadece bir ürüne, bir satıcıya ya da bir fenomene bağlı kalmadan kullanıcılara birçok farklı seçenek arasından seçim yapma imkânı sunmaktadır (Yanık & Yegen, 2015, s. 370-371).

Tüm kabuk değişikliklerine bağlı olarak, kendi iç dinamiklerini yenileyen Instagram; asıl uygulama alanı olan fotoğraf ve video içerik paylaşımı safhasını çok hızlı atlamış, artık üretilen bir metanın satış ve alış alanı olarak kendisini yeniden kodlayarak, yeni kimlikler oluşturmuştur (Yanık & Yegen, 2015, s. 384).

Günümüzde global ölçekteki pazarlamanın reklam ayağında; çok sayıda takipçisi olan ve gerçek hayatta kanaat önderine karşılık gelebilecek, sosyal medya çerçevesinde ise fenomen olarak nitelendirilen kişiler tercih edilmektedir. Bu kişiler aynı zamanda influencer ve blogger terimleriyle de adlandırılmaktadır. Influencer'lar sanattan, ulaşım; giyimden, teknolojiye; kozmetikten, inşaat sektörüne kadar birçok alanda boy göstermektedir. Çok sayıda takipçiye sahip olan influencer'lar; hazırladıkları içerikleri takipçileriyle paylaşarak onların davranışlarını etkilemekte ve satın alma reflekslerini harekete geçirerek kendilerinin ya da reklam yüzü olduğu şirketlerin karlarına satış desteğiyle doğrudan etki etmektedirler. Influencerları reklam ve pazarlama aşamasında diğerlerinden farklı kılan ve öne çıkartan unsurun, bireysel yeteneklerin yanı sıra sosyal medyanın da kullanıcılara sağladığı karşılıklı etkileşim, beğeni ve yorum yapma, etkileşime girebilme imkânı olduğunu söylemek yanlış olmayacaktır (Burucuoğlu & Yazar, 2019, s. 70). Bu kapsamda; artık günümüzde sayıları azımsanmayacak kadar çok olan şirketlerin yanı sıra kamu kurumları da kolay, hızlı ve etkili iletişim ve reklam için influencer'lardan yardım almakta, onları marka ve kurum yüzü olarak kullanarak yeni bir pazarlama stratejisinin oluşmasını sağlamaktadırlar (Aydın & Uzturk, 2018, s. 183).

## YÖNTEM

Araştırmanın evrenini Instagram fenomenleri oluşturmaktadır. Örneklem olarak amaçlı örneklem tercih edilerek Instagram'da bir milyonun üzerinde takipçisi olan influencer'lardan Yasemin Sakallıoğlu ele alınmıştır. Çalışmada yer alan görsellerin çözümlenmesinde Roland Barthes'ın göstergebilim çözümlenme yöntemi tercih edilmiştir. İçerikler düz anlam, yan anlam ve derin anlam olarak incelenmektedir.

Maddenin öncelikli olduğu dünya hayatında, bireyler manalarla da hayatlarını anlamlandırmaktadır. İnsanlar, hayatları boyunca muhatap oldukları şeyleri tek bir anlam yerine farklı anlamlandırmalarla da özümsemeye çalışmaktadır. Fiziksel ya da ruhsal, somut veya soyut; gelen her mesaj, düz ve yan anlamlarla sentezlenerek çözümlenmeye tâbi tutulmaktadır.

Kişilerin iletişim evresinde gelen mesajları anlamlandırarak karşılıklı anlaşma zemini oluşturmak için kullanılan; dil, hareketler, müzik, tablo, tiyatro oyunu, sinema filmi, billboardlar, yazılı materyaller ve daha birçok unsur, bütünsel anlamda dizge olarak nitelenmektedir. Farklı düzlemlerde gerçekleşen bu dizgeler tanım olarak gösterge terimiyle ifade edilmektedir. Bütünsel anlamlı yapıların aralarındaki ilişkiyi tespit etmek, bu anlam sürecinde var olan göstergeleri sınıflandırabilmek, etkileşimlerin çeşitliliğine açıklık getirme gayesi, göstergebilimin temel dinamikleri arasında gösterilmektedir (Ekin, 2103, s. 9).

İnsanlar gibi toplumlar da oluşturdukları kimliklerle tanınmakta ve kendilerini tanıtmaktadır. Birikimlerin, tecrübe ve deneyimlerin bütünü bu kimliğin oluşmasına aracılık etmektedir. Toplumsal ölçekte algılama ve yorumlama refleksleri, anlamlandırma ve sorunu giderme yöntemleri; akademik, politik, mali, sportif, sanatsal, mimari ve çevresel ölçekte hayata geçirilen tüm varlıklar kültürün yapı taşları olarak kabul edilmektedir. Bu anlamlı bütünsellik içinde bütünü oluşturan olay ve olguların, göstergelerin; parçalara ayrılarak her bir parçanın tasvirinin

ve eleştirisinin yapılmasına imkân sağlayan yöntem ifadesi göstergebilime denk düşmektedir. Bir sistematığı olan göstergebilimi; etrafta olan şeyleri anlama ve anlamlandırma olarak nitelemek yerinde bir tanımlama olacaktır (Kalelioğlu, 2021, s. 191).

Roland Barthes, göstergebilim alanında öncü olarak kabul edilmektedir. Kendisi düz anlam, yan anlam ve derin anlam kavramlarını göstergebilim alanına kazandırmıştır. Düz anlam; göstergenin neyi temsil ettiği ile ilgili herkes tarafından genel kabul görmüş anlamı olarak nitelenirken; yan anlam ise; o göstergenin değişkenlik gösteren yanını, yani nasıl temsil edildiği olarak ifade edilmektedir. Derin anlam ise toplumsal kodlar üzerinden düz ve yan anlamlar haricinde zaman içerisinde oluşan anlam olarak nitelenmektedir. Barthes'e göre çözümleme aşamasında gösteren ve gösterilen düzleminde göstergeler düz ve yan anlamlarının yanı sıra ayrıca derin anlam da taşımaktadır (Soylu, 2022, s. 46). Düz anlamda nesnellik ve global ölçekte kabul görmürlük söz konusu iken, yan anlam ise kültüre ve toplumlara göre farklılık gösterebilmektedir. Bu bağlamda yan anlamların çözümlemeleri de o kültür ve toplumun anlamlandırma refleksleriyle çözümlenmektedir (Karaman, 2017, s. 31).

Göstergebilim kuramının öncülerinden kabul edilen Sausure tarafından dil temelli yapılan tanımlamada, dile aktarım fonksiyonu yüklenmiş ve fikirlerin iletilmesinde diğer yardımcı unsur olan göstergelerin iletilmesine aracılık ettiği belirtilmiştir. Gösteren ve gösterilen kavramlarına da değinen Sausure; gösteren terimine duyu organlarına hitap eden ses ve işaretler bağlamında maddi bir form yüklemiş, gösterilen terimine ise kavramlar ve fikirleri örnek vermiştir. Sausure bu açıdan sembollerin ve işaretlerin ele alındığı bilim dalını semiyoloji ya da diğer adıyla göstergebilim olarak isimlendirilmektedir (Yaylagül, 2016, s. 125).

Diğer yandan gösterge bilimin duayenlerinden sayılan Claude Levi Strauss; erken dönemdeki toplumsal yapıda toplumların genel olarak ortak bir düşünce yapısı taşıdığını belirterek; bir toplumu anlayabilmenin ve anlamlandırabilmenin yöntemi olarak o toplumun kültürünün kilit bir öneme sahip olduğunu, kültürü oluşturan tüm birikimlerin, mitolojik unsurların, ritüellerin, gelenek ve göreneklerin de dilbilim sayesinde analizinin yapılabileceği görüşünü savunmaktadır. Dilbilim sayesinde toplumların kültürel yapılarının detaylı olarak ele alınıp incelenebileceğini, bu yapıyı oluşturan alt etmenlerin ve okumaların dilbilim sayesinde yapılabileceğini ifade etmektedir (Yaylagül, 2016, s. 126-127).

Göstergebilimin yoğun bir şekilde kendisine alan bulduğu diğer bir mecra ise günümüzde sosyal medya olarak karşımıza çıkmaktadır. Çeşitli tanımlamaları olsa da sosyal medya; sosyal ağ ve sosyal ağ siteleri ifadeleriyle nitelenmektedir. Tanımlamalar farklılık gösterse de sosyal medya genel hatlarıyla; kişilerin basit, herhangi bir kısıtlamaya tabi olmadan içerik oluşturabildikleri ve bunu en hızlı şekilde dolaşıma sokma imkânı buldukları, geniş topluluklara erişim imkânı sunan, çevrim içi uygulamalar olarak tanımlanabilmektedir. Sosyal medya mecraları bireysel iletişimin yanı sıra kurumların iletişim stratejilerinde de kendisini hissettirmektedir. Günümüzde devlet teşekküllerinden, özel şirketlere kadar birçok kurum sosyal medya platformlarını kurumsal iletişim kanalları olarak değerlendirmektedir. Bu kapsamda ele alındığında hem bireysel kullanıcılar yönünden hem de kurumsal şirketler tarafından sosyal medya platformlarının etkin birer iletişim aracı olarak kullanıldığı söylenebilmektedir (Bostancı, 2019, s. 22-23). Diğer bir görüşte sosyal medyaya; kullanıcılarına online platformlarda bireysel düşüncelerini açıklama, iletişim kurma, gruplar içerisinde yer alma ve bu gruplara bilgi birikimleriyle katkı sunma fırsatı tanıyan, özünde sosyalleşmenin yattığı sosyal ağ siteleri nitelemesi yapılmaktadır (Köksal & Özdemir, 2013, s. 325).

Yeni medyanın hayatımıza girmesi ile bireyler de sosyal medya platformlarını farklı amaçlar için tercih edebilmektedir. Enformasyonun geniş kitlelere yayılmasına imkân tanıyan sosyal medya, yeni ürünlerin ve pazarların oluşturulduğu günümüzde artık pazarlama, satış, tanıtım noktasında da tercih edilir hale gelmektedir. Bu popülerlik sosyal medya mecralarından yapılan paylaşımların, verilen mesajların, sunulan içeriklerin ya da satışı yapılan ürünün, kurgusunda yer alan unsurların analizini insanlar için olası kılmaktadır. Bu da bize gösterilenin yanı sıra, gösterilmek istenenin de anlamlandırılmasını gerekli kılan sosyal medya platformlarındaki paylaşımların, gösterge bilim ışığında çözümlenmesine olanak sağlamaktadır (Yeniçikti, 2020, s. 372-373).

**BULGULAR****Görsel 1.** Yasemin Sakallıođlu'na ait "Bianca Stella Boya" tanıtım filmine ait kare.

Paylaşılan reklam filminin birinci görselinde Yasemin Sakallıođlu mutfakta görünmekte. Üzerinde pembe gömlek ve başında bandana takılı olan Sakallıođlu yine çekim tekniđi kullanılarak kopyalanan diđer Yasemin Sakallıođlu karakteri ile bir arada görünmektedir. Elinde mavi renk bir demlik bulunan Sakallıođlu diđer karakterin yan tarafında ona bakmadan tebessüm ederek bir şey doldurmaktadır. Mutfak kısmında çevredeki farklı renklere sahip eşyalar da yine göze çarpmaktadır (Sakallıođlu, 2023).

| Gösterge       | Düz anlam                 | Yan anlam   | Derin anlam  |
|----------------|---------------------------|---|--|
| Mavi demlik    | Renk, cansız, çay, içecek | Güven, sadakat, huzur, sükunet, uzay, sonsuzluk, özgürlük, bağımsızlık  | İdeoloji, metafizik, kapitalizm, modernizm             |
| Pembe gömlek   | Cansız, renk, kıyafet     | Dişil, nazik, gençlik, enerji, iyimserlik, sevinç, neşe, kişisel ifade, özgünlük, sevgi, şefkat,  | İdeoloji, inanç, romantizm, mistisizm                  |
| Tebessüm       | Gülüş                     | İyi niyet, samimiyet, iyimserlik, sevinç, neşe, yardımseverlik, hoşgörü, umut, affetme, barış, iletişim, bağ kurma, insanlık              | Mistisizm, psikoloji, psikanaliz, egoizm               |
| Beyaz dolaplar | Cansız, nesne             | Temizlik, düzen, zenginlik, refah, prestij, sadelik, minimalist, lüksü, statü   | Psikanalizm, kültür, kapitalizm, pazarlama             |
| Beyaz tabak    | Cansız, nesne             | Temizlik, hijyen, sağlık, zarafet, şıklık, refahı, lüks   | Psikoloji, kapitalizm, tüketim, inanç                  |
| Yeşil şişe     | Cansız, nesne             | Dođa, canlılık, tazelik, refah, lüks, şıklık, dostluk, samimiyet, misafirperverlik, huzur, dinginlik, sağlık, yenilenme, deđişim, dönüşüm | Psikanalizm, inanç, kapitalizm, tüketim, ekspresyonizm |

**Görsel 2.** Yasemin Sakallıođlu'na ait "Bianca Stella Boya" tanıtım filmine ait kare

Paylaşılan reklam filminin ikinci görselinde Yasemin Sakallıođlu ve diđer kadın figür mutfak içinde yan yana görünmektedir. Görselde ayrıca gri alt mutfak dolapları ile turkuaz renkteki buzdolabı da göze çarpmaktadır. Turkuaz renk üst dolap kapaklarının alt kısımlarının yanı sıra ocakta da kullanılmıştır. Sakallıođlu'nun üzerinde pembe kıyafetinin yanı sıra mavi renkli kot ve beyaz ayakkabı olduđu görülmektedir. Diđer kadın karakterde de beyaz hırka, siyah beyaz gömlek ve kahverengi pantolon olduđu görülmektedir (Sakallıođlu, 2023).

| Gösterge            | Düz anlam               | Yan anlam   | Derin anlam  |
|---------------------|-------------------------|---|--|
| Turkuaz buzdolabı   | Cansız, Renk, Nesne     | Ferahlık, serinlik, canlılık, yaratıcılık, özgünlük, farklılık, trend, moda, tarz, özgüven, kendini ifade etme, cesaret, gösteriş, lüks, şık, özgürlük, macera, deđişim   | Metafizik, kapitalizm, emperyalizm, modernizm, mistisizm   |
| Kahverengi pantolon | Cansız, Renk, Giysi     | Basit, günlük, resmi olmayan kıyafet, içe kapanıklık, baskılanmış hisler, yerleşiklik   | Minimalizm, muhafazakarlık, gelenekselcilik  |
| Mavi pantolon       | Cansız, Renk, Giysi     | Huzur, dinginlik, sadelik, saflık, yaratıcılık, özgünlük, özgüven, cesaret, yetki, liderlik, profesyonellik, güven, stil, moda, estetik, güç, otorite, etkililik  | Metafizik, mistisizm, kapitalizm, emperyalizm, inanç, psikanalizm                                    |
| Beyaz ayakkabı      | Cansız, Ayakkabı, Nesne | Rahatlık, moda, trend, estetik, statü, lüks, gösteriş, profesyonellik, temizlik, saflık, masumiyet, dürüstlük, yaratıcılık, özgünlük, tarz, kişisel ifade, zenginlik, elitlik, güç, ayrıcalıklı olma, ciddiyet, disiplin, güvenilirlik, saygınlık | Liberalizm, feminizm, metafizik, kapitalizm, mistisizm, pazarlama, endüstrileşme, psikoloji, tüketim |

| Önünü kapatma      | Örtme, jest                 | Engelleme, durdurma, sınırlama, kontrol, manipülasyon, baskınlık, güç, otorite   | İdeoloji, psikoloji,, mistisizm, sosyoloji, ekspresyonizm, Psikanalizim, inanç, kültür   |
| Temizlik malzemesi | Mimik, jest, gülümseme      | İyimserlik, sevgi, mutluluk, samimiyet, saygı, kabul etme, hoşgörü, güven, barış, sosyal uyum,   | İdeoloji, psikanalizim, mistisizm, sosyoloji, hümanizm, ekspresyonizm, manipülasyon  |
| Beyaz lavabo       | Cansız, renk, nesne         | Temizlik, hijyen, zarafet, nezaket, düzenlilik, özen, saflık, masumiyet  | Pazarlama, endüstrileşme, psikoloji, tüketim, liberalizm, feminizm, metafizik, kapitalizm, mistisizm   |

**Görsel 8.** Yasemin Sakalhoğlu'na ait "Bianca Stella Boya" tanıtım filmine ait kare

Paylaşılan reklam filminin son görselinde; Yasemin Sakallıoğlu duvar rafının önünde durmakta ve elinde raftaki ürün renkleriyle benzer renge sahip boya kabı tutmaktadır. Firmanın tanıtım sitesindeki renk kartelasında bu renk “yasemin” ismiyle tanımlanmıştır (biancastella, 2023). Sakallıoğlu'nun tebessüm ettiği de yine göze çarpan göstergelerden birisidir (Sakallıoğlu, 2023).

| Gösterge           | Düz anlam         | Yan anlam  | Derin anlam   |
|--------------------|-------------------|--|---|
| Yasemin rengi      | Cansız, renk      | Zarafet, saflık, naiflik, iyimserlik, sevgi, umut, denge, huzur, güven, arınma, yükseliş | Romantizm, spiritüalizm, ideoloji, inanç, din, propaganda, kapitalizm, mistisizm, hümanizm                      |
| Vazo               | Cansız, obje, kap | Sanat, estetik, benlik, kadın, güzellik, zarafet, naiflik, statü, mutluluk, huzur, barış | Psikoloji, ekspresyonizm, modernizm, psikoloji, inanç, ideoloji, mistisizm, sosyoloji, psikanalizm, kapitalizm, |
| Geometrik şekiller | Kare, dikdörtgen  | Düzen, simetri, estetik, basitlik, soyutlama, barınak, ev                                | Uygurluk, sanat, kültür, mimarlık, yetenek  |

### Sonuç

Tüketim kültürü, şirketler nezdinde kapitalizmle bağlantılı olarak bireylere her geçen gün daha fazla etki etmekte ve bu etkiye bağlı olarak toplumlara tüketim kültürü ekseninde yeni bir forma sokmaktadır. Bu amaç doğrultusunda hareket eden üreticiler, bireyleri etkilemek için farklı yöntemler tercih etmektedir. Günümüzde etki alanının büyüklüğünü, kitleselliğini gören ve yapılan çalışmaların satışlara olan yansımalarını sayısal veriler ölçüğünde anlık değerlendirme imkânı bulan şirketler, daha az maliyetle daha çok kişiye ulaşma imkanına sahip olduğu kanaatinden hareket ederek sosyal medya platformlarını etki unsuru olarak kullanmaktadır. Tüketicilerin günümüzde sosyal medya platformlarını daha sık tercih etmeleri, üreticilerin de bu platformları reklam, tanıtım, sunum, bilgilendirme v.b. amaçlar için kullanmalarını netice vermektedir. Satın aldırma mottosuyla hareket eden şirketler reklamlarında etkiyi daha fazla arttırmak için fenomen isimleri kullanmaktadır. Araştırma kapsamında ele alınan bir milyonun üzerinde takipçiye sahip Influencer'lardan; Sakallıoğlu'nun, ürün tanıtımlarını içeren reklam filmlerinde yer alan göstergelerin, takipçilerde ve dolayısıyla potansiyel tüketicilerde satın alma refleksini tetiklediği düşünülmektedir. Işıktan, kullanılan yazı karakterine; giyilen bir elbiseden, mutfaktaki demliğin rengine kadar özenle seçilen her bir gösterge, düz anlamlarının yanı sıra barındırdığı yan ve derin anlamlarla da kişilerde etkiye sebep olmakta bu da dolaylı olarak kapitalizmin dayattığı tüketim olgusuna destek vermektedir.

Toplumsal kodlar; reklam içeriklerinden, verilecek mesajlara; tercih edilecek platformlardan, reklam yüzü olarak kullanılacak influencerların belirlenmesine kadar her aşamada kendisini hissettirmektedir. Ürün pazarlamasında, takipçiler üzerinden satın alma sonuçlu netice tesis edilmesi için, dijital mecraayı etkin kullanan ve takipçisi 6 milyonun üstünde olan bir kadın fenomenin tercih edilmesi, o ürünün daha kolay satın alınmasına ve dolayısıyla tüketimin sağlanarak şirket karının artmasına vesile olmaktadır. Paylaşımındaki videolar incelendiğinde ürünün tanıtımını yapan karakterin rahat, kendine güvenen, bilgili, huzurlu, mutlu hallerini yansıtan göstergeler kullanılması; takipçilerde de aynı duyguları yaşama isteği oluşturmada, bu da bir sonraki aşamada satın almaya eylemini desteklemektedir.

Bireyler, şirketlerin ürün satışlarındaki tanıtım ve pazarlama eylemlerine çok sık maruz kalmakta, her gün yeni bir ürünün farklı mecralardaki sunumlarıyla karşılaşmaktadır. Tüketim kültürü; televizyon, radyo, gazete ya da dergi gibi geleneksel medya kanallarından kurgulanan bir aşamadan, bugün en fazla tercih edilen reklam ve satış platformları arasında gösterilen Instagram ve diğer sosyal medya mecraları üzerinden tasarlanan bir döneme evrilmektedir. Instagram'ın video yükleme, izleme, yorum yapma ve paylaşmayı mümkün kılan tüm kolaylıkları onu öncelikle tercih edilen sosyal medya platformları arasına sokmaktadır. Ayrıca Instagram; influencer'lara şirketler için reklam yüzü adı altında ürün tanıtımı yapma imkânı da sunmaktadır. Bu kapsamda fenomenin çok yüksek sayıda takipçisi olması tüketicide yaratılmak istenen etkiyi pozitif yönde desteklemektedir. Kullanıcılar takipçisi oldukları influencer'ların tanıtımını yaptığı ürünler hakkında; niteliklerinden, avantaj ve dezavantajlarına kadar her türlü bilgiye karşılıklı etkileşim özelliğiyle birinci kaynaktan ulaşabilmektedir. Ayrıca ünlü biriyle iletişim halinde olmanın verdiği güven, mutluluk da ayrı bir haz vererek satış eylemini desteklemektedir.

Reklam filmlerinin hazırlanmasında kullanılan unsurların derinlemesine incelenmesi gerekmektedir. Bu kapsamda araştırmanın temelini de oluşturan gösterge bilim ve çözümleme teknikleri önem arz etmektedir. Verilmek istenilen mesajı desteklemek için paylaşılan göstergelerin anlamlandırılması aşamasında sıklıkla yöntem olarak göstergebilim kullanılmaktadır. Özellikle yeni medya platformlarında çok fazla sayıda gösterge içeren reklamlara yer verilmekte, bu da influencer'lar tarafından verilen mesajların çözümünü gerekli kılmaktadır. İdeolojik olarak

da farklı mesajlar iletilmesine imkân sağlayan Instagram'daki reklam filmlerinin göstergebilimsel çözümleme teknikleriyle yorumlanması, tüketicilere bilinçli tüketimin yanı sıra içerik okuma alışkanlığıyla birlikte sosyal medyayı daha etkin kullanma imkânı da kazandırmaktadır.

Araştırma, tüketim kültürü ekseninde yeni medyanın toplum üzerindeki etkisini tespit etme ve yine tüketim kültürünün kullanıcılara ve takipçilere sosyal medya reklamları üzerinden nasıl aktarıldığının ifadesi noktasında önem taşımaktadır. Araştırma literatürdeki örneklere bir yenisiyle destek olmakta, yeni medya mecralarının tüketim kültürüne etkisini Instagram üzerinden ele alarak influencer'lar özelinde değerlendirip ayrıca katkı sunmaktadır. Çalışmada sadece Instagram çerçevesinde değerlendirme yapılması alanı sınırlamakla birlikte, tüketim kültürünün şekillenmesinde, diğer sosyal medya platformlarının ne derece etkili olduğu yönünde farklı araştırmaların yapılmasının hem literatüre katkı sağlayacağı hem de daha nesnel sonuçlarla konunun derinlemesine ele alınacağı değerlendirilmektedir.

karanlık güçler, bir şekilde deşifre olan ‘benim’, her yerde barışçıl fikirlerimi, satın almak istediğim ama piyasaya henüz sunulmamış ürün fikirlerimi sunup, neden yapmıyorsunuz, inanın bir sürü insan benim gibi bekliyor, dediğim için, sorduğum sorulardan kaynaklı belki de vb. gibi . bilgisayarımdaya tuttuğum günlüğümde mi haberdar ettim, bilemem, kişisel bilgisayarımdaya yazdığım içeriğimin talan edilmesi tek dünyaya inandığım fikirlerimle senkronize dış dünyanın değişmeye başlaması aynı zamanlar, içine konduğum kutularda çalışmalarımı sekteye uğratacak dış dinamikler silsilesi dahil buna, Yani Boğaziçi Üniversitesi’ndeki Hazırlık(YADYOK) öğrenciliğimden beri talan edilmem, teneffüslerde resim ve şiirlerle dolu ders notu aldığım defterlerimi, hatta günlük, bilgisayarıma aktaracağım notlar aldığım defterlerimi sıramda bırakmam, birden günlüğümdeki tek dünya görüşünün dışa yansımalarıyla paralel. Bir başka deyişle talanımla küreselleşme aynı anda başladı. Heal the World, We are the People, Think Pink, Şarkıcı Göksel’in piyasaya sunulması, çok sonraları çözdüğüm gibi dünyayı yöneten karanlık güçlerin eline düşmüştüm. Talan edilen günlüğümde gündem yaratan, kafa karışıklığı oluşturan, ticari ederimin ortaya çıkmasıyla kutulanmaya başladığım yıllar. Örgütsel tavır ve Gülen Örgütü ve ondan öncekilerin; bu karanlık güçlere yardım etmesi için yaratıldığı da bir gerçek; sözde kötülerin ayıklayıp talana devam edilmesiydi gibi.

Sözde mağdur edilmiş kişilerin, ekmekten dilim kaparken masum insanların üzerine sürülmesi çağı, herhalde insanlık tarihinde çok ama çok önemli bir yer kaplayacaktır. Aynı toplum içinde kin bilemek, nefret büyütme, dijital çağın ona hazır sunulan nimetlerini, bir şekilde dış bilediklerini ‘Dijital Köle’ edip, üzerinden geçinmek üzere kullanmak...

Bu makale potansiyel emsal vaka ‘Dijital Kölelik’ üzerine kuruludur. Dolayısıyla yaşam yolunun başında bir örgütün kapanına düşen ve ömürlük çalınmamanın ne olduğunu insanlık tarihine yazmak üzere ayağa kalkmış bir akademisyenin insanlığa katkısı olarak sunulmuştur. Tüm bunları zevkle yapabilmek hiçbir normal insanın harcı olamasa gerektir.

### **Kötücül Yapılanmalarda Yer Alan İnsanların Kişilik Özellikleri ve Hedefe Aldıkları Kişilere Yönelik Dijital-Reel Psiko-Semiyotik Dil Kullanımlarıyla Baskılama Yöntemlerine Örnekler**

Nasıl herkesin bir kişiliği varsa, büyük oranda biyolojinin tahakkümü altında bir yaşam ve davranış biçimi de vardır. Her çocuk dünyaya kendine özgü bir yatkınlık ve hassasiyet şablonuyla gelir. Anneler bebeklerinin farklı olduğunu doğar doğmaz anlar; dikkatli anne babalar kardeşlerin birbirlerine benzemeyen yanlarını görebilirler. İngilizce ’ye Ortaçağ’da giren ‘temperament’ sözcüğü, kişiliğin içinden filizlendiği biyolojik toprağa istinaden kullanılır. Dolayısıyla ‘mizaç’ davranışın altında yatan biyolojik potansiyeldir. Bunu bireylerin duygusallığından veya faaliyet döngülerinin yoğunluğundan açıkça görebiliriz. Mizacı kişiliğin üzerinde yaşam boyu etkili olan kalıtsal biyolojik unsurların genel toplamı olarak tanımlayabiliriz.. mizacın kişiliğin diğer alanlarından daha önemli ve daha etkili olduğunu savunmak elbette mümkündür. Fiziksel ana yapımız kişiliğin diğer ana yapılarının ortaya çıkmasından çok daha önce var olduğundan, biyolojik donanımızdaki davranış eğilimleri gelişimin olası diğer tüm yollarını zapt eder, tıkar ( Millon, Grossman.Meagher.Ramnath, 2021). Bu paragraf insan kişiliğini tanımlayan pek çok yaklaşımlardan sadece biridir çünkü insan çok komplike, grift bir varlıktır. Mizacı, temel kişilik özelliklerini kökten söken, yaşam sürecinde bilinçdışı kazandığı, bir başka söylemle yaşantılarla elde ettiği deneyimler yaşamında farkında olsun veya olmasın tutum ve tavırlarında belirleyici hâle gelebilir (Mlodinov, 2013) ama öz nüvede var olanı darmadağın edebilir mi? Bu ve benzeri soruları üretmek ve cevaplarını bulmak için teke tek kötücül yapılanmalarda yer alan bireylerin incelenmesi gerekir ki, bu makalenin konusu değil. Bu karanlık yapılanmaya yakalanan sürdürülebilir dijital köleliğin belki de tek örneği potansiyel emsâl ‘Dijital Kölelik’ vakasının öznesinin örüldüğü, muhatap olduğu, maruz kaldığı kumpas olay olaylarında yer alan, iş başta olmak üzere yaşam alanlarında etrafını ören kişilerin talanı örtbas etmek, dikkat dağıtmak, kendini korumak için yapması gerekenleri yapmamasını sağlamak üzere bir araya gelen kişilerin, kişilik özellikleri üzerinde durulacaktır. Bu kişilikler, inanılmaz derecede oyuncu kişilikler, talan edilen günlükten yemlemeler kullanmak hepsinde ortak özellik, aşığılama, rencide etme, değersizleştirme hepsinde ortak özellik, senelerce yaşadığı ortamların birer ilan tahtası olarak kullanıldı, talan edilip proje ürettikleri dijital alanlarından elde edilen içerikten kapılarının üzerine asıldı, aynı yöntemi iş yerinde gözlemledi. Mahrem dijital alanları talan edenlerin ortalamaları üzerinden gidilerek genel bir yol izlenen bu makalede, çok derin inceleme ve araştırma sonuçları yer almamaktadır. Sonuçta yılların ‘Dijital Köle’si nihayet kurtulup, özgürce çalışmalar yapabileceği günlerin hayalini kurmaktadır. Bir başka söylemle bu çalışmalar böyle bir ortamdan yürütülmektedir. Hepsinde ortak olduğu gözlemlenen yaptıklarında asla rahatsız olmamaları, istedikleri sonucu alamamaktan, istedikleri kadar ileri gidememekten rahatsızlar, hepsinden bir alay etme, kendini sütün görme, efendi sayma eğilimi var çünkü tümüyle elinde oyuncak olan biri olarak bakıyor, toplu takip toplu taciz, toplu kumpas, örgütsel bir yapılanma içinde ortada yakar top, ortada sıçan var oyunu gibi oynayabildikleri biridir ve her direnişinde bu oyuna kurmaca hukuk oyunları, sözde intihal suçlamaları, ihtar manipülasyonları eklerle ve bu oyun sürer gider, talan ettikleri kişinin fikir ve projelerini kaparken kendisine asla saygı duymamaları ‘Dijital Köle’ye karşı sürdürülen tutum ve tavırlardandır. Tüm bunları nasıl insanlar yapar sorusunun cevabını kişilik bozukluklarında arayan bir çalışmadır. Daha başlangıçta hangi nedenle olursa olsun: Din, dil, ırk, etnisite, dünya görüşü, ideoloji,

vb. gibi böyle bir yapılanmaya katılıp, buradan kendilerine bu şartlar altında bir gelecek sağlayan insanların kişilik özellikleri üzerinde durulmaktadır.

**Makyavelist Kişilik:** Chicago’da klinik psikolog olan Aimee Daramus “Makyavelist kişilik, manipülatif ve stratejiktir”, demektedir. Bir hedefleri olduğunda, bunu nasıl başaracaklarını çok iyi düşünürler, ancak dahil olan diğer insanların duygularını hiç düşünmezler. İstediklerini elde etmek için manipülatif davranışlarda bulunabilirler, aldatma veya sömürü de yapabilirler, genellikle duygusuz görünürler. Makyavelistlik erkeklerde daha yaygın olma eğilimindedir ancak her yaşta her kesimi etkileyebilir. Empatiden yoksundurlar. Bir narsistin aksine dikkatin merkezi olmadan hedeflerine ulaşmaya çalışırlar. İpleri çeken kişi olmaktan hoşlanırlar(<https://psychcentral.com> ).

**Narsistik Kişilik:** Genel bir bakışla narsistik kişilik bozukluğu, insanların mantıksız bir düzeyde yüksek kendilerine önem verme duygusuna sahip olduğu bir ruh sağlığı durumudur. Çok fazla ilgiye ihtiyaç duyarlar ve bunu ararlar, insanların onlara hayran olmasını isterler bu bozukluğa sahip kişiler başkalarının duygularını anlama veya önemseme yeteneğinden yoksun olabilirler ancak bu aşırı özgüven maskesinin ardında öz değerlerinden emin değildirler ve en ufak bir eleştiriden kolayca rahatsız olurlar. (<https://mayoclinic.org> ) Narsistlerin hayatlarındaki diğer insanlar, kendilerini sıkça bu insanların malı gibi hissederler, sanki arsızca kullanılıp sömürülmek için dünyaya gelmiş muamelesi gördüklerini düşünürler. Bu ben merkezci egoları, diğer insanların haklarına ve refahına, ayrıca bazen de toplumun kanunlarına karşı kayıtsız kılar. Eylemlerini meşru kılmak için bıkınlık verecek ölçüde rasyonalizasyona girer, ortaya makul gerekçeler atarak, düşüncesizliklerinin maruz görülmesini bekler, böylelikle zeytinyağı gibi üste çıkarlar. Karşı tarafın bastırıldığı veya onlarla yüzleştiği durumlarda iyice mağrur, baştan savan hatta hiddetli bir tutum ve tavrı benimserler. Onlarla iletişim kurmak açısından en zor kişilik bozukluklarından biridir( Millon, Grossman.Meagher.Ramnath, 2021). Karanlık, kötücül bir örgüt yapılanmasında bir başka söylemle, potansiyel emsal vaka örneği ‘Dijital Köle’ üzerinden hareketle, dijital mahrem alanları talan edecek, ‘Dijital Köleliğin’ sürdürülebilir kılınması için gerekli: Dikkat dağıtıcı, direnen köleyi yola getirci kumpas davalar açmak, sözde intihaller uydurmak, ihtar vakaları yaratmak için, bunları yapabilecek kişileri bünyelerine katmak bir avantajdır. Karanlık yapılanmalarda, örgütsel bir düzenekte, bu tür kişiliklerle rahatça istedik doğrultuda iş görebilirler. Muhtemelen bireyci olan kötücül yapılanmalarda, ‘bu bireycilik’ bir din, dil, ırk üstünlüğü üzerine kurulu olabilir, ( Millon, Grossman.Meagher.Ramnath, 2021). Narsist, Tanrı’nın dünyaya hediyesidir. Kişilik bozuklukları ne kadar çoksa o kadar da istedik olabilirler çünkü her bir kişilik bozukluğunun sahne alırlacağı yer vardır.

### **Dikkat Dağıtıcılar, kötücül yapılanmada yer alanlar, bunu Dijital-Reel Psiko-Semiyotik Dil Kullanımlarıyla yaparlar,**

Hedefin, ‘Dijital Köle’nin çevresini sürekli kötücül enerjiyle sararak onu paralize etme, onda kafa karışıklığı yaratma, kafeslendiği durumdan kurtulamamasını sağlamaya çalışmak üzerine kurulu bir yapılanmadır. Enerji alanıyla uğraşır ve direnen ‘Dijital Köleyi’ bu sefer uyduruk intihal, kumpas hukuk davaları, ihtarlarla baskılamayı ve sindirmeyi hedefler. Bilinmesi gereken bu kadar kötü dinamiğin olduğu bir yaşam zaten cehennemdir, çekilmez, her ne olursa olsun ayağa kalkmalıdır. Tüm karalama kampanyaların rağmen. Bu yapılanmanın dadandığı ocakta artık ot yeşermez.

Senelerce bilgisayarında tuttuğu günlüğü, sonrasında yazdığı tüm dijital alanları ve yaşam alanları 7/24 dinleme, gözetleme, dikat çekiciler( yapılanmaya bağlı insan faktörleri aracılığıyla, deşifre edilen psikolojik çözümlenmeleri üzerinden daha çok yazması ve daha çok talan edilip, talan ürünlerinin piyasaya sürülmesi ardışık olaylar olarak sürdürülebilir dijital köleliğin ürünleri oldular(Algül, 2020-2023), yalnızlaştırılıp daha çok çalındı. Pek çok karakter tiplmesi bu şekilde çalındı. Gülse Birselle işi ilerletip, reklam çekim filmleri için çağrıldığı reklam ajanslarında karşısına yeni kasti çıkardı. Bir şekilde günlüğüne olumlu dolanan kişiler akabinde çalıntı karakterlerin yüzleri oldu ve bu bağlamda kasıtlı takip, kasıtlı Dijital- Reel Psiko- Semiyotik dil kullanımlarını ayrıca çalıntı tümüyle çalıntı TV dizilerine konu etmesinden dolayı tüm suçlular arasında Gülse Birselle’in ayrı bir yeri vardır ve gelecek günler tüm bunlara gebecektir.

Bu yapılanmaya eklemli, yerleştirildiği yaşam alanlarında etrafını çepeçevre kuşatan bu kişilerin kişilik özellikleri tüm eliptik kürede tek olmalıdır. Böyleleri herhalde sadece bu topraklara özgü olsa gerektir.

Bu örgütlenmede bireysellik, cemaat, grup, hizip üzerinden yürütmekte, talancıların bağlı olduğu gruplar var, etnisite olabileceği gibi, din, kültür olabilir ve her bir talancıyı koruyan legal görünümü beyaz yakalar var. Hani talancıyı anarsa onu korumakla görevli taraf ayaklanır, resmen çete gibi, etrafını sarar. Bir başka söylemle ‘Dijital Köle’ hak arayışıyla ayağa kalkamasın diye satranç oyunu gibi döşenen taşlar var. Bunu talan alanlarına yazdığı ve artık “bu out door satranç oyunu bitti”, dediğinde ki, başarısız darbe kalkışması sonrasıydı, taşındıkları yerde, rektör, kocaman bir dış mekân satranç yeri kurmuştu. Bu yapılanmada alay, rencide, aşağılama, değersizleştirilme, şamar oğlanına, kızına çevirme yöntemlerdendir, talan günlüğünün reel yaşama bu şekilde yansıtılması, okuduk, çaresizsin mesajını da taşır ki, yapılan eylem tarihe Dijital-Reel Psiko-Semiyotik Dil Kullanımları olarak gelecektir.

Bu bağlamda yapılanmanın kurucularının hem de onların gündelik yaşam içinde kutulama yöntemlerinin uygulayıcılarının hareket noktalarının temellerinden biri hakkı olarak görmek, hakkı olarak görmek narsist bir

tutumdur, talan etmek, onu yerinde saydırmak, talan ürünleriyle birim kurmak, kendi insanlarını yerleştirmek, onları kanaat lideri ve önderi yapmak, ses çıkarırsa maaşın tehlikeye girer Dijital-Reel Psiko-Semiyotik, kumpas ve düzenekleriyle etrafını çevirmek maaş karşılığında çalınmayı ve onca yapılan aşağılayıcı, rencide edici, manipülasyonlara ses çıkarmaması gerekçesini bir hak olarak görmekte yatmakta. Yaşam alanları yıllardır bu şekilde hem iş hem zorunlu yaşam alanları: En son yaşatılan belgeli elinde telefon olduğu için, asansörün kapısını tutarak bekleyen, yıllar içinde ki, artık yirmi beşinci seneye girilmek üzere, “ Kendimi çekiyorum”, denmesine rağmen “...Çekiyorsun, çekme, haddini bileceksin” diye defalarca bağırılması, bağırmanın yüz ve beden dili, seneler içinde onca hiç ses çıkarılmamış Dijital Reel Psiko-Semiyotik Dil Kullanımları, hukukla korkutma çabası, yirmi beş seneye giden süreçte yüzlerce, talan edilen günlükten üretilmiş, Dijital Reel Psiko-Semiyotik Dil Kullanımı örnekleri, bu kişilerin toplumun tarihsel süreci üzerinden yürüttükleri bir narsisizm olduğu doğrultusunda ki, bu tür de bir yaklaşım içerisinde herhalde ancak narsistler yer alabilir. Bu açıdan bakıldığında ruh sağlığı yerinde olan kişilerin bu tür şeyler yapamayacakları açık olsa gerektir. Bu tür bir yapılanmada yer alma nedeni ne olursa olsun bireysel boyutta ruhsal aksamalar olduğu düşünülebilir çünkü bu kişiler bir mizansende yer alan, ‘miş’ gibi olmayı iyi beceren, oyuncular adeta çünkü yapılanma da bunu gerektiriyor. Bir kere talan ürünlerini paylaşmış piyasada kendilerine nam, şan, akademik kariyer yapmada bir sorun göremeyen karakterler, birebir dalga geçer gibi şikâyet ettikleri konu talan ürünlerinin adilce paylaşılmaması olabilmektedirler. “Bu makaleye yazdığım sırada, adı hiç geçmeyen yapan kişinin adına gönderilen tam tamına aynı konulu beş görevlendirme yazısı aldım. Bu şu demek, tüm yazdığım alanlar kontrolümüzdeki, tüm çalışmalarım sırasında bu yapılanmaya eklemelerce devam ettirildi”. Bu böyle bir yapılanma. Potansiyel vakanın öznesinin adım adım, sistematik çalınmaya başlayacağı çalıntı bir ismin İngilizcesiyle kurulu (çoğaltma bu yapılanmada yöntemlerden önce tam Türkçe olarak marketler serisi açıldı, sonra İngilizce olarak TV kanalı kuruldu ve talan günlüğünden çalıntı isim slogan edildi), bunun başlangıcı BÜ’de henüz lisans öğrencisiyken Kanal D olarak başladı hatta şarkısı bile talan edilen günlüktendi. Orta öğretimde başlayan öğretmenliği bu kanalın sahiplerinden birinin eğitim sektörüne de el attığı ve kuruculuk yaptığı okuluna büyük tesadüf ‘tesadüftür’lerle düşürüldü. Düşürüldüğü kolej de çalıntı fikirlerle varlığını ilan edenlerdendi. Bu yapılanmada tesadüf diye bir şey yok. Bu şekilde talan edebildiler. İleri düzey kumpas, tuzak, tezgâh, örülmeyle başlayan kesintisiz çalınma bugünlere kadar geldi. *Sadist/Sadizm*: Sadizm başkalarının açısından veya ızdırabından haz alma eğilimidir. Sadist kişiliklere sahip bazı insanlar başkalarına acı verebilirken, diğer sadistler sadece tanıklık eder ve dolaylı olarak bundan zevk alırlar. Sadistler şiddet gibi fiziksel güçle veya duygusal taciz ilişkilerinde olduğu gibi psikolojik güçle acı verebilirler sosyal ortamlarda başkalarını kontrol etmeye çalışabilir ve onları aşağılamaktan veya küçük düşürmekten zevk alabilirler. (<https://psychologytoday.com>) Kesintisiz yirmi beşinci senesine girilecek olan bu ileri düzey nitelikli talan ve Dijital-Reel Psiko- Semiyotik Dil Kullanımlarıyla sarılı, kutulandığı yaşam alanlarıyla baskı kafesine alınmış bu süreçte böyle bir psikoloji tarafından paralize edildiğinin bazıları somut belgeli, özellikle talana şiddetle karşı çıktığı başarısız darbe kalkışması sonrası günlerinin hissettirdikleri bunlardır. Atama gerçekleştikten kısa bir süre sonra bu TV kanalı sahibinin okulunun akademik versiyonu dediği zamanlardan bu zamanlara böyle gelindi ki, hâlen yaşadığı daire, bir TV kanalı sahibinin okulunda öğretmenlik yaparken onları bulan dairedir. Adım adım örülme sürecinin bugün geldiği noktanın tarihçesine girebilir bu bölüm. *Egoist/Egoizm*: Egoizm kişinin kendi çıkarının tüm etik kararlarda motivasyon olması gerektiğine olan inancı ifade eden felsefi bir terimdir. Egoistler, başkalarının çıkarlarını feda etmek anlamına gelse bile, kendi çıkarları doğrultusunda hareket etmesini ahlâki olarak kabul edilebilir olduğuna inanırlar(<https://philosophos.org>) Psikopat: Psikopat terimi duygusuz ve ahlâken yozlaşmış, ahlâk dışı ( <https://ncbi.nlm.nih.gov> ) birini tanımlamak için kullanılır. Resmi bir ruh sağlığı tanısı olmasa da, klinik ve yasal ortamlarda sıklıkla ben merkezci, antisosyal, pişmanlık ve başkalarına karşı empati eksikliği olan ve sıklıkla suç eğilimleri olan birini ifade etmek için kullanılır.( <https://verwellmind.com> )Yukarıda adı geçen her bir tanımlamanın bir kişilik bozukluğu olduğu gerçeği unutulmamalıdır( <https://my.clevelandclinic.org> )Her psikopat için antisosyal denebilir mi? Bir örgüt yapılanmasında zaten ortak çıkar, fayda için bir araya geldikleri ve buna sosyalleşme dedikleri, talan ettiklerini asosyal olarak baskılayıp güldükleri nokta, unutulmamalıdır. Bu denli uzun süreli, sürdürülebilir sözcüğünün dahil genel yaygın kullanıma düşmesi günlükten, Kamu Sosyal Yararı gibi, daha makalesini yazarken; tıpkı ötelemek, öteki, tükenmişlik sendromu gibi, tüm bu yapılanları yok sayma, kamufle etme, illüzyon, sahte gerçeklik yaratma ki, buna fiziksel görünüm de dahildir, dini bütün, mazlum, Anadolulu, her türden azaları kullanmak adeta Gülen örgütüne atfedildiği gibidir; manipülasyonlarla hukuki veya sivil( karalama kampanyaları gibi) yeni baskı unsurları yaratmak ruhsal sağlığı iyi olan kişilerin tercih edecekleri yollar değildir. Ayrıca alenen talan ettikleri kişiyle dalga geçmek ve eğlenmek zevkleri haline gelmiştir. Ara ara sistematik çalınmanın ve düşürüldüğü okulun kurucusunun başına düşen hukuki suçlamaları da vardır. Bu kişi egemen siyasilerle ve bu siyasilerin yazılı görsel basın kuruluşlarıyla iç içedir. Akademik baskı ve talan düzeninin ayakları her ikisiyle de ilişkilidir. Akademik ayağın ilintili olduğu egemen siyasi ayakları potansiyel emsal vakanın öznesiyle görünür ilişkisi otuz senesi öncesine dayanıyor. Örülme ve talan için sıkı kutulanma, sistematik çalınmanın başlangıcı eş zamanlıdır, yaklaşık yirmi beşinci senesine girmektedir, atamadan sonra ise sürekli talan edilme ve sıkı baskılanma dönemi başlar( Algül, 2020-2023), kesintisiz yirmi sene boyunca sürekli talan edilir ve kumpaslarla uğraşır. Egemen

siyasi erkle, siyasi arenayla ilgili bu isimler Dijital- Reel Psiko-Semiyotik Dil Kullanımlarıyla tüm bu talan boyunca hep etrafında oldular. Bunlar çok ciddi şekilde kötü insanlar diye yazmaya başladığında, yine talan edilen günlüğünün, dijital alanlarının içeriğinden ne tesadüf ki, darbe kalkışması yaşandı. Sözde kötüler açığa çıktı. Eklemler hırsız basın kuruluşlarına sözde yol verildi ama talan yöntemi devam etti. Talan edilen günlüğünün içeriğinden yaratılan inanılmaz çok sayıda dram, drama örneği var. Dijital alanları hem kendileri için talan eden hem de satan bu yapılanmanın illegal dijital talan alanlarının içeriğinden yarattığı sayısız sayıda dram, drama var.

## SONUÇ

Hani eski zaman masalları anlatır,  
hüznümü huzura dolarsın.  
Kaşım gözümünden çok içim bir parçan:  
Annem sen benim yanıma kalansın.

Hani bir biblon vardı kırdığım.  
Üstüne ne kırgınlıklar yaşadın.  
Ama bil ki ben de parçalandım.  
Annem ben senin yanına kalanım.

Annem annem, sen üzülme!  
Sözlerin hep yüreğimde.  
Annem annem, gel üzülme.  
Ben hâlâ senin dizlerinde.

**Yazar:** Nevin Algül

**Yazdığı Yer:** Onun dışında hiç kimsenin kullanmadığı, şifrelerle ve güncellenen, piyasadan satın alınan, anti virüs programlarıyla, dijital güvenlik adına ne varsa kullanılan bir kişiye ait bilgisayar.

Dijital Köleliğin' sürdürülebilir kılınması için gerekli: Dikkat dağıtıcı, direnen köleyi yola getirici kumpas davalar açmak, sözde intihaller uydurmak, ihtar vakaları yaratmak için, bunları yapabilecek kişileri bünyelerine katmak bir avantajdır. Karanlık yapılanmalar, örgütsel bir düzenekte bu tür kişiliklerle iş görürler, görebilirler ancak, Bu türde yapılanmalarda, terfi alma, makam sahibi olma, topluma hiç sahip olmadığı fikirler, görüşlerin insanı olarak sunulma, ünlenme, refah seviyesini yükseltme vb. gibi maddi manevi kendini yüceltme ve yükseltme baskılayabildikleri oranda, ödül olarak gelmektedir. Senelerce sürdürülen 'Dijital Kölelik'te bu birebir gözlemlenmiştir. Dolayısıyla karanlık işlerin asıl kaymağını yiyenlerin, en çok sevdikleri aza tipi, kişilik bozuklukları, hiçbir değeri tanımayan hırsları en üst düzeyde olanlardır çünkü onlar sayesinde kurdukları karanlık sistem tıkr tıkr işleyebilecektir. Sağlam kişiliklere sahip bireylerin tüm bunları yapabilmesi, herhangi bir aşamada hiçbir rahatsızlık duymadan yer alabilmesi mümkün görülmemektedir ama olma ihtimali araştırma konusu edilmelidir çünkü bu tür karanlık yapılanmaların en çok kullandıkları baskı araçlarından biri de tehdittir. Masum bir insanı önce tuzağa düşürüp, sonra da tehdit etmeleri mümkündür.

Potansiyel emsal 'Dijital Kölelik' vakasında çok uzun süreli, henüz gencecik bir üniversite dil için hazırlık okurken başlamış bir talanın gelişimine bakıldığında, çaldırmamayı başardığı da dahil bilim alanları yaratan bir akademisyen olarak 'nefret objesi' olarak nesnelleştirilme durumu da olabilir çünkü yeni dünya düzeni, demokratik haklar derken, onun gibi hümanist biri üzerine yapılan bu denli ileri düzey ve nitelikli kuşatmanın hareket noktalarından birinin de bu olduğu düşünülebilir. Bir başka söylemle eklemler insan faktörleriyle kuşatan oyun kurucular kutulama sistemindeki kullandığı dinamikler göz önüne alındığında, oyuncu olarak sahaya sürdükleri ileri araştırmaların konuları olacaktır.

Bu karanlık yapılanma, potansiyel emsâl 'Dijital Kölelik' vakasında olduğu gibi dijital kölenin talan ettikleri bilgisayarda tuttuğu günlüğünü, tüm dijital alanların yazdıklarından ele geçirdikleri hayatına ait bilgiyi, onu örerken kullandılar. Çocukluğunda, büyürken onu kıskananları bir şekilde kendilerini aşağıda hissedenleri için içine kattılar. Potansiyel emsal vakanın öznesinin kaleminden "Yemekteyiz Acun Ilıcalı'nın çalıp, patentini aldığı bir yarışma programlarından; bu programa, Dijital Köle'nin günlüğünde çocukluk anlarıyla yer alan birini çıkarmak, onlara yakın bir akrabasına otel kurdurmak, bu otellerden biri, kölenin LinkedIn'e yazdığı hikâyenin başlığını taşımakta ki, bilgisayarına yazar yazmaz, oteller ortaya çıktı, bu otellerden birinin sahibiyle talancı şarkıcı Gülşen'in (şarkıları ben yazdım dediği için) ağabeyiyle arkadaş, kölenin bir diğer akrabası, Müslüman evlerde ölüm olduğunda müthiş travma şekliyle yaşıyor, oysa tasavvuf da İslam da tersi söylemler var, keşke bu TV'lerle anlatılsa, neler yapılmalı yazdığı notlarının hemen akabinde Kanal 7'de mizansen ölü üzerine kurulu programda, din adam, neler yapılması gerektiğini anlatır ki, ilk taşındığı yıllarda ikinci karşı komşu dairenin akrabasıdır, ona da punduna getirip tanıştırmıştır; oradaki "ölü" de dayısının kızının oğludur. Bu arada kanalın makajörü çok eski, 2002 yıllardan beri kanalın makyözüdür ve birebir çalıntı program yapanlarla ilgili Dijital-Reel Psiko Semiyotik Dil Kullanımları vardır. Akrabalık ilişkilerini de bu şekilde

kullanan bir karanlık yapılanma. Aynı zamanda diğeri bir dayımın kızının çocuğu hastalandı ve bu kanalın daimi haber kaynağı edildi. Acun Ilıcalı'nın akrabalarla ilişkisi malum zaten. Tüm bu akrabalık bağımlı kullanma TV kanalının sahibinin, okulundayken başladı. Yakın çevrenin örölüşü, bunlardan birinin eşi, Seren Serengil'in ablasıyla uzun seneler boyunca yaşadı. Kamuya açık yazmaya başladığımda eklemliğin çoğu Bodrum'a yerleşti." Bu yapılanmaya yakalananlar ilginç ve benzeri bir biçimde hastalanıyor, ölüyorlar. Ayrıca bu durumlar da araştırılmalıdır." Bu kutulama yöntemi herhalde bu örnekle daha iyi anlaşılmalı olmalıdır ki, bu örneklerin sayısı çoktur."

Potansiyel emsal dijital kölenin, akademik çalışmaları ve başvurularını engellemek için senelerce internet bağlantısıyla oynandı, yakın zamanda bile dener, yazdığı anda ya bir SMS ya bir kesinti: "Okuduk, takipteyiz Dijital-Reel Psiko-Semiyotik Dil Kullanımı olarak ona yansıtılacak ki, yöntemlerdendir. Siyasi partilerden özellikle biri talan edilen günlüğünü hem halkla ilişkilerinde kullandı hem de siyasi partilerinin politikalarında ki var oluşları talan edilen günlüktendir. Yapılan, kontrolün bizde tacizlerine, özellikle darbe kalkışması öncesi elektrik kesilmeleri, buna dahildir. Her şeyin 7/24 kontrolümüzde demek de yöntemlerdendir. Kutulanılan yer bileşik kaplar ilkesiyle çalışır, örneğin site yönetimiyle eleledirler, Site yönetimi paftaları değiştirir, istediği alanlar için yönerge uydurur, istediği alanları özel korumaya alır, özel güvenlik kapıları kurar ve bu işler hiç bitmez. Oyun parkı ve yeşil alan olarak bırakılan yeri, villalara ferahlık , genişlik, park ve kamerye alanı olarak katıp bir de dikenli telle çevirir, yani yeşil alanı villalara hibe edip, değerlerini artırır, gündelik yaşamlarını kolaylaştırır ki, aynı site yönetimi tüm bu Dijital-Reel Psiko-Semiyotik Dil Kullanımlarıyla hareket eder, kapı baskınları meşhurdur. Siteler arası mobil hareketten de sorumlu gibidir.

Kolektivist bir yaklaşımla dünyaya bakan, insanlığı bir bütün olarak gören, ortak ülküyü, önce doğduğu topraklar, sonra tüm küre ve hatta evren için içselleştirmiş biri olarak yapılanları anlamaktan ziyade yapanlara kondurmak ve onları tahlil etmek, aman "haksızlık yapmayayım" düsturundan dolayı yıllar aldı. Bu yüzden örgünün parçaları olan (Nil Karabrahimgil'in aynalama yöntemi gereği sahip olduğu gazete köşesinden Dijital-Reel Psiko-Semiyotik Dil Kullanımı örneği Haraşo Bknz. Hürriyet Gazetesi) kişilere bir kondurup bin bir kaldırdı 'Dijital Köle',

Daha başlangıçta ayağa kalkmak ocağa incir dikmelerini engelledi ama olamadı. Nasıl bir düzenek kurduklarını yakalanan anlar. Her geçen yıl daha fazla örölme ve kayıpla sonuçlandı. Susturmak için sözde intiharlar, sözde intihaller, uyduruk ihtar ve hukuk davaları, yetmedi, delilik yaftalamalarıyla karşılaşılacaktır. Eve kırmızı saldırgan araçlarla gelmek. Trafikte sataşan kırmızı araçlar çünkü hâlâ yazma aşamasındaki makalelerimi okumaktalar. Gelinek noktada ya özgürlük ya ölüm noktasıdır. Ne olursa olsun gerçeklemlerinizle ayağa kalkmak bunlarla böyle yaşamaktan bin kat evlâdır.

Elbette yapılacak ilk şey, yazılı-görsel basınlarını yaşamınızdan çıkarmaktır. Talandan faydalanmayı yok( ama reklamını çıkış olarak kullanabilir, asla legal görünümlü illegal alanlar dokunmuyoruz gibi) , bilin. Her reklamların bakıldığında talancı gruba destek verilmiş olunur, bu alanların da bedava kaynak olarak kullanıldığı asla unutulmamalıdır. Gözünüzün duraksadığı yer kadar yorumlar da önemli, dikkat edilmeli, maazallah bir de ticari değeri saptanırsa, 'Dijital Köle'ler çoğalacaktır. Sonra tüm bir hayat böyle bir ağdan kurtulma çabasına dönebilir.

## ÖZET

Değerler, bireylerin davranışlarını belirleyen rehberdir. Okul, toplumsal değerlerin kazandırıldığı sosyal bir kurumdur. Bu bağlamda bireylerin değerlerinin davranışa dönüşmesinde okullar sosyal kurum olarak yerini almaktadır. Çocuklar kazanmış oldukları değerleri davranışları yoluyla, sözlü, yazılı ifade biçimiyle ve çizim yoluyla geri yansıtmaktadır. Davranışların yansımadaki bu araçlar, çocukların kazanmış oldukları değerlerin değerlendirilmesinin bir bölümünü oluşturmaktadır. Covid 19 üzerine alan yazında yapılan araştırmalar da farklı kademelerdeki öğrencilerin sabırsız davranışlar ortaya koydukları, çok çabuk sıkıldıklarına bağlı olarak dikkatlerini toplayamadıkları tespit edilmiştir. Yapılan bu açıklamalar bağlamında, Covid 19 sürecini de yaşayan günümüzün ilkokul öğrencilerinin sabır değerini nasıl yansıttıklarının incelenmesine ihtiyaç duyulmaktadır. Nitel desenlemenin doğasına uygun olarak yarı yapılandırılmış görüşme formları kullanılmıştır. Sabır değeriyle ilgili çalışmanın uygulaması araştırmacı tarafından hazırlanan içerik ve yönerge bağlamında Milli Eğitim Bakanlığı Rize İl Millî Eğitim Müdürlüğünden uygulama izni alınan kamuya bağlı ilkokul dördüncü sınıfta gerçekleştirilmiştir. Bu amaç doğrultusunda öğrencilere içerisinde sabır değerini bulunduran senaryo tabanlı sorular sorularak sabır değeriyle ilgili düşüncelerini yansıtan yazılı anlatım yapıları istenmiştir. Nitel paradigmaya dayalı çalışmanın verileri, olgubilim deseni kullanılarak toplanmıştır. Araştırmanın yürütülebilmesi için Recep Tayyip Üniversitesi Sosyal ve Beşeri Bilimler Etik Kurulu'ndan etik kurul onayı alınmıştır. Araştırma gönüllülük esasına dayalıdır. Sabır değerinin boyutlarını ortaya koyan dört farklı senaryo sorusu hazırlanmıştır. Verilerin tematik analizi içerik analiziyle gerçekleştirilmiştir. Veriler, tema ve alt temalar altında toplanıp haritalandırılmıştır. Araştırmada, nitel verilerin ses dökümünde ve analizinde bilgisayar destekli nitel veri analizi programı Nvivo 14'den faydalanılmıştır.

**Anahtar Kelimeler:** Sabır, değer, ilkokul, yazılı anlatım

## WRITTEN EXPRESSION REFLECTIONS OF PRIMARY SCHOOL STUDENTS' PERCEPTIONS OF PATIENCE VALUE

### ABSTRACT

Values are guides that determine the behaviour of individuals. School is a social institution where social values are acquired. In this context, schools take their place as a social institution in the transformation of individuals' values into behaviour. Children reflect back the values they have acquired through their behaviours, verbal and written expressions and drawings. These tools in the reflection of behaviours constitute a part of the evaluation of the values acquired by children. In the studies conducted in the literature on Covid 19, it was determined that students at different levels exhibited impatient behaviours and could not concentrate their attention due to being bored very quickly. In the context of these explanations, there is a need to examine how today's primary school students, who also experience the Covid 19 process, reflect the value of patience. Semi-structured interview forms were used in accordance with the nature of qualitative design. The implementation of the study on the value of patience was carried out in the context of the content and instructions prepared by the researcher in the fourth grade of the public primary school, for which permission was obtained from the Rize Provincial Directorate of National Education of the Ministry of National Education. For this purpose, scenario-based questions containing the value of patience were asked to the students and they were asked to make a written expression reflecting their thoughts about the value of patience. The data of the study based on qualitative paradigm were collected using phenomenological design. Ethics committee approval was obtained from Recep Tayyip University Social and Human Sciences Ethics Committee for the conduct of the research. The research is based on volunteerism. Four different scenario questions revealing the dimensions of patience value were prepared. The thematic analysis of the data was carried out by content analysis. The data were collected and mapped under themes and sub-themes. In the research, computer-aided qualitative data analysis programme Nvivo 14 was used in the audio transcription and analysis of qualitative data.

**Keywords:** Patience, value, primary school, written expression

## GİRİŞ

Sabır, zor şartlarda haksız davranışlarla karşılaşılınca sakince beklemektir. Sabır zaman gerektiren süreçlerin sonunda bir ödüllendirme ifadesiyle tanımlanmıştır. Sabır sahibi kişiler iyi dinleyicidir, sorumluluk sahibidir, sakin karakterlidir, saygılıdır, dirençlidir, tahammüllüdür ve hoşgörülüdür. Sabır türleri ise sabrın gösterilme türüne göre kısa süreli sabır ve uzun süreli sabırdır. Yaşamda karşılaşılan sabır durumuna göre gündelik yaşamda sabır, kişilere karşı gösterilen sabır ve yaşam zorluklarında sabır türlerine sahiptir. Sabra karşı gösterilen direnç türüne göre aktif sabır ve pasif sabır türleri bulunmaktadır. Sabırsızlığın olası sonuçları ise sabırsız kişilerin huzursuzluk duygusu vermesinden dolayı güvensizlik duygusu vermeleridir. Sabırsız kişilerin aşırı aceleci olması nedeniyle kaos ortamı oluşturmasıyla çatışmaya yol açmasıdır. Bu bağlamda sabırsız kişilerin hayal kırıklığına uğramasıyla başarısızlığa uğrarlar.

Eğitim teori ve pratiğinde sabır değerinin değişik öğretim kademeleri ve derslerde nasıl kazandırıldığı ve sabır düzeyleri, sabır eğitimi ile ilgili program taslakları, model ve yöntemler geliştirme ve uygulama, sabır eğitimi ile ilgili öğretmen ve öğrenci görüşlerini toplama, sınıflandırma ve değerlendirme, öğrencilerin sabır algılarını değerlendirme gibi çalışmalar yapılmaktadır (Doğanay, 2019; Eliüşük, 2014; Esen, 2019; Izgar ve Eliüşük-Bülbül, 2017). Türkiye’de sabır üzerinde yapılan çalışmaların toplamı bunlardır. Bu çalışmalardan biri de Doğanay (2019) tarafından yapılan “Psikolojik açıdan hayatın zorlukları karşısında dini inanç ve sabır: Nitel bir çalışma” konulu çalışmadır. Bu çalışma alandaki bir ihtiyacı karşılamaktadır. Türkiye’de sorumluluk değeri 2000’li yıllardan itibaren çalışıldığı halde sabır değeri için çalışmalar oldukça yenidir. Sabır değerini geliştirmek için pratik çalışmalar ise bulunmamaktadır. Halbuki günümüzün çocuklarının en yetersiz değerlerinden biri ve ailelerin de yakındığı sabır/sebat değeridir. Bu konuda güzel bir çalışma “Çocuklarımız neden bu kadar çabuk sıkılıyor, hayal kırıklığına uğruyor ve hiç bekleyemiyor?” (<http://yourot.com/parenting-club/2016/5/16/why-our-children-are-so-bored-at-school-cant-wait-and-get-so-easily-frustrated>) başlığıyla duyu bütünleme terapisti tarafından kaleme alınmıştır. Çocuklarla, ailelerle ve öğretmenlerle 10 yıllık bir çalışma deneyimi bulunan bu duyu bütünleme terapisti çocukların pek çok yönden giderek kötüleştiğini düşünmektedir. Bu terapist, görüştüğü her öğretmenden çocuklarda sosyal, duygusal ve akademik işleyiş açısından bir düşünüş görme ve devam etmesi mesajı almaktadır. Sabır değeri bu kadar önemliken ve sabır değerinin hem aileler hem de okul tarafından küçük yaşlardan itibaren kazandırılmaya çalışılması gerekirken akademik olarak bu konuda çalışmaların bulunmaması oldukça dikkat çekicidir.

Sosyal medya platformlarında sürekli değişen ve karmaşık içeriklerin zihnin alışmasına neden olduğu ve bireyin hayatta bu hıza ayak uydurmaya çalıştığı ancak hız yakalanamadığında sabırsız tutum sergilediği; gerçek hayatın durağanlığına sabretmeyi zorlaştırdığı ifade edilmektedir (Kırcalı, 2021). Lim (2020) tarafından, teknolojinin sabır üzerinde benzer gözlemleri olduğu ifade edilmiştir. Hızlı tempolu teknolojik ortamların, anlık tatminlere olan bağlılığı artırdığı ve sabırsızlıkla olan bağı güçlendirdiği ortaya konmuştur (Janakiraman, Meyer ve Hoch, 2011). Bu bağlamda, teknolojiye bağlı hızlı yaşam tarzının bireyin sabırlı olma durumlarını etkilediği söylenebilir.

Sabır, psikolojide bir kişilik özelliği, bir eğilim, bir durum olarak nitelenir. Hayal kırıklığı, sıkıntı ve acı karşısında kişinin sakince bekleme eğilimi (Schnitker, 2012), gecikmeye karşı bir tepki biçimidir. İçinde beklemek olduğu için sabır genelde zamanla ilgilidir. Ama bazen de zor koşullar ve kötü kişiler de sabrı ortaya çıkarabilir. Bireyin bekleme ve zorlayıcı şartlar karşısında geçmiş yaşantısındaki olumlu ve olumsuz duygularının, sabrın duyuşsal değerlendirilmesinde önemli bir yeri vardır (Dudley, 2003). Sabır bir kişilik özelliği olmasına rağmen sonradan kişinin kazandığı veya ona kazandırılan bir özellik gibidir.

Değerler, bireylerin davranışlarını belirleyen rehberdir. Okul, toplumsal değerlerin kazandırıldığı sosyal bir kurumdur. Bu bağlamda bireylerin değerlerinin davranışa dönüşmesinde okullar sosyal kurum olarak yerini almaktadır. Çocuklar kazanmış oldukları değerleri davranışları yoluyla, sözlü, yazılı ifade biçimiyle ve çizim yoluyla geri yansıtmaktadır. Davranışların yansımadaki bu araçlar, çocukların kazanmış oldukları değerlerin değerlendirilmesinin bir bölümünü oluşturmaktadır. Covid 19 üzerine alan yazında yapılan araştırmalar da farklı kademelerdeki öğrencilerin sabırsız davranışlar ortaya koydukları, çok çabuk sıkıldıklarına bağlı olarak dikkatlerini toplayamadıkları tespit edilmiştir (Altıntaş-Yüksel, 2021; İnci-Kuzu, 2020; Kurnaz, Kaynar, Şentürk Barışık ve Doğrukök, 2020; Metin, Gürbey ve Çevik, 2021). Alan yazın incelendiğinde Okçu ve Platin (2018) tarafından yapılan ortaokul öğrencilerinin sabır değeri ile ilgili algılarının resim yoluyla değerlendirilmesi ve Gökalp (2022) tarafından yapılan ortaokul öğrencilerinin sabır değeri üzerindeki faktörlerin incelendiği araştırmaların dışında öğrencilerin sahip oldukları değerlerin bir yansıması olarak ortaya konulmak üzere sabır değeri üzerine yapılmış araştırmalara ulaşılamamıştır. Yapılan bu açıklamalar bağlamında, Covid 19 sürecini de yaşayan günümüzün ilkökul öğrencilerinin sabır değerini nasıl yansıttıklarının incelenmesine ihtiyaç duyulmaktadır.

Sabır nedenleri, süreci ve süresi olarak çok çeşitlidir ve çocuklar sabrın her çeşidini öğrenmelidir. Bazı şeyler için kısa, bazı şeyler içinse uzun beklemek gerektiği öğretilmelidir (bu öğretim yemeklerle, bitki yetiştirmekle vs yapılabilir). Bazı şeylerin süresi bellidir, ama bazı şeylerin ne kadar süreceği belli değildir. Her işin kendine göre bir olgunlaşma süreci ve süresi vardır, burada kişinin kendi gücü, hazır bulunuşluğu ve dış faktörler de etkili olur. Bu bağlamda bu araştırmada ilkökul öğrencilerinin sabır değeri algı yansımalarını incelemek hedeflenmiştir. Bu araştırmanın amacı ilkökul öğrencilerinin sabır değerini yazılı olarak nasıl yansıttıklarının incelenmesidir.

## YÖNTEM

Bu araştırma, nitel yöntem araştırması şeklinde tasarlanan bir çalışmadır. Araştırmanın amacına en iyi şekilde ulaşabilmek için bu çalışmada, ilkökul öğrencilerinin sabır değeri yansımaları ortaya konulmaya çalışılacaktır.

### Çalışma Grubu

Araştırmanın evreni Rize ilindeki ilkökul öğrencileridir. Araştırmanın katılımcılarının belirlenmesi, amaçlı örnekleme türüne göre gerçekleştirilmiştir. Bu tür örnekleme türünde araştırmacının katılımcılarının seçimi araştırmanın amacına dikkate alınarak belirlenir. Araştırma gönüllülük esasına dayalıdır. Çalışma grubu, “Okul Deneyimi” dersinin yürütüldüğü bir okulun dördüncü sınıfındaki 24 öğrencidir. Bu sınıftaki öğrencilerin 15’i kız, 9’si erkektir. Okul, Rize ilinde sosyo-ekonomik düzeyi orta olan bir okuldur.

### Veri Toplama Süreci

Araştırmanın yürütülebilmesi için Recep Tayyip Üniversitesi Sosyal ve Beşeri Bilimler Etik Kurulu’ndan etik kurul onayı alınmıştır. Çalışmanın yürütülmesi için Rize Milli Eğitim Müdürlüğünden gerekli resmi izinlerin alınması ve sınıf öğretmeninin de gönüllü desteği alınmıştır. Araştırma, 2024 eğitim yılında Nisan ayında gerçekleştirilmiştir. Sabır değeriyle ilgili çalışmanın uygulaması araştırmacı tarafından hazırlanan içerik ve yönerge bağlamında uygulama sınıfında sabır nedir? sabretmemiz gereken durumlar nelerdir? neden sabır sahibi olmalyız? Sorularının cevabına ulaşmak için yazılı anlatımlarla haftada bir (1) ders saati uygulamasında sınıf öğretmenleri tarafından gerçekleştirilmiştir. Öğrencilerin sabır/sebat değerini nasıl algıladıkları ve yansıttıklarına yönelik kompozisyon çalışmaları yapılmıştır.

### Verilerin Analizi

Araştırmada, nitel verilerin ses dökümünde ve analizinde bilgisayar destekli nitel veri analizi programı Nvivo 14’den faydalanılmıştır. Görüşme verileri yazılı formata dönüştürülmüştür. Yapılan dökümlerin doğruluğu ve geçerliliği için ses kayıtları iki kere tekrar dinlenilerek kontrol edilmiştir. Verilere içerik analizi uygulanmıştır. İçerik analizi sürecinde takip edilen işlemler; 1) verilerin kodlanması, 2) temaların bulunması, 3) kodların ve temaların düzenlenmesi, 4) bulguların tanımlanması ve yorumlanmasıdır (Corbin ve Strauss, 2015; Moustakas, 1994). Verilerin analizi içerik analiziyle gerçekleştirilmiştir. Veriler, tema ve alt temalar altında toplanıp haritalandırılmıştır.

### Araştırmanın Geçerlik ve Güvenirliği

*Araştırmanın geçerliğinde* konu ile ilgili geniş kapsamlı literatür taraması yapılarak çalışmanın kuramsal çerçevesi oluşturulmuştur. Araştırmada kullanılan nitel desenin ve veri toplama aracının nasıl geliştirildiği ve araştırmanın örneklemini oluşturan katılımcı grubunun seçimi, katılımcıların sayısı ve katılımcılara ait bilgiler ayrıntılı olarak açıklanmıştır. Araştırmanın inandırıcılığını arttırmak için derin odaklı veri toplama kullanılmıştır (Yıldırım ve Şimşek, 2015). Katılımcıların görüşleri doğrudan verilmiştir. Gizlilik ilkesi gereği katılımcıların gerçek isimleri kodlanarak verilmiştir.

*Araştırmanın güvenilirliğinde* çalışmanın araştırmacısı tarafından araştırma soruları ve görüşme transkriptleri tekrar tekrar okunarak verilerden çıkarılan kavramlara göre kodlamalar yapılmıştır. Yapılan içerik analizinin güvenilirliğini sağlama bağlamında kodlayıcılar arası tutarlılık kapsamında alan uzmanları tarafından verilerin kodlanması sağlanmıştır. Teyit edilebilirliğini sağlamak için çalışmadan elde edilen notlar, veriler ve kodlamalar daha sonra incelenebilecek şekilde elektronik ortamda saklanmıştır (Miles ve Huberman, 1994; Silverman, 2016).

## BULGULAR

Bu çalışmada, ilkökul öğrencilerinin sabır değerini yazılı olarak nasıl yansıttıkları incelenerek var olan durum derinlemesine ortaya konulmuş olup Tablo 1’de gösterilen temalara ulaşılmıştır. Bu bölümde, araştırma sürecinde toplanan verilere dayalı olarak elde edilen bulgulara tematik olarak yer verilmiştir.

**Tablo 1.** Covid-19 sürecine bağlı eğitimde yaşanan etik ikilemler

| Ana Tema                | Alt Temalar               |
|-------------------------|---------------------------|
| Farklı Boyutlarda Sabır | Gündelik hayatta sabır    |
|                         | Kişiler arasında sabır    |
|                         | Kısa süreli sabır         |
|                         | Uzun süreli sabır         |
|                         | Aktif sabır               |
|                         | Pasif sabır               |
|                         | Yaşam zorluklarında sabır |
| Sabırlı Kişiler         | Dirençlidir               |
|                         | Tahammüllüdür             |

|                       |
|-----------------------|
| Saygılıdır            |
| Hoşgörülüdür          |
| Sorumluluk sahibidir. |
| İyi dinleyicidir.     |
| Sebat sahibidir.      |

Araştırmanın sonuçları, ilkökul öğrencilerinin sabır değerini yazılı olarak; farklı boyutlarda sabır ve sabırlı kişiler olmak üzere iki kategoride temalandırılmıştır. Farklı boyutlarda sabır; gündelik hayatta sabır, kişiler arasında sabır, kısa süreli sabır, uzun süreli sabır, aktif sabır, pasif sabır, yaşam zorluklarında sabır temalarında kategorilendirilmiştir. Konuyla ilgili alıntılar;

“Neden ve nelere sabırlı olmalıyız. Para biriktirmekte, yemeğin gelmesini beklerken, yerlere çöp atanlara, kavga edenlere, kitabını okurken, hasta olduğumuzda, bir şeyi temizlerken, satranç oynarken, kızmabirader oynarken, bitki yetiştirirken, söz hakkı alırken, hastanede sıra beklerken, kantinde sıra beklerken, bilet alırken, trafikte beklerken”. (K3)

“Öğretmenimizi dinlerken sabırlı olmalıyız. Olmazsak hiçbir şey öğrenemeyiz. Arkadaşlarımızın dikkatini bozarız. Öğretmenimize saygısızlık yaparız. Sınavlardan düşük not alırız. Derslerimize çalışmayız. Işıklarda beklerken sabırlı olmalıyız. Olmazsak kaza olabilir. Yolda düzen bozulur. İnsanlar ölebilir. Polisler arabalara ceza verebilir. Tartışmalar olabilir. Kendimizi tehlikeye sokabiliriz...” (K4)

“Ödevlerimin bitmesi için sabrediyorum. Kekin pişmesini sabırla bekliyorum. Kantin sırasında sıranın bana gelmesini sabırla bekliyorum. İğdir’a giderken yolculuğun bitmesi için sabrediyorum. Eğer sabırlı olmazsak istediğimiz şeyleri elde edemeyiz. Amacımıza ulaşmamız için beklememiz gerekir. Sabır olmazsa sonunda başarı da olmaz”. (K6)

“Arkadaşlar arasında sabırlı olmalıyız. Derslerimize sabırlı olmalıyız. Sınıfa girerken sabırlı olmalıyız. Kardeşler arasında sabırlı olmalıyız. Bir şeyi beklerken sabırlı olmalıyız. Yolculukta sabırlı olmalıyız. Hayvanlara karşı sabırlı olmalıyız. Sinirlendiğimizde sabırlı olmalıyız. Birini beklerken sabırlı olmalıyız. (K11)

“Allah’ın verdiği dertlere ve hastalıklara sabırlı olmalıyız. Geçim sıkıntılarında sabırlı olmalıyız. İşlerinizde sabırlı olmalıyız. Aileler arasında sabırlı olmalıyız. Cesaretimize sabırlı olmalıyız...” (K15)

“... Örneğin öğretmen sınav notunu açıklayacak. O zaman sabırlı olmamız gerekir. Ya da bir yakınımız hastaneden çıkacak. O zaman da sabırlı olmamız gerekir”. (K17)

“Sıra beklerken sabırlı olmalıyız. Olmazsak kavda çıkar. Sıra düzeni bozulur. Birbirlerinin hakkını yerler. İşimiz daha uzun sürer. (K24)

Yukarıda verilen bulgular bağlamında sabır türleri, sabırın gösterilme türüne göre kısa süreli sabır ve uzun süreli sabırdır. Yaşamda karşılaşılan sabır durumuna göre gündelik yaşamda sabır, kişilere karşı gösterilen sabır ve yaşam zorluklarında sabır türlerine sahiptir. Sabra karşı gösterilen direnç türüne göre aktif sabır ve pasif sabır türleri bulunmaktadır.

İlkökul öğrencilerinin sabır değeri yazılı anlatımında sabırlı kişiler; dirençlidir, tahammüllüdür, saygılıdır, hoşgörülüdür, sorumluluk sahibidir, iyi dinleyicidir ve sebat sahibidir temalarında kategorilendirilmiştir. Konuyla ilgili alıntılar;

“Sabır, bir insanın olumlu veya olumsuz bir davranışı beklemesine karşısına çıkan zorluklara güçlü bir şekilde dayanmasına denir. Eğer bahsettiğim gibi biri olmak istiyorsanız; soğukkanlı biri, kendini kontrol edebilen biri ve başladığı işin sonunu bitiren biri olmanız lazımdır”. (K2)

“Sabırlı insanların özellikleri ani bir durumda sakin kalabilmeleridir. Başka olarak sabırlı insan düzenli olur. Sabırlı insan planlı olur. Bunlardan başka sorumlu insan çalışkan olur. Sabırlı olursak her zaman mutlu oluruz. Ama tersi sabırlı olmazsak yanlış yaparız. Kendimize yazık ederiz. Örneğin bir yakınınız hastalandı. Kendimizi üzeceğimize sabretmeliyiz. Bunun için sabırlı olmalıyız. Sabırlı olmanın olumlu ve olumsuz yanları olumlu olarak örnek ani bir anda bir panik yapmayız bu başkalarını da etkilemez. Ama tam tersi bir an panik yaparsak bizi ve başka arkadaşlarımızı kötü yönde etkiler. “Kimlere karşı sorumlu olmalıyız?” İlk önce kendimize karşı sabırlı olmalıyız. Sonra küçüklerimize karşı sorumlu olmalıyız. Sonra büyüklerimize karşı sorumlu olmalıyız. Derslerimize karşı sabırlı olmalıyız”. (K5)

“Sabırlı olmak, bizi olaylar karşısında daha olumlu düşünmemize neden olur. Bir şeylerin olumlu olması için süre gereklidir. Beklemenin yanı sıra sabırlı olmanın bizim için ne kadar önemli olduğunu bilmeliyiz. Acele karar vererek sonucu kötü olabilirler. Bekleme sonucunda elde ettiğimiz sonucu ne kadar değerli olduğunu anlarız. Eğer her şey çok hızlı gelişseydi elde edilen sonuç belki de bizim için bir önemi olmazdı. Kolay ve çabuk elde edilen bir başarı bizi mutlu etse bile zamanla kolay yoldan elde edilen başarının değeri bizi mutsuz edebilir. Harcanan emek ne kadar çoksa başarı da o kadar mutlu eder”. (K12)

“... Karşıma çıkan herhangi bir olay karşısında sabırlı ve sakin bir şekilde bir olayı çözmeli. Sabreden derviş muradına ermiş atasözüne uygun hareket etmiş oluruz. Sabırlı olmasak başımıza gelen olaylar daha da karmaşık hale gelir. İşin içinden çıkamayız. Başarmak istediğimiz olay sonuçsuz kalır. Kim planlamış

*olduğu bir olayın sonuçsuz kalmasını ister ki. Elbette kimse istemez değil mi? Hedefimize ulaşmak için sabırlı olmak zorundayız". (K16)*

*"Sabırlı insanlar başladığı işi sonuna kadar götürür, sinirliiyken kendine hâkim olur, olaylara geniş açıdan bakar, daha az hata yapar, hayat başarısı yüksektir, karar alırken acele etmez ve soğukkanlıdır". (K19)*

*"Sabırlı insanların genelde özellikleri şunlardır: soğukkanlılık, saygı, kararlılık, dürüst, az hatadır. Sabırın amacı bir olayın ters gitmemesidir. Eğer sabırlı bir insan olursak çevremiz tarafından seviliriz, olayların önemini öğreniriz. Olayların bakış açımızı değiştiririz. Ama bunları kimlere karşı yapmalıyız? Arkadaşlarımıza karşı, ailemize karşı, öğretmenimize karşı vb. kişilere karşı sabırlı olmalıyız. Sabrımızı kontrol edemezsek pişman olabileceğimiz şeyler yapabiliriz. Sonucu kötü olabilir". (K23)*

## SONUÇ

Felsefede, Platon'da ve İncil'de dört temel erdem bilgelik, cesaret, ölçülülük ve adalettir. Sabır, ölçülülük erdeminin içinde yer alır. Aristoteles de, Nicomachean etiğinde sabırın bir erdem olmadığını, yaşamı iyi, mutlu başarılı bir şekilde geçirebilmek için gerekli bir karakter özelliği olduğunu iddia etmiştir (Hursthouse, 1986).

İlkokul kademesinde öğrencilere kazandırılması büyük önem taşıyan bilgi, beceri, tutum ve değerler toplum yaşamında gözlenen hızlı değişimlere koşut olarak artmakta ve çeşitlilik göstermektedir. Alan yazın incelendiğinde, öğrencilerin sahip oldukları değerlerin bir yansıması olarak ortaya çıkarmak için çizimler yardımıyla yapılmış çalışmalara ulaşılamamıştır. Bu bağlamda çocukların sahip oldukları değerlerde bir eksiklik ya da sorun varsa bunların ortaya konularak değerlerin çocuklara erken yaşlarda kazandırılması oldukça önemlidir. Araştırmada, sabır türleri sabırın gösterilme türüne göre kısa süreli sabır ve uzun süreli sabırdır. Yaşamda karşılaşılan sabır durumuna göre gündelik yaşamda sabır, kişilere karşı gösterilen sabır ve yaşam zorluklarında sabır türlerine sahiptir. Sabra karşı gösterilen direnç türüne göre aktif sabır ve pasif sabır türleri bulunmaktadır. Sabırsızlığın olası sonuçları ise sabırsız kişilerin huzursuzluk duygusu vermesinden dolayı güvensizlik duygusu vermeleridir. Sabırsız kişilerin aşırı aceleci olması nedeniyle kaos ortamı oluşturmasıyla çatışmaya yol açmasıdır. Bu bağlamda sabırsız kişilerin hayal kırıklığına uğramasıyla başarısızlığa uğrarlar.

Eğitim teori ve pratiğinde sabır değerinin değişik öğretim kademeleri ve derslerde nasıl kazandırıldığı ve sabır düzeyleri, sabır eğitimi ile ilgili program taslakları, model ve yöntemler geliştirme ve uygulama, sabır eğitimi ile ilgili öğretmen ve öğrenci görüşlerini toplama, sınıflandırma ve değerlendirme, öğrencilerin sabır algılarını değerlendirme gibi çalışmalar yapılmaktadır (Doğanay, 2019; Eliüşük, 2014; Esen, 2019; Izgar ve Eliüşük-Bülbül, 2017). Türkiye'de sabır üzerinde yapılan çalışmaların toplamı bunlardır. Bu çalışmalardan biri de Doğanay (2019) tarafından yapılan "Psikolojik açıdan hayatın zorlukları karşısında dini inanç ve sabır: Nitel bir çalışma" konulu çalışmadır. Bu çalışma alandaki bir ihtiyacı karşılamaktadır ve aynı zamanda bu projenin de araştırmacılarından biri olan Yapıcı'nın danışmanlığında gerçekleştirilmiştir. Türkiye'de sorumluluk değeri 2000'li yıllardan itibaren çalışıldığı halde sabır değeri için çalışmalar oldukça yenidir. Sabır değerini geliştirmek için pratik çalışmalar ise bulunmamaktadır. Halbuki günümüzün çocuklarının en yetersiz değerlerinden biri ve ailelerin de yakındığı sabır/sebat değeridir. Bu konuda güzel bir çalışma "Çocuklarımız neden bu kadar çabuk sıkılıyor, hayal kırıklığına uğruyor ve hiç beklemiyor?" (<http://yourot.com/parenting-club/2016/5/16/why-our-children-are-so-bored-at-school-cant-wait-and-get-so-easily-frustrated>) başlığıyla duyu bütünleme terapisti tarafından kaleme alınmıştır. Çocuklarla, ailelerle ve öğretmenlerle 10 yıllık bir çalışma deneyimi bulunan bu duyu bütünleme terapisti çocukların pek çok yönden giderek kötüleştiğini düşünmektedir. Bu terapist, görüştüğü her öğretmenden çocuklarda sosyal, duygusal ve akademik işleyiş açısından bir düşünüş görme ve devam etmesi mesajı almaktadır. Araştırma sonuçları özellikle, veliler ve öğretmenlerle açık ve net biçimde paylaşılarak farkındalık düzeylerinin artırılması sağlanabilir.

İlkokul kademesinde öğrencilere kazandırılması büyük önem taşıyan bilgi, beceri, tutum ve değerler toplum yaşamında gözlenen hızlı değişimlere koşut olarak artmakta ve çeşitlilik göstermektedir. Alan yazın incelendiğinde, öğrencilerin sahip oldukları değerlerin bir yansıması olarak ortaya çıkarmak için çizimler yardımıyla yapılmış çalışmalara ulaşılamamıştır. Bu bağlamda çocukların sahip oldukları değerlerde bir eksiklik ya da sorun varsa bunların ortaya konularak değerlerin çocuklara erken yaşlarda kazandırılması oldukça önemlidir.

## IMPACTS OF WAR ON CHILDREN AND ADOLESCENTS

**Assoc. Prof. Dr. Münevver MERTOĞLU**

Istanbul Kultur University-Education Faculty,  
CEHAMER - Head of Research and Prevention of Violence in Schools.  
m.mertoglu@iku.edu.tr

### ABSTRACT

Many children have lost their lives in wars in recent years. Those who survived witnessed extraordinary violence. Many children lost their parents and relatives, and almost all their homes and buildings were destroyed. Children and their families are denied safe access to food, water, electricity, medicine, and hospitals. Hospitals and schools were bombed. Especially children and adolescents are psychologically affected by all these negativities. The degree of impact varies depending on the degree of violence experienced in the war, the age of the children, their upbringing, their financial situation, and whether similar vulnerabilities have been experienced before. Another important issue is that the problems of children and adolescents do not end with the end of the war and emerge as post-traumatic syndrome later in life. One of the impacts of war on children and adolescents is that the violence applied by the authorities becomes legitimized for children. For these reasons, the necessary treatment and psycho-social support should be provided to children and adolescents, as well as to those responsible for the care of children and teachers.

**Keywords:** Adolescent, child, psychosocial support, war, war victim.

### INTRODUCTION

War is a serious public health issue. Particularly in modern times, wars are closely followed by countries worldwide through the media and social platforms, and their devastating consequences negatively affect everyone. However, children form the most impacted group. The 2022 UNICEF report highlights that children who survive war experience severe trauma (UNICEF, 2022). While 90% of those who died in World War I were soldiers, recent wars have seen the majority of casualties being civilians, including women and children, underscoring the urgent need for international measures. According to a United Nations report from 2018, the number of children killed or injured in wars and conflicts in 2018 reached 12,000 (the highest number since 2005). In 2021, 2,515 children were killed, in 2022, 2,985, and in 2023, by December 14, a total of 19,453 people, including 8,000 children in Gaza, had lost their lives. The Geneva Conventions, signed on August 12, 1949, with the aim of regulating the rules of war and protecting war victims, is one of the most significant legal documents related to human rights (<https://tr.euronews.com/2019/08/12/cenevre-sozlesmeleri>). The fourth of these conventions, known as the Geneva Conventions, specifically addresses the protection of civilians during war. Despite this, in recent wars, many civilian children and adults have been killed, and their homes and service buildings have been almost entirely destroyed. Children and their families' access to food, water, electricity, medicine, and hospitals has been obstructed, and hospitals and schools have been bombed. The situation in the Gaza-Israel war, where 10 children are reportedly killed every minute, is even more dire. Historians express sadness and astonishment in the media, noting that such cruelty was not witnessed even in the distant past when warfare technology was less advanced. Sadi Bereke, a 63-year-old cemetery worker in Gaza, told an Anadolu Agency (AA) reporter that they buried 600 women and children in a single day, exceeding the total number of burials in Gaza over the past five years (<https://www.trthaber.com/haber/dunya/gazzedeki-mezarlik-gorevlisi->). Children and adults in war zones experience violence the most. In other words, war is one of the greatest disasters that can befall humanity. Beyond the physical harm of death and injury, children may witness armed attacks, explosions, the deaths of their loved ones, deprivation of basic needs and exposure to extreme cold or heat can have an even more traumatic impact. Children who survive face the difficult reality of being orphaned, displaced from their homes and countries, and subjected to complex issues that are difficult to resolve. Many children also experience psychological, physical, economic, and sexual abuse during and after war, with some describing these conditions as more painful than death itself. Children are the most vulnerable group in war environments, where injured individuals cannot be helped and proper care for existing diseases is unattainable. Furthermore, babies born in unhealthy environments due to the lack of necessary healthcare increase the risk of infant mortality.

### The Physical and Psychological Effects of War on Children and Adolescents

The victimization of children and adolescents in war can be evaluated in two ways. **In primary victimization**, children directly experience the adverse effects of war. They suffer significant physical harm through injury, death, the loss of family members, and lack of access to shelter, food, care, and medical treatment. **In secondary victimization**, while not directly exposed to these negative events, they witness the overall adverse consequences of war. Fear and a lack of safety are prominent feelings. Children and adolescents are psychologically affected by the physical consequences of war, and the degree of this impact varies based on the

level of violence, the children's age, upbringing, socioeconomic status, and whether they have faced similar vulnerabilities before.

### **Post-Traumatic Stress Disorder**

A key issue is that the negative effects of war on children and adolescents do not cease when the war ends. The traumatic nature of modern warfare leaves lasting psychological scars on children and adolescents. Many of these effects are called as Post-Traumatic Stress Disorder (PTSD), continuing for long periods. The World Health Organization (WHO) defines trauma as the intense stress individuals experience in response to threatening events. Post-Traumatic Stress Disorder (PTSD) is a psychological disorder that threatens the physical and mental health of the individual, creates a sense of terror, fear, insecurity, anxiety and helplessness, causes inadequacy in coping and whose effects continue for a long time. Besides, this condition can also lead to problems in social and professional life. Anxiety, nervousness, sleep disturbances, nightmares, and changes in appetite are common in children who experience war-related PTSD. More importantly, persistent fears, worries, and insecurity about the future emerge, often associated with guilt that the events will happen again, that the person will be left alone and defenseless, and that they will be punished for their wrongdoings (American Psychiatric Association, 2000).

### **Studies on the Effects of War on Children**

Even when children affected by war are provided with shelter, education, and financial support, the impact of their traumatic experiences can last for a long time. In a study conducted on 232 children affected by war, most were found to suffer from PTSD as well as behavioural disorders, anxiety, stress disorders, and attention deficits. Another study involving 4,365 children affected by war, conflict, and terrorism reported similar findings, with children developing stress reactions such as PTSD, behavioral and emotional problems, depressive symptoms, anxiety disorders, and phobias (Betancourt et al., 2009; Cohen & Eid, 2007; Comer & Kendall, 2007). Furthermore, another study found that children experienced sleep and psychosomatic problems after war. Similar issues were observed in the results of a study conducted by Khamis (2016) on 205 families and their children who had been directly affected by war. Another study reported that 98% of children with worsening psychological conditions after war exhibited symptoms such as crying, screaming, disrupted sleep patterns, unhappiness, and bedwetting. Despite a partial reduction in post-traumatic stress symptoms after the war, most studies on this subject indicate that childhood traumas have a lasting impact on cognitive, moral, and personality development, as well as interpersonal relationships and coping abilities (Barath, 2002; Dubow, Huesmann & Boxer, 2009). Children who are displaced from their homes, schools, and friends, and who lose all their belongings, including toys and personal items, often experience deep sadness, pain, and anger, feeling powerless and insecure. These children may face difficulties in social and marital relationships and could develop substance or alcohol dependence

### **Children and Adolescents Aged 0-6 Affected by War**

Children aged 0-6 need parental care. The disruption of an environment of love and security can cause children to face serious problems both after the war and in the future. Adolescents affected by war may struggle to make plans for the future. Their concerns about the future can negatively affect their expectations, academic success, and zest for life. Problems in relationships with family, school, and the environment can negatively impact their adjustment to their surroundings. As a coping mechanism for the traumatic events they have experienced, adolescents may engage in risky behaviors that harm themselves and others. Their tendencies toward violent, aggressive behavior may increase. They may also experience intensified feelings of insecurity and disruptions in their sense of self.

### **The Social Effects of War on Children**

The physical, psychological, and social effects of war are closely related. Having to live with and defend oneself for a long time against violence, especially in wartime environments, can establish the belief that violence must be met with violence. It may even legitimize violence. Research shows that in countries where war has persisted for a long time, homicide rates have increased by between 10% and 79% (Archer & Gartner, 1976). War can also negatively impact the moral development of children. In the moral collapse created by war, children may struggle to distinguish between right and wrong. They may begin to believe that the violent actions displayed by authority figures are morally acceptable. The feelings of revenge and hostility experienced by children who have lost loved ones and homes in the war and have been forced to migrate may trigger the development of a culture of violence. This undermines the cultural norms of peace, security, solidarity, and charity. Consequently, children may experience difficulties in friendship, marriage, and other social relationships. Children who witness the violent behaviors of role models may learn to resort to aggression to protect themselves (Gökler, 2001). Moreover, the angry adults around them may reinforce these aggressive behaviors. Children raised in today's war-torn environments may have the potential to become active perpetrators of violence in the future.

### **Measures to Be Taken for Children and Adolescents Affected by War**

The physical, psychological, and social support that can be provided to children affected by war varies depending on the degree of victimization and the ages of the children. Regardless of their age group, the priority is to create an environment that offers love and security, allows them to quickly return to their routines, and meets their physical, psychological, and social needs. Ensuring that they can continue their academic lives and participate in sports and artistic activities plays an important role in overcoming the traumatic process.

#### **Support for Children Aged 0-6**

Under normal conditions, the environment in which children aged 0-6 grow up, as well as the behaviors and communication styles of their parents or caregivers, play a crucial role in their physical, emotional, and social development. Being exposed to war or similar environments during this period can negatively affect their development, academic and professional lives, as well as personal and social relationships. Children aged 0-6 who have been in war zones may experience crying fits, waking up startled or crying, sleep disturbances, bedwetting, and bowel problems. Parents or caregivers are expected to be conscious and supportive in this regard. Despite all the difficulties, it is important to create a stable environment for infants, meet their basic needs (especially breastfeeding), ensure that caregivers for babies who have lost their parents do not change frequently, and provide familiar items and toys to help them adapt to the new environment. Physical intimacy, love, and security are crucial. Regular health check-ups and vaccinations must be carefully monitored. Play plays a significant role in the rehabilitation of war-affected children from the age of one. They should be given the opportunity to play in their environment. As they grow older, activities like music, drawing, storytelling, and drama, in addition to play, should be encouraged to help them express themselves and have fun (Bellamy, 2005).

#### **Support for Adolescents Affected by War**

Adolescents have a higher level of awareness and a better ability to understand events and foresee consequences compared to younger children. Therefore, they may need more attention and support. Parents, relatives, or specialists should listen to adolescents and share their fears and concerns. Creating a communication environment where adolescents can feel confident and encouraged is important. More importantly, ensuring their participation in activities that can eliminate the sense of hopelessness brought on by war is crucial.

#### **Support for Parents and Teachers**

Parents and teachers who are victims of war also need support in providing help to children. Therefore, it is necessary to include them in the psycho-social support programs designed for children and adolescents (Caffo and Belaise, 2003). In traumatic environments, children need the support of their parents and teachers more than ever. This is why the primary therapy is often aimed at families. In necessary situations, trauma can be addressed with cognitive, behavioral, and personal therapies. Children and adolescents should be kept away from violent news and images during wartime, not just in war-torn countries but around the world. Governments are also expected to take the necessary measures in this regard. If, despite these precautions, children witness scenes of war, it is important to be there for them, answer their questions, and try to provide explanations. Educating parents and teachers about the unusual reactions that children may develop after trauma is crucial for mitigating the long-term negative effects of war. It may not be easy for teachers to monitor children's unusual reactions while also maintaining education, cultural, and sports activities at school, so it is essential to remember that they also need support and training.

#### **Psycho-social Support for Children Traumatized by War**

Providing individual or group psycho-social support to traumatized children is important. Sharing experiences among children who have been exposed to common traumas helps them feel less alone and promotes solidarity, hope for the future, and learning from positive examples on how to cope with difficulties. In the first stage of psycho-social support, children should be informed about how war environments affect people and the reactions that may occur during this process. These explanations can support children in expressing their emotions and controlling their fears and anxieties. Calming techniques, such as breathing and relaxation exercises, can also be used to help children cope with stress. After the war, it is crucial to create environments where children and adolescents do not feel they have lost everything and can look toward the future with hope. Supporting them in developing a positive outlook is extremely important (Yule & others, 2000). In all forms of support provided to children after war, their best interests must be considered.

### **CONCLUSION**

In modern wars, many children die, and those who survive face severe physical and psychological problems. The inability to meet their most basic needs, access care and treatment, and the trauma of witnessing the deaths of loved ones and explosions profoundly affect them. More importantly, the problems that children face do not end with the cessation of war, as they often experience post-traumatic syndromes. It is necessary to provide treatment

and psycho-social support to children and to those responsible for their care and education. However extensive and intense the psycho-social interventions for children after war may be, it is very difficult to completely erase the traces of violence. Therefore, it is essential to resolve ongoing political conflicts as soon as possible and keep civilians and children away from these conflicts. Considering the profound negative impact of war on children's entire lives, political leaders and societal authority figures must take on significant responsibilities to prevent new wars from breaking out.

### ABSTRACT

In modern times, the rise of information and communication technologies increases risks in this area, including the events arising from these risks. It has also created the basis for the increase of investigation work on such incidents. Electronic mail (e-mail) systems used during information exchange are one of these fields. For this reason, there is a need to explore different methods in cyber forensics to investigate potential attacks from devices, whether mobile or generic. This paper proposes an artificial intelligence-based research method in cyber forensics to improve the promptness and efficiency of cybercrime detection and evidence collection in the e-mail system.

**Keywords:** evidence, mobile cyber forensics, general cyber forensics, digital forensics, mobile device, artificial intelligence, investigation, email.

### INTRODUCTION.

In the digital age in which we live, the increase in the use of information and communication technologies in all areas of our lives has created the basis for the increase of risks and the events arising from them in this area and the expansion of research works. As most of our sensitive information has been moved to the digital arena, the scale and complexity of cyber attacks has also increased. Every activity we perform in this arena can become a potential object of attack.

Electronic mail (e-mail) systems used during information exchange are also one of the main facilities. E-mail systems, as one of the main means of communication in the Internet era, generate a large amount of electronic information. Millions of users use email systems every day for various purposes. Communication through e-mail is effective and efficient, convenient, accessible and simple. However, e-mail systems, in addition to being the primary means of personal and business correspondence, are also prime targets for cyber threat actors to launch attacks and establish communications. Some types of email use in cyber attacks include "email spoofing", "email phishing".

Electronic mail (email) correspondence plays a key role in the field of cyber forensics as an important source of evidence. Emails can contain a variety of information such as text, video, images and other attachments, links, which can be analyzed as evidence. Analyzing this data plays an important role in the process of investigating cyber intrusions. For this reason, there is a need to explore different methods in cyber forensics to investigate potential attacks from devices, whether mobile or generic.

Data collection from electronic mail systems is carried out using various methods and tools. Natural Language Processing (NLP) occupies a special place among these methods.

### Materials and Methods

This paper proposes an artificial intelligence-based investigation method in cyber forensics to detect cyber intrusions in e-mail system and increase the promptness and efficiency of evidence collection and explores in detail the application of NLP techniques such as BM25 and Word2Vec.

The main goal of the reviewed research work is the application and development of efficient methods for the classification and analysis of e-mail data. Applying the BM25 and Word2Vec methods on the e-mail data obtained in the conducted research, e-mails are classified with these methods. Then, the value calculated with the received indicators is entered into the model environment, and the system is optimized. The research carried out will contribute to the development of new and effective methods for detecting spam and malicious emails.

**Data Collection and Preparation:** A test laboratory environment was formed to carry out the research work. In a structured environment, e-mails that serve different purposes are collected into user accounts that are included

in an e-mail system. As a result of the detailed investigation of the received e-mails, they were divided into two main classes: genuine and malicious (malicious).

Genuine e-mails include e-mails that do not contain any threat elements in their content. Malicious e-mails include e-mails sent with malicious purposes, such as phishing, spam, and malware distribution, which threaten the user's security.

The data collection will be used for email security analysis, detection and classification of malicious activities. Thus, the results of this research study are important for investigating and strengthening defenses against existing and emerging email security threats. The research process is described below.

**BM25 method:** BM25 is a search and matching method often used in the field of NLP (Natural Language Processing). At the same time, we mention the BM25 algorithm as an improved version of TF-IDF [1]. BM25 is a ranking function that considers both term frequency (TF) and document length normalization to determine and evaluate the relevance of a document to a given query [2]. We implement the BM25 algorithm, certain stages of execution, which are based on the set of obtained data.

The basic formula of the BM25 model is as follows[1]:

$$BM25(D, Q) = \sum_{q_i \in Q} IDF(q_i) \cdot \frac{f(q_i, D)^{k_1+1}}{f(q_i, D) + k_1 \cdot (1-b + b \cdot \frac{|D|}{avgdl})}$$

- $f(q_i, D)$ - the query in document D shows the frequency of term  $q_i$
- $k_1$  and b are hyperparameters (usually  $k_1=1.2$  and  $b=0.75$ ).
- Avgdl shows the average length of documents.
- $|D|$  – length of documents.

calculates the inverse document frequency of terms and takes into account the importance of a term in the entire set of documents.

$$IDF(q_i) = \log\left(\frac{N - n(q_i) + 0.5}{n(q_i) + 0.5}\right)$$

Here N is the total number of documents and  $n(q_i)$  is the number of documents with term  $q_i$ .

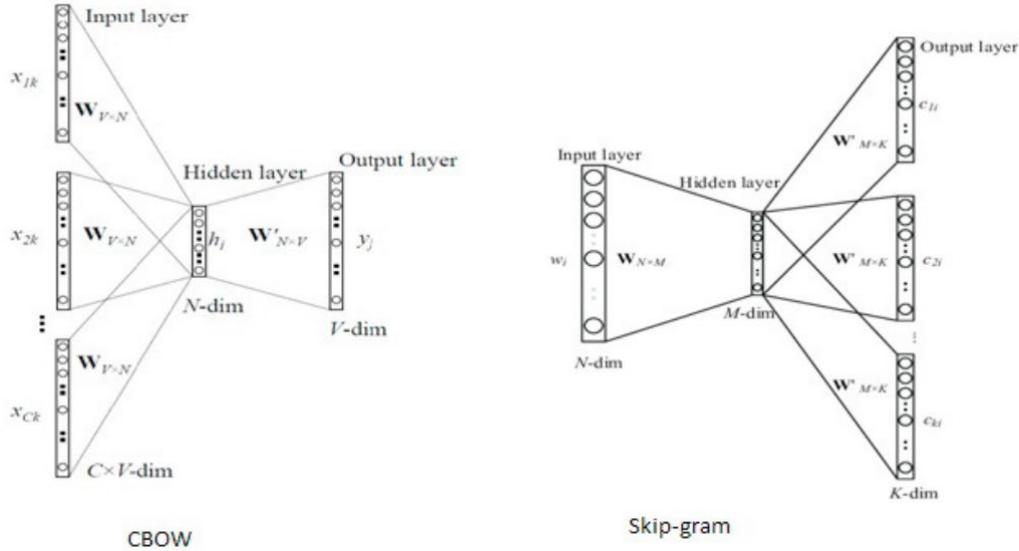

With the application of BM25, we calculate the compatibility score for the available data and classify them.

**Word2Vec method:** Word2Vec NLP is also a widely used model used to meaningfully transform words in texts into numerical vectors and create a vector representation [3].

Word2Vec uses two main approaches: CBOW (Continuous Bag of Words) and Skip-gram. (Figure 1)

The CBOW (Continuous Bag of Words) architecture creates a model for predicting a target word by considering past and future contextual word vectors. This approach allows to calculate the average value of the contextual word vectors and perform the prediction process by combining this information with the log-linear classification model[4].

Skip-gram architecture uses a negative sampling method to perform prediction of other words in its context based on a given word. In this process, the model is trained to maximize the probabilities of words in the context of a given word[4].

**Figure 1.** Structure of CBOW and Skip-gram

The Word2Vec model is calculated using the values of the word vectors obtained from the cosine similarity equation. Cosine similarity is a method used to evaluate the similarity between two n-dimensional vectors, which calculates the cosine value of the angle formed between these vectors[5]. This method is widely used for comparing documents or other texts.

$$\cos\theta = \frac{\vec{x} \cdot \vec{y}}{\|\vec{x}\| \|\vec{y}\|}$$

- $\vec{x} \cdot \vec{y}$  – shows the scalar product.
- $\|\vec{x}\|$  və  $\|\vec{y}\|$  – shows the norm of the vectors.

At the next stage, the algorithm of the BM25 and Word2Vec methods is built using the appropriate Python libraries. Emails collected in a test laboratory environment are analyzed using software developed with those algorithms. Emails with both methods are compared and a relevance score is determined (Table 1).

**Table 1:** Relevance score of Word2Vec and BM25.

| № | NAME     | Precision | Recall | F1 Score | Query process time |
|---|----------|-----------|--------|----------|--------------------|
| 1 | Word2Vec | 1.0000    | 0.5000 | 0.6667   | 0.9322             |
| 2 | BM25     | 0.40      | 1.00   | 0.57     | 0.5375             |

**Evaluation:** Performance indicators such as "Precision", "recall" and "F1" score are calculated based on the obtained BM25 and Word2Vec scores. It determines the effectiveness of these methods in email classification. Evaluation metrics are calculated as follows[7]:

Precision - The ratio of correctly identified spam emails to total email results.

$$\text{Precision} = \frac{TP}{TP+FP}$$

Recall - The ratio of valid spam emails to total spam emails.

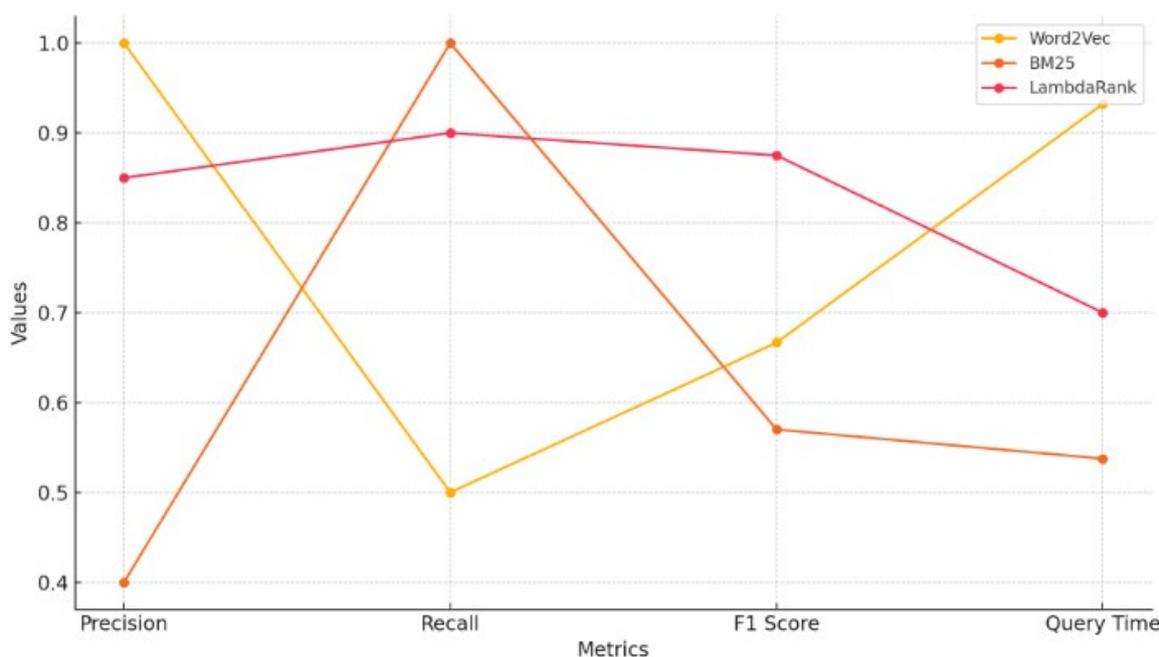

$$\text{Recall} = \frac{TP}{TP+FN}$$

F1 Score - Harmonic mean of Precision and Recall.

$$F1 = 2 \cdot \frac{\text{Precision} \cdot \text{Recall}}{\text{Precision} + \text{Recall}}$$

Request Time - Algorithm processing time on each email.

**Comparison with LambdaRank:** LambdaRank is an algorithm aimed at improving the accuracy of ranking systems, as it provides a more flexible approach to optimizing the ranking problem, and this methodology allows for easier calculation of differences between pairs of documents, while also helping to improve the efficiency of the respective ranking systems. [6]. The ranking performance of both methods is compared using LambdaRank. In this method, email results evaluated by BM25 and Word2Vec are ranked and which method performs better and the results are compared.(Figure 2)

**Figure 2.** Performance metrics - Word2VEC and BM25 and LambdaRank

At this stage of the research are processed in the Python environment and the training process of the model is carried out. The input data is fundamental in that the model learns the relationships between the given patterns and defines the features. This stage is a necessary condition for the model to achieve high accuracy and reliability in the classification process.

After the model completes the training process, appropriate libraries are used in the Python environment in order to optimize its performance. These libraries provide extensive capabilities for model training, parameter tuning, and results analysis.

During the optimization phase, the training results are analyzed in depth, and as a result of this analysis, a number of improvements are applied to improve the performance of the model. Considering the indicators of the model (for example, precision, recall, and F1 score), visualization and graphical analysis of the results obtained through the appropriate libraries is performed. Proper tuning ensures that the model performs with higher accuracy in email classification and helps to minimize misclassifications.

The model can accurately classify increasingly complicated and diverse email samples and produces reliable results because it was optimized using the right techniques. Thus, this methodology makes it possible to ensure a high level of accuracy and stability in terms of practical application of scientific theory.

## CONCLUSION AND FUTURE WORK

This study demonstrates the potential application of NLP techniques for email evidence analysis in mobile forensics. In the conducted research, using two NLP methods, BM25 and Word2Vec, information extraction and analytical approaches were applied to e-mails. Algorithms for both methods were built in Python and evaluated based on the given email data. At the last stage, a model for classification of spam and non-spam e-mails was built and preliminary results were analyzed using appropriate Python libraries. The differences between the results obtained according to the model have been determined.

This research was carried out on the experimental data at the initial stage and the model was formed. This model will be applied to the real data sets obtained in the next research, and larger-scale analyzes will be carried out. The main goal of the next research work is to study the classification accuracy of BM25 and Word2Vec methods on real e-mail data in more detail and to form a new improved module according to the appropriate optimal variant.

In future research, the functionality of the model will be expanded with more sophisticated data analysis methods and ways to apply it to broader areas of digital forensics will be explored.

# IMPROVING SOLAR PANEL EFFICIENCY THROUGH AI-BASED MAXIMUM POWER POINT TRACKING: A PERFORMANCE EVALUATION

**Javad NAJAFI**

Azerbaijan Technical University, Baku- Azerbaijan  
Qwerty642.5@mail.ru

## ABSTRACT

This paper discusses the application of artificial intelligence (AI) models to optimize maximum power point tracking (MPPT) processes in solar power systems. With the increasing role of renewable energy sources, efficiently extracting maximum power from solar panels is becoming critical. The paper proposes the use of various machine learning algorithms, including neural networks, decision trees, and genetic algorithms, to implement MPPT. The study will compare these models based on criteria such as response time to changing conditions, overall energy extraction efficiency, and resilience to data noise. The results of this study can contribute to the wider adoption of AI in solar systems and improve their efficiency, which in turn will support the transition to more sustainable energy sources.

**Keywords:** artificial intelligence, MPPT, renewable energy, solar panel

## INTRODUCTION

Solar energy plays an important role in the development of renewable energy sources due to its environmental friendliness, availability, and cost-effectiveness. However, the low conversion efficiency of photovoltaic (PV) systems, ranging from 9 to 17%, requires the use of power optimization technologies to improve their efficiency. Maximum Power Point Tracking technology provides an opportunity to maximize the output power of solar panels by adapting them to changing climatic conditions [1, 2, 3].

Traditional methods such as perturbation and observation (P&O) and incremental conductivity (INC) algorithms are widely used due to their simplicity and low implementation cost. However, these methods have limitations such as steady-state oscillations and efficiency degradation under rapidly changing solar radiation [4, 5]. In recent years, much attention has been paid to the implementation of intelligent methods, including neural networks, logic controllers, and particle optimization algorithms. These approaches demonstrate improved tracking performance, robustness to data noise, and adaptation to complex operating conditions [6, 3].

Several studies have been conducted to compare MPPT methods to identify their strengths and weaknesses. For example, Sarvi and Azadian's study classifies algorithms into traditional, smart, and hybrid, noting that hybrid approaches have an advantage in non-uniform shading conditions [3]. Eltawil and Zhao's work provides a detailed discussion of the advantages and disadvantages of smart methods over traditional ones, highlighting their potential to improve the efficiency of solar systems [2].

This study aims to investigate and evaluate state-of-the-art MPPT algorithms applied to photovoltaic systems, focusing on comparing their performance characteristics such as response time, robustness to data noise, and overall energy extraction efficiency, thereby identifying promising areas for further development.

## MATERIALS AND METHODS

Maximum Power Point Tracking technology is designed to maximize the energy extracted from solar panels despite changes in environmental conditions (e.g. sunlight intensity, temperature, shading). Each solar panel has a Maximum Power Point (MPP) — the combination of voltage and current at which the greatest power is produced. However, due to the nonlinear characteristics of solar cells and changing conditions, this point changes throughout the day.

MPPT algorithms measure the panel voltage ( $U$ ) and current ( $I$ ) to calculate the output power  $P = U \cdot I$ . MPPT analyzes the current power and compares it to previous measurements. If the power increases, the load settings change in the same direction. If it decreases, the direction is adjusted. MPPT controllers continuously adjust the panel voltage and current to achieve the optimal power point, even as weather conditions change. The implementation of MPPT provides maximum energy efficiency of solar systems, increasing the output power by 10-30% compared to systems without MPPT [7].

This study aims to evaluate the capabilities of artificial intelligence (AI) to improve the efficiency of MPPT. It includes several stages: first, the classical Perturb and Observe (P&O) algorithm is simulated, which is the basis

for performance analysis. The simulator generates random voltage and current values in the range of 0-60, calculates the power and records the results. Performance is assessed by average, maximum and minimum power. The indicators of such AI models as neural networks, decision trees, genetic algorithms, particle swarm optimization (PSO) are compared.

The following criteria are selected for comparing the models:

- Response Speed: The time it takes to adapt to changing conditions.
- Power Extraction Efficiency: The maximum power that a model can achieve.
- Robustness to Data Noise: The ability to maintain performance in the presence of variations or errors in the input data.

**Neural Network.** A neural network is a composite mathematical model that transforms input data into output through a system of interconnected nodes (neurons) organized into layers [8]. For MPPT problems, neural networks are trained on data including voltage, current, and power to predict optimal voltage and current values. The general formula for a single neuron is: The output  $y_i$  of a neuron in layer  $l$  is defined as:

$$y_i^{(l)} = f(\sum_{j=1}^n w_{ij}^{(l)} x_j^{(l-1)} + b_i^{(l)}),$$

where  $x_j^{(l-1)}$  is the output of the  $j$ -th neuron from the previous layer,  $w_{ij}^{(l)}$  is the weight of the connection between neurons,  $b_i^{(l)}$  is the bias of the current neuron,  $f(\cdot)$  is the activation function (in our case, it is ReLU),  $n$  is the number of inputs for the current neuron. The network optimizes the parameters (weights  $w_{ij}$  and biases  $b_i$ ) based on the loss function  $L$ , which measures the discrepancy between the predicted output  $\tilde{y}$  and the true value  $y$ . An example of a loss function:

$$L = \frac{1}{N} \sum_{i=1}^N (y_i - \tilde{y}_i)^2,$$

where  $N$  is the number of training examples.

Gradient descent is used to minimize the loss function:

$$w_{ij}^{(l)} \leftarrow w_{ij}^{(l)} - \eta \frac{\delta L}{\delta w_{ij}^{(l)}},$$

$$b_{ij}^{(l)} \leftarrow b_{ij}^{(l)} - \eta \frac{\delta L}{\delta b_{ij}^{(l)}},$$

where  $\eta$  is the learning rate. For the voltage and current prediction task, a linear activation function is used in the output layer to ensure continuous output. The network is tuned based on synthetic data representing the voltage, current, and power of solar panels under different conditions.

**Decision tree.** These are algorithms that use a tree structure to make decisions based on input data. The tree consists of nodes, where each node represents a condition or criterion, branches that connect the nodes, and leaflets that represent the outcome [9].

The tree structure consists of a root node, which is the starting point where all input data is analyzed, an internal node, which is an intermediate decision point, representing conditions based on the values of the input parameters, a branch - a path that connects nodes based on the truth or falsity of the conditions, leaves, which are endpoints representing the predictions of the model.

The tree construction algorithm: at each stage, the attribute that provides the greatest reduction in uncertainty (by entropy or Gini) is selected. The data is then split into subsets according to the selected attribute. The process is repeated until a specified tree depth, minimum subset size, or other stopping metric is reached.

The decision to split the data is made based on metrics such as:

Information Gain measures the reduction in entropy after splitting the data:

$$IG(S, A) = H(S) - \sum_{v \in \text{values}(A)} \frac{|S_v|}{|S|} H(S_v),$$

where  $H(S)$  is the entropy of a data set  $S$ , and  $S_v$  is a subset of  $S$  partitioned by the value  $v$  of an attribute  $A$ . The Gini Index measures the purity of the partition:

$$Gini(S) = 1 - \sum_{i=1}^n p_i^2,$$

where  $p_i$  is the proportion of objects belonging to the  $i$ -th class in the set  $S$ . For a new input example, the tree traverses the paths determined by the input data values to the final node, where a prediction is made.

**Genetic algorithms.** These are heuristic optimization methods that imitate the processes of natural selection described by the theory of evolution. These algorithms are suitable for finding optimal or approximately optimal solutions to complex problems. The genetic algorithm is based on the use of a population of possible solutions to the problem, represented as chromosomes that encode the solution parameters [10]. The quality of each solution is assessed using the fitness function, which determines the efficiency of the corresponding solution. During the operation of the algorithm, selection is carried out, in which chromosomes with the highest values of the fitness

function are chosen to participate in reproduction. The creation of a new generation includes a combination of parent chromosomes using the crossover operation, as well as the use of mutation, which introduces random changes to maintain the genetic diversity of the population. After this, the new generation replaces the previous one. The algorithm begins with initialization, during which an initial population of random solutions is created. At each iteration step, the fitness function is assessed, parents are selected, and crossover and mutation are performed to generate a new generation. The process continues until a specified number of iterations is achieved or the target optimization criterion is met.

A chromosome is a string of parameters  $x = (x_1, x_2, \dots, x_n)$ , where  $x_i$  is the parameter value. For MPPT, these are voltage and current. The fitness function evaluates the quality of each solution. In MPPT, the fitness function is defined as:  $f(x) = P(x)$ , where  $P$  is the output power of the solar panel, depending on the parameters  $x$ . Then selection occurs – the probability of choosing the  $i$ -th chromosome  $p_i$  is proportional to its fitness:

$$p_i = \frac{f(x_i)}{\sum_{j=1}^N f(x_j)}$$

where  $N$  is the population size. The crossover generates offspring  $o_1, o_2$  by combining parent chromosomes  $p_1, p_2$ . An example of a single-point crossover:

$$\begin{aligned} o_1 &= (p_1[1:k], p_2[k+1:n]), \\ o_2 &= (p_2[1:k], p_1[k+1:n]), \end{aligned}$$

where  $k$  is the split point.

Mutation introduces a random change in chromosome  $x$ :  $x'_i = x_i + \delta$ , where  $\delta$  is a random value from a given range. A new population is formed from the offspring, or combined with a part of the old population to preserve elite solutions. The algorithm terminates if the specified number of iterations is reached or the fitness function value stops improving.

### **Particle Swarm Optimization (PSO).**

It is an optimization method inspired by the social behavior of flocks of birds or schools of fish. The algorithm uses particles that move through a solution space to find the optimal value of an objective function [11]. Each particle represents a potential solution to the problem and moves through the solution space based on its past experience and social interactions. To operate, the PSO algorithm first defines an initial population of particles, each with a position  $x_i$  and a velocity  $v_i$  chosen at random. Each particle is evaluated using an objective function  $f(x)$  to determine its "quality". The velocity and position are updated according to the formula:  $v_i = \omega v_i + c_1 r_1 (p_i - x_i) + c_2 r_2 (g - x_i)$ , where  $\omega$  is the inertia coefficient controlling the influence of the previous velocity,  $c_1, c_2$  are the learning coefficients for the personal and social components,  $r_1, r_2$  are random numbers in the range [0,1] providing stochasticity,  $p_i$  is the best position of the particle,  $g$  is the best position among all particles in the population. The position of the particles is updated according to the formula  $x_i = x_i + v_i$ . The algorithm repeats the process of updating the velocity and position until the stopping criterion is reached.

In the context of MPPT, PSO is used to find the optimal combination of voltage and current that provide the maximum power of the solar panel. Each particle represents a possible combination of  $(V, I)$ , and the objective function is the output power:  $f(V, I) = P = V \cdot I$

## **RESULTS AND DISCUSSION**

Four algorithms—Neural Networks, Decision Trees, Genetic Algorithms, and Particle Swarm Optimization (PSO)—were evaluated to determine their potential in enhancing the performance of solar energy systems under dynamic environmental conditions. Neural networks demonstrated an average power output of 45.2 W and achieved a maximum power output of 58.3 W. The model exhibited rapid adaptability, with a response time of 0.2 seconds, ensuring swift adjustments to environmental changes. Energy extraction efficiency was measured at 90% under optimal conditions, while the resilience to data noise was maintained up to 15%, indicating robustness in handling moderate levels of input variability. Despite these strengths, the network's slightly lower maximum output compared to other algorithms suggests room for optimization in capturing peak power.

The decision tree model, while simpler in implementation, showed limitations in performance. The average power output was 42.8 W, with a maximum power output of 55.0 W. The response time was slower, at 0.5 seconds, reflecting its reduced ability to adapt to rapid changes. Additionally, the energy extraction efficiency was 85%, and the model's resilience declined significantly when noise levels exceeded 10%. This indicates that decision trees are less suited for noisy or highly dynamic environments, although they offer interpretability and computational efficiency.

Genetic algorithms achieved notable results, with an average power output of 47.5 W and a maximum power output of 60.0 W, the highest among the tested methods. The response time of 0.4 seconds was competitive, and the energy extraction efficiency reached 92% when the system was optimized. Furthermore, the algorithm demonstrated strong resilience to data noise, effectively maintaining performance with up to 20% noise. These

findings underscore the suitability of genetic algorithms for applications requiring high efficiency and adaptability under uncertain conditions.

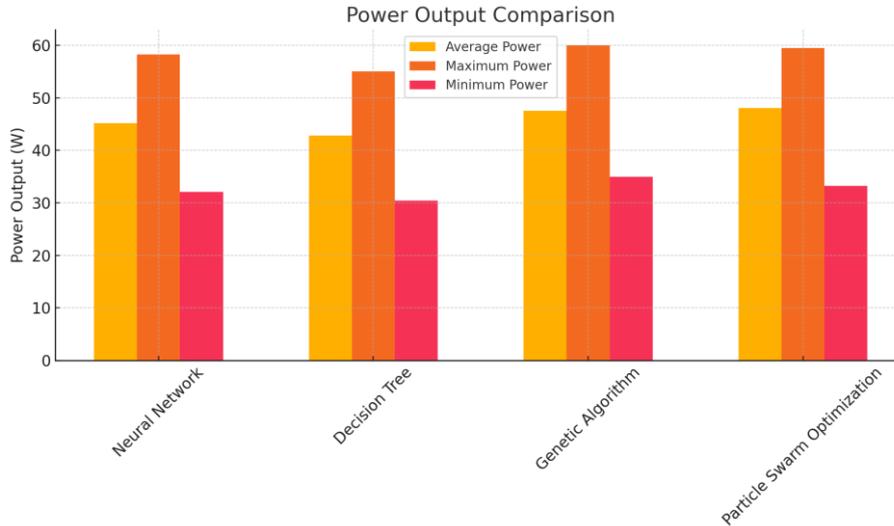

Particle Swarm Optimization exhibited a balanced performance, with an average power output of 48.1 W and a maximum output of 59.5 W. The model adapted to environmental changes in 0.3 seconds, demonstrating its effectiveness in dynamic settings. Energy extraction efficiency was measured at 91%, and the algorithm maintained robust performance with up to 15% noise in input data. The results suggest that PSO offers a strong combination of efficiency, adaptability, and resilience, making it a viable choice for MPPT.

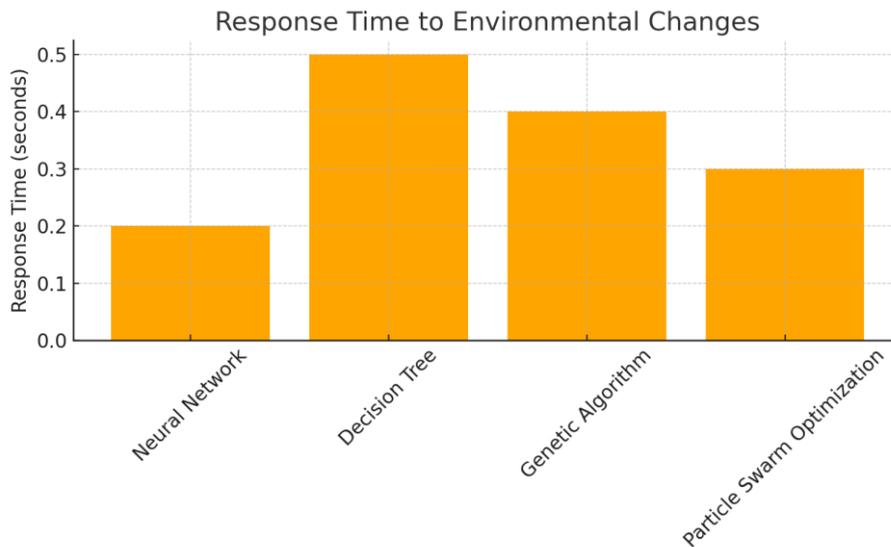

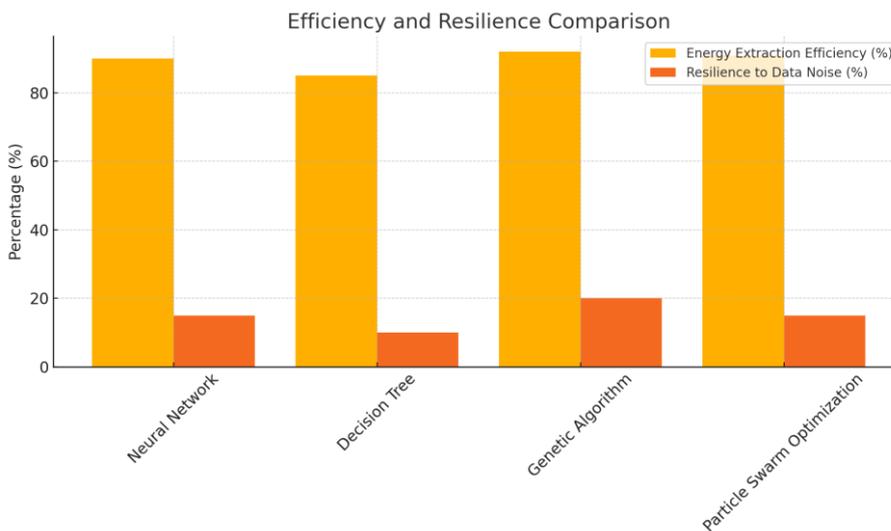

**Table 1:** Results summary table.

| Algorithm         | Average Power Output (W) | Maximum Power Output (W) | Minimum Power Output (W) |
|-------------------|--------------------------|--------------------------|--------------------------|
| Neural Network    | 45.2                     | 58.3                     | 32.1                     |
| Decision Tree     | 42.8                     | 55.0                     | 30.4                     |
| Genetic Algorithm | 47.5                     | 60.0                     | 35.0                     |
| PSO               | 48.1                     | 59.5                     | 33.2                     |

While all algorithms provided notable results, their suitability varies depending on the specific requirements of the MPPT system. Genetic algorithms and PSO outperformed other methods in terms of maximum power output and efficiency, making them ideal for systems demanding peak performance. Neural networks, with their rapid response and robust handling of noise, are suitable for applications requiring fast adaptability. Decision trees, though limited in efficiency and noise resilience, may be preferred in scenarios where interpretability and simplicity are prioritized.

**Figure 1.** Power output comparison.

**Figure 2.** Response Time to Environmental Changes.**Figure 3.** Efficiency and Resilience Comparison.

## CONCLUSION

The study evaluated the application of AI techniques, including neural networks, decision trees, genetic algorithms, and particle swarm optimization, to improve maximum power point tracking in photovoltaic systems.

Genetic algorithms and PSO demonstrated the highest energy extraction efficiency, reaching 92% and 91% respectively, and demonstrated robust resilience to data noise, making them particularly suitable for scenarios requiring high efficiency in dynamic and uncertain conditions. Neural networks, although slightly lower in maximum output power, excelled in fast response times (0.2 seconds) and maintained resilience to moderate levels of input noise. In contrast, decision trees, despite their simplicity and interpretability, demonstrated limitations in noise resilience and adaptation speed, making them less effective in complex and noisy conditions.

Overall, the study highlights the potential of AI-based MPPT techniques to significantly improve the performance and reliability of solar energy systems. The results highlight the importance of selecting algorithms based on specific operational priorities, such as response speed, noise tolerance, and output power efficiency. Future research could focus on hybrid approaches that combine the strengths of multiple algorithms or further optimization of individual methods to address their limitations.

# INFORMATION SCIENCE AND TECHNOLOGY EDUCATION FOR NON-STEM STUDENTS: A TOP-DOWN APPROACH

**Suchintha FERNANDO**

Rutgers University, School of Communication & Information  
New Jersey- USA  
suchintha.fernando@rutgers.edu

## ABSTRACT

This paper discusses the importance of providing at least a basic education in information science and technology to students, regardless of whether they are from a science, technology, engineering, and mathematics (STEM) background, or not. It explores how this knowledge in information science and technology is required by professionals of all fields, but in varying degrees or levels, and how, even though it is built on a foundation of mathematics, even students who are not from a STEM background can be provided with a basic level of information science and technology education, if it is taught in a top-down fashion, so as to avoid overwhelming non-STEM students with advanced mathematical concepts which would otherwise be difficult to grasp. This paper explores how these concepts could be taught in a manner stemming from day-to-day occurrences, to provide non-STEM students with just enough mathematical knowledge required for a successful education of information science and technology education at a basic level.

**Keywords:** Information Science and Technology Education, Information Systems, Non-STEM, Top-Down Approach

## INTRODUCTION

The education of Information Science and Technology has become one of the most sought-after subject areas by many students regardless of their profession, or field of study. Even students who are not from science, technology, engineering, and mathematics (non-STEM) backgrounds, require some knowledge of information science for their professions, as no job in today's technologically advanced world is totally exempt from the use of information science and technology-based tools for performing at least a few tasks. Most office jobs in areas such as health information, banking, inventory management, library information systems, to name a few, are even more heavily reliant on information systems (IS) and information technology (IT) tools and applications. Thus, for those working in professions such as these, it is paramount to obtain at least a basic education in information science and technology in order to have some understanding as to how these information systems that they use for their day-to-day tasks work, so that they may be able to utilize these systems and tools in an optimal fashion. Some higher level professionals such as those in managerial positions need an understanding of the basic inner workings of these systems so that they may know what these systems are capable of, and so that they may understand what goes on behind the scenes when they 'call in the IT department' to fix any issues these systems would inevitably present from time to time. This knowledge is especially helpful when the employees of the said IT department are subordinates working under these high-level managers, as one would not want to rely on one's subordinates for this crucial knowledge. Further, as Senanyake and Fernando (2018) have pointed out, at least a basic knowledge of information security is also integral to ensure that users of these information systems access and share the information required for performing their jobs in a proper and secure manner.

Information science and technology falls under the science, technology, engineering, and mathematics (STEM) category, and therefore, it is necessary for students of information science and technology to have such a STEM background with a good foundation in mathematics in order to fully understand the more advanced concepts of IT and programming. However, not all users of such information systems come from a STEM background. In fact, the majority of these users may be from non-STEM backgrounds such as arts and humanities. Yet, this should not prevent them from obtaining an education in information science and technology, especially when such an education is crucial to their success in their professional careers. It is important to realize that the education of information science and technology comes in varying degrees and levels, and that not every student requires the same level or depth of knowledge. While the students pursuing careers in technology, such as software engineering, networking, etc. would undoubtedly require a deeper understanding of information technology, and would therefore require a strong STEM background in order to obtain that knowledge, the other students who require only a basic knowledge of information science and technology so that they may be able to properly utilize the information systems they use, may obtain that knowledge without a strong STEM background.

Yet, it is undeniable that information science and technology, a subject area which is founded in mathematics, would have certain mandatory mathematical concepts that need to be studied in order to understand the subject concepts. However, for students from a non-STEM background, teaching those mathematical concepts and therefore, those information science and technology concepts in the usual bottom-up fashion, where we lay the foundation and then build on top of it, might be rather overwhelming, and eventually, unsuccessful. Instead, this

paper proposes a top-down approach in providing information science and technology education to non-STEM students, which would allow them to learn these mandatory mathematical concepts in a more natural manner stemming from day-to-day occurrences rather than from mathematical laws and processes, thereby allowing them to obtain the level of information science and technology knowledge that they need.

### **What Non-STEM Thinking brings to Information Systems**

The usual method of teaching information science and technology is to begin with the mathematical concepts that build the foundation. In other words, a bottom-up approach, where the mathematical foundation is first laid, and then the education of information science and technology is built on top of that, is the commonly practiced method. While this method is perfectly well-suited for those students who are from a STEM background and who have an aptitude for STEM subjects, and while this is the preferred method for students who plan to become professionals in the field of information science and technology, as they require an in-depth understanding of the science behind how systems and tools work, so that they may, themselves, fix or create such systems, or invent new tools and technologies, such a deep level of understanding of information science and technology might not be required by most general users of information systems and tools. And a majority of students who seek a basic education of information science and technology today, comprise of students who are currently, or are intending to be, professionals in other (non-technology-based) industries, but who still need an understanding of these IT systems and tools.

One might think that stripping down the education of information science and technology, so as to avoid teaching these non-STEM students the mathematical concepts behind it, is a lazy approach. Yet, this is not the case. Angell and Demetis (2010) discuss how linearity (one thing after another) is a delusion in this non-linear world. In other words, it is not mandatory for an education of information science and technology, as long as it is only a basic level of education, to be built upon a full, solid foundation of mathematics. In today's world where education is better available to people, where a person can obtain their higher education at any stage in life, even after a long hiatus from education, where they were focusing on their professional careers instead, it is of utmost importance that there are many paths of entry into a formal higher education, and that there are degree programs that focus not only on those who have an aptitude towards STEM subjects, but also those that provide the means for students from non-STEM backgrounds to obtain such an education.

It is also important to understand what non-STEM thinking brings into the design of information systems, and how the addition of non-STEM students can enrich courses in information science and technology. In fact, it is rather easy for students with a solid STEM background to 'think like a computer' and provide instructions that are understood by computers, as those are the students who end up creating computers and other IT systems and tools. But while thinking like a computer, it is also rather easy to forget the importance of the user aspect, and to forget that the end users of these systems might be laymen who are not experts in the field of information science and technology. This is why there is a need for the roles of domain experts and business analysts etc. to work as intermediaries between the software engineers and architects who design and develop these IT systems, and the end users of the system, so that the ideas and expectations of the users can be translated to the IT experts and vice versa. Thus, the inclusion of non-STEM students in an information science and technology course enriches it further, by bringing a fresh, new perspective into the analysis of requirements and design of an information system. The human mind is not naturally broken into separate segments. Instead of considering the processing of the mind as an isolated and compartmentalized phenomenon (Anderson et al., 2004; Carroll & Bandura, 1987; Newell, 1994), separate domains of education need to come together in a system to attain different, but common outcomes. (Koechlin, Basso, Pietrini, Panzer, & Grafman, 1999; Salvucci & Taatgen, 2008). That being the case, it is paramount that we provide an approach of information science and technology education that is accessible to non-STEM students without overwhelming them by laying a thick mathematical foundation.

### **Different Levels of Information Science and Technology Education**

A thorough education in information science and technology would have to cover certain mandatory subject areas such as computer hardware, the central processing unit, arithmetic logic unit, etc. which comprise of electronic components such as digital circuits, transistors, gates, wires, registers, memory, etc., machine language – commands using a series of 1s and 0s, which instruct this circuitry to either send or not send an electronic pulse at each clock cycle –, assemblers which translate human-readable programming code into computer-readable machine language, firmware and mid-level languages, software and high-level programming languages, networking and telecommunication including communication systems, network structures, devices and protocols, etc. It should also cover information security education including access control, network security, cryptography, security architecture and models, etc. (Fernando, 2018; Harris & Maymi, 2016).

However, as not all students of information science and technology require, nor seek, a thorough and comprehensive education in it, they require different levels of understanding and knowledge in the subject area. For instance, a hardware engineer would need a solid education in electronics, while a software engineer might only need a basic understanding of it as they might not be dealing with the digital circuits and wiring directly the

way a hardware engineer would. Similarly, as computer languages could be categorized as low-level, mid-level, and high-level (Friedman & Wand, 2008), while a machine language programmer would require an in-depth knowledge of the hardware components and clock system and electronic pulses, etc., thanks to the assemblers (which are themselves developed by assembly language programmers) which translate high-level programming code written in languages such as C++, Java, Python, etc. into machine language, high-level programmers – the usual software engineers – can do with a shallower understanding of those concepts which are required by low level programming languages. This is comparable to how even though information security professionals who analyze security risks and implement countermeasures require a thorough understanding across all areas and domains of information security, a basic education in information security would equip most users of information and communication systems with the knowledge to protect themselves in cyberspace (Fernando, 2018). Hence, for those non-IT professionals from non-STEM backgrounds who require a basic level of information science and technology education, so that they may have sufficient knowledge to utilize the IT systems and tools required for their jobs and daily lives, higher education programs should provide an approach to information science and technology education that does not involve first laying down that thick, solid foundation of mathematics that is required by computer scientists and IT professionals. The remaining sections of this paper explore some of the mandatory STEM components for certain aspects of information science and technology education, and how a top-down approach could help in providing that education to non-STEM students.

### **Identifying the Mandatory STEM Components for Information Science and Technology**

In order to provide such a top-down approach of information science and technology education, we must first properly identify the STEM components and mathematical concepts that are mandatory for properly understanding certain subject areas. After having identified these mandatory STEM components, we must then explore how a top-down approach could be used when teaching those information science and technology subject areas along with the required STEM components identified for each of those subject areas.

When looking at subject areas such as programming and algorithm development, we can see that concepts such as procedural thinking and logical thinking would be required for writing conditional statements such as if-then-else, and loops such as for loops, while loops, and do-while loops. Knowledge of algebra would be needed for algebraic equation and formula construction. Knowledge of data structures such as stacks, heaps, queues, linked-lists, trees, etc. would be required when writing algorithms for searching, sorting, recursion, etc. And knowledge of permutations and combinations would be required for figuring out the different possible outcomes for switch-case conditions, and so on.

When teaching databases (database design and development, as well as data access), for instance, students would certainly need the knowledge of set theory and a basic understanding of Boolean logic. They would also need an understanding of the order of precedence to properly write data queries using parentheses as appropriate, and a very basic understanding of binary tree data structures to understand the concept of binary search, which is commonly used in databases and database indexing.

For students of information security, a knowledge of binary numbers would be of high importance, as concepts such as cryptography and networking utilize binary numbers in multiple ways. For instance, binary addition, subtraction, shift, etc. are often used as parts of a cryptographic key when encrypting a message. Packet headers for networking packets are created in binary form, where each bit or each set of bits represents a certain element. Binary and hexadecimal numbering is also used when creating internet protocol (IP) addresses – both version 6 (IPv6) and the previous version 4 (IPv4). And the subnet masks used to identify the subnets that each device in a network belongs to in the IPv4 network addressing scheme is also based on the binary system (Harris and Maymi, 2016).

As most non-IT professionals are users of information systems, and therefore, require a basic knowledge on relational database systems, the next section of this paper will examine how to utilize a top-down approach to teaching relational database systems to non-STEM students.

### **The Importance of a Top-Down Approach to Teaching Information Science to Non-STEM Students**

The often-used method of teaching information science and technology, as previously stated, is the bottom-up approach. This is also very much the case when teaching relational database systems, as we usually start by teaching about the tables consisting of fields or columns, and rows or tuples, then move on to teaching about how each of the tables in a database are related to others in either a many-to-many relationship, a one-to-many relationship, or in rare cases in a one-to-one relationship. We then move on to designing a database by creating the entity-relationship diagrams (ER diagrams). Then the very important, yet very intense and difficult to understand concept of normalization is introduced, sometimes with not too much thought given to the exact requirements of the intended database system. After normalizing the database, we then teach how to implement it on a database management system (DBMS), and then plug it into a front-end user interface (UI). And the students are expected to have a prior knowledge of set theory and order of precedence so that they may be able to write SQL statements to query data from multiple tables properly, and a prior knowledge of binary searching so that they may understand

the concept of indexing.

Even though the bottom-up approach outlined above works for students from a STEM background, it is not a very successful method of teaching relational database systems to non-STEM students who may come from an arts and humanities background, and who have not studied set theory or binary trees. More importantly, these students would find the concept of normalization of tables, especially difficult to comprehend, due to its very complicated nature.

Instead, here we look at a top-down approach to teaching relational database systems – focused mainly on non-STEM students, who, as previously discussed, may bring in a fresh perspective and a lot of domain expertise to the process of designing and developing information systems. Hence, rather than starting with the tables, this paper proposes beginning by examining database systems the students have used or are currently using to identify how the interface may be made more user-friendly, how certain important features or functionality that is omitted in the systems they examine should be included, while how certain other features that are available in these systems are not often used, and determine other strengths and weaknesses of these systems. Based on those findings, the students are then required to propose a purpose for which they would like to design and develop a database system, and to visualize and sketch what they would imagine the front-end UIs of that system might look like. These interfaces might be subject to change as they move along the process of designing and developing the database system, but it starts by looking at the front-end interfaces at the top, and then going down to look at the rest of the database system, all the way down to the back-end database. This allows the students to be in control of the design of their database system, rather than their understanding of theoretical concepts and principles of relational database design limiting their thinking and design.

When designing the database by creating the ER diagrams, most students find the proper identification of tables or entities somewhat daunting. Hernandez (2013) discusses a method of looking at the requirements to write a clear, concise mission statement for the intended system, and a list of mission objectives expected by the system, and then reading through this mission statement and these objectives to identify the nouns, and then removing duplicates, in order to arrive at a set of entities or tables. The students would then be taught to identify the attributes that describe these entities, and thereby arrive at a set of fields for each of these tables. Hernandez (2013) also states the importance of naming tables using plurals to imply that there would be multiple instances or data records which would result in multiple rows of data in a table, and of naming fields using singular nouns to imply that there would only be a single value in each field. This, in turn, allows the students to identify incorrect fields which should either be broken into multiple separate fields, should be dropped completely as they can be calculated using other existing fields, or should be dropped from that existing table to create a separate table (Hernandez, 2013). The students are then taught to create a linking table, to resolve the many-to-many relationship between the original table and the newly created table, by breaking it into two separate one-to-many relationships, which can be properly enforced and implemented in a database. In this very practical manner, the complicated theories behind the process of normalization are bypassed, allowing the students to create relational database tables which are normalized to at least the 3<sup>rd</sup> degree.

When teaching SQL, the dominant language used for querying relational databases, instead of first teaching how to create tables and populate those tables with data, the students should first be taught to query an existing database that is provided to them. They should begin by learning to query from a single table, and then be taught how to join multiple tables together to query from them. They should be taught how to include a ‘WHERE’ clause, which would allow them to filter out individual rows, before being taught how to group rows of data together, and then filter out groups using the ‘HAVING’ clause, etc. The students should be given business questions to be answered and taught how to write queries in SQL to obtain a result set to answer those given business questions. Similarly, they should also be given SQL queries to figure out the business questions that they would answer when the queries are executed.

It is when constructing the filtering conditions for the ‘WHERE’ or ‘HAVING’ clauses, that the concept of set theory comes into play. When two or more conditions need to be evaluated in these filter statements, most non-STEM students find the use of the logical operators ‘AND’ and ‘OR’ confusing. For example, if they were asked to select records from a table of transactions, for ‘all transactions that did not take place on date A or date B’, they might be confused whether to use the logical operator ‘AND’ or ‘OR’ within their WHERE condition. In the above instance, as they need to look at all other dates but the two given dates, they need to use the logical operator ‘AND’ as depicted in the following example:

WHERE (date != ‘A’ AND date != ‘B’)

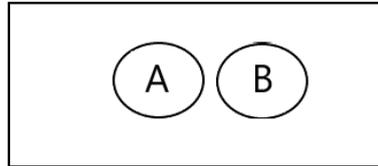

Instead, if they were to incorrectly write this filter condition using the logical operator ‘OR’, as in the following example:

WHERE (date != ‘A’ OR date != ‘B’)

Then they would be looking at all of the dates, including A and B, since when the condition looks at “date != ‘A’ ”

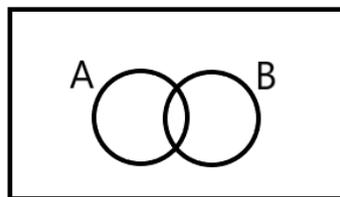

it includes B, and when the condition looks at “date != ‘B’ ” it includes A. And as the logical operator ‘OR’ would accept any value which satisfies either one of these conditions, then it will accept all of the available dates, and not filter any dates. So instead of filtering out the transactions that took place on one of these two dates, this incorrect condition will not filter out any rows.

Once students have experienced this confusion with the logical operators ‘AND’ and ‘OR’, it is then time to teach them the basics of set theory and Boolean logic. By sketching the dates ‘A’ and ‘B’ on a Venn diagram as shown in figure 1 below, they can be taught how to look at A separately, B separately, everything but A { NOT(A) }, and everything but B { NOT(B) }.

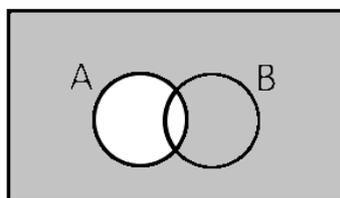

**Figure 1.**An example of a basic Venn diagram depicting two mutually exclusive entities

Having shown how two mutually exclusive entities would look on a Venn diagram, we can now show them how two entities which are not mutually exclusive would be depicted (see figure 2).

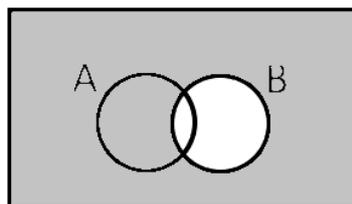

**Figure 2.**An example Venn diagram depicting two mutually non-exclusive entities

Then we can show students what the negation of each of these entities would look like. Figure 3 depicts NOT(A), while figure 4 depicts NOT(B).

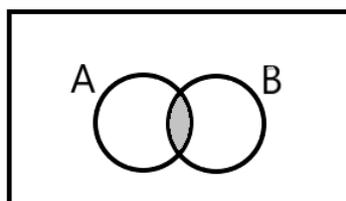

**Figure 3.**An example of a basic Venn diagram with the shaded area depicting negation of A: ‘NOT(A)’

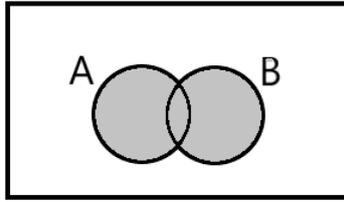

**Figure 4.**An example of a basic Venn diagram with the shaded area depicting negation of B: ‘NOT(B)’

They can now also be taught to look at ‘A AND B’ (see figure 5), and ‘A OR B’ (see figure 6).

**Figure 5.**An example Venn diagram with the shaded area depicting the intersection of A and B: ‘A AND B’

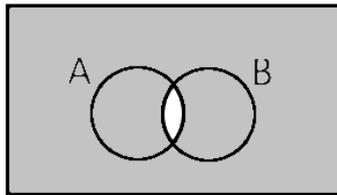

**Figure 6.** An example Venn diagram with the shaded area depicting the union of A and B: ‘A OR B’

Even though non-STEM students do not require a thorough knowledge of logic gates for a basic information science and technology education, showing them a simple truth table to depict the cases of ‘A AND B’ and ‘A OR B’ (see table 1), at this stage, would help them to get a visual understanding of what these intersections and unions would result in:

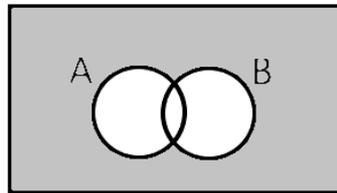

**Table 1:** Truth Table depicting ‘A AND B’ and ‘A OR B’

| A | B | A AND B (Intersection) | A OR B (Union) |
|---|---|------------------------|----------------|
| 0 | 0 | 0                      | 0              |
| 1 | 0 | 0                      | 1              |
| 0 | 1 | 0                      | 1              |
| 1 | 1 | 1                      | 1              |

The next step would be to teach them to look at the negations of the above: ‘NOT(A AND B)’ (see figure 7), and ‘NOT(A OR B)’ (see figure 8).

**Figure 7.** An example Venn diagram with the shaded area depicting negation and intersection: ‘NOT(A AND B)’

**Figure 8.** An example Venn diagram with the shaded area depicting negation and union: ‘NOT(A OR B)’

By considering the total shaded parts of figure 3 and figure 4 together and comparing that with figure 7, this will then teach the students how to deduce the Boolean logic of:

$$\text{NOT}(A \text{ AND } B) = \text{NOT}(A) \text{ OR } \text{NOT}(B)$$

And by considering the common parts of figure 3 and figure 4 together and comparing that with figure 8, it will teach students how to deduce the Boolean logic of:

$$\text{NOT}(A \text{ OR } B) = \text{NOT}(A) \text{ AND } \text{NOT}(B)$$

Which in turn, will help them to understand when to use the logical operator ‘AND’ and when to use the logical operator ‘OR’ when combining two conditions to create a filter condition for a SQL query.

When looking at multiple-table queries, we can further utilize the concepts of union and intersection in set theory so that the students may, for instance, be able to query a subset of rows which belong to multiple tables. For example, let’s consider a scenario where the students are required to look at a database consisting of tables for the branches of a bank, and the employees of a bank. If the bank consists of the branches ‘X’, ‘Y’, and ‘Z’, and if the employees fall into the designations of ‘manager’ and ‘teller’, and if the students are required to find the ‘tellers’ in branch ‘X’, then they will need to look at an intersection of ‘tellers’ and ‘X’ (similar to what is depicted in figure 5) to create the filter condition:

WHERE( branch=‘X’ AND designation=‘teller’)

And if they were to look at ‘all employees’ in either branch ‘Y’ or ‘Z’, then they will need to look at the union of ‘Y’ and ‘Z’ (similar to what is depicted in figure 6) to create the filter condition:

WHERE( branch=‘Y’ OR branch=‘Z’)

This practical and top-down approach to teaching the basics of set theory and basic Boolean logic, takes away the fear of STEM subjects that most of these non-STEM students are faced with and provides them with sufficient STEM knowledge required for their education of relational database systems.

Another point that does not come naturally to non-STEM students is the order of precedence. A strong STEM-educated mind thinks mathematically – similar to a computer. Therefore, assigning parenthesis to specify the order of precedence is a process STEM students do automatically. This is not, however, the case with non-STEM students. As they think more in terms of natural spoken language rather than the way computer programming languages work, non-STEM students need to be taught how to properly assign parenthesis to dictate the order of precedence – i.e. the order in which they want the computer or database compiler to execute the given conditions. For instance, in the above example with tellers and bank managers working in multiple branches of a bank, if they were to select either tellers or managers, all of whom should be working at branch ‘X’, then the filter condition for the WHERE clause should look like:

WHERE( ( designation=‘teller’ OR designation=‘manager’ ) AND branch=‘X’ )

The use of parenthesis in this example, clearly specifies that the selected tellers or managers should be working at branch X. But if the inner pair of parentheses were omitted to write the following instead:

WHERE( designation=‘teller’ OR designation=‘manager’ AND branch=‘X’ )

Without the use of the proper parenthesis, in this case, it would be difficult to determine whether the selected tellers or managers are all working at branch X, or whether the selected managers are working at branch X, while the selected tellers could be working at any branch. Hence, the need for parenthesis to properly specify the order of precedence.

Should the requirement be to find any teller (working at any branch), or the managers who are only working at branch X, then the condition should be properly written with the inner pair of parentheses combining the managers with branch X as shown below:

WHERE( ( designation=‘teller’ ) OR ( designation=‘manager’ AND branch=‘X’ ) )

Examples such as these would help non-STEM students to understand the importance of using parenthesis to specify the exact order of precedence, and thereby, incorporate this habit of parenthesizing into their information science and technology practices.

Next, the students should be taught how to sort the results in ascending or descending order and to create indices. At this point in time, the concept of binary search should be explained. As the students are, by this time, familiar with sorting the data in a certain order, the idea of splitting the sorted data in the middle, continuously, until the value being searched for is found, becomes a lot clearer than if one was to first teach these students without a prior STEM background, the concept of tree data structures, and then binary trees, and then binary search, before teaching them the database index feature and sort functions.

Only after being able to properly query from a database, should the students be taught how to create tables and insert data to populate these tables, and then to update them and to delete from them. And finally, the students should be taught how to connect their back-end database to a front-end UI in such a way that provides the data access functionality to the system’s users as they previously identified in their requirements analysis. As explained above, depicting these important STEM concepts of set theory, order of precedence, or binary search in a practical manner as shown above, once the students have already been exposed to a similar practical scenario through their education of relational database systems (a top-down approach), rather than first teaching them all these concepts and then beginning their education in relational database systems (a bottom-up approach), allows non-STEM students to understand the required STEM concepts without being overwhelmed, and helps them obtain their education successfully. This top-down approach to teaching relational database systems to non-STEM students depicted here, can further be applied to other areas of information science and technology education as well.

## CONCLUSION

In conclusion it can be seen that information science and technology education is required by many students, but in varying levels or degrees. A complete and thorough education in information science and technology, which also requires a thorough and solid foundation in STEM concepts will only be required for students intending to become computer scientists or IT professionals and engineers, who design and develop computer hardware, software programs, and IT systems and tools. Yet, any non-IT professional who uses such information systems and tools

should have a basic information science and technology education in order to properly utilize those systems and tools. As most of these non-IT professionals may come from a non-STEM background, gaining a deep understanding and complete knowledge of STEM concepts on which information science and technology is rooted, may be overwhelming, and the usual bottom-up approach to teaching information science and technology may be unsuccessful. However, by providing information science and technology education in a top-down approach, and teaching the basic STEM components required for the information science and technology subject area that is taught in a practical and natural manner, non-STEM students would be able to successfully obtain the education sufficient for their non-IT professions. Thus, it can be concluded that information science and technology education for non-STEM students should be provided using a top-down approach.

### ÖZET

Teknolojik gelişmelerin insanlık tarihine etkisi tartışmasız büyüktür. Özellikle bilgisayar ve internet teknolojilerinin hızlı ilerlemesi, habercilik alanında da köklü değişikliklere neden olmuştur. Yeni medya sayesinde haberlerin sanal ortamda yayınlanması mümkün hale gelmiş ve bu durum, habercilik türlerinde de önemli değişikliklere yol açmıştır. Ancak, bu değişikliklerin beraberinde getirdiği bazı olumsuz sonuçlar da olmuştur. Özellikle etik ihlaller ve mesleki değer kaybı gibi sorunlar, yeni medya ile artış göstermiş ve habercilik mesleğinin geleceği konusunda endişelere neden olmuştur. Bu çalışmada, ünlü fenomen Dilan Polat haberleri örneği üzerinden, habercilik ve habercilik mesleğinin yeni medya araçlarındaki dönüşümü ele alınacak ve bu dönüşümün yarattığı sorunlar, etik ilkeler ve özel hayatın gizliliği bağlamında incelenecektir. Örneklem grubu Akşam, Cumhuriyet, Sabah, Milliyet ve Yeni Akit internet gazetelerindeki Dilan Polat haberleri, nitel araştırma yöntemlerinden “Van Dijk Eleştirel Söylem Çözümlemesi Modeli” uygulanarak incelenmiştir. Yapılan çalışmaya göre, yeni medyada etik ilkelere dayalı habercilik anlayışının geliştirilmesi gerekliliği ortaya konulmaya çalışılmıştır.

**Anahtar Kelimeler:** Yeni Medya, Etik, Habercilik, Teknoloji, Dijital.

### GİRİŞ

Gelişen teknolojilerin, habercilik alanında büyük dönüşümler yaşanmasına sebep olduğu bilinen bir gerçek. Habercilik sektöründeki bu değişimler, teknoloji çağının ortaya çıkışıyla başladı ve yaşanan ilerlemelere paralel olarak devam etti. Transistörlerin 1940'larda icat edilmesiyle birlikte başlayan bilgisayar teknolojileri, kısa sürede küresel çapta popülerlik kazandı ve 1950'lerde ağ bağlantılarının kurulmasıyla yaygınlaştı. Başlangıçta askeri amaçlar için kullanılan bu ağ bağlantıları, kısa bir süre zarfı içerisinde sivil yaşamda da benimsenen bir teknoloji haline geldi. İnternet adını alan bu bağlantılar, Web 1.0'dan başlayarak 2.0, 3.0 ve 4.0 aşamalarında gelişimini sürdürdü.

Habercilik, bu tarihsel evrim içinde web ortamlarına entegre olmaya başladı. Web 1.0 döneminde interneti sadece haberlere erişim amacıyla kullanan pasif okuyucular, teknolojik ilerlemelerin ardından Web 2.0'da daha etkin bir konuma yükseldi. Bu dönemde paylaşım, katılım ve şeffaflık gibi kavramlar öne çıktı ve okuyucular haber üretme yeteneğine sahip hale geldi. Daha katılımcı ve etkileşimli bir iletişim döneminin ardından, Web 3.0 olarak adlandırılan yapay zeka destekli internet kullanımında internet, bireye özgü bir hizmet aracına dönüştü. Bu aşamadan hemen sonra gelen Web 4.0'da ise artırılmış gerçeklik teknolojilerinden faydalanılmaya başlandı. İnternet gelişimini sürdürürken medya faaliyetlerinin de internet ortamlarına dâhil olmaya başlaması, habercilik alanında yeni gelişmelerin yaşanmasına yol açmıştır. Bilgisayarların ve web teknolojilerinin dünya çapında genişlemesi, “Yeni Medya” terimi ile adlandırılan yeni bir fikri gündeme getirmiştir. Yeni medya, çok fazla sayıda bilim insanı tarafınca değişik şekillerde tanımlanmıştır. Ancak ortak karar, bu kavramın teknoloji üstüne yapılandırılmış olduğudur. Yeni bir iletişim kurma aracı olarak açıklanan bu terim, milletleri derinden etkilemiş ve internet halklarına dönüştürmüştür. Dünya genelinde genişleyen internet ağlarına yükselen bağımlılık durumu, haberciliği de bünyesine almış ve yeni değişimlerin yaşanmasına vesile olmuştur. İnternet öncesinde geleneksel yollarla gerçekleştirilen habercilik anlayışı değişerek, internet haberciliğine evrilmiştir. Teknolojik gelişmeler neticesinde meydana gelen bütün bu yeni habercilik türlerinin avantajları olmasıyla birlikte dezavantajları da bulunmaktadır. Bu bağlamda yeni habercilik yöntem ve imkânlarının, haberciliğe sağlamış olduğu katkıların yanı sıra sorunlara yol açmış olduğu da görülmektedir. Bu sorunların başında da etik kurallarına aykırı tutumlar gelmektedir.

Etik kavramı, bireylerin davranış şekillerini ahlak ile ilgili ilkeler doğrultusunda inceleyen ve açıklayan ahlak

bilimi dalıdır. Etik kavramı, bireyler için en doğru olan noktanın bulunmasını hedefler ve bu doğrultu üzerinden ilkeler belirler. Bu ilkeler coğrafyalara göre farklı anlamlara gelse de ortak payda bireylerin arasında ilişkilerin belli bir seviyede kalmasını sağlamaktır. Etik dediğimiz kavram, farklı farklı alanlarda kullanılmakta olan kurallar bütünüdür. Medya sektörü, bu etik kurallardan sıkça ve doğrudan yararlanmakta olan alanların başında gelmekte ve bunu konu edinmektedir. Medya ve etik kavramı arasındaki bağlantı, medya etiği denilen kavramı gündeme getirerek inceleme konusu yapmıştır. Habercilik faaliyetlerinde çalışan ve bunu sunan kişilerin davranışlarını belirli çerçevede sınırlandırmayı hedef edinen medya etiği dediğimiz kavram, habercinin yapmaması gerekenleri ifade etmektedir.

Geleneksel habercilikte etik ilkelere karşı oluşmuş olan bağlılık, az sayıda ihlaller bulunduran haberlerin okurlar ile paylaşılması durumunu kolaylaştırmıştır. Fakat internet haberciliği dediğimiz kavramın sahip olduğu sınırsız özgürlük alanı, kullanıcıların katılım sağlaması vb. avantajları, izlenilen ve yürürlüğe konulan etik süreçlerin zaman kaybına ve sıkıntıya uğramasına neden olmuştur. Denetim mekanizmalarının kontrolünde olmayan olan internet haberciliği kavramı, kendine has etik ilkelere sahip olmamasından kaynaklı sorunların yaşandığı bir çevre haline gelmiştir. Bu bağlamla yeni medya paylaşım alanlarından olan kaynaklarına, diline ve kurgusuna, konumlandırmasına, güvenliğine, içeriğine ve doğrulanmasıyla alakalı etik ihlallerin yapıldığı ve bunun çok sık olduğu görülmektedir.

Yeni medya ortamlarının kazandırdığı avantajlara bakacak olursak, yüzlerce içeriğin aynı anda dolaşması sağlanarak kullanıcılar tarafından erişilebilir olmasına imkân tanımıştır. Ancak 21. Yüzyılın getirdikleri ile, internette dolaşan haberlerin güvenilirliği oldukça şüpheli hale gelmiştir.

Bu çalışmada, son yıllarda hızla güzellik merkezleri zinciri sahibi olan, sadece Instagram'da 7 milyondan fazla takipçisi bulunan, son dönemde çeşitli iddialarla yoğun olarak gündemdeki haberlerde yer alan ünlü fenomen Dilan Polat haberleri örneği üzerinden, habercilik ve habercilik mesleğinin yeni medya araçlarındaki dönüşümü ele alınacak ve bu dönüşümün yarattığı sorunlar, etik ilkeler ve özel hayatın gizliliği bağlamında incelenecektir. Örneklem grubu olarak Akşam, Cumhuriyet, Sabah, Milliyet ve Yeni Akit internet gazeteleri haberleri, nitel araştırma yöntemlerinden "Van Dijk Eleştirel Söylem Çözümlemesi Modeli" uygulanarak incelenmiştir. Eleştirel söylem çözümlemesi, sosyal güç ile söylem arasındaki ilişkiyi ele almaktadır. Egemen grup ya da kurumlar, konuşma ve metinler aracılığıyla gücün kötüniyetli kullanımına neden olmakta ve bunu yeniden üretmek meşrulaştırmaktadır.

Eleştirel söylem çözümlemesi ise bunun nasıl gerçekleştiğini tanımlayarak açıklamaktadır (Van Dijk, 1996, 84) Yapılan çalışmaya göre, yeni medyada etik ilkelere dayalı habercilik anlayışının geliştirilmesi gerekliliği ortaya konulmaya çalışılmıştır.

## YENİ MEDYA VE ETİK

Dördüncü güç olarak isimlendirilen basın, ilk kez kullanılmaya başladığından bu zamana dek daima denetleme görevi üstlenmiştir. Basının üstlendiği denetleme rolünde bu gücünü kullanabilmesinin ilk koşulu özgür olmasından geçer. Bu kapsamda, basına yönelik yapılan engellemeler, basının denetleme haklarına karşı bir müdahale olarak değerlendirilmektedir. Bu durum da görevin tam anlamıyla yerine getirilmemesi ile sonuçlanmaktadır. 1980'lerde baş gösteren tekelleşme süreci, Türkiye'de basının özgürleştirilememesi için yapılan engellemelerin meydana geldiği bir süreç olarak haberciliğin tarihçesinde yer almaktadır. Medyada tekelleşme çabaları, sıradan kitle iletişim araçlarının gücü elinde bulunduran kişi ve kurumların boyunduruğu altına alınmasına ve denetleme görevini yürütemez duruma gelmesine sebep olmuştur. Bu yıllarda siyasi gücü elinde bulunduranlar basının gücünden faydalanmak istemiştir. Basını da kendi menfaatlerine ulaşmak amacıyla kullanmak üzere faaliyetler yürütmüştür. Bu süre zarfında basın tek bir güç bünyesinde toplanmaya başlamış ve demokratik süreçlere zıt bir hava tüm medyayı etkisi altına almıştır (Özgen, 2002: 57-58).

Demokratik sistemle yönetilen toplumların devamlılığı, habercilik ile direkt olarak ilişkilidir. Haberler, milletleri mutluluk, huzur ve güven ortamında hissettirebileceği gibi büyük bir kaosun içine sürüklenme yetisine de sahiptir. Ancak tekelleşme faaliyetlerinin gerçekleştirildiği yıllarda, geleneksel kitle iletişim araçları üzerindeki basın işlemleri, basını ekonomik ve siyasal açıdan dış etkenlere bağımlı hale getirmeye başlamıştır. Basına yönelik yapılan bu müdahaleler sonrasında, dijital çağın ortaya çıkmasıyla birlikte yeni medya, demokratik süreçlere katkıda bulunan alternatif bir alan olarak değerlendirilmeye başlanmıştır. Herkese söz hakkı tanıyan yapısı ile yeni mecralar, geleneksel mecralara nazaran daha az denetim ve daha az müdahalenin görüldüğü özgür platform ve ortamların olması sebebiyle, habercilik çalışmalarının yürütüldüğü yeni platformlar haline gelmiştir. Ancak haberciliğe sunmuş olduğu yeni olanaklar ile popülerleşen yeni habercilik pratikleri, kontrolsüzlüğü de peşi sıra getirmiştir. Dolayısıyla yeni medya ortamları, etik ihlallerin normalmiş gibi sık sık yapıldığı sanal platformlara dönüşmüştür.

## YENİ MEDYADA YAPILAN ETİK İHLALLER

### Kaynaklara İlişkin Sorunlar

- **Haber Kaynağı Gizlilik Durumu**

Haberde adının açıkça geçmesini istemeyen ve halktan kimliğini saklayan insanlar, gizlilik şartıyla medyacılara

görüşme yapmaktadır. Haberciler de kaynaklar ile gerçekleştirilen bilgi diyalogunu, kaynağın bilgilerini gizlemek kaydıyla meydana getirmektedirler. Ancak günümüz haberciliğinde dijitalleşen mecralarda, habercilerin daha fazla tıklanmaya ulaşma isteği ile gizlilik şartlarını ihlal ettiği görülmektedir (Maden, 2019:75).

- **Özel Yaşamın Gizliliği**

Gazeteci tarafından mobil cihazlar ile kayıt altına alınan fotoğraf, video vb. unsurlar yeni medya aracılığıyla diğer kullanıcılar ile hızlıca paylaşılmaktadır. Bu yolla etik ihlaller yapılmaktadır (Maden, 2019:75).

- **Telif/Patent Hakları**

İnce (2018: 68) tarafından belirtilene göre, haber sayfalarının, başkalarının kendi emekleriyle elde ettikleri veya satın aldıkları içerikleri (bedelsiz) kullanarak yayınlamaları, telif hakkı sorununu ortaya çıkarmaktadır.

- **İçeriğin Asıl Kaynağının Gösterilmemesi**

Çoğu haber sitesi, gerçeğe dayanmayan yüzlerce habere ve bilgiye ev sahipliği yapmaktadır. Bu tür davranışlar, genellikle hak ihlali ve çalma kavramlarıyla bağlantılıdır. İnternet ortamındaki bir haberin, fotoğrafın, videosunun veya ses kaydının, atıf yapılmadan veya telif hakları satın alınmadan doğrudan kullanılması, paylaşılması, emek hırsızlığının bir örneğini oluşturur. Bu sebepten dolayı diğer kaynaklardan beslenen her türlü habercilik faaliyetinin kaynağı açıkça belirterek yürütülmelidir (Binark ve Bayraktutan, 2013: 67-70).

### **Dil ve Kurgu Sorunları**

Yeni medya platformları, dil ve kurgu bünyesinde etik ihlalleri bulunan çalışmaların oldukça fazla yapıldığı alanlardır. Maden'e (2019: 78) göre, dilin özensiz ve düzensiz kullanımı, nefret söylemleri, içeriklerin yanlış ve yanıltıcı biçimde etiketlenmesi ve başlıklandırılması, alakasız spot kullanımı gibi problemlerin yanı sıra hassasiyetlere yönelik sorunlar da dijital çevrelerde etik ihlal kapsamına girmektedir.

- **Dilin Özensiz Kullanımı**

Tokgöz (2013: 150) tarafından belirtilene göre, haberlerde kullanılan yazım dilinin basit, anlaşılır, doğru, açık ve kesin olması gerekir. Ancak, internet gazeteciliği yönünden bakıldığında, dilin kullanımında geleneksel gazeteciliğe göre daha fazla bozulmaların yaşandığı gözlemlenmektedir.

- **Nefret Söyleminin Varlığı**

Bir konu ile ilgili toplumu bilgilendirmek için tarafsız bir biçimde yazılması gereken haberler, yeni medya platformlarında toplumu kızdırtan dil/üslup hataları ile oluşturulmaktadır. Bu durum etik kural ihlali olarak değerlendirilmektedir (Maden, 2019:79).

- **İçeriklerin Yanıltıcı Şekilde Başlıklandırılması ve Etiketlenmesi**

Günümüz kullanıcıları arasında oldukça popülerleşen etiket ile araştırma yöntemi, yeni medya üreticilerince etik kurallarının ihlaline yol açan bir alana dönüşmüştür. Konuyla alakası bulunmayan etiketlerin yerleştirilmesi, eski içeriklerin yeniymiş gibi etiketlenilip okur kitlesine sunulması ve popüler olanın etiketinin kullanılarak insanların yanılsamaya düşürülmesi en sık karşılaşılan etik sorunlardır (Maden, 2019:79).

- **Haber Spotları**

Bu platformlarda, başlıkla alakası olmayan ve olay hakkında bilgilendirici bir cümleye bile sahip olmayan spot kullanımları oldukça yaygındır (Anadolu Ajansı, 2018: 185-190).

- **Hassasiyetler**

Yeni medya hassas meselelerden beslenen yapısıyla etik kuralların ihlaline sebebiyet veren fazla miktarda haberin kullanıcılarımıza sunulmasına ve görünür olmasına olanak sağlamaktadır. Tıklanma ile okur sayılarını artırma amacıyla bu gibi hassas meselelerden nemalanan medya çalışanları, duygusal açıdan olumsuz yaklaştığı kişilere yönelik etik kurallarını çiğneyen

haberler üretmektedirler (Maden, 2019:80).

### **Konulandırma Sorunları**

- **Haber ile Ticari Enformasyon Sınırlarının Silikleşmesi**

Okur kitlesinin ekonomik amaçlı haberler vasıtasıyla yanıltılması, yeni medyada bünyesinde karşılaşılan etik ihlaller içerisinde yerini almıştır (Maden, 2019:81).

- **Yeni Medya Platformlarının İşlevleriyle Kullanıcıların Yoğun Reklam Altında Bırakılması**

Okurların haberi okumak için siteye girdiklerinde, sitenin üst ve alt bölümlerine çokça yerleştirilen reklamlar ile

karşılařması etik ihlaller arasındadır.

- **Bireylerin Yeni Medya Çerçevesinde Sadece Tüketici Olarak Konumlandırılması**

Yeni medya ortamlarına katılan bireylerin sadece tüketiciler olarak görüldüğü ve gelir elde etme amaçlarına hizmet etmek üzere kullanıldığı gözlemlenmektedir. Bu davranış biçimi, yeni medya ortamlarında sıkça karşımıza çıkan etik ihlallerdendir (Maden, 2019: 82).

### Güvenlik Sorunları

- **Kişisel Veri Güvenliğı ile İlgili Sorunlar**

Bayraktutan ve Binark (2013: 73) tarafından ifade edildiğı üzere, kişisel verilerin güvenliğinin sağlanamaması, bireylere ait bilgi ve verilerin sanal ortamlarda çeşitli yollarla ifşa edilmesine dayalı etik bir sorundur.

- **Veri Madenciliğı Olgusu**

Binark ve Bayraktutan'un (2013: 74) tanımına göre, veri madenciliğı farklı bilgilerin birbirleriyle ilişkilendirilmesidir. Bireylerin sanal mecralardaki her adımının kaydedilmesi, analiz edilmesi, sonuçların sınıflandırılması ve şirketler tarafından bu verilerin satın alınıp kullanılması, yeni medya etiğı bağlamında etik ihlaller arasında yer almaktadır.

- **Dijital Gözetim**

Dijital gözetim terimi, veri madenciliğı ile benzer bir bağlam içinde değerlendirilebilir. Bu, bireylerin kullandıkları platformlarda profilendirilmesini, kaydedilmesini, internet aktivitelerinin titizlikle takip edilmesini ve elde edilen bilgilerin çeşitli amaçlar doğrultusunda kullanılmasını ifade eder (Maden, 2019:83).

### İçerik Sorunları

- **Hiperlink Kullanımı**

Haber metni içerisine yerleştirilen bağlantıların haberle ilgisiz olması, başka haberlere yönlendiren linklerin eklenmesi ve güvenilir olmayan kaynaklarla bağlantı kurulması ve bu alana yönlendirilmesi, haber metinleri içinde karşılaşılan temel etik sorunlardandır (Anadolu Ajansı, 2018: 182).

- **Foto Galeri Şeklinde Haber Sunumu**

İnce'nin (2018: 61) değerlendirmesine göre, bu tür habercilik uygulamasının, insanları yanıltma ve zaman kaybına neden olma özellikleri sebebiyle etik açıdan uygun olmadığı belirtilmektedir.

- **Sipariş Haber**

Bu ortam içerisinde sipariş haber diye isimlendirilen yeni yönelim; kişi, kurum ve kuruluşların kendi isimlerini yaygınlaştırmak amacı ile medya çalışanlarına menfaatleri karşılığında haber yaptırılmalarını ifade etmektedir (Maden, 2019:85).

- **Abur Cubur Haber**

Halk içerisinde büyük yankı uyandıracak haber üretim şekillerinin şöhret kazanması, haber niteliğı olmayan olayların haber yapılmasını desteklemektedir. Bu tür içeriklerin de, haber vasfı taşıymıyor olması nedeniyle etik kurallarına aykırı olduğu görülmektedir (Maden, 2019:86).

- **Yüceltici Haber**

Gazetecilerin olumlu haber üretim pratiğı, kişisel tercihlerine dayanarak, kendilerini takdir ettikleri yöneticileri övmeye ve hoşlanmadıkları liderleri eleştirmeye yöneliktir (Schneider ve Raue, 2002: 2-4).

- **Çocuklara Yönelik Haberler**

Çocuklar ile ilgili yapılan haberlerde, etik ihlallerin yapıldığı açıkça görülmektedir. Bu konu oldukça hassastır. Çocuklar ile ilgili haberlerde, fotoğraf koyulmaması, bilgi verilmemesi dikkat edilmesi gereken hususlardandır.

- **Kadınlara Yönelik Haberler**

Kadına cinsel istismar ve şiddet konulu haberler, özen gösterilmesi gereken alanlardandır. Bu konuyla ilgili haber yazma dönemlerinde, mağdur olan bireylerin kimliklerinin açıklanması ve görsellerinin kullanılması konuları özellikle dikkat edilmesi gereken temel etik kurallarındandır. Ancak yeni medya bünyesinde, mağdur kişilerin kimlik bilgilerinin ve fotoğraflarının, bütün internet kullanıcıları ile hususi olarak paylaşıldığı görülmektedir. Paralel olarak haber sayfalarında paylaşılan internet haberlerinde mağdur fotoğrafının kullanılmadığı fakat kullanılan temsili görsellerin bireylerin başına gelen olayları pekiştirici uygulamalar da mevcuttur (Telci, 2017: 160).

## Doğruluk Sorunları

### • Görüntünün Kurgulanması

Birbirinden alakasız videoları birleştirme, hiç var olmayan bir vakayı yaşanmış gibi gösterme, birbirine karşıt olan kesimleri kıskırtma amacı güdürek yapılan etik ihlallerdir.

### • Çamur Atma

İnternet medyasında çamur atmak olarak tabir edilen eylem, haber sahibinin fikri ayrılıklar yaşadığı bir bireyin hakkında dijital platformlarda yalan haberler yazması ve kişi ile ilgili gerçek dışı yermek eylemleri şeklinde açıklanmaktadır. Bu amaca uygun olarak hazırlanan haberlerde, iddiaların sahibi her kimse kimlik açıklaması yapılmamakta ve haberler "ileri sürüldü" gibi ifadeler kullanılarak kurgulanmaktadır (İnce, 2018: 63).

### • Editör Kontrol Eksikliği

Haber, okuyucu ile en hızlı şekilde buluşturmak isteyen gazetecilerin, doğruluğunu kanıtlamadan haber yazma süreçlerini tamamladıklarına rastlanmaktadır. Bu durum editörler tarafından haberin tam anlamıyla doğruluğunun takip edilmeden yayınlanmasına sebep olmaktadır. İsim, sayı, yer vb. bilgilerin eksik veya yanlış yazılması ve kontrol edilmemesi sebebiyle göz ardı edilmesi, bireylerin yanlış bilgilendirilmesine sebep olmaktadır (İnce, 2018: 63).

### • Yanıltıcı Yöntemlerin Kullanılması

Gazetecilerin; kamera, ses kayıt cihazı vb. gibi günümüz teknolojik aletleri gizlice kullanması etik ihlaller arasında yer alır.

## LİTERATÜR TARAMASI

"Aydın Karanlık Yüzü: Yeni Medya ve Etik" kitabı, yeni medya ve etik konularını ele alan bir çalışmadır. Kitapta, yeni medya teknolojilerinin ortaya çıkmasıyla birlikte ortaya çıkan etik sorunlar ve bu sorunların çözümü için öneriler tartışılmaktadır (Binark, Bayraktutan 2013). Yazarlar, yeni medya teknolojilerinin toplumsal ve kültürel değişimlere yol açabileceği gibi, aynı zamanda etik sorunların da artabileceği konusunda uyarıda bulunmaktadır.

İrvan, S. (2005) tarafından yazılan "Medya ve Etik" makalesi, medya etiği konusunda bizlere bilgi vermektedir. Makale, medya etiği konusunu ele almakta ve medya çalışanlarının etik sorumluluklarını tartışmaktadır. Ayrıca, medyanın toplum üzerindeki etkileri ve medya çalışanlarının etik davranışları konusunda çeşitli örnekler de sunmaktadır.

Maden ve Selin'in (2019) çalışmasında, haberlerin doğruluğunun kontrol edilmesi için incelenen örnekler arasında, teyit.org ve dogrulukpayi.com gibi doğrulama siteleri seçilmiştir. 1 Mart-31 Mart 2019 tarihleri arasında içerik analizi ile incelenen belirlenen iki site, haberciliğin teknolojilerin gelişimine paralel olarak geçirdiği dönüşümü araştırmıştır.

Verilerin incelenmesi sonucunda, teknolojinin ilerlemesiyle birlikte ortaya çıkan yeni habercilik türlerinin, haber alanında etkili olduğu tespit edilmiştir. Bunun yanı sıra, yeni medyanın sunduğu fırsatlarla birlikte ortaya çıkan etik ihlaller arasında bir ilişki bulunmuştur (Maden, Selin 2019).

Özgen'in kitabının konusu, etik değerler açısından gazeteci kimliğinin saptanmasıdır. Bu çalışma, gerek yazılı gerekse görsel-işitsel basın alanında etik ilkelerin belirlenmesi ve uygulanması aşamalarında, temel dayanak noktalarının ne olduğu ve hangi koşullar altında ortaya çıktıkları ile gazetecilerin bu ilkeler bağlamında kimliğinin ve görevlerinin ne olduğu, konusunda kalıcı bir yapıt bırakma çabasının ürünüdür. Ortaya konan bu çalışma, basın alanında ortaya konulmuş olan etik ilkelerin alt alta sıralanmasıyla bir kurallar yığını oluşturmaktan kaçınmaktadır. Bu nedenle, ilkeleri sıralamak yerine onların temelinde yatan siyasi, toplumsal ve felsefi görüşlerle, düşünce ve diğer etkenleri belirleyerek, çözüme ulaştıracak ipuçlarını elde etmeyi hedeflemektedir (Özgen, 2002).

"Gazetecinin El Kitabı", gazetecilik mesleğiyle ilgili temel konuları ele alan bir kitaptır. Yazarlar, gazeteciliğin tarihini, etik kurallarını, haber yazma tekniklerini, röportaj yapma becerilerini ve medya hukukunu ele alarak, gazetecilik mesleğine giriş yapmak isteyenler için kapsamlı bir rehber sunarlar. Ayrıca, medya sektöründeki değişimleri ve yeni teknolojilerin gazetecilik üzerindeki etkilerini de ele alırlar (Schneider, W. ve Raue, P. J., 2002).

## YÖNTEM

Bu çalışmada nitel araştırma yöntemlerinden söylem analizi uygulanmıştır. Nitel araştırmada, süreç aşamaları arasındaki karşılıklı etkileşim, esneklik ve ilişki ön plandadır. Bu nedenle nitel araştırma deseni esnek bir yaklaşımı gerektirir ve başta ortaya çıkan desen araştırma süreci içinde karşılaşılan yeni durumlara ve bulgulara göre yeniden biçimlendirilir.

Nitel araştırmalarda belgeler, sözcükler, görüntüler vb. veriler kullanılır. Nitel araştırma yöntemleri olarak da belge incelemesi, içerik çözümlemesi, örnek olay çalışması, söylem çözümlemesi yapılmaktadır.

Bu çalışmada, 7 milyondan fazla takipçisi bulunan ve hakkında son dönemde yoğun haberler çıkan ünlü fenomen Dilan Polat örneği üzerinden, habercilik ve habercilik mesleğinin yeni medya araçlarındaki dönüşümü ele alınacak ve bu dönüşümün yarattığı sorunlar, etik ilkeler ve özellikle özel hayatın gizliliği ve tık odaklı habercilik bağlamında ve söylem çözümlemesi ile incelenecektir. Çalışmanın evrenini çevrimiçi haber siteleri oluşturmaktadır. Çalışmanın örnekleme ise akşam.com.tr, cumhuriyet.com.tr, sabah.com.tr, milliyet.com.tr ve yeniakit.com.tr haber sitelerinden oluşmaktadır.

Örnekleme grubu Akşam, Cumhuriyet, Sabah, Milliyet ve Yeni Akit internet gazeteleri ile sınırlandırılmış olup söylem analizi için, Teun Adrian Van Dijk'in "Eleştirel Söylem Çözümlemesi Modeli" uygulanmıştır. Bu kapsamda, Türkiye'deki internet haber sitelerinde yayınlanan Dilan Polat haberleri 1-31 Aralık 2023 tarihi baz alınarak tam bir ay boyunca takip edilmiş, kullanılan başlıklara, fotoğraflara ve haberin içeriğine de bakılarak "Van Dijk Eleştirel Söylem Çözümlemesi Modeli" ile incelenip açıklanmıştır. Van Dijk modeli "Makro yapı ve mikro yapı" olarak iki bölümden oluşmaktadır. Makro yapı da kendi içinde iki başlık altında incelenmektedir: "Tematik çözümleme ve şematik çözümleme" (van Dijk, 1983)

## MAKRO YAPI

### 1. Tematik Yapı

#### a. Başlıklar

Örneklem olarak belirlenen gazetelerdeki haber başlıkları incelendiğinde, mekan, zaman, dönem gibi belirleyici bilgilere yer verildiği görülmüştür. 13 Aralık 2023 tarihli Cumhuriyet gazetesi ve 20 Aralık 2023 Milliyet gazetesinin haber başlıklarında yer alan başlıkların birbirine yakın anlamlı olduğu görülmektedir. Bu haber başlıklarında yer alan Dilan Polat'ın ruh halinin iyi olmamasının sebebinin cezaevi ile ilgili olmasına bağlı olduğu anlaşılmaktadır. 23 Aralık 2023 Yeni Akit gazetesinin haber başlığında görülen ziyaretçi listesinde sürpriz isim başlığı atılarak yapılan haberde mekan belirtmemesine rağmen, Dilan Polat'ın cezaevinde olmasıyla bağlantılı olduğu anlaşılmaktadır. Bilgi eksilimine gidildiği görülen 20 Aralık 2023 Sabah gazetesi haber başlığında yer alan 'o çorcular' ifadesinin ne anlama geldiğini kavramanın ancak içeriği okuyup anlaşılabilir olabileceği görülmüştür. Haber başlığının devamında yer alan sosyal medya yıkıldı ifadesi de abartılı bir kullanıma örnektir. Bir diğer bilgi eksilimi, Yeni Akit gazetesinin 23 Aralık 2023 tarihli haberinde görülmektedir. Haber başlıklarında bilgi eksikliği yaratılarak, habere tıklanma ihtimali artırılmaya çalışılmıştır. Ele alınan haber başlıkları etik açıdan incelendiğinde ise bazı etik ihlaller yapıldığı sonucuna ulaşılmıştır. En önemli etik sorunlardan biri olan "tık odaklı habercilik" internet gazeteciliğinde sıkça karşılaşılmaktadır. Bundan dolayı haber başlıklarında aldatici başlık kullanımları, bilgi eksilimi ve okurun çıkarımında bulunamayacağı kelimeler kullanıldığı tespit edilmiştir.

Özel yaşamın gizliliği konusunda ise başlıklarda kullanılan ifadeler, büyük bir yolsuzluk durumunda,
